STAT

No. 77262

When, from whom, and how this volume was obtained,
with the price paid, if any, may be found opposite
the above number in the Register of Books,
which is always open to inspection.

Extract from the Political Code.

SECTION 2296. Books may be taken from the Library
by the MEMBERS OF THE LEGISLATURE, DURING THE SESSIONS
THEREOF, and by other State officers at any time.

SEC. 2298. The Controller, if notified by the Librarian
that any officer has failed to return books taken by him
within the time prescribed by the Rules, and after demand
made, must not draw his warrant for the salary of such
officer until the return is made, or three times the value
of the books, or of any injuries thereto, has been paid to
the Librarian.

SEC. 2299. Every person who injures or fails to return
any book taken is liable to the Librarian in three times
the value thereof.

No person shall take or detain from the General Library
more than two volumes at any one time, or for a longer
period than two weeks. BOOKS OF REFERENCE SHALL NOT
BE TAKEN FROM THE LIBRARY AT ANY TIME.—[Extract from
the Rules.]

The foregoing Regulations will be strictly enforced.

A New and Important Railroad Projected.

EDITORS PRESS:—For some time past complaint has been heard from the east side of the San Joaquin valley of the exactions practiced by the Southern Pacific Railroad Company, coupled sometimes with a lack of courtesy on the part of the company's employees. Voicing these grievances, the Fresno *Expositor* of recent date declares the time has come when the interests of the people inhabiting the belt of country indicated demand the construction of a competing road, extending along the foothills of the Sierra from Stockton to the head of the valley.

Having vainly appealed to the great corporation for a correction of these evils, these people are ready now to entertain propositions looking to the early construction of a rival road over this route. They stand ready to liberally subsidize any company undertaking the work, this subsidy to consist of rights of way with land for depots, shops, etc., or of a large money donation, and possibly of both.

This disaffection is not confined to the town of Fresno and vicinity. It is widespread, extending to all classes and interests along that section of the valley reaching from the line of the Central Pacific road to the foothills, including the latter and the mountain country to the east. It is a community of malcontents, the entire population pledging their patronage to any new company entering the field.

Encouraged by these liberal offers, and knowing how rapidly this section of the State is being populated and its great need of additional transportation facilities, a company known as the Stockton, Fresno and Southern Railroad has lately been incorporated for the purpose of building a road over the route here spoken of, this company including among its incorporators and officers some of our best known citizens and most substantial business men.

The total length of the projected road, as shown by the report of the company's engineer, is 175 miles, the country traversed being extremely favorable for railroad construction. There will be no sharp curves or heavy grades on the line. The greater portion of the road will be built on grades of less than 15 feet to the mile, much of it on a dead level, while the amount of excavation and that now required for grading will be less than six miles, though there will be several large rivers and numerous creeks to be crossed. The road will proceed south from Stockton, passing through the Merced, Fresno, Kings, and San Joaquin counties, and ending at Bear, Mariposa, Cottonwood, and Dry.

Along the rolling stock, depots, etc., the entire cost of constructing the road, which is to be single track, standard gauge, is estimated at \$2,086,201—present annual gross earnings at \$3,068,950. Deduct from this on account of operating expenses, fixed charges and sinking fund, \$2,151,370, leaves to be distributed to shareholders \$917,680. These estimates pertain to the income and outgo of the first year, following which both the gross and the net revenues of the company will be year by year largely increased.

The articles to be carried over this road include all the leading California staples, such as grain, flour, lumber, wine, wool, fruit, hogs, sheep, cattle, etc., the freight on the two items of wheat and barley amounting to \$1,140,000 annually. It is calculated that there will be transported over the road yearly 3000 carloads of fruit, 1000 carloads of cattle and 2,500,000 gallons of wine.

As laid out, it bisects the richest agricultural section of the State, the counties immediately tributary to it forming one of our foremost grain, grape and fruit growing districts. The most of the soil is a deep, sandy loam, exceedingly fertile, nearly the whole country being so level that irrigation, where required, can be practiced with the greatest facility, there being at the same time an abundance of water available for the purpose. The cereal crops, however, do not as a general thing need this aid, nor is it imperative in the culture of fruits and vines in more than a few localities. Recourse to irrigation is often had, not so much that it is an absolute necessity as because it tends to enrich the soil and insure beyond contingency a bountiful crop. The agricultural territory tributary to the projected road amounts to over one and a half million acres. This, however, includes only the valley lands proper, the foothill region, the best portion of the State for fruits and grapes, and the site of the gold-fields, with the vast extent of timbered mountains beyond, being also tributary to the road. The forests on these mountains being among the finest in California, would send down incalculable quantities of lumber. That this road when built will do a heavy transportation business admits of no doubt.

Had not this company undertaken the construction of a railroad along this belt it would all the same have been done. The old companies no longer seek to dominate the entire railroad system of the State, nor do they claim every eligible local route as one of their per-

quisites. They have abandoned this policy as impracticable, and because they have found it more profitable to encourage other parties to build these lateral lines to become feeders to their main trunks. No country requires these local roads so much as California, as the wagon-roads here become almost impassable during the wet season. At the rate this State is filling up with inhabitants it will not be long till we shall see it gridironed with these highways after the manner common in the Eastern States, every hamlet, mining camp and important agricultural district being in this manner connected with the general railroad system of the country.

H. D.

Cloverdale Precinct, San Bernardino County.

EDITORS PRESS:—Commencing at Box Springs, on the C. S. R. R., about five miles east of Riverside, and running from there to the San Jacinto lake, ten miles east, is a section of country that until within a year or two was considered unfit for human habitation. A few families have moved in, taken up Government land and bought of the R. R. company, and what was once a sheep range is now being transformed into happy homes of prosperous farmers.

The soil consists of decomposed granite, and near the foothills retains moisture to a wonderful degree. Water is obtained for domestic purposes by running cuts in the foothills, where it is found in the clay seams between the granite. No one in the neighborhood has failed to find it by digging.

The crops have been mostly barley for hay and grain, and the yield has been very satisfactory. There was a small amount of corn matured without irrigation. Potatoes did well. Beans filled well, but were taken by the rabbits after the barley was gone. Several varieties of fruit trees were carried through the summer without water; among them were apples, peaches, pears, plums, cherries, figs and quinces, as well as grapevines, both rooted and cuttings.

Our nearest postoffice is at Alessandro, about seven miles distant, on the C. S. R. R., where there is a commodious hotel and a fine depot.

The boom is bursted, but the rains have come and every one is trying to get as much grain in the ground as possible, and the result will be a better boom than the speculative one that is gone.

The climate and location are well adapted to raising country, and some parties have already leased land, with intention of building a road, which has been herded as they used sheep.

Bees do well, as there is an abundance of white sage from which they make white honey. Will report progress in the future.

Dec. 1, 1888. L. S. LYNN.

Santa Barbara County Notes.

EDITORS PRESS:—In common with the rest of the State this county has been blessed with abundant rainfall, about ten inches having fallen up to date. The rain has fallen gradually as to be absorbed as rapidly as it fell and has thus been saved. All nature is smiling and pastures are green. Many strangers are noticeable looking for small tracts of land for homes. Much more of this class are coming in proportion to the usual amount of travel than has been customary for some time. The large ranches are being cut into small farms more and more each year, and the supply of cattle, hogs, sheep and horses must therefore be produced more and more yearly by the small farmers in order to keep up to the demand.

Around Santa Barbara and Carpinteria artesian water has been found in such paying quantities and shallow depths that new wells are being sunk constantly, adding to the large number of wells now flowing. Mr. G. E. Thurmond, the postmaster at Carpinteria, has lately sunk a well which sends the water out of the top of a pipe 20 feet from the ground, and he supplies a considerable portion of the residents of the village with water, piping it wherever wanted. There are several other wells in the valley equally good as this one, and they certainly are a great boon to the possessors.

There is a great demand for fruit and nut trees throughout this section. Hundreds of acres of walnuts will be set out this winter and more would be set out if the trees were obtainable.

The beans and walnuts raised this season have not as yet all been marketed. The walnut market has been depressed by the holders of last year's California and Chili walnuts in San Francisco, who hoped by this means to work off their stocks ahead of the new crop. This year's crop is short in quantity but very fine in quality and of large size, and should command higher prices than it does. Beans also were short in quantity and farmers have been backward about selling. However, the majority of the crop has been sold and that at good prices.

Business of all kinds is very dull, but all are hoping for livelier times soon. The holiday trade has been retarded somewhat by the inclement weather, as the weather has been quite stormy and windy for a few days.

L. B. CADWELL.

"Pomona's Retreat," Carpinteria.

HORTICULTURE.

Coming Meeting of the American Pomological Society.

EDITORS PRESS:—At the last meeting in Boston, the society unanimously accepted an invitation from the Florida Horticultural Society to hold its next meeting in that State. This will be the first time that a meeting has been held in the extreme South. The enthusiasm with which the proposition to go to Florida was received, and the extensive preparations being made by the pomologists of the South for the reception of their Northern friends, give promise of the most successful meeting ever held.

The session will open at ten o'clock on Wednesday, Feb. 20, and continue three days. It was expected to hold the meeting at Sanford, beginning Feb. 6, but it has been found necessary, owing to lack of time for suitable preparation, to postpone it until the 20th, and at the request of the Florida Society, to hold the session at Ocala instead of Sanford. Ocala is located in the central part of the peninsula, in the midst of the orange region, nine-tenths of all the oranges grown in the State being produced within a radius of 80 miles. The climate is salubrious and healthful. No cases of yellow fever have occurred in that region, and the direct railroads leading to Ocala from the North pass through none of the districts where it has existed. No fear, however, need be entertained of visiting any portion of the State on this account. Since the occurrence of severe frosts the last quarantine, that of Jacksonville, has been raised, and the tide of winter travel has now set in.

Among the attractions offered by the people of Ocala as inducements to hold our meeting there, are the Florida International and Sub-Tropical Exposition, which opens in January, the commodious buildings of which are tendered for the use of the society. The leading places of interest in the State are easily accessible from this point, and the local attractions include the famous groves of Lake Weir and Dunnellton, and the wonderful Silver Springs, the finest of the kind in the world.

Arrangements will be made for unusually low rates on roads entering Florida, and for excursions within the State. Full particulars in regard to these will be announced later. Where no other arrangements exist, delegations should secure special rates to Ocala from their nearest member of the General Passenger Agents' Association.

It is hoped that all Pomological, Horticultural and Agricultural Societies in the United States and British Provinces will send delegates, such numbers as they may deem expedient, and all persons interested in the cultivation of fruit are invited to be present and become members of the society. Persons so desirous to do so, should send the fee, \$4 for biennial membership, or \$2 for life membership, to the treasurer of the society, Mr. Benjamin G. Smith, Cambridge, Mass., who will give a receipt for the same. The holder to all the courtesies in the society, reduced railroad and hotel rates, etc. The secretary be notified as soon as practicable of the names of members desiring to attend, in order that proper arrangements may be made for their reception.

A special invitation is extended to ladies to attend the meeting, become members, and take part in the proceedings. An attractive program is in preparation, a full account of which will appear later. It includes papers and discussions by the best pomologists of the country upon new fruits and methods of cultivation, the problems of judging fruits, of transportation and marketing, diseases and their remedies, and the origination and introduction of new varieties.

The society will be held at the Hotel Florida, Ocala, Fla. Exhibits to be made by the members of the society, and medals will be made by the American Society.

Packages intended for exhibition, freight or express addressed, freight or express to J. O. Clark, Ocala, Fla.

PROSPER J. BERCKMANS, 1888.

Angus

Note—Until the Florida meeting, the office of the secretary, A. A. Crozier, will be at the Department of Agriculture, Washington.

Fruit for the Paris Exposition.

EDITORS PRESS:—It being impossible to address letters to the many growers of citrus fruits, I have thought to publish, through your columns, a statement to the effect that the department is making efforts to exhibit the citrus and other fruits of the entire country at the Paris Exposition in 1889. As I have the matter in charge, I hope to have voluntary collections of the citrus fruits in particular, to this office for that purpose. Accordingly, I have demanded that all specimens be ready for shipment by January 1st, and I trust that this may be complied with by the many persons in

your State who feel ready to co-operate. All expenses, such as expressage, will be paid here, or the parties reimbursed if they prepay such charges.

H. E. VAN DEMAN,

Pomologist in charge of fruit exhibit.

A California Fig Exhibit.

The fact that California is now producing the true Smyrna fig of commerce, with another exceedingly choice variety, the White Adriatic, has rendered it desirable that an exhibit of figs be sent to Paris during the coming exposition in that city, that the people of Europe may be able to see as great a variety of the products of California soil as possible. The Department of Agriculture of the United States has recognized the important bearing of the fact that the true fig of commerce is successfully grown here, and has requested G. P. Rixford of this city to secure an exhibit for the Paris Exposition, appointing him the department's agent for that purpose. Mr. Rixford will act as requested, and asks fig-growers to prepare packages of figs, put up in a tasteful manner, and to send them to him, care of the State Viticultural Commission. He requests that they be sent by express, which can be done without expense to the sender, as arrangements for paying express charges have been made. Every package exhibited will be credited to the person contributing it.

As the exhibit is to be representative of the whole fig industry, samples of not only dried fruit, but crystallized, pickled or preserved by any method, are desired. Any further particulars may be had by addressing G. P. Rixford, 528 California street, San Francisco.

THE STABLE.

Quinine for Pinkeye.

Mr. L. Brodhead, superintendent of the famous Woodburn Stock Farm, Lexington, Kentucky, uses quinine for pinkeye and kindred diseases, and gives the following recipe:

Give a dram from 15 to 20 grains a day. We generally give this quantity once a day, but when first taken and the fever is high, give about 15 grains twice a day, morning and evening; if the attack is mild, only one dose a day, and continue until the disease leaves the system. The quinine allays the fever, is good for the inflamed throat, is a fine tonic, and so far has cured every case we have had, to the number of 150. In the spring we had several very severe cases that I am sure we should have lost but for quinine. These were yearlings, and we gave 20 grains twice a day. Older horses can take 60 grains a day in two doses. Whenever there is fever, use quinine freely, no matter what the disease. It is almost a specific for lung fever and pneumonia. I have cured two cases of lockjaw in sucklings this summer with quinine and atrophy, 20 drops of the latter to the dose. We are not particular to weigh the quinine, but guess at a dose. Put it on a spoon and place it on the tongue, without elevating the head or exciting the animal. We pull the tongue to one side, insert the spoon, turn it over and wipe it on the tongue. It is easy to administer, and the animal gets it all. It is perfectly safe, and there is little, if any, danger in giving too much. I have used quinine for four or five years, and always with good results.

NERVOUS HORSES.—Finely bred, intelligent horses are very often nervous. They are quick to notice, quick to take alarm, quick to do what seems to them, in moments of sudden terror, necessary to escape from possible harm from something they do not understand. That is what makes them shy, bolt and run away. We cannot tell what awful suggestions strange things offer to their minds. For aught we can tell, a sheet of white paper in the road may seem to the nervous horse a yawning chasm, or a deep pool of water.

ware on until the noise simply as a nuisance. The material objects as only trivial things liable to get hurt if they are in his way. He may not learn all that in one lesson, continue the lesson and you will cure all his nervousness.—Horseman.

A Bill has just been introduced into Congress that ought to become a law. It provides that in all National elections the payment of money for the vote of any person shall be unlawful, and the person violating the law shall, upon conviction, be disfranchised for not less than six years nor more than ten, and during the said period be disqualified to hold any office of trust or profit under the United States.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Executive Committee Meeting.

A special meeting of the Executive Committee of the State Grange of California, P. of H., will be held at the office of the Secretary, 220 Market street, S. F., at 1 o'clock P. M., Friday, January 11, 1889.

W. L. OVERHISER,
Chairman.
A. T. DEWEY,
Secretary State Grange of Cal.

Joint Installation of San Joaquin County Granges.

To the Officers and Patrons of all the Subordinate Granges in San Joaquin County:—A majority of the Granges of this county have agreed upon having a joint installation of the officers of the San Joaquin county subordinate Granges in Lodi hall on January 16th, commencing at 9:30 A. M., with a basket lunch.

The Master says come, the Secretary says come, all say come—and doubtless they will come by the multitude.

J. D. HUFFMAN,
Secretary of Committee.
Lodi, Dec. 30, 1888.

The Tule Basins.

Every now and then, in the discussion of the debris evil, the tule basins of the valley are mentioned in certain quarters as suitable places wherein to settle the material washed out of the mountain by the hydraulic giant. Such a scheme has again come to the front as a possible relief to the dethroned methods of mining. The Farmer has on several occasions pointed out the impracticability and undesirability of the scheme, and since it has again been mooted we will renew once more our objections.

The tule basins—or winter lakes, as we may call them—are as necessary to the Sacramento valley as a safety-valve from complete periodical inundation, as are the depressions upon the globe that hold the waters of the seas. The Creator caused the waters to separate from the soil, and then animals appeared, to reside on the lands and in the waters, and by-and-by the soil began to be cultivated. Such were the natural processes by which the great interior valleys of California were created. That these were once inland seas is self-evident; that natural causes divided the soil from the water and rendered it inhabitable, none will gainsay. Hence it is that we have a Sacramento and a San Joaquin valley, perhaps to-day the richest spots on earth. But they have been slow in forming, and are so nearly a "dead level" as to have caused the waters to leave behind them the finest alluvial matter. The absence, then, of a current kept the mud within the inner bays and in time were separated into arable land, tule swamps and low-water channels. We say low-water channels, because these were never adequate to carry the waters at flood-tides to the lower bays and to the sea. Thus is explained the presence of the tule basins, which are known to hold the flood-waters with safety to the arable land, until they have time to pass away through the channels created to accommodate a low-water standard.

Now fill these depressions and it is as certain as anything in nature can be that the channels must be vastly enlarged or the floods will spread as of yore from mountain to mountain, converting the valley into its original elements of mud and water. The wash proposed is not the alluvial element that made the valley, but comes from the bowels of the mountains, unfit to create anything except a desert to be blown about at the will of the winds, as witness the 50,000 acres already so converted. That, so far as is known, not a single swamp-land owner desires such a reclamation, is the best evidence deducible that it is impracticable and undesirable. The late Wm. H. Parks, who was the best authority in the State in such matters, never wanted his swamp land reclaimed by the sanding process.

There is yet one other objection, and one which is wholly insurmountable. It is simply this: The objectionable matter can never be gotten there, even if the entire revenues of the General Government were applied to the scheme. A force that will down mountains must be met with a force that will dry up the seas to be effective!—*Sutter Farmer.*

EDEN GRANGE initiated two new members at its meeting on the 22d ult.

Three Days Among Grangers.

MESSRS. EDITORS:—The participation with our Grange in the anniversary exercises just whet up my appetite for more, so I accepted the general invitation of Temescal Grange to be present at their anniversary exercises. From the persons that are at the head of the Order and the manner in which it was announced, it was well known that it would be a grand success.

This was a fair demonstration of what can be done when co-operation is fairly carried out. Eden Grange came down with their numbers and their talents, age and experience, and they did not withhold any of their good things. They affiliated so completely that it seemed but one Grange, and I think it the grandest lesson in fraternal gatherings that I have witnessed in many a day.

Grandmother Brooks was there and took her place as one of the Three Graces. I believe Grandmother Brooks enjoys the Grange as much as any of the younger sisters, and fortunate is the Grange that claims her genial manners and kind words.

I will not go into the details of the order of exercises, as the PATRON contained a good account of it, but will say that the day was not half long enough to hear from all. Usually on such occasions, when they get well warmed up, they are liable to get off some spicy and well-seasoned hits.

The entertainment that the sisters had prepared for the physical was not second in its appreciation to that prepared for the mental.

Temescal Grange is fortunate in one respect, she has two brothers that are clergymen (who are engaged in farming as well as preaching) and are splendid readers and speakers, and they frequently enliven the Grange with their eloquence.

Bro. and Sister Overhiser improved finely on their trip to the National Grange. They look much younger and fresher. I believe it is inclined to make a person look and feel younger to go and exchange ideas and courtesies with representative farmers from all the States in the Union.

In the evening several of us went to Sister Dewey's house and took tea with her. By invitation, a good company went to Bro. and Sister Frink's house, where we spent a pleasant evening. This brother and sister have things just about as handy as money and brains will make them, and they have the disposition to enjoy them. It is a pleasure to me to see persons with a competency who know how to enjoy it.

When the evening was well spent, Sister Frink absented herself from the party, and in a few minutes we heard the rumbling of doors. Looking up, we saw her standing in the center of two large folding-doors—a living picture in an immense frame, with as handsome and inviting a background as I ever saw. The picture and background were the realization of some of my wild dreams. When I arose to my feet, I caught a bird's-eye view of that long dining-room table, which seemed as natural as life itself, and my critical eye failed to find anything amiss in the perspective. It was an agreeable surprise.

As it was an original picture and there were no copies for sale or to give away, we made a closer inspection. We found the frame large and substantial, the colors natural, the background made up of the substantial and realities of life. Sister Frink indulged us with a luxury that few have to dispense. It was a fine cup of tea grown in her yard and cured by her own hands. The ornaments and eatables on the table were fit for a Granger's wedding-feast, and were fully appreciated by the guests.

Bro. Dewey threw out some hints as though we should have been notified of this so we could have been a little more sparing of an editor's table. My answer was that a keen appetite knows no distinction between an editor's and a banker's table. Bro. Steele and I, fearing an editor's beds might be like his table, concluded we would tarry with Bro. Frink.

Sunday forenoon Bro. Steele and myself went and heard the Master of Temescal Grange preach. We participated in the sermon, the singing and the contribution-box. From the text, "Remember the Sabbath day to keep it holy," he preached a good, wholesome, practical sermon.

Sunday afternoon Bro. Dewey invited it seemed nearly all the Grange to meet at his house for dinner. I suspect that some of the brother's good neighbors saw the number of country cousins at his house and attempted to help him out.

In the center of the table lay one of the largest of turkeys square on his back. It was like the upheaval of a small mountain on a desert plain. An appreciative appetite never inquires into pedigree or ownership.

The editor thought the muscles that

had been running a pair of shears and a pastebush not sufficiently developed to attack such a monster, and invited the aid of some of the older members. All but one brother excused themselves as not being adepts at such work. The one brother said to me, in a low tone of voice, that he could put the fork in the bird's breast and never take it out until all was cut up. I replied, I would like to see him do it at his own table. He neither smiled nor said he would send me his card. I felt a good deal of sympathy for Sister Dewey as she helped her large family of 13 to their second Thanksgiving dinner.

The afternoon and evening were passed very pleasantly in social intercourse and music. It was one of the most pleasant and realistic entertainments that it has been my lot to enjoy for a long time.

Knowing that Bro. and Sister Frink were of a sensitive nature and easy to take offense, Bro. Steele and myself sacrificed our feelings in the matter and became their guests the second night.

There being no juveniles at this house, I escaped a great embarrassment that usually falls to my lot when traveling with Bro. Steele. Being a greater student of Chesterfield than the brother, it usually falls to my lot to make the introductions. When Bro. Steele's name is mentioned in a large family where they have been sent to Sunday-school and taught the Ten Commandments, the younger members will soon begin to gather up what property belongs to them that is lying around loose. Before confidence can be fully restored, I am compelled to spell the name.

Sister Overhiser and Bro. Steele go to the city, and Bro. Overhiser and myself go to Stockton. I go to Oak Home with the owner, and see him turn over the rich soil with his three gay plows and 15 head of horses. If the Worthy Master could get some purchase whereby he could drive the Grange through as he does his own business, we would soon be a healthy rival to Texas or Pennsylvania.

These three days among Grangers have been the happiest that I have spent for a long time, and I thought it a pity that the days were so short.

If the farmers will not come in and join the Grange and enjoy some of the good things of the earth, I am afraid more will fall to our lot than we can justly endure.

D. F.

Bros. Overhiser, Steele, Flint, Goodenough and Dr. McKaig, and Sisters Overhiser and Sanders did just give us one of the happiest greetings we ever had; so we don't mind the Lecturer's giving it away that an editor's bed and board are too hard even for "Flint" and "Steele" to endure.

San Joaquin County Pomona Grange.

MESSRS. EDITORS:—The third effort San Joaquin County Pomona Grange made to have a meeting, succeeded and we had a fine day and a good meeting. It partook of a Pomona Grange meeting more than any meeting that has been held for a long time. After the election of officers, they got to a genuine business meeting, and a great interest was manifested in all the subjects that were advanced on the calendar of business. It was suggested that we hold the election for officers of this Grange biennially instead of annually, and a committee was appointed to prepare a program for the four regular meetings of each year, and, if the business could not be completed at the designated times, to hold special meetings to complete the program. The installation of officers will take place the fourth Thursday, or the 28th day, of February, 1889. Fraternally,
J. D. HUFFMAN, Sec.

Lodi, Dec. 30, 1888.

About Grain Bags.

MESSRS. EDITORS:—The article of Bro. farmer Huffman has my hearty amen, and let every farmer in the State requiring bags join in one united demand against the bag fiends that have by their manipulations here and in India succeeded in nullifying, to a great degree, the effort of the farmers' legislation to turn their own prison labor, that they are taxed for, into some relief from this set of robbers. Let some united effort at once be made for our protection, for high rates of taxes, labor, freight and bags leave us to work for the powers that live by crushing us.

L. F. MOULTON.

Colusa, Dec. 25.

THAT laws securing to the people an absolutely secret ballot should be passed by all the States, was declared to be the sentiment of the National Grange, at its last session.

Work for the Australian Voting System.

Some agitation is now being made in favor of a new and stringent law governing our system of voting, in order to prevent frauds through various unfavorable influences exerted upon elections under our present regulations. The Australian system, recently published in our columns, or something quite similar, seems to most popularly meet the opinions of those who are anxious for a reform. We believe that this is one of the most important measures for farmers, as well as all other good citizens, that will come before the Legislature at the present session. The National Grange has declared in favor of strong action in this line.

We should like to have it discussed by different writers in our columns. We urge every honest voter to take an interest in this matter, and in one way or another do something to help bring about so desirable a reform. Let it be the subject of debate in each Grange, at its first meeting if possible.

We recommend that the Secretary of each Grange draw up a letter to the legislative representatives of the district, to be signed by as many members of the Grange as possible, and forward it to the representatives without delay.

Some of the points of advantage in the so-called Australian system of voting lie in the fact that illegal voting and counting of ballots are greatly curtailed, if not entirely prevented. Some of its important features may be mentioned briefly as follows: All the ballots are printed by the State. Each ballot contains the names of the candidates of all parties. Each voter enters the balloting-place separately, is provided with one ballot only by two attending Government officials. In an apartment by himself alone, the voter checks or marks such names as he desires to vote for. He then passes to the front of the ballot-box, deposits his ballot, and passes along some distance and out, no one but the two officers named being allowed to approach the voter in the voting apartment during the process of voting. All ballots not voted are accounted for and returned by the officials. This plan has worked well in other places, and it is believed, if adopted in California, would prevent nearly all the frauds and do away with most of the "political hangers-on" that the State is now cursed with.

Pleasing Incident in Stockton Grange.

MESSRS. EDITORS:—At our Saturday's meeting the Worthy Master declared a recess, when Sister Root, wife of our Worthy Secretary, presented each member with a paper sack of snowy popcorn, and each brother with a neat, round pocket-cushion filled with pins, as a fraternal New-Year token of love and hope of success in the coming year.

A hearty vote of thanks was tendered our sister whose heart is full of love for all that is won by patient toil and honest principle.

Kind acts are mightier in our loved Order than whole afternoons spent in telling that we don't do as we ought to, and combing us the wrong way, with the best of intentions.
Stockton, Dec. 30. W. D. A.

THE LAX LAND LAWS.—A correspondent of the Visalia Delta thus swells the cry in favor of repealing all enactments regarding public lands except the homestead law: There are a number of timber claims on the plains which the holders have allowed to go over a year without commencing improvements as called for by law. Most of them have been promptly contested by the settlers in this vicinity, but they are a great impediment to close settlement of the country. What with railroad and school sections, absentee owners of homestead and preemption claims, and uncultivated timber claims, the actual settlers are widely scattered. It seems to be the almost unanimous opinion of actual settlers who are improving their lands, instead of relying on "improvement of witnesses" to obtain title to them, that all the land laws should be repealed except the homestead provisions. Uncle Sam has lavishly bestowed his land upon anybody as though he expected to annex the earth, buy the moon and foreclose a mortgage on Jupiter before the end of this century. Even those who are taking advantage of his careless, even criminal, generosity, realize that a halt should be called.

A RESOLUTION was passed by the National Grange at its late session urging upon Congress the importance of passing a law so that the postmasters of this country shall be elected by the patrons of the different offices, and not appointed by the Postmaster-General as they now are.

Corned Beef and Vegetables.

MESSESS. EDITORS:—The following recipe appeared originally in the *New England Farmer*:

“Corned Beef.—Whoever neglects from ignorance or other cause to cure a quarter of beef, or more if the family is numerous, neglects a high privilege and loses a substantial item and luxury from his table. The pickle should be made as follows: To six gallons of water add nine pounds of pure salt, three pounds of brown sugar, one quart of molasses, three ounces of saltpetre and one ounce of pearlsh. Let these ingredients be boiled and carefully skimmed as long as impurities from the sugar and salt continue to rise to the surface. When the water is ready to receive the rest of the material, pour in the saltpetre *only*, and when dissolved and the water boiling, dip your beef, piece by piece, into the boiling saltpetre, holding it for a few seconds only in the hot bath. When the beef has been thus immersed and becomes quite cool, pack it in the cask where it is to remain. Then proceed with your pickle as at first directed, and, when perfectly cold, pour it upon the meat, which should be kept down by cover and stone. The immersing of the beef in hot saltpetre-water contracts the surface by closing the pores, and prevents the juices of the meat from going out into the pickle. The saltpetre absorbed by the contracted or cooked surface will modify the salt that passes through it, the whole producing the most perfect result.

“Beef cured in this manner will preserve its color, and cut almost as juicy and inviting as a fresh roast. It is as unlike the hard, blue, briny, knotted substance sold at markets and frequently cured at home, mis-called ‘corned beef,’ as a sirloin differs from a steak cut three inches back of the horns, and sold for a porter-house.”

I commenced operations at the point reading, “When the water is ready,” etc., as I could not add all the ingredients mentioned to water, and then afterward “pour in salt petre only.” It proved a success; only it did not keep a year as is claimed for “Panzy’s” recipe. It is not now visible to the naked eye. Pork is now king; for on a ranch in winter-time meat must be had. I have vegetarian tendencies and believe in the theory, but practically it is “Arise, Peter, slay and eat.”

Speaking of vegetarian tendencies reminds me of vegetables. I have tried to dispense with nice fresh vegetables brought around by the Chinamen, but have only partially succeeded. The Chinamen used to come around very regularly, till last year they saw me sowing peas, lettuce, etc., and never since then have they been visible. I see plainly I am to be boycotted, or whatever it is. So we have already strawberries and cabbages set out. Now if “Panzy,” or the editor, or some equally good authority, will, each month, tell what vegetables should be put in the ground and how it should be done in California, not New England, they would favor every tenderfoot farmer among your readers, “of whom I am chief.” And seriously I believe it would help old stagers, who do not like to acknowledge ignorance, and so do not grow vegetables, but depend on the providence of Chinamen. Yours respectfully and thankfully,

J. W. MACKIE.

[The suggestion which Brother Mackie makes in the last paragraph in his letter is a good one, and we shall be happy to carry it out. To do so, however, we shall need the aid of readers in all parts of the State, from San Diego to Siskiyou, and from the seashore to the Sierras. Will you who have had experience in the matter write us

- (1.) What vegetables you have succeeded in raising in your locality;
- (2.) At what time, and
- (3.) In what manner you have planted, and what care you have given each variety; also
- (4.) What vegetables—if any—you have tried with unsatisfactory results.

We suggest these questions for consideration in every Grange, and invite the Secretary to report discussions and conclusions. If you are not so fortunate as to have a Grange in your neighborhood, but are fortunate in having individual experiences, please report them for the benefit of the “tenderfoot,” and thus oblige both him and Eds. PRESS]

A NATIONAL CHILDREN’S DAY is to be declared by the Master of the National Grange at some specified time each year. The custom of proclaiming Children’s Day by the Masters of the Michigan State Grange has long been in use, and one that is looked forward to by the children and parents with great pleasure, and is almost universally observed. It is believed that it would give to our Order an additional incentive if the Master of the National Grange would proclaim such a day.

Grange Elections.

SAN JOAQUIN POMONA.—S. W. Sollars, M.; R. Pixley, O.; Sister Joseph Adams, L.; V. Jahant, S.; E. G. Williams, A. S.; A. A. Gurnsey, C.; E. Fiske, T.; J. D. Huffman, Sec.; E. R. Elliott, G. K.; Sister J. L. Beecher, P.; Sister W. B. White, F.; Sister A. J. Nelson, Ceres; Sister S. C. Waters, L. A. S.

SIERRA VALLEY.—N. N. Strang, M.; A. M. Haselton, O.; Mrs. M. Richard, L.; Mrs. R. Weed, S.; A. Hubbard, A. S.; Mrs. G. J. Johnson, C.; Mrs. R. L. Olsen, T.; A. E. Knear, Sec.; J. Hubbard, G. K.; Mrs. B. F. Lemmon, Ceres; Miss M. A. Lawry, F.; Mrs. Eva Hostetta, P.; Mrs. N. N. Strang, L. A. S.

WHEATLAND.—Frank Kirshner, M.; John Landis, O.; Mrs. L. Keyes, L.; Michael Horner, S.; A. Hollingshead, A. S.; Mrs. Mary Hammond, C.; Mrs. Lou Fraser, T.; I. W. Huffaker, Sec.; Hugh Morrison, G. K.; Mrs. L. W. Hamilton, P.; Mrs. C. K. Dam, F.; Mrs. P. Ostrom, Ceres; Miss Lizzie Oakley, L. A. S.; Miss Rosa Ostrom, Organizer (appointed).

NOTE.—The Secretaries of Granges are requested to forward reports of all election and other matters of interest relating to their Granges and the Order.

The Press Assists the Lecturer.

Bro. Mortimer Whitehead, Lecturer National Grange, in his annual report to that body, said:

None can doubt the good accomplished by our many good lecturers, and the grand service being performed by our Grange papers; but through them we can only reach a comparatively small portion of the great agricultural class. We must place the Grange and its work right at their firesides, in the local and other papers they already are taking. This will create an interest, a thirst for more knowledge, an inquiry for the “way,” then follows organization, a strengthening of our lines, and better support to our own Grange press. The lecturer’s voice does good, but to proceed, go with it, and follow after and complete the work, we must use the printed page, following the successful methods of business men, politicians, churches, and all great reforms that are making progress. I could almost wish that it was one of our laws that Patrons in each county of our Union should be required to furnish their local papers with a column or more of items each week, of Grange principles, its work and progress. That the papers will publish such items I have no longer doubts, since some of the oldest and largest journals of our country have this year asked to be regularly supplied with our literature. Let us devise ways and means for more concerted and extended effort in this direction.

Treatment of Tramps.

The Portland *Oregonian* of Dec. 28th has some plain suggestions about the tramp question, as follows:

Last evening Mr. Ira F. Powers visited the city jail at supper-time, to see if a couple of his strayed lambs had been perchance gathered into that fold. He was present when supper was served. A man went into the big cell with about a bushel of bread, which he placed under the table which surrounds one of the pillars. Hardly had he let go of it when a big tramp seized the basket and upset out all the bread on the table, and all hands grabbed for it. Some secured three or four pieces and some got none. Then a plate of a sort of Irish stew was served out to each, and a cup of coffee.

“It was too good a supper for them,” said Mr. Powers. “If the city will do as I want it to, build a place where these fellows can be kept apart from each other, and send them out to work on the streets, this city will soon get a bad name with this class, and we shall not have one tramp where we have a dozen now.”

“The tramps tell one another where the best jails are, and where they are best fed and least worked. I want the city to get as much notoriety as I have. Ask any of the tramp boys who come in here if they have heard of Ira Powers of the Boys’ and Girls’ Aid Society, and they will tell you they have, some in Salt Lake, others in San Francisco, Ogden, Missoula, Spokane Falls, Seattle, etc. By putting the boys in solitary

confinement, they soon come to terms and promise to behave.

“I have one in my store on trial now. He said he would do anything I wanted him to and mind what I told him if I would not send him to the jail, so I gave him a trial. Neither the men nor the boys care a snap for being sent to jail, if they are allowed to herd in a warm room, and are well fed and allowed to play cards, sing, and amuse themselves by teaching each other all the wickedness they know; but if confined in separate cells and made to work, they will take pains to keep out of jail. The city needs a new jail with plenty of small rooms where vagrants, tramps, etc., can be kept by themselves.”

The Legislature.

The California Legislature convenes at Sacramento on Monday next. The regular session is fixed for 60 days only. Any important bills which may be expected to be got through should be presented early. We have already called attention to the resolutions which the State Grange passed in favor of legislation as follows on the following subjects: County Assessment Blanks, Enforcement Railroad Taxes, To Regulate Appropriations for and Prevent Gambling at Agricultural Fairs, and Concerning Convict Labor.

The members proposing legislation on the above subjects and offering resolutions which were adopted at the last session of the State Grange have been requested to form bills to be presented to the Legislature. So far we have received no bills for proposed enactment. We are quite certain, however, that several are being prepared. We hope the authors of all the resolutions will show sufficient good faith and zeal to prepare, or cause to be prepared, suitable bills to carry out their opinions.

This Legislative Committee should soon meet, organize, and commence work in good earnest. Let every Patron and farmer acquainted with more or less members of the Legislature who are farmers, write and urge them to hold a meeting for conference in order to use their united strength for securing the enactment of all good bills coming before the Legislature. Also, form “a destroying alliance” for killing every evil proposition which may be laid before the Senate and Assembly.

We also urge all knowing or thinking of any information which may be of value to the above-named Legislative Committee, to communicate the same to them. Furnish the names of any members with whom you are acquainted that our Legislative Committee might likely prevail upon to co-operate with in endeavoring to effect wholesome legislation.

Frauds on Farmers.

Although we have from time to time warned our readers against ever giving their autographs to strangers, under whatever pretenses they may seek to obtain signatures, we believe it will be salutary for many to have the following, from one of our Eastern exchanges, brought to their notice:

I do not think the subject of frauds which a certain class of men are perpetrating on the farming community, should be dropped, and I think that every farmer who knows of any swindle should report it. There are a great many complex frauds. I use this term because their complexity makes them hard to understand until the farmer is hooked in for a considerable amount. Besides, the law upholds swindling to a certain extent. It doesn’t make any difference how a swindler gets his name, so he attaches a note of hand to it and puts it in the bank—the farmer has the note to pay. If the law would not uphold innocent purchasers, who buy notes of strangers, a great deal of this swindling would soon be stopped.

A few years ago, a well-to-do farmer close to Swits City, Ind., received a letter from some parties, making inquiries as to the country, its productiveness, soil, minerals, etc., a letter which almost any one would have answered, especially if he had his country’s good at heart. A short time after he had answered the letter he was informed that a note of \$700 was in one of the Indianapolis banks which had his signature. The farmer was terribly surprised, as he had no paper out. So he went up to the city and found the note with his name attached, which, he says, was his handwriting, or had so close resemblance that he did not try to deny it, but how did it get there was the question. A long litigation was the result, but the innocent purchaser prevailed, and the farmer had the note to pay.

About ten years ago one of these insinuating “daredevils” appeared in our county with his hay-fork. He swindled some 30 or 40 farmers to the amount in all of about \$10,000. The farmers clubbed together and hired a lawyer to defend them. The innocent purchaser found out where the swindler lived and sent for him to use him as a witness. When he appeared the farmers used some “mild persuasion,” when he admitted that he had swindled them. They had him arrested, and to-day he is reposing in the Illinois State prison.

This summer a man came to the directors of our school district. He said he was an agent of a school-furnishing house of Chicago and in-

troducing maps. The directors told him they did not wish to purchase anything in his line until they had consulted the people. After some conversation he proposed to call the directors of the district together, but said that he would like to have them give their names, showing their willingness to meet. The meeting was never called, and a few days ago the directors were informed that the firm had shipped them maps to the amount of \$43, as per order. The directors are terribly angry about it, and talk of litigation.

I will relate another trick that is being played on the unsuspecting farmer in different portions of the country. A man drives up to the farmer’s house, in a one-horse wagon with, perhaps, a half-dozen wagon-jacks, or some other worthless implement. He would be much obliged if the farmer would let them lie under his wagon-shed for a few days; his family is sick way up in Michigan, and he has been telegraphed for and has to go home. Of course, under the circumstances, the farmer grants him the privilege. So he stores the implements, gets in his wagon, and starts away. But after going some distance, he turns and comes back, and tells the farmer that he had forgotten to ask his name and postoffice, at the same time presents the farmer with a pencil and blank card. The unsuspecting man writes his name in full. The pencil is indelible. In a few days he is informed that there are a hundred or two wagon-jacks, shipped to him per order, and he cannot get out of it, as his name is genuine.

One more trick is being played extensively in the more rural districts of the West. A finely dressed gentleman presents himself at the mansion of one of the wealthiest farmers in the county, and informs the family that he is a colporteur of a certain church, which is always the same church that his intended victim holds to. His satchel, well filled with bibles, proclaims the truthfulness of his assertion. He informs them that if any one in the family has not a bible, he is authorized to present them one free. After discussing the topics of the church and weather, if it is in the middle of the day he asks for dinner; if in the evening, he asks to stay all night. After being accommodated, he asks his bill, which, generally, he is told is nothing, but the bible man insists that they receive something for the trouble he has caused the family, and states that the church pays his expenses. After explaining to the farmer how it is, the farmer takes his pay, after which the colporteur takes a little book out of his pocket and asks the farmer to sign his name and the amount of charge, stating at the same time that this would be a voucher upon which he can draw his expenses. The sequel to the whole is a note in the bank with the farmer’s name to it, which is genuine, and he has to pay the innocent banker from \$300 to \$500.

Now, brother farmers, these are but a few swindles that we as a tolerant class are subject to. We allow ourselves to be the victims of every blarneying agent, and bring upon ourselves such epithets as “green as a farmer,” “hay-seed,” and others. Now, I propose that our Legislatures pass an Act making a note of hand void, unless given in the presence of one or more witnesses, whose signature on the margin would be proof of its genuineness; that such witness shall not be anyway responsible for the payment of such note, but merely witness. Do not put your name to anything a stranger presents you.

DUES TO THE NATIONAL GRANGE.—The following shows the amount of National Grange dues paid by each State Grange during the year: Alabama, \$20; California, \$98.80; Connecticut, \$88.32; Georgia, \$43.60; Illinois, \$214.22; Indiana, \$127.49; Iowa, \$45.39; Kansas, \$84.84; Kentucky, \$29.34; Maine, \$651.82; Maryland, \$35.83; Massachusetts, \$264.37; Michigan, \$571.98; Minnesota, \$30.14; Mississippi, \$51.56; Missouri, \$182.60; Nebraska, \$31.89; New Hampshire, \$271.62; New Jersey, \$85.53; New York, \$817.71; North Carolina, \$76.85; Ohio, \$324.14; Oregon, \$106.90; Pennsylvania, \$515.45; South Carolina, \$28.57; Tennessee, \$12; Texas, \$358.15; Vermont, \$84.50; Virginia, \$35.45; West Virginia, \$54.05; Wisconsin, \$133.19; total, \$5476.30.

ROSEVILLE GRANGE will have its officers installed by Worthy Master Overhiser today. Worthy Lecturer Flint will probably be present at this meeting also. We hope there will be a goodly number of Patrons present. We should get a good report from this important post of the P. of H.

GOVERNMENT RECEIPTS AND EXPENDITURES. Gen. Rosecrans, Register of the Treasury, has favored us with a copy of his report to the Secretary for the fiscal year ending June 30, 1888—a volume of 203 octavo pages, mostly occupied with tabular financial statements. The Register’s Office was created to keep account of all receipts and expenditures of the Government, and its duties have grown larger and more complicated until 108 persons are now employed in their fulfillment.

DISAPPEARED.—Chas. F. Merle, president and manager of the California Bonemeal and Fertilizer Co., and agent for N. K. Fairbank & Co., a commission merchant who has lived in this city for 16 years, and was looked upon as a thorough business man, is missing since Dec. 21st.

Don't Marry a Man to Save Him.

A cry comes over from Oregon
For a carload—not of women wan,
But of women of blood and brain and brawn:
"Come, marry these men to save them!"

"There are thousands here in these haunts of sin
Spending their money in game and gin,
Corrupt without and corrupt within;
Come, marry these men to save them!"

"They have been somebody's pride and joy;
Somebody's petted and pampered boy;
Spoiled for the lack of a maiden coy;
Come, marry these men to save them!"

"You must be healthy, pure, and strong,
Able to breast and bear the wrong,
Willing to carry a burden along;
Come, marry these men to save them!"

"You must be leader, but always seem
To be gentle and helpless as love's young dream,
And leaned upon when you seem to lean;
Come, marry these men to save them!"

"You must be cleanly, and kind, and sweet,
Making a path for their godless feet,
Up to the grace of the mercy seat;
Come, marry these men to save them!"

O Woman! you're sold at a fearful price
If you wed your virtue to that of vice,
And trust your soul to a chance of device;
Don't marry a man to save him!

A life that is pure needs a pure one in turn,
A being to honor and not to spurn,
An equal love that shall constant burn;
Don't marry a man to save him!

A woman's life is a precious thing;
Her love is a rose unwithering;
Would you bury it deep in its early spring?
Don't marry a man to save him!

You can pray for his soul from morn till eve,
You can win the angels to bring reprieve
To his sin-bound heart; but you will grieve
If you marry a man to save him!

God gives to woman a right to press
Her claim to a man's best manliness;
A woman gives all, should a man give less?
Don't marry a man to save him!

—SARAH K. DUTTON.

Wives of America.

[Original—By M. W.]

I was sitting one day, not many weeks ago, at *table d'hôte* in one of the many charming little hotels which are everywhere to be found in Paris, listening to an animated discussion between an American and a French gentleman regarding the women of the two countries as wives—that is, the women of the middle classes. Of course the Frenchman upheld his own countrywomen and the French laws. He contended that the wives of France were more heroic in assisting their husbands in the dreary toil for a livelihood than the women of America, who, he said, had no higher ambition than to dress, look pretty, and flirt.

Before proceeding further, I must here explain some of the rules pertaining to marriage among the *bourgeois* class. It may not be generally known, but it is the fact nevertheless, that every girl who marries in France must have her "dot"—that is to say, she must have a certain sum of money to bring her husband, which is either put in his business or is used to provide a home for the mutual benefit of both. When a girl is "in the market" no one cares to ask, "Is she pretty? What is her age?" but "What is her dot?" This refers to both classes, for in any case money must be religiously piled in the scales with the daughter of the house in securing a husband.

But with the *bourgeois*, if the parents or relatives of the girl cannot give the amount, the godparents try to supply the deficiency. If this fails, the poor young woman has no alternative but to forego the matrimonial ties until she can by her own industry save up a sufficient sum worthy of being considered the necessary "dot." It may take years to accumulate it, and when it has been accomplished, the suitor, who has been waiting all this time, marries her in the most matter-of-fact way, and they at once start in business together, becoming partners more, perhaps, in a commercial point of view than in the more finer feelings. True, they go to their vocations together and at night return home side by side, and the work of the day becomes a common interest. What annoys or interests one affects the other. They talk over the business of the day together,

discourse on fortunate or unfortunate speculations while the husband eats his dinner with his "partner." In the evening he sits by the family hearth and reads the morning paper with the partner, and together they look over the household expenses with the neat white-capped maid. You see it is much cheaper to pay the price for a servant—a sort of maid-of-all-work—than for that of a clerk in the business; so for this reason Madame gives up all the pleasures of domestic home life for the purpose of enriching the coffers a trifle more.

To return to the dinner-table argument. My French friend concluded with: "No French girl goes to her husband in an impoverished condition. What becomes of the poor girls of America?"

Arriving at the conclusion that my opponent had gone too far in underrating my countrywomen, I said: "What becomes of them? They get the best husbands and protectors in the land. What do they bring their husbands? A true and happy heart, a yielding, loving nature, and a clinging confidence which makes eternal sunshine in the home circle. Flowers, though only to beautify, should grow beside the kitchen garden; and so with our lives. A respite from all thoughts of work is what man needs. This is what the American looks for in his gentle life-partner. Surely a man in time will weary of having only the companionship of his business associate, for there are sweeter ties than this. There are many hours in a man's life when he would fain fling aside for a brief while the cares and tumult of business and live over the poetry of his youth. Without this, existence would be a desert waste—a fever and a sad biting regret."

I had then in my mind the English poet who said:

"Tis sweet to hear the honest watch-dog's bark
Bay deep-mouthed welcome as we draw near home;

'Tis sweet to know there is an eye will mark
Our coming and look brighter when we come."

Is not this woman's sphere? Is it not one of the holiest missions on earth to spread gladness all around? For whom else does the wife decorate her home with pretty ribbons and sweetly scented blossoms? Whose taste and fancy does she consider when preparing the evening meal? For whom does she change her dress and don a better collar and a bit of lace but for the one whose home she is the center of attraction? How many little hands and faces are daily washed and tangled locks arranged because papa will soon come home? Surely women should strew life's pathway with roses wherever there is a manly heart to cheer or arm to protect. Yet I am very much afraid there are many wives who do not make their homes as attractive as they might for the man who labors and battles with the world all day, yet sighing for the kiss of welcome which never comes.

Is it a marvel, then, that such a man will wander to the club-house, the wine-room and other objectionable places, and over a game of cards or a glass of grog seek the pleasure of forgetfulness? To make home pleasant surely is woman's sphere. Let the husband feel there is no place on earth like home. Let it not be simply a dwelling where he can eat and sleep, but home in the fullest sense of the term, where the very atmosphere breathes of sweet accord and thoughts sublime. To be the queen of his heart and home and seek no other throne, should be the highest aim of the truly perfect woman.

After an extended European tour, where I saw women assisting in taking canal-boats up the Crinan and Caledonian canal, in Scotland, harnessed to wagons in Italy, assisting in Germany to build houses by carrying bricks up steep ladders, eking out a living by begging in the streets of London, and running hotels, butcher-shops and all other lines of business in France, I have a higher opinion—a veneration I should say—for the men of America than I ever had before; men who are willing to take our young girls who have no "dot" to bring with them, and who think only of making home happy for those who are willing to labor for them.

ON THE BIRTH OF A SON.—The editor of the *Napa Register* thus notices an est. con's. arrival at the estate of paternity: We congratulate our neighbor of the *Reporter* on his afternoon edition. Believe us when we tell you that a boy is a handy thing to have about the house. While very young he serves in place of an alarm clock and keeps his male parent running on schedule time, like a restaurant, at all hours of the day and night. Later he performs whatever mischief there is to be done on the premises and does it in much better form than the neighbors' chickens. The dirt necessary for his comfort need not be hauled and paid for at 50 cents a load; he'll find it if he has to wade through mud up to his knees and go across lots on stilts to the other end of town after it. As to clothes, he doesn't mind much whether he has any or not. It is only when

he first falls in love that he will care to observe cleanliness or wear a "boiled shirt." Because of him the "devil" in the office will get a rest, for you'll have a smaller one at home to scold. And then to think of his future, the fond hopes to be realized, the ladder you rear for him to climb as you say to yourself and friends, "I'll make an editor outen o' him." Oh, we've been there. We know how "stuck-up" you feel; hence this tribute and with it again our sincerest congratulations.

Women in Council.

The following circular is being sent all over the country by Miss Frances E. Willard, who is well known on this coast:

Miss Frances E. Willard of Evanston, Ill., president, and Mrs. May Wright Sewell of Indianapolis, Ind., corresponding secretary of the National Council that was organized in Washington, D. C., as the outcome of the great council of women held there last spring, are laying the foundations of a new and mighty work. Its purpose is to secure in every leading city and town of the United States a "Women's Council," made up of the presidents of all societies of women, having a headquarters of its own, with an office secretary, and entering unitedly upon such lines of work as all the women can agree upon. It is believed that such a plan of interaction combined with the organic independence of each society, will do away with the overlapping of plans that now lead to much waste of time and energy.

Also that it will broaden the horizon of every woman who belongs to an organized society of women, and tend to larger mutual toleration between guilds heretofore separate and to a great degree non-sympathetic. As an illustration of the practical working of the plan it may be stated that such a council of women could readily arrange for petitions from all societies of women in any given town or city asking that women should be placed upon the School Board, upon the different boards intrusted with the care of public institutions for the care of the defective, delinquent and dependent classes; asking for the admission of women to local, county, State and national organizations, such as press associations, medical associations, ecclesiastical associations, etc.; asking that the doors of such schools and colleges as are not yet open to women might be thrown wide open for their admission; asking for better protection for the home and heavier penalties for all crimes against women and girls.

Women could use their influence to secure for girls in the public schools better opportunities for physical culture, and the enforcement of the new laws for instruction in hygiene. They could also help to engraft the kindergarten system on the public schools. They could do much for the protection of shop-girls, in furnishing them better conditions of living by securing local ordinances requiring the best sanitary conditions; limiting the number in one room, and in every way ameliorating the present situation, while using their utmost influence to increase the wages of this class of workers.

It will be readily seen that greatly added force will come from any such movement, whether local, State or national, when it is backed up by the united societies of the locality, State or nation, and that with a small expenditure of money and time all these societies, while carrying on separately their own separate work for which they were organized, may yet do an immense work for womanhood at large along the lines on which all can agree to unite in sympathy, influence and effort. To carry out such plans and on so large a scale will require time, but there is every reason to believe from the experience and success of the women who have taken up this work that they will persist in a quiet but intelligent endeavor, having in view the ends herein stated until success shall crown their great but altogether practicable movement.

HABITUAL GOODNESS.—It seems to be a common failing among good men who undertake to improve bad men that they consider their work ended when the bad men give expression to virtuous sentiments. But it is the steady, unwavering, unquestioning obedience to law that is the best proof of a man's fitness for a responsible position; and this attitude is not acquired suddenly and impulsively, but is the result of long and severe training. Erratic display of kindly and honest feelings does not demonstrate beyond peradventure that a man is a good man, but the persistent adherence to a right course is the best evidence of such a condition. An engine that runs 40 miles an hour and keeps on the track all the time is much to be preferred to an engine that runs 60 miles, but is liable to run off the track. Most of the goodness in this world is, indeed, only a matter of habit. Men act largely on instincts; and these instincts, whether honest or dishonest, are the result of the habit of themselves or their ancestors. By far the larger part of the average man's actions are based on habit. A very little effort will start us rightly, and from the performance of little duties we obtain the moral momentum to carry through successfully great and noble plans. Practice makes perfect in the moral and mental as well as in the physical world, and lack of practice results in debilitation and death.—*The Summary.*

Affirm the Good.

As the Mohammedan thrice daily calls to Allah, as the devout Catholic never fails to repeat the prayers of his rosary at stated times, so he that believes in universal, omnipresent Good should never fail in making the affirmation: "All is Good."

It is a proven law that affirming the good and holding to the thought with steadfastness and intensity verily brings the good. The spoken word, the uttered thought, has power to make the principle of good manifest in our lives.

In the real and the true life—the life of the spirit—we have learned there is only good, and the great discovery that has been made in law of spirit is that declaring good makes it manifest, makes it possible that no evil, no sin, sickness or sorrow shall come to him who thus declares it. How is this? The Good is ever present and we have only to command it to receive it. The good is for all—not a select few who can teach or write upon abstruse subjects, but for the simple as well as for the great. Each individual has the ability to prove it.

"All is Good." No more magic sentence was ever uttered! In these words is the beginning and ending of spiritual science, is the sum and substance of all that is written or spoken upon the subject. The fervid utterance of these words brings relief to the suffering, peace to the sorrowing and right-living to the erring. Affirm the good, morning, noon and night, carry the thought at all times in your heart, and lo! as if by magic the good is yours. Pains are forgotten; envy, jealousy and strife are blotted out; and in their place is peace of mind, ease of body, besides ability to accomplish allotted work.

People have long been taught to wait upon the will of God for His blessing and think it is sacrilege to believe that the blessing is to be had by the affirmation, by the word of command. Are we not a thought of God? Are we not one with the Spirit of the universe which is ever present? Then have we not a right to demand that God—the Good that is in us—shall show forth states of happiness and efficiency?

Some come into the knowledge and understanding of the good more speedily by denying the power of evil. They do this by repeating over and over again: "there is no evil." By this is meant that to them there is no power in evil. Evil is only a negative of good and holds the same relation to it that darkness does to light, or cold to heat. The power and effect of evil or error can be erased by holding to the thought, "there is no evil." Persons have been known to attain to great spiritual growth and efficiency by steadfastly giving utterance to the thought, "there is no evil."

Evidently this is only another road to spiritual unfolding and the knowledge that all is good. To most people the negation is not so potent in development of character in resistance to sin and sickness as in the affirmation that "all is good." Before this avowal, the petty annoyances of life disappear; the invalid forgets his pains; the fretful child becomes a constant joy, and the discouragements in daily life vanish as a dream. The good, the real, becomes manifest. Before this affirmation, too, the monster fear flees forever. Fear of climate, fear of malaria, fear of poisoned food, fear of foes, of failures and accidents all dissolve as vapor does before the sun. All is good to the real spiritual self, which being at one with the Spirit of the world can experience no evil. Blessed joy to all who suffer, that believing and affirming the same brings the realization! To them there is no more sin, sickness or sorrow. All is good.—*Alice B. Stockham in Woman's World.*

HAVE YOU A BOY TO SPARE?—"The saloon must have boys, or it must shut up shop. Can't you furnish it one? It is a great factory, and unless it can get about 2,000,000 boys from each generation for raw material, some of these factories must close out and its operatives must be thrown on a cold world, and the public revenue will dwindle. 'Wanted—2,000,000 boys!' is the notice. One family out of every five must contribute a boy to keep up the supply. Will you help? Which of your boys will it be? The minotaur of Crete had to have a trireme full of fair maidens each year; but the minotaur of America demands a city-full of boys each year. Are you a father? Have you given your share to keep up the supply for this great public institution that is helping to pay your taxes and kindly electing public officials for you? Have you contributed a boy? If not, some other family has had to give more than its share. Are you not selfish, voting to keep the saloon open to grind up boys, and then doing nothing to keep up the supply?"

A NEW TOBACCO DISEASE.—A Constantinople journal states that the cultivation of tobacco is in danger of a disease hitherto unknown. The malady has appeared in Greece, in some plantations of the Phiotide. The plants, appearing very healthy during the day, bend suddenly at night to the earth and the next day are dead.

A WALKING DAIRY.—Grass Valley has a walking dairy. A Chinese drives a cow from house to house and milks his customers' orders in plain sight. They get their milk straight and John gets the coin for each order.

Down Into the Dust.

Is it worth while that we jostle a brother
Bearing his load on the rough road of life?
Is it worth while that we jeer at each other
In the blackness of heart? that we war to the
knife?

God pity us all in our pitiful strife.

God pity us all as we jostle each other;
God pardon us all for the triumph we feel
When a fellow goes down 'neath his load on
that heather

Pierced to the heart; words are keener than
steel,

And mightier far for woe or for weal.

Were it not well, in this brief little journey
On over the isthmus, down into the tide,
We give him a fish instead of a serpent,
Ere folding the bands to be and abide
Forever and aye in the dust by his side.

Look at the roses saluting each other,
Look at the herds all at peace on the plain—
Man and man only makes war on his brother,
And laughs in his heart at his peril and pain;
Shamed by the beasts that go down on the
plain.

Is it worth while that we battle to humble
Some poor fellow-soldier down into the dust?
God pity us all! Time oft soon will tumble
All of us together like leaves in a gust,
Humbled indeed down into the dust.

JOAQUIN MILLER.

Betting.

In a sermon on "Pledges and Promises" Rev.
J. Kirkpatrick of Philadelphia made the follow-
ing remarks in regard to the practice of betting:

"There can be no question as to the immor-
ality of the practice, and it is certain that it
affects injuriously the happiness and the pros-
pects of many homes. Many stake their all
upon a contingency about some comparative
trifle without pausing a moment to reflect upon
the serious loss and possible ruin it may entail.
"The recent Presidential election has called
forth this evil spirit to a remarkable extent.
One may be disposed to laugh at the absurdity
of the situation when one neighbor is seen
wheeling another around the square in a push-
cart, or when a minister of the gospel conde-
scends to take orders for a given time for sew-
ing machines in order to meet liabilities incur-
red under the inexorable law of a game of
chance; but it is pitiable to see the more terri-
ble consequences to morality and human hap-
piness when the stakes are heavier and when
success on the one side means disaster on the
other. " * Indeed, in more than one case
the results have been so shocking at this time
that rather than contemplate their inability to
pay, or look upon the needless ruin brought to
wife and family by their folly, persons have
taken their own lives.

"The betting man is a gambler, and he is a
coward at heart. He has neither the courage
nor honesty to acquire money by lawful means,
and flatters himself that he may make it dis-
honestly, and upon the plea of honor he de-
mands the fulfillment of the pledge even at the
risk of another's ruin. No Christian can con-
scientiously give or take a pledge under circum-
stances like these. If the cause we seek to
serve is good we cannot help it by such cor-
rupting influences, and the destiny of one's
country, represented by the party in power,
ought to be so sacred as to place it beyond the
reach of such miserable and mischievous
trifling. In the spirit of faith and prayer we
should look for the fulfillment of God's
promises to our beloved country—that those
who are providentially raised to power may
rule in the fear of God, and that as a united
people we may grow and prosper."

American, Though Naturalized.

A tourist in San Diego county tells in the
Cleveland Leader and Herald the following
anecdote, whose lesson many a native American
may well take to heart:

It was Election day when Alpine, a small set-
tlement up in the mountains, was reached. In
a little schoolhouse an Election Board was dili-
gently serving its country, and the handful of
voters who lived in the precinct were gathered
about the building, apparently disposed to make
a holiday of the event.

During the course of the balloting, which, in
that sparsely settled country, dragged lazily
along, a German approached the table and es-
sayed to cast his vote.

"Where do you live?" asked the clerk. The
man named some place, and casually remarked
that he had walked six miles that morning.
"You don't live in this district; you vote in
Descanso," said the clerk.

"Descanso!" exclaimed the German, "Vere
is dot?" The clerk told him it was 14 miles
from Alpine, and then pointed out the road he
must take to reach it. "Vell, I must get away
purty gwick den if I walk dot far," he said, and
started off in the direction of Descanso.

There was an example of pure patriotism
worth coming to California to see. All that the
people of Alpine knew about the German was
that he had just taken up a sheep ranch back
in the valley.

LITTLE BOY: "Pa, what does phenomenal
mean?" Father: "It is a word used by the
citizens of Illinois, Iowa, Kansas, and Nebras-
ka when they refer to the growth of their re-
spective towns. It doesn't mean much."

YOUNG FOLKS' COLUMN.

The Coral Cavern.

[Written for the RURAL PRESS by DAGMAR MARIAGER.]

"I had a dream which was not all a dream."

My friend Rover and I had been out in the
country hunting. Yet we had not been hunt-
ing, or if we had, then it had been a weapon-
less hunt, and one without harmful intent.
True, we both had our teeth and nails, more or
less concealed weapons; but we were not
savages. We did not want to kill anything
and thereby have our names flying as those of
a pair of bloodthirsty creatures. No, no!
Rover and I had no taste for fame, at least
not when gotten in that way. We had not
been out for a week or two, and we simply
wanted a few hours' tramp in the open
country to stretch our limbs in the freer air,
and enjoy anything that might be enjoyable
by the way.

And we came home tired. I had probably
covered ten miles. Rover had circled and
doubled on his own tracks, as dogs will when
going anywhere. Had he sported a distance-
measuring machine he would probably have re-
corded thirty miles as his forenoon's work.
However, we had returned, and we felt in a
mood to rest. I on my lounge and Rover on his
rug beside me.

I did not think of Rover any more. I slept
well, and I dreamed a most wonderful dream.
I was wandering all alone in an enchanted
forest and I saw a most grotesque spectacle. I
came to the steep face of a hill, its curvatures
smoothly molded. Over it grew a tan colored
rushy growth, much resembling a wind-swept
field of over-ripe grass. This one species of
vegetation covered all the hillside, except two
places, from which something shone clear and
bright 'neath the overhanging brush. These
places were about half-way between the base of
the hill and its summit. They were separated
from each other by a broad ridge. Entranced,
I gazed upon their liquid splendor. Closer ob-
servation showed them to be convex, and each
resting on an almond-shaped pedestal of al-
baster. They were alike, semi-transparent, and
consisted of many wonderfully colored rings,
one within another, mottled and ever-changing,
while the round well like centers were black as
jet, and seemed continually swelling and shrink-
ing with irregular measure.

Awestruck, I stood at the base of the hill,
with my gaze fixed upon these two wonders.
What were they? I vainly asked myself. Who
built them? How was such perfect work, such
perfect polish, accomplished? And for what
purpose were they put there? They seemed
like mammoth jewels of some unknown and
precious kind. Each one was slightly sunken
in its respective territory amid the shaggy
yellow growth; and on the summit of the hill
above each of them stood a scroiled watch-
tower, sugar-loaf shaped, and overgrown with
dwarfed vegetation of the same kind that cov-
ered the hillside.

With the force of my will-power I withdrew
my gaze from the two colossal gems that so
strangely fascinated me, and near by I discov-
ered two dark caverns, side by side. These
were in the sharp terminus of the high ridge
running down from above, and they were divided
by a massive wall. My instinct told me they
were the portals to a habitation within. Their
thresholds and casements were not grass grown,
and the walls within were smooth, while their
formations were awkwardly tilting and unsys-
tematic.

The seemingly fixed base of the hill now sud-
denly rose up until it covered all but the two
sentinels aloft. The jewels were gone; in their
place was a marvelous pink coral cavern of
enormous proportions. Its roof was wonder-
fully frescoed as far back as the eye could
reach. The walls, floors and frescoes were all
of the same rich pink, and polished, excepting
the floor, which was honeycombed. I soon saw
that the coral floor was but a sliding platform.
As I gazed in wonder at the interior, this plat-
form slid toward me, between two walls of al-
baster monuments. The movement, I thought,
contained an invitation to me to mount and en-
ter. As the platform came still nearer me I
was surprised by seeing it coil upward at its
thin rounded edge. I stepped forward to en-
ter, but too late without some muscular exer-
tion. I earnestly desired to enter the cavern,
with a view to exploring far, far away where it
seemed to dip and branch off into the spacious
bowels of the earth. The coiling of the plat-
form only intensified the glory of the entire
scene. This effect in turn enhanced my desire.
I would not be baffled. My eagerness took the
place of amazement, and it grew more intense
with every second. The curling edge was al-
most beyond my reach. I made a dash and
snatched determinedly at it, feeling that I was
athletic enough to mount to it, could I but
catch hold of its retreating rim, though it was
risen to the level of my hat. Again I snatched
at it, but in vain. The thing of beauty evaded
me, though yet within easy reach. It then
waved over me majestically and re-entered the
cavern, which closed from above.

I was dumbfounded, and I opened my eyes
wider that nothing should escape my vision.
Then I saw my closed cave, hill, jewels, towers,
and all walk off on all fours in a spirit of indig-
nation. And I saw still more. Yes, I saw

Rover's body and tail attached to it all, as it
disappeared through the open doorway.

Poor Rover! I would not have insulted him
had I been awake. Nor would I have attempt-
ed to walk down his open throat because he had
the vulgarity to yawn in my face.
Santa Barbara.

The Lost Ring.

"Please tell me a story, auntie," said little
Ethel, one stormy afternoon.

"If this weather continues, my stock of
stories will soon be used up," said Ethel's
pretty young aunt, but she laid her book aside
just the same, and sat down by the little girl
and began: "When I was six years old, my
Uncle George brought me from Boston the
prettiest present you can imagine. It was in a
little white box. Can you guess what it was?"

"A muff," said Ethel, who had a new one.

"No; something very small."

"A little watch."

"Smaller than that."

But Ethel could not guess until auntie said:

"Something to wear on one's finger."

"Oh, I know—a ring."

"Yes, a lovely little ring, set with two
rubies and a pearl," said auntie. "I was so
pleased and so careful of it that they let me
wear it all the time, although it was an expen-
sive ring and did not fit very tightly."

"I had two playmates whom I loved very
dearly, a black and white kitten called Spot,
and a half-grown chicken named Peter."

"When Peter was little his mother used to
peck at him and drive him away from her, un-
til at length I took pity on him and cared for
him myself. He was very grateful, and would
follow me everywhere. I asked Sister Annie
to find a good name for him, and she said
'Peeper' would be a perfect fit, but I thought
'Peter' sounded better, and chose that instead.
He learned to know his name, and would come
whenever I called him. I felt sure he and
Spot understood everything I said, and I used
to talk to them as other girls do to dollies. I
did not like dollies. They couldn't run about
with me like my pets."

"One day after I had been playing hide-and-
seek among the haycocks with Spot and Peter
all the morning, I came in to dinner and found,
when I was washing my hands, that my dear
little ring was gone. How I cried! The
whole family helped me look for it, father and
mother and all, but it was of no use. The ring
was nowhere to be found."

"I felt so badly that I couldn't play at all that
afternoon. Peter seemed to sympathize with
me, I thought, but Spot was as frolicsome as
ever. I sat down on the doorstep in the after-
noon, almost heart-broken, and said: 'O
Peter! won't you and Spot help me find my
ring? You know I would do anything I could
to please you.'"

"Spot only climbed the wooden piazza posts
in reply, but Peter looked carefully about,
turning his head first one side and then the
other, and began to scratch among some loose
straws that were lying scattered about, and
what do you think! There was the ring be-
neath them."

"I ran to mother with it, so happy I could
hardly speak, and then I ran back to Peter and
hugged and kissed him more than he liked, I
am afraid. Afterward I made him a nice dish
of Indian-meal dough, with plenty of corn
sprinkled in it, like plums, as I could think of
nothing he would like better, and he seemed
very much pleased with it. I thought Spot
seemed a little jealous, but I wasn't quite sure."

"Thank you, auntie," said Ethel, and then
she ran off to play at being auntie herself, and
she acted the whole story very nicely, with the
old cat for Spot and the baby's rubber chicken
for Peter.

GOOD HEALTH.

MEDICAL HYPOCHONDRIACS.—The common
people are not the only ones who become hy-
pochondriacs. There are many practitioners
in good standing who give way to the same
phantasy. The *St. Louis Globe-Democrat*
says: So many people are hypochondriacs that
a physician expects to find one-third of his pa-
tients laboring under imaginary ills. It is easy
for people to exaggerate symptoms, and, by
giving themselves into the hands of quacks, be-
come confirmed victims of ill health. What is
not at all unusual is to find physicians who have
become thoroughly hyped. Many of them
with great reputations and very large practice
and capable of diagnosing any case become
cranks concerning their own health. They ex-
aggerate the slightest symptoms into dangerous
cases and believe they have chronic troubles
when they would know that, in a patient,
it would be but a slight indisposition. Most
physicians are not competent to treat them-
selves, and many of them are confirmed hy-
pochondriacs. Medical students begin early to
imagine themselves afflicted with the various
diseases they are studying. I remember I had
a room-mate who became thoroughly hyped
after entering the course. One day he caught
a cold, and that night suddenly informed me
he believed he was going to die, as he was
certain that he was afflicted with a new ma-
lignant fever which we had been studying that
day. I went immediately for one of the pro-
fessors, and he not being in, I had another come.
The second understood the case at once and
gave my friend some simple remedy, and later

the first came, and he, wishing to give the
young man a lesson, had me administer a liberal
dose of ipecac. This made him very sick, but
cured him of the malignant fever.

A MECHANICAL CURE FOR HICCOUGH.—Pro-
cure a glass of water and pour a little of it
down the patient's throat. While he is drink-
ing the water he should press a finger on the
orifice of each ear. By this method you open
the glottis, and in five seconds the thing is
done. Should you by any chance meet with an
obstinate case, you may rest assured that the
throat and ears were not closed at one and the
same time; either the water was swallowed be-
fore the ears were thoroughly stopped, or the
water was not sufficient to fill the throat.
Another precaution is to keep the chin well up.
This cure was obtained by the writer from an
old Indian medical officer who had experimented
for some years to discover a method of relieving
the terrible stage of hiccoughing in yellow
fever, and this cure was the outcome.—*Phar-
maceutical Journal*.

EFFECT OF THE IMAGINATION IN SICKNESS.—
An instance has just occurred in Brooklyn,
New York, to show the strong influence which
the imagination has over a weak and sensitive
mind. Jacob Hertline was bitten by a dog
which he supposed had hydrophobia. He died
of fright and nervousness, a medical examina-
tion proving there were no rabies in his case.

GUM-CHEWERS should take warning from the
fate of a Newton, Conn., girl, aged 16. A piece
of gum slipped down her throat, and, lodging
at the entrance to the stomach, caused a fatal
ulceration.

DOMESTIC ECONOMY

Washing Dishes.

I know a fair maid with laughing eyes,
Where a mingling of mischief and kindness lies.
Her form is supple and gracefully neat,
And she trips about upon restless feet;
She can sing divinely—converse with ease,
With a presence as pure as a summer breeze—
And endowed beyond bound of human wishes
She's bewitchingly sweet when washing dishes.

With a cheerful air and a smiling haste,
She ties a big apron around her waist;
And I notice, as slyly glancing up,
How she deftly handles each shining cup,
Placing them carefully side by side,
Where she views them all with dimpled pride;
Softly humming a lively measure,
Tapping the time with childish pleasure.

Then pursues her task demurely sedate,
Taking in turn each china plate;
And so busily passing to and fro,
Until they are laid just where they should go—
For though she embroiders with taste and skill,
Can faultlessly glide through the gay quadrille—
We admire her more when she grants our wishes
And allows us to watch her washing dishes.

—Good Housekeeping.

APPLE BUTTER.—To 40 gallons of good, sweet
cider, made from sound, ripe apples, use three
bushels of select apples. The cider should be
boiled down to one-third or a little less before
putting in the apples, which should be pared
clean, all specks, bruises, seeds and seed cav-
ities removed. They may be quartered or cut
into eighths if very large. If in a hurry, the
apples can be boiled in a little water before
putting into the cider. Stirring should com-
mence as soon as the fruit gets soft, and be
kept up carefully until done. At all times pre-
vent the flames of fire striking the kettle above
the line of contents. When boiled down to
ten gallons it will be done, and it will be an
article fit for a king. Put in earthen vessels,
and, when cold, dip clean white paper into
good whisky or brandy, and lay it over the
tops. In four months from making, if kept in
a garret (the best place), the jars can be in-
verted on a floor or shelf without running out;
will keep for years, and if made with the right
kind of apples, such as Rambo and Smokehouse,
or Bellflower, will become as smooth as cheese.

APPLE OMELET.—Pare, core and stew six
large, tart apples as for sauce; beat them very
smooth while hot, adding one tablespoon of
butter, six tablespoons of white sugar, nutmeg
to taste, and one teaspoon of rosewater; when
quite cold, add three eggs, beaten separately
very light, putting in the whites last; pour into
a deep pudding dish, previously warmed and
well buttered. Bake in a moderate oven until
it is delicately browned. Eat warm, not hot.

GELATINE PUDDING.—Make a custard with
the yolks of four eggs, one pint of milk and
sugar to taste; soak one-third of a box of
gelatine in a little cold water, then dissolve it
in three-fourths of a cup of hot water, add this
and the whites of four eggs well beaten to the
cold custard. Pour into a mold and serve cold.

BEAN SOUP.—Soak one quart of beans over
night. In the morning add one quart of cold
water, and set where it will keep warm one
hour; add two chopped onions and one pound of
salt pork. Cook until the beans are tender;
strain and season.

COTTAGE PUDDING.—One egg, one table-
spoonful of melted butter, one-half cup of milk,
one-half cup of sugar, one-half of a teaspoonful
of soda, one teaspoonful of cream of tartar,
flour enough to make a cake batter.

The Week.

The old year closed triumphantly and the new begins hopefully. Our annual review of California's productive achievements, which we hope to have in readiness for our next issue, will show how great in actual industrial outcome the good year with the triple eight has been. The new year is one of the greatest promise. The sun is the brighter for having his looks combed and his face brushed by the passing moon, and will nobly do his part in inviting unsurpassed growth from the thoroughly moistened earth. Our gain in acreage of all crops, and of feed on all pastures, bide fair to make

wealth and comfort for our enlarged population, which the figure experts put at 1,400,000, with a chance that the census-takers of 1890 will enroll two names for every one recorded a decade ago. It is certainly a wonderful era for California, but no item of real growth and progress at all oversteps the great merit of our commonwealth—an inheritance which makes life worth living, and at the same time prolongs life for its enjoyment. God bless California!

The Solar Eclipse.

The total solar eclipse which occurred on the 1st of January has been looked forward to by astronomers for many months, and elaborate preparations were made by a number of parties and individual observers. Aside from the residents of this State who observed the phenomenon, a number of parties from the East, fully equipped with optical appliances and instruments, came to California and Nevada and selected stations on the line of totality. The results received do not thus far give very many details, but they are of a character to show that the observations made were generally successful and that clear weather prevailed. At this eclipse the main features observed by most of the parties were those connected with the corona, less attention being given to times of contact than has usually been the case, and drawings and photographs of the corona have been made in great numbers. It is probable that never before were so many photographs made of a similar astronomical event. One of the parties in the field alone made 164 negatives. Arrangements were made and carefully carried out whereby different periods of exposure of the plates were given from half a second up to 40 seconds. It is hoped by these means to obtain several good images giving exact representations of this strange phenomenon, as yet so little understood.

Even as seen through the naked eye, the corona is a wonderful sight; as seen through a telescope, it is a very complicated structure. The inner corona or photosphere is usually composed of bright filaments separated by darker bands, and some of these are sometimes seen almost black. The appearances are very irregular, and often it appears as if the inner corona is made up of flashes of light on a darker background. It was formerly doubtful if the corona was not the atmosphere of the sun or moon, but 20 years ago experience proved that the red prominences belonged to the sun, and that, though covered by the moon, they remained attached to the sun. The corona has also since been shown to be a solar appendage.

To one of the parties in the field, that of Cloverdale, several of the representatives of the RURAL PRESS were attached. An opportunity was given of examining and comparing about 40 drawings of the corona made by independent observers, who had not as yet compared notes. There is a striking similarity in all these drawings. With this party there were none who observed much color aside from that of a pale, cold, steely blue, the streamers fading away with lighter tinges from the edge.

It was noticed that the darkness during the period of totality was not so intense as was expected. It was sufficient, however, to have an effect on animals, the chickens retiring to roost and the cattle and horses showing signs of disquiet. In those parts of the country where there were Indians, these people attributed the darkness to some supernatural agency.

The fear that some had expressed that the month of January would prove a bad time to examine an eclipse in California was found to be wrong; scarcely any of the parties reported other than favorable weather. Even close to the coast, where fog might have been expected, there was none to interfere with observations.

The scientific results of this eclipse will not be known in full until the negatives made by the photographers are all developed and compared. It is hoped on this occasion results have been accomplished which will serve as a basis for more accurate observations in the future. This is particularly the case in connection with photography. More negatives were taken of this than in any previous eclipse, and as their time of exposure has been recorded, on another occasion of a similar kind the work can be carried on more accurately by reason of the knowledge of the exact time of exposure.

A number of excursion trains were run from

this city to points on the line of totality, and advantage was taken of this by large numbers of people to visit favorable points for observation. Those along the lines of partial obscuration were also awake to the event, and the hill-tops around the bay of San Francisco were seized upon as vantage-ground by those who were not able to visit the belt of the totality. The phenomenon was quite as impressive as popular descriptions promised, and all observers were awed by its majesty as well as satisfied with human knowledge which could predict with such accuracy an event of such remote occurrence.

Foreign Varieties of the Olive.

We give on our first page this week a collection of olive twigs representing a number of foreign varieties which are most talked about in this State. The figures will be examined with much interest by our olive-growing readers, because they represent the foreign varieties as actually fruited in this State, and are not reproduced from European engravings. Much credit is due to B. M. Lelong, Secretary of the State Board of Horticulture, for the energy and interest he is showing in securing and publishing information on the olive, a fruit which is now exciting such wide interest in this State. Our engravings are reproduced from Mr. Lelong's latest pamphlet, which is now ready for distribution and can be had free by addressing the office of the State Board of Horticulture, 220 Sutter St., S. F.

This pamphlet contains other varieties than those we show this week, which we may present later, also figures representing methods of budding and grafting, operations which are of especial interest now that many will wish to change their varieties to others which they may think more desirable. The descriptions of varieties given by Mr. Lelong are based upon a recent authoritative French publication, and full lists of synonyms are also given. In the notes which we prepare for the general reader, we take only the most striking features, with allusion to the growers of the different sorts in this State.

Probably the greatest interest will pertain to the contrast between the Redding Picholine, now so widely distributed in this State, and the Picholine of the French. It is clear that the variety we are growing is neither the Picholine nor of the Picholine type. What it really is, is a mystery, but it may prove of value, and if not so in itself it is undoubtedly a good stock for working on other sorts. The value of our Picholine for oil will probably be fully demonstrated this winter.

A famous variety is the Lucques, which is now fruiting on the grounds of C. A. Wetmore at Livermore. It is grown in large quantities in France in regions where the growth of olives for the table forms a special industry. It is usually given good, deep soil, and though it does not seem to produce hearty, this is compensated for by its beauty and high quality for pickling.

The Manzanillo is a large fruit, of irregular, globular shape, as shown. The tree is now fruiting at the places of Juan Gallegos, Mission San Jose; Geo. E. Ladd, Atwater; Dr. J. M. Stewart, Santa Cruz, and on the grounds of the California Nursery Company at Niles; also at San Jose and Santa Barbara. This variety is widely distributed, as hundreds of trees have been sent out in small lots by the State University.

The Pendulina is a handsome tree and good bearer, as has been shown by its growth at Livermore, Santa Cruz, San Jose, Niles and Mission San Jose. It is said to be good both for oil and for pickling.

The Pendoulier is the variety which has been mentioned in the RURAL as fruiting on the farm of Albert Montpellier at Vacaville, and as ripening as early as the first of October in that early part of the State. On Mr. Rixford's place in Sonoma valley it ripens in November. At Atwater, Merced county, it ripens about the same time as at Vacaville. It has an excellent foreign record, the fruit being large, as shown, and the tree of a vigorous growth and beautiful weeping habit.

The Verdale in France is a dwarf tree and bears a table olive. It is very popular in Languedoc. It ripens very early. The fruit seems especially desirable for pickling green. It is rather sensitive to cold. The Verdale is fruiting in several parts of this State. At Saratoga

it is bearing on very steep sidehills, so steep that they can hardly be cultivated. The trees bore a full crop this year.

The last variety we show this week is the Columella, which Mr. Lelong considers a most valuable acquisition because of its productiveness and superior quality of fruit; the weight of the fruit brings the branches to the ground. The fruit is of a clear yellow color before maturity and makes a very handsome pickle. It is now growing in Livermore, San Jose, Niles and Saratoga.

The larger part of the olive varieties portrayed by Mr. Lelong were obtained from Mr. Rock's importations of trees, of which mention has been made from time to time in the RURAL.

QUERIES AND REPLIES.

Cow With Jaw-Swelling.

EDITORS PRESS:—Will some kind reader of the RURAL PRESS please state whether he has had any experience where a cow has a large lump or swelling on the under jaw—on the jaw-bone, and what it is? Also the cause, and what is best to do for it? I have a Jersey cow on my ranch so affected, and as she is a pet, am very much worried about it. She does not seem to mind it, nor does it seem to be sore, but it is growing larger. I will be very grateful to any one who will kindly answer my questions in regard to this matter.—READER, San Jacinto.

EDITORS PRESS:—It is a very difficult matter to diagnose the above disease positively without examination, as there are so many diseases, the symptoms of which are swellings on different parts of the body. It is very probable that the disease may be actinomycosis; this disorder is caused by a fungus of the genus actinomyces, which is found in man, ox and pig. It is very probable that this disease is communicable by contagion and infection through any pores or natural orifices of the body. Spontaneous cure as a result of abscess is occasionally seen in the lower animals, but, as a rule, surgical extirpation of the tumor is absolutely necessary. In man, actinomycosis tends to deep abscesses and extensive necrosis of tissue with formation of fistula, and it frequently proves fatal through pyæmia resulting.

There is also another swelling under the jaw, rather common in cattle, especially in some parts of the country, called wens or clyers, this disease especially affecting those parts which have lymphatic glands situated in them. They increase in size slowly, as a rule, but may manifest a first acute stage, which changes to a phase of less activity. The tumor may also undergo a classification and thus remain in statu quo for a long time.

The treatment I find best is the application of acid-sulphuric—with friction to the bases of the tumors by means of a suitably shaped piece of brick, stone, or piece of wood.

I should certainly advise the case to be examined by a thoroughly qualified veterinary surgeon, as if it be a case of actinomycosis it is a serious matter for man as well as beast.—A. E. BUZARD, M. R. C. V. S. L., No. 11 Seventh St., S. F.

Barn Plans.

EDITORS PRESS:—Can you give us now and then a plan for a barn suitable to the ordinary needs of a suburban place, where a cow and calf and two horses are kept, with suitable arrangements for convenient feeding of the same; also with storing-place for hay and feed enough to keep them through the winter, and harness-room, grain-bins and carriage and sleeping room for a man included in the plans, so as to make the whole a neat, substantial, tasty building suitable for a gentleman's place near town. So many new-comers are needing just such plans to work on in building their new California homes that some suggestions in the RURAL upon this subject will fill a long-felt want of many of your subscribers.—L. U. MCCANN.

[This subject is a good one. Will our readers who have built to their satisfaction favor us with photographs, sketches of ground plans, etc.? Now that amateur photographers are almost as numerous as tramps, probably one of them could be easily persuaded to practice on the barn and send us the result.]

Holes in the Bark.

EDITORS PRESS:—I notice a few of my largest apricot trees have a quantity of round holes picked or bored in the bark, but cannot find any insect to work at them. Holes are about one-eighth inch in diameter, and are through the outer bark. Many have gum running out. None of my neighbors know what it is. One thought it was done by wood-pickers. Please answer through the RURAL PRESS what you think is the cause, or ask subscribers to state their views, and oblige.—A. VOLLMER, Los Gatos.

We presume the holes are the work of the species of woodpecker commonly called the sap-sucker, about which there was quite a controversy in the RURAL last winter.

Sowing Buckwheat.

EDITORS PRESS:—Will you please inform me through the RURAL PRESS when is the best time to sow buckwheat?—L. MOORE, Walnut Creek.

[We would like to hear experience on this point, how early can it be profitably sown in any part of the State, and for the special benefit of our querist who will write of it in Contra Costa county?—EDS.]

De Lesseps and His Canal.

De Lesseps and his canal enterprise has for some time been recognized as one of the most picturesque figures in the world. No one thing has more largely occupied the world's attention for the past year than this great engineering effort to connect the two oceans at Panama. In a commercial point of view, it is fully equal in importance to the Suez canal. In an engineering light the work of connecting the Mediterranean with the Red sea bears no comparison to that required on the Isthmus of Panama. The Suez canal is a mere ditch through a sand plain, which was first conceived and completed some 2000 years ago. De Lesseps merely cleaned it out and created more substantial entrepôts at either end. There were no engineering difficulties in the way which might not have been overcome by the merest tyro at such work.

Why even that canal should have cost \$100,000,000 is difficult to explain, especially when nearly all the laborers were furnished by the enforced labor of Egyptian fellahs. Equally difficult is it to explain, especially in view of the much more magnificent engineering enterprises which have been carried to successful results in other parts of the world, why De Lesseps should have won such applause for his Suez work. The first American overland railroad, the canal and reclaiming system of Holland, the Erie canal through New York and other similar enterprises, exhibited much greater engineering skill than was called into recognition on the Isthmus of Suez. The first construction of that canal in the dim light of early history, when the world was young and science and engineering skill scarcely known, was a work of far greater magnitude than its modern renewal.

The Panama canal, neither in its conception nor in the engineering skill in its initiation, has been the work of De Lesseps. The proposition for its construction has been before the world for over 200 years, and its engineering possibility shown by actual surveys. De Lesseps has never been on the isthmus but once, and then only as the head of a junketing party. No special examinations were made, and no calculations as to the possibility, cost, or manner of the work.

De Lesseps has been simply a promoter of the scheme, without taking the trouble to give the work any serious consideration. He seems to have been peculiarly unfortunate in selecting men to let his contracts to superintend the work and to select and purchase machinery. Millions of dollars have been thrown away on machinery which, when placed on the ground at great cost, proved to be utterly worthless. Contracts have been so carelessly let as to give fortunes to the lucky contractors and pile up useless expenses against the enterprise. Stock and bonds have been sold at large discount and interest on the same paid from date, contrary to usual practice in such investments.

There has already been expended more than twice the sum which investors were assured would complete the work, and at least one half more will still be required to finish the same.

Money has been obtained under the most fraudulent assurances and expended in the most profligate manner. A large portion of this money has been drawn from people of small means who can ill afford to lose it. As the work took on a sort of semi-national character, these people, in their present calamity, naturally look to their Government to see that it is completed, so that their investments need not be an entire loss. And right here stands a lion in the way—the Monroe Doctrine—under which no European nation can be allowed to acquire any local national rights on this continent. The French Government would gladly step in and finish the work; their people demand it; but they dare not do so. They remember Maximilian and his fate. It would not do for the Government to take charge of and complete the work without establishing a government protectorate over it. That cannot be permitted by the United States.

De Lesseps' last remaining hope was taken away when Senator Edmunds introduced his

late resolution into the U. S. Senate stating that this Government would look with serious disapproval upon any European government which should undertake either the control or construction of any ship canal across the Isthmus of Darien.

It would seem under existing circumstances that the Government of Colombia should apply to the United States for aid to complete the canal. Either some such plan must be adopted

which some of the treeless plains and valleys of California can be made to yield large supplies of excellent fuel.

Seattle, W. T.

A Glance at the Metropolis of the Puget Sound Country.

Seattle occupies a site which was selected as a favorable point for a city as early as 1852.

RESIDENCE OF MR. CARSON, EUREKA, CAL.

or the canal company must raise the remaining funds required in its civil capacity. Neither the French nor any other European Government will be allowed to step in and take up the work.

Bitter denunciations are heard among the French investors in regard to what they consider the mismanagement of the affairs of the

Elliott bay, on which the city is situated, was visited by Capt. Chas. Wilkes in his famous exploring expedition in 1841, and was named by him in honor of one of the lieutenants of the company. Owing to depredations of Indians the city was slow in growth for many years. In 1860 it was exceeded in population and business by at least three other cities on the sound,

PARTIAL VIEW OF SEATTLE, W. T.

company. The most of those who have discussed the matter feel kindly disposed toward De Lesseps, commiserate the misfortune which has overtaken him, and still have hope that his fruitful brain will find some satisfactory way out of his present dilemma. The canal will most undoubtedly be completed; but in all probability the money already invested will be mostly lost. Whoever puts money into the scheme at this stage of the enterprise must be protected, whatever may befall previous investors.

A QUEER kind of fuel is now used by some of the people of Wyoming Territory. It is nothing more nor less than sunflowers. An acre of sunflowers will, it is asserted, furnish fuel for one stove for a whole year. When dry the stalks are as hard as maple wood and make an excellent fire, and the seed heads, with the seed inside, are said to burn better than the best hard coal. As sunflowers will grow almost anywhere, it is believed that there is a way by

bay. Solid bank buildings, fine brick streets, broad sidewalks and a rushing crowd of people will surprise him. For a distance of four or five blocks along the west side of the principal street there is an activity and a city-like aspect surpassed by few streets in San Francisco.

The retail business is massed in comparatively limited level space, and the effect is to make a very active and attractive center. On the west side of the street, for a distance of about 1000 feet, there is a solid frontage of houses which would be creditable anywhere. These are uniformly three stories high, with deep basements and of the most modern construction. The materials are stone, iron, brick, pressed brick and plate glass. Inside and outside the business blocks of Seattle compare favorably with those of Portland, San Francisco and Chicago.

Redwood Houses.

Nearly all of the wooden houses on this coast are made of California redwood, but it has only been within the past few years that it has been used for interior finish and decoration. Now, however, that painted wood is unfashionable for interiors, the native woods are being utilized, and the redwood largely. The roots and stumps have a curly grain, which is very beautiful when polished. We give an illustration on this page of the handsome residence of Mr. Carson, of the firm of Dolbeer & Carson, in Eureka, Humboldt county, built mainly of redwood.

Its exterior appearance is grand and attractive, as may be gleaned from the illustration. The interior is elegant in its appointments and finish. All the different forms of redwood—straight-grained, curly and variegated—besides foreign hardwoods, are used in the interior finish and decorating. Some idea of its elegance may be formed when it is known that all the lumber was finished and millwork done at Mr. Carson's mill, and yet the cost was \$30,000. The stable in the rear and standing at one side is of the same architecture as the residence. Messrs. Newsome Bros. of San Francisco were the architects, and it may be well called a masterpiece of the builders' art. One of the most attractive features is the use of different woods, hard and soft, natural and stained, in the different suites of apartments, giving a rich, elegant and pleasing variety, and making this palatial residence one of the finest that can be seen anywhere, surrounded as it is by the spacious and well-appointed grounds, and occupying a commanding site.

THE jute mills at Oakland are running more smoothly of late than ever before in their history. In former seasons it has been found necessary to close down very frequently in order to await the arrival of new supplies of raw material from India. In the past ten months supplies have been coming in very freely, and in such a way as to obviate the necessity of stopping the machinery, at frequent intervals, as has been the case during the greater part of the history of this important industry in California. By steady running, the mills

return a better profit to their owners and keep the large number of employees steadily at work. There are now about 300 white persons of various ages at work in the mills and about 90 Chinamen. The new machinery for making the coarser grades of jute material, including matting and hop cloth, are found to work admirably. There is believed to be a good outlook for the industry here, now that it is possible to secure supplies as they are required by the manufacturers.

WE notice some of the newspapers are discussing who will be called to the Cabinet to fill the position of Secretary of the "Department of Agriculture." This is premature; no such department exists. The bill creating such an official is not likely to be taken off the hook during the present short term of Congress, we are sorry to say.

A CREAMERY is to be established at Ellensburg, Washington Territory.

AGRICULTURAL NOTES.

CALIFORNIA.

Butte.

TAMM'S WILD FRUITS.—Gridley Herald, Dec. 27: Mrs. Jennie Jarvis has a number of wild fruit plants for sale, embracing wild red cherry, mountain gooseberry, red and black currants and black raspberry. These plants come from Truckee Canyon and the fruit they bear is of the best quality. They will do well in this neighborhood.

THEY PAY.—Matthew Mullen, four years ago, planted 30 orange trees on a town lot 80x110. He set them out more for ornament than for profit. This week, however, he has discovered that there is some profit in raising oranges. Taxes will become delinquent next Monday. Times have been very quiet this winter and money scarce. Monday, Mr. Mullen thought he would sell the oranges on his trees and thereby avoid drawing on his bank account so heavily for tax-money. He did so. They netted him \$185, about \$8 more than his taxes on a ranch of 160 acres. And now the "young man" says he'll have the biggest orange grove in Gridley township next year.

Contra Costa.

IN PRAISE OF BERMUDA GRASS.—Antioch Ledger, Dec. 22: In the grounds adjoining Mr. Holliday's handsome cottage is a plantation of Bermuda grass, which demonstrates the value of this grass for lawn purposes in this locality. With little care and without any elaborate preparation of the ground, Mr. Holliday has here one of the handsomest bits of lawn that we have ever seen. The grass has a graceful, feathery appearance that renders it very attractive, and the hot sun of summer appears to affect it not at all.

OATS.—Martinez Item, Dec. 27: A bunch of tame oats reached this office yesterday from the ranch of N. R. Harris, near Jersey Landing, who is one of the successful farmers of that reclaimed district. The oats are fully headed out and developed—something by no means usual at this time of the year—and nearly five feet in height.

Fresno.

KING'S RIVER ORANGES.—Fresno Expositor, Dec. 26: Fulton G. Berry and a party of friends took a drive yesterday to the foothills. They visited the orange grove of Wm. Hazelton on King's river above Centerville, found the trees bearing abundantly, and brought back with them some of the finest clusters of oranges and lemons we have ever seen in Fresno. Mr. Berry also brought in a sack of oranges from a tree in his grove, in the same locality. A careful estimate of the oranges on the tree from which the sackful was plucked placed them at over 5000. The Expositor returns thanks to J. H. Lewis of Upper King's River for a box of fine oranges grown on his place. They are like all the oranges from that favored region, bright, clean, thin-skinned and sweet. The orange is bound to be a prominent product of the Upper King's River country.

THE 'POSSUMS.—P. P. Payne has sold his 'possums (lately imported from Missouri) to Jesse Irvine. Two and a-half acres have been inclosed, by a high fence made of wire, on Mr. Irvine's place. Within this inclosure are several small saplings, such as 'possums delight to climb. There are several hollow logs in the lot. During the daytime not a 'possum can be seen in the inclosure. As soon as it becomes nicely dark they come out of their retreat and frolic about the yard. The young have grown amazingly since coming to California. It was predicted by many Southern gentlemen when Mr. Payne first introduced the 'possum here that it wouldn't thrive, but this opinion has been thoroughly exploded. Mr. Irvine is also convinced that Brown Leghorn chicks and 'possums won't thrive on the same ranch!

Lake.

PERCHERON IMMIGRANTS.—Lakeport Avalanche: Capt. W. B. Collier has arrived with 31 choice Percheron horses, some of which were imported and some purchased from M. W. Dunham, while others of the younger stock were foaled on Mr. Collier's farm at Bridgeton, 14 miles west of St. Louis. The stock brought to Lake county is of the two best Percheron strains ever brought to America. Mr. Collier has done a great thing for this portion of the State by bringing this stock here, and we wish him success in his undertaking. The stock came through by rail without sustaining injury and will be quartered at the fair grounds until Mr. Collier can arrange suitable quarters at his ranch above town on the lake shore.

Los Angeles.

ONIONS.—Santa Ana Blade: Mr. Murdock, who has ten acres of peat land near Bolsa, has actually sold from one measured acre this year \$450 worth of onions, and a second crop on the same ground is well advanced. It was his first experience in onion raising, but he says if he had planted his crop one month earlier, to secure the best advantages of the Eastern market, he could have made the price of his entire ranch on this one year's crop. How is this for high, you doubting Easterners?

Mendocino.

HORTICULTURISTS ORGANIZED.—Dispatch Democrat: The adjourned meeting of the Mendocino Horticultural Society was held in Ukiah Saturday, Dec. 22, 1888, Robt. Mc-

Garvey presiding. The society then effected a permanent organization with 16 members, by the adoption of constitution and by-laws, and the election of the following officers: R. McGarvey, Pres.; E. W. King, V. P.; H. Price, Sec'y; L. W. Babcock, J. M. Luce, J. S. Hogehead, Directors. The following were appointed by the president to make out a petition to the Board of Supervisors asking them to appoint a Commission on Fruit Pests: E. W. King, L. W. Babcock and T. J. Fine. Adjourned to meet the last Saturday in January, at 1 o'clock P. M.

Merced.

FINE ORANGE CLUSTER.—Merced, Dec. 25: The Board of Trade here will to-morrow forward to the State Board of Trade at San Francisco a bunch containing 36 large yellow oranges. This fine cluster was raised in the garden of Dr. G. T. Lee, in this town. The tree was transplanted last spring, and produced this season about 500 large oranges of delicious flavor.

Modoc.

PESTERED BY PANTHERS.—Alturas Independent: The sheep-owners who are grazing their flocks on the west side of Goose lake are experiencing considerable trouble from California lions. One night lately one of the vaqueros entered the fold of Mr. Thompson, seized a large ram, carried it off several hundred yards, killed it, and then walked off and left the carcass. Quite a number of sheep have been killed by these animals.

Placer.

TO EXHIBIT IN S. F.—Newcastle News, Dec. 26: A meeting of the Directors of the Board of Trade of Placer County was held at the reading-room in Newcastle on Saturday relative to making some sort of an appropriate exhibit of Placer's products, either in Chicago, in "California on Wheels," in Los Angeles or in San Francisco, and after a full consideration of various propositions, it was unanimously decided to secure an eligible location on either Market or Kearny street, in San Francisco, and there place our exhibit. Vice-President Parker and Director Robert Jones were named a committee to proceed to San Francisco and engage suitable quarters. Those gentlemen are now in that city in fulfillment of their mission. A committee consisting of George D. Kellogg, A. Moger, W. J. Wilson, J. Reith, Jr., H. E. Parker, J. F. Madden and Bell M. Berry was chosen to collect such citrus fruits, etc., as may be deemed necessary for a creditable exhibit. It is proposed to purchase from the growers about 3000 oranges, at the market prices, which will form the bulk of the exhibit. There will also be a display of apples, persimmons, pomegranates, almonds, walnuts, cereals, etc., in fact a general display of the products of the county.

San Benito.

TRES PINOS NOTES.—EDITORS PRESS: The indications for good crops the coming season were never better in this section. The last rain commenced the night of the 12th, several days after our neighbors farther north were favored in like manner, and has come gently; warm rains that the ground has readily absorbed and put it in the right condition for plowing. In the Tres Pinos valley the grain-fields of last year are green with the volunteer crop nicely started, and much of the cultivated lands will not be reseeded. Mr. Zenas Churchill has planted this month eight acres for a nursery within half a mile of Tres Pinos depot, and is expecting to put out a large portion of his ranch into orchard next year, and be able to supply trees to those in the valley who, like himself, have faith that San Benito county lands can grow as good fruit trees as other parts of the State. Three years ago last March, Mr. Churchill put out 300 trees to test the capabilities of his land for growing orchard. He finished planting the 17th of March. It proved to be a dry season, and they did not have a drop of water after planting till late in the fall; were kept alive by cultivating, and have not had the attention experienced orchardists give their fruit trees, for the ranch has been rented for the last three years to a man who is a good farmer, but makes no pretension to growing fruit trees successfully. These trees have made a fine, healthy growth, and fairly demonstrated the fact that it will pay to plant orchards in this valley; and it may yet rival the famous Santa Clara county orchards.—M. A. S.

San Bernardino.

RIVERSIDE ITEMS.—Press, Dec. 22: Since last Saturday Frost & Burgess have sold 20,000 three-year-old orange trees for setting out, and think they see where they can place 40,000 more right off. The amount sold will set out about 300 acres. Griffin & Skelly estimate the crop of oranges now beginning to be harvested in this settlement at 900 carloads, of 300 boxes each. We think this is a liberal estimate, and, while deferring to their superior judgment, would rather put it at 800 carloads. D. H. Burnham has put up a large lot of Smyrna or White Ischia figs this season. He is about the only fig-grower around here who makes a business of curing this ticklish fruit for market. He is very successful, and his figs are delicious.

San Joaquin.

RYE HEADING OUT.—Stockton Independent, Dec. 27: N. H. Locke of Lockeford yesterday exhibited in this city samples of a volunteer crop of rye now growing on Noah Clapp's farm, near Lathrop, which would surprise people who did not know of the wonderful fertility of San Joaquin county lands. The crop now stands

15 inches high on a tract of 200 acres and has commenced heading out. The rye started after the light rain in September last, and has been growing safely ever since.

San Luis Obispo.

TREES IN VARIETY.—Cholame Cor. Tribune: Mr. Harris, a non-resident, who has a timber-culture claim in the Palo Prieta country, is quite enthusiastic about the future of this locality. He is having sown catalpa, locust, and two kinds of cypress seeds. He is also setting out quite a number of Picholine olive trees, which are almost certain to do well, as Tilman Fowler, of the Paloma Pass, has a tree in full bearing which produces olives of the finest quality. Mr. Fowler also has orange and fig trees in bearing, which produce remarkably fine fruit.

PROMISING WHEAT.—Paso Robles Cor. Tribune, Dec. 28: O. Howard, living four miles northwest of town, near Oak Flat, Saturday brought to my office a stool of green wheat standing nearly four feet high, with full-grown heads as long as our hands. The grain had grown as volunteer in Mr. Howard's field since the summer grain was harvested. He also brought some watermelons and nearly ripe tomatoes that he picked off growing vines the morning he brought the vegetables to town.

Santa Clara.

GONE GOPHERS.—Los Gatos Mail, Dec. 28: L. I. Beach informs us that he has killed nearly all the gophers on his ranch of 30 acres (formerly a portion of the Boudish ranch, on the Saratoga road) by using carbon bisulphide on cotton wadding, sticking the cotton in the holes and covering it over with dirt. He says it is essential to find every hole on the tract and fill them up. He used two gallons of carbon bisulphide and about \$1 worth of cotton, the total cost being about \$4.

Shasta.

RASPBERRIES.—Redding Free Press: Tuesday, the 18th of December, we were accorded the rare privilege of tasting several of a magnificent cluster of ripe raspberries. The rich red fruit nestled naturally among the tints of autumn's flame-splashed leaves, and, strange to say, retained the delights of the first flavors of the berry season. The cluster came from the gardens of E. A. Reid.

Solano.

EDITORS PRESS:—The mercury stands at 42° this morning, but no frost. The sun is shining bright, with a prospect of clear weather. On Christmas night we had three inches of rain. The various rain-gauges give from 1½ to 17 inches for the season. In the hills, three miles west of Vacaville, about one-sixth more rain falls than in Vacaville. Our roads (one of the weak beauties of Solano county) are almost impassable on account of mud. The McMann Bridge Co. of S. F. has just finished a 60-foot bridge across Alamo creek, and have a contract for another in Pleasant valley. Several new brick buildings are soon to be erected in Vacaville, the contracts being let and men at work clearing up the ground. We have had very little frost this season, volunteer potatoes are up, and a foot high. Grass is gaining very fast. Everything so far points to a favorable season, and consequently, everybody is in good humor.—G., Vacaville, Dec. 30th.

Stanislaus.

IRRIGATION BONDS.—Turlock Pioneer, Dec. 26: Last Tuesday the directors of the Turlock Irrigation District met, E. B. Clark presiding and a full board present. L. M. Hickman appearing, the matter of the sale of bonds was taken up, and Mr. Hickman stated that he had sold bonds to the amount of \$500,000 at 90 per cent of their face value, and upon the following conditions: \$10,000 cash, \$20,000 on February 1, 1889, \$20,000 on March 1st, \$50,000 on April 1st, and the balance as called for by the directors, upon their giving 20 days notice and in sums not exceeding \$50,000 per month. Upon motion duly made and seconded, it was by said board unanimously decided to accept the bid. C. F. Linder was appointed a committee of one to supervise the work of the Engineering Corps, with instructions to have the permanent survey from the dam immediately commenced.

Trinity.

ABOUT HAY FORK.—Cor. Record Union: I have seen as fine winter apples here as any that come from Oregon. Walter James took a load to Red Bluff a week ago, and sold them readily at three cents a pound. If they had been put up in boxes, instead of being carried loose in the wagon, and had been picked from the trees instead of shaken off, they would have brought at least four cents per pound. This county produces potatoes and alfalfa to perfection, and is fairly good for wheat and other cereals. The foothills are well adapted for the successful raising of fruits—particularly apples and pears, and, I think, many of the more hardy varieties of the grape would do well here. W. W. Shock showed me a few vines of Flume Tokay, on my previous visit, that would be a credit to any locality. This county is coming to the front rapidly as a stock county, and the man is fortunate that gets a title to a good range before it is too late.

Tulare.

PORTERVILLE PRAISED FOR RIVERSIDE.—Press, Dec. 22: Some of our nurserymen are sending orange trees to Porterville, a promising young candidate for citrus honors. Among the Riverside people who have landed interests up there are Ad. S. Alkire, Philip Frankenhimer,

Felix Lightner, Geo. T. Frost, Frank Morrison and a brother of C. S. Burgess. Porterville is about 250 miles northerly from here, on the broad bench below the foothills of the Sierra Nevada, almost under the shadow of Mount Whitney, a peak 15,000 feet high. Thirty five hundred inches of mountain water supplies it; thirty soil, and it is said to be as well adapted to orange culture as any place in this southern section. It lies where it meets the tide of home-seekers both from the north and south.

POPULAR POINTERS.—Cor. Delta, Dec. 27: A larger area of crops is being put into the ground at the present time than ever before. A few first-class windmills have been placed. The stock business holds out well. Horses and cattle are on the increase. Hogs are more scarce. Draft horses are receiving their share of attention, but the breeding of fast horses seems to receive more. The best breeds of cattle and swine have received their share of interest. The fruit business is on the increase; more interest has been awakened within the last year, and all conclude that there is more profit in fruit than in wheat. There was a large amount of the cactus hedge plant set in this neighborhood. Much of it is dead, and what is alive is very scattering. The Seneca-wheat man has also been around, and succeeded in making several contracts in this vicinity. Our industries are becoming more diversified, consequently more independent. The year has not been as prosperous as some, but our people have not felt the anxiety that they did heretofore, when their labor was expended on one kind of product and that proved a failure. The outlook in every respect is bright.

BEARS, GRAIN AND FRUIT.—Three Rivers Cor. Delta: Farmers and stockmen are very busy hunting the bear and plowing and sowing grain. Grain is up already and looks well. It is earlier than usual this season and we expect a bountiful crop. Bears are fat now, and the oil is relished much on hotcakes. Frank and E. nest Britton killed two bears a few days ago. Wes Warren killed one bear, and it is reported that John Swanson and Walter Serby killed five a short time ago, and that Din Busby has killed six since he arrived from Kansas. Lu Davis and Abe Wilkinson killed three and W. F. Dean and D. N. Cioffler have killed three or four bears lately. Jack Bahlwell and M. L. Burton killed one, and it is said that M. L. came near having his shirt torn off, for there was only the shirt between him and the bear. Sam Hilted is hauling apples to Visalia. Apples are plentiful this season. Some of the Japanese persimmon trees are well loaded with persimmons, which have a good flavor.

Yolo.

EDITORS PRESS:—We are having just the best old-fashioned winter you ever saw, up here in the Sacramento valley—rain, a plenty, and an even and mild temperature that is just delightful. The fields are green, and the wild oats and foxtail tall enough to furnish good pasture, and if we have no more frosts, the season of feeding stock will soon end. We have had but two slight frosts as yet, and the only thing that bothers the grain rancher is how to get in his "winter-sown" grain between showers. Tree planting bids fair to exceed any previous year and is limited only by the supply, the varieties most in demand being exhausted. The people of Woodland are seriously considering the cannery problem once more and I think this time it will be a success. With many well wishes for the PRESS, a Merry Christmas and Happy New Year.—J. R. SPRINGER, Woodland, Dec. 24, 1888.

COUNTY RAISIN CROP.—Mail, Dec. 29: Various estimates of the raisin crop of Yolo county for 1888 have been made, ranging all the way from 50,000 to 100,000 boxes. A short time ago the Fruit-Grower published a statement that Yolo and Solano counties combined would produce for the year 1888 something over 85,000 boxes. From reliable statements made by the producers, we are enabled to give the true amount of the output in boxes for the season past—Yolo county alone has raised 129,650 boxes of raisins.

NEVADA.

CATTLE ON THE MEADOWS.—Reno Gazette and Stockman, Dec. 27: The following is a correct list of the cattle on the meadows feeding, and to whom they belong: C. Derby has 500, George Humphrey 350, J. Stang 220, Matt Healy 200, Ayers & Poor 375, Potry, Heilbron & Co. 400, Horn & Chapman 325, Joseph Frey 520, C. Alexander 200, E. P. Sessions 170, Major Wall 220, George Mapes 1400, Louis Dean 900, Ward Bros. 400, Gravson, Owen & Co. 650, Hayes, Carrick & Co. 950, John Sparks 500, George Peckham 50, G. C. Hunt 231, E. Crain 200, W. H. Callaghan 150, and other small lots estimated at 150, making a grand total of over 9000.

STOCK SHIPMENTS.—Last Monday D. N. Wheeler shipped nine cars of beef cattle to Coley, Heilbron & Co., S. F. John Slaven shipped to Grayson, Owen & Co., Oakland, five cars of the Sparks & Tinnin cattle which have been fed on Truckee meadows. Among this lot are several thoroughbreds, half and three-quarter bred Herefords, which are sent to the shambles as a sort of test to see how they will weigh. Two carloads of mutton sheep were also shipped to the S. F. market by D. C. Campbell. Besides the above, nine cars of beef cattle, which arrived from the East Monday morning, were re-shipped Monday night.

Kentucky SHORTHORNS.

Messrs. J. W. PREWETT

And S. D. GOFF,

—OF—

WINCHESTER, KY.,

Have shipped 70, picked out of 200 first-class SHORTHORN CATTLE, to San Francisco, Cal., which they offer to the Pacific Coast breeders. In individual merit the Cattle are as good as any ever sent here from the East, and breeders should not fail to see them. They are all recorded or accepted for record; are good colors, and in just the condition to promise future usefulness.

They can be seen at the RAILROAD STABLES, corner Turk and Steiner Sts., after December 25, 1888, and will be

SOLD AT AUCTION

At a date hereafter to be published. Visitors welcomed at any time.

SORGHUM

A LITTLE book that every farmer ought to have is the "Sorghum Hand Book" for 1889, which may be had free, by addressing The Blymyer Iron Works Co., of Cincinnati, O. Sorghum is a very valuable crop for syrup-making, feed, and fodder, and this pamphlet gives full information about the different species, best modes of cultivation, etc. Send and get it and read it.

The "San Jose" all Iron & Steel Frame CULTIVATOR.

We take pleasure in calling the attention of the Orchardists and Vineyardists of the Pacific slope to our NEW ORCHARD AND VINEYARD CULTIVATOR. The most complete and easily handled machine in existence. Weight, 335 pounds. The Cultivator is raised and lowered by means of a foot and hand lever, reducing the labor of handling to almost nothing.

It is the only Cultivator that can be handled successfully on a side hill. By means of the Shifting Pole the tendency to crawl down hill can be overcome. This feature is of advantage on level ground as well. The pole is shifted by the horses and can be checked at any angle by means of a foot lever. The Cultivator is increased from 7 to 9 teeth by sliding arms into a grooved casting in the ends of the frame. We lack space for a further description. WRITE FOR CIRCULARS. Address:

SAN JOSE AGRICULTURAL WORKS,
SAN JOSE, CAL.

McLEAN'S ORCHARD AND FIELD CULTIVATOR.

Will do a Greater Variety of Work than any Cultivator on the Pacific Coast.

The Favorite.

This Cultivator has been awarded more First Premiums than any other Cultivator made in this State.

THE FIELD.

Important Rain and Crop Statistics.

[Written for the RURAL PRESS by J. R. F.]

In the RURAL PRESS of Dec. 22d there was published a rain table by seasons for Sacramento, running back to the year 1849, which is not only an interesting, but an instructive, study to the farmer as well as to the scientist. The table taken in connection with the records of passing events kept since 1809, by Jesuit missionaries, confirms the belief that there are weather cycles so far as regards certain periods of light rainfall. Aside from this, taking the wheat acreage and crop outturn for a decade past, and comparing them with the rainfall by months, and it is confirmatory of a generally accepted theory—that the spring rains make the crop.

Going back to the earliest records, and it is discovered that the first reported drouth was in 1809-10, when the missions and presidios suffered severely on account of the shortness of pasture and crops, causing much difficulty in procuring water and food for stock. Eleven years afterward there was a drouth of much more severity, and the two years' provender, which past experience had taught the missionaries to store up against an emergency, was largely depleted by feeding to the live-stock. Owing to the scarcity of maize and beans, a special dispensation was granted by the Senam, a father-president, allowing the use of meats, eggs, etc., on forbidden days. The severest drouth ever experienced commenced eight years later, or in 1828, and extended over a period of two years.

It was felt the keenest south of Juan Baptista. Wells and springs dried out, necessitating families living at Monterey to bring water from the Carmelo river, a distance of three miles. The loss in horses and neat cattle was placed at the time at 40,000 head. It is noted as a fact that at Purissima many bands of horses were driven over the cliff into the ocean for two-fold purposes—to end their sufferings quickly and to save the provender for the cattle and sheep. This was followed by a drouth in 1839-40, another in 1850-51, another in 1856-57, and two very severe, one in 1863-64 and the other in 1870-71. During the last two drouths there was heavy loss in live-stock, particularly in the southern part of the State. The writer in 1864 saw cattle starving in Los Angeles county, while in San Gabriel valley, in the same county, he saw cows standing by a cactus fence eating, or trying to eat, the prickly cactus, and bellowing with pain as the thorns pierced their jaws. Since 1871 there has not been any severe drouth, and not likely to be, with the improved system of irrigation and orchard and vineyard planting.

By referring to the rainfall table, given in last week's issue, it will be seen that the seasons' rainfalls have varied very considerably, as the following compilation by seasons for the 12 months ending with August of each year, shows:

Year.	Inches.	Year.	Inches.
1850	33.0	1876	13.67
1851	4.71	1877	8.47
1852	17.98	1878	21.05
1853	36.36	1879	14.20
1854	30.66	1880	22.89
1855	18.66	1881	17.69
1856	13.77	1882	35.68
1857	10.44	1883	9.32
1858	14.09	1884	36.13
1859	16.04	1885	17.27
1860	22.70	1886	26.74
1861	16.54	1887	26.13
1862	35.55	1888	16.28
1863	11.58	1889	18.30
1864	7.86	1890	24.78
1865	22.00	1891	16.28
1866	17.92	1892	32.27
1867	35.55	1893	19.97
1868	32.76	1894	11.56
1869	16.64		

The smallest rainfall within the past 39 seasons was 4.71 inches for the season of 1850-51, and the heaviest was 36.36 inches for 1852-53. The next heaviest was in 1861-62, when the rainfall was 35.55 inches. In the early part of 1853 and also in that of 1862, the Sacramento and San Joaquin valleys, except on the high lands, were inundated. The loss in live-stock by drowning, and houses and other improvements swept away, was very heavy each year, going into the millions of dollars; while, since 1849, the State was visited by two severe drouths, there were two heavy floods. Since 1876-77 the rainfall by seasons has been more uniform—the highest being 26.74 in 1879-80, and the smallest 11.56 in 1887-88.

From September, 1849, to August, 1888, the rainfall by months in inches, the total by months for the 39 seasons and the aggregate quantity average since 1849 are as follows:

SEASONS.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	April	May	June	July	Aug.
1849-50.	2.05	1.50	2.22	12.50	4.50	.50	10.00	4.25	.25			
1850-51.					.65	.35	1.88	1.14	.69			
1851-52.		.18	2.14	7.07	.58	.12	6.40	.19	.30			
1852-53.		6.00	13.41	3.00	2.60	7.60	3.50	1.45				
1853-54.		1.50	1.54	3.25	8.50	3.25	1.50	.21	.31			
1854-55.		.65	1.15	2.67	3.46	4.20	4.32	1.15	.01			
1855-56.		.75	2.00	4.91	.67	1.40	2.13	1.84	1.03			
1856-57.		.19	.65	2.29	1.37	.49	.67		.35

During the 39 years the heaviest rainfalls in single months were as follows: January, 1867, 15.03 inches; April, 1880, 14.28 inches; December, 1853, 13.41; December, 1849, 12.50; December, 1867, 12.85; December, 1880, 11.80; December, 1872, 10.99; December, 1873, and March, 1849, 10 inches each.

It is to be regretted that we have not at hand data of the acreage seeded to wheat previous to the season of 1877-78, so as to extend the comparison of the rainfall, acreage and crop outturn by seasons as far back as possible. With this data could be determined all theories as to which rains, winter or spring, bring out the largest crop. The following are the rainfalls, wheat acreage and outturn since 1877:

Season.	Rainfall, Inches.	Acreage.	Outturn, Centsals.
1877-78.	25.45	1,800,000	16,000,000
1878-79.	17.27	1,850,000	18,500,000
1879-80.	26.74	2,100,000	35,000,000
1880-81.	26.13	2,400,000	22,700,000
1881-82.	16.28	2,900,000	22,000,000
1882-83.	18.30	2,800,000	21,000,000
1883-84.	24.78	3,400,000	30,400,000
1884-85.	16.58	2,500,000	17,800,000
1885-86.	32.27	3,400,000	24,000,000
1886-87.	19.97	3,300,000	18,400,000
1887-88.	11.56	3,100,000	19,600,000

The largest yield of wheat was in 1880, when the rainfall was only 26.74 inches for the season. The following year the outturn fell off about one-third, with an increased acreage seeded and only a slight falling off in the rainfall. In order to show the rainfall influences to better advantage, the following table is compiled:

Year.	Jan.	Feb.	Mar.	April	May	June	July	Aug.	Total.
1878.	1.47	0.47	0.47	0.47	0.47	0.47	0.47	0.47	6.47
1879.	1.47	0.47	0.47	0.47	0.47	0.47	0.47	0.47	6.47
1880.	1.47	0.47	0.47	0.47	0.47	0.47	0.47	0.47	6.47
1881.	1.47	0.47	0.47	0.47	0.47	0.47	0.47	0.47	6.47
1882.	1.47	0.47	0.47	0.47	0.47	0.47	0.47	0.47	6.47
1883.	1.47	0.47	0.47	0.47	0.47	0.47	0.47	0.47	6.47
1884.	1.47	0.47	0.47	0.47	0.47	0.47	0.47	0.47	6.47
1885.	1.47	0.47	0.47	0.47	0.47	0.47	0.47	0.47	6.47
1886.	1.47	0.47	0.47	0.47	0.47	0.47	0.47	0.47	6.47
1887.	1.47	0.47	0.47	0.47	0.47	0.47	0.47	0.47	6.47
1888.	1.47	0.47	0.47	0.47	0.47	0.47	0.47	0.47	6.47

It will be seen by the above that the season of the largest average yield was when the heaviest rainfall was in the spring months. The smallest average yield was in the year when the rainfall for the season was light in the spring months. This, to a very great extent, is due to the spring rains, particularly those in April, cooling the air and causing the dread hot north wind which at times sweeps

over the Sacramento and San Joaquin valleys in the month of June to defer its visit until after the crop is harvested.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 220 Market St., S. F.

FOR WEEK ENDING DEC. 18, 1888.

- 394,902.—HORSE-BRUSHING MACHINE—C. Alexander, S. F.
- 394,950.—FRUIT-PICKER—F. & G. W. Ansley, Medical Lake, W. T.
- 394,636.—GOLD-SAVING APPARATUS—O. H. Bagley, Knappa, Ogn.
- 394,553.—WINDOW-BLIND—F. A. Bernard, San Bernardino, Cal.
- 394,641.—VINEYARD HOE—E. Cartwright, Lincoln, Cal.
- 394,677.—STATION INDICATOR—A. E. Cruceel, S. F.
- 394,769.—ROLLER BEARING—R. W. Hent, S. F.
- 394,575.—CIGAR-HOLDER—D. B. James, S. F.
- 394,654.—CONCENTRATOR—J. A. Jones, Tuscarora, Nev.
- 394,720.—LAMP-FILLER—M. W. Paxson, Virginia, Nev.
- 394,662.—BALING-PRESS—Jacob Price, San Leandro, Cal.
- 394,664.—CAN TESTER—W. H. Smyth, Berkeley, Cal.
- 394,741.—STATION INDICATOR—W. A. Turner, S. F.
- 394,799.—STATION INDICATOR—W. A. Turner, S. F.
- 16,098.—TRADEMARK—Aleutian Islands Fishing & Mining Co., S. F.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co. in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

WOUNDS FROM BARBED WIRE.—J. W. Dean, writing on this subject in the *Prairie Farmer*, says: "Ordinary liniments and salves are generally too severe, even when the latter is plentifully mixed with lard. A preparation consisting of one part turpentine and two parts lard will soothe the wound and keep away flies. Deep cuts can be healed thus without leaving a scar. But if the animal is not in good condition, blood-poisoning may ensue and death follow. Pine-tar applied to the part affected will also keep away flies, but it has a tendency to harden the bare flesh and render it more painful. A salve made of bitter-sweet and a little pine tar mixed with it will heal the wound and keep away flies. Ordinary cuts on barbed-wire fence, when the animal is in good health, will often heal rapidly without any application whatever, provided the flies are kept away. I will give a simple remedy, which will not only keep away insects, but will drive out maggots from wounds where they are found, and heal them rapidly. Take the inside bark of the elder and boil in lard until a strong salve is made; add a little tar. Apply plentifully and as frequently as necessary, and unless the wound is extremely severe it will soon heal."

RELIEVING BLOATED CATTLE.—The *Arizona* says that A. J. Port of Tempe has a method of relieving cattle suffering from alfalfa bloat, which is infallible. He uses a piece of inch hose, forcing it down the throat of the afflicted animal into the pouch. The gases are thus allowed to escape and the animal is at once relieved. It is preferable to "sticking," as no wound is left upon the animal.

THE Alameda pottery works, recently erected, have been closed down in order that new machinery may be put in to increase the capacity of the works and the variety of their manufacture.

Our Seed Offering—1889.

Great Inducements for New Subscribers.

To encourage gardening and further extend the circulation of the PACIFIC RURAL PRESS, we will offer, while this notice remains in our columns, to furnish to all old or new subscribers the following seeds on the favorable terms named below:

VEGETABLE SEEDS.		93 Antirrhinum Majus,	
83 Varieties.		fls mixed.	
In Papers, postpaid.		94 Caccalia Cucinera (Tas-	
BEET.		sel flower).	
1 Early Bloem Turnip.	10	95 Ca. panula Speculum,	
2 Early Extra Bassano.	10	(Venus' Looking Glass).	
3 White Sugar.	10	96 Candytuft, white fragt.	
4 Yellow Sugar.	10	97 Centaurea Cymus (Bach-	
5 Early Long Dark Blo'd	10	elor's Button).	
CABBAGE.		98 Clarkia, fine mixed.	
6 Early York.	5	99 Convolvulus (Morning	
7 Early Dutch.	10	Glory) mixed.	
8 Early Wakefield.	10	100 Foxglove, mixed.	
9 Early French Orchart.	10	101 Globe, mixed.	
10 Large Late Drumhead	10	102 Globe Amaranthus.	
11 Red Dutch (pickling).	10	103 Gypsophila Elegans.	
CELERY.		104 Ice Plant.	
13 White Solid.	10	105 Larkspur, finest mixed.	
CAULIFLOWER.		106 Linum Grandifol (Flax).	
14 Early Paris.	10	107 Love-in-a-mist.	
CARROT.		108 Marigold, d. French.	
15 Extra Early Forcing.	10	109 Marigold, African, dbl.	
16 Long Orange.	10	110 Mizounte, Sweet.	
17 Early Horn.	5	111 Nasturtium.	
18 White Belgian.	5	112 Noliata.	
19 Half Long Danvers.	10	113 Portulaca, mixed.	
CHART-MEEK.		114 Poppy, Double, mixed.	
20 Early Cluster.	10	115 Rocket, Sweet.	
21 Early Frame.	10	116 Scabiosa, Dwf, mixed.	
22 Long Green.	10	117 Sensitive Plant.	
23 Eng. Ghe-kin, Pickles.	10	118 Sweet Pea, White.	
LETTUCE.		119 Sweet Pea, Crimson.	
24 Early Curled Silesia.	10	120 Everlasting.	
25 Ice Drumhead.	10	121 Sweet Pea, mixed.	
26 Simp. on Early Curled	10	122 Sweet William, mixed.	
27 Prize Head.	10	123 Sunflower, Cal. Dble.	
28 Hanson.	10	124 Adlumia Cirrhosa (Mountain Fringe).	
30 Boston Market.	10	125 Al. he (Hollyhock) fine mixed.	
MELON.		126 A. he, China, mixed.	
31 Large Yel. Canteloupe.	10	127 Australian Vine.	
32 Extra Fine Nutmeg.	10	128 Balsam (Lady Slipper).	
33 Casaba (new).	10	129 fine mixed.	
34 Montreal Nutmeg.	10	130 Balsam, Fine Paris, dbl.	
35 Mountain Queen Wm. Jon.	10	131 Balsam, Splendid, dbl.	
36 Mt. Sweet Wat melon.	10	132 Balsam, Dwarf, double.	
37 Red Dutch (pickling).	10	133 Ballou Vine.	
38 Black Spanish do.	10	134 Brocolia Grandiflora.	
39 White Imp. or Lodi do.	10	135 Canna (Indian Shot).	
39a Ge. rg's Rattlesnake do.	10	136 Canna, fine mixed var.	
ONION.		137 Celosia Cristata Varie's	
41 Early Red.	10	138 Celosia Cristata Pur-	
42 Red W. one d. do.	10	purea.	
43 Yellow Danes s.	10	139 Clematis Flammula.	
44 W. Portugal or Sil. Skin	10	140 Dianthus, double, max.	
PARSNIP.		Dianthus Chinensis	
45 White Duf. h.	5	141 Indian Pink (China s.)	
RADISH.		142 Dianthus Chinensis	
47 Mammoth California.	10	D. ble White.	
48 Oliv. Purple Radish.	10	143 Celosia Cristata, fine	
49 Early Scarlet Turnip.	10	mix-d (Coxcomb).	
50 Blk Spanish or Wint's	10	144 Cichorium, fine, com.	
60a Long Scarlet.	10	145 Datura, fine mixed.	
SQUASH.		146 Evening Primrose.	
51 Early Scalloped Bush.	10	147 Four O'Clock, mixed.	
52 Early Summer's Neck.	10	148 Forget-me-not.	
53 California Field.	10	149 Geranium Zonale.	
54 Maclehead.	10	150 Geranium, fancy color-	
55 Boston Marrow Wint's	10	151 Godetia (The Bride).	
56 New Hubbard Wint's.	10	Gondetia (Hercules) lib.	
TOMATO.		152 Ipomoea (Cypress Vine).	
57 The Conqueror.	10	153 Ipomoea, fine mixed.	
58 Early Red Smooth.	10	154 Lobelia, Crystal Palace	
60 Trophy.	10	155 Lobelia, Blue.	
61 Canada Victor (earliest)	10	156 M. P. B. nt.	
62 Favorite.	10	157 Nicotiana Gracilis.	
TURNIP.		158 Parsy, fine mixed.	
63 Cow Heart.	10	159 Petunia, mixed.	
64 Yel. Rotunda's Sw'dth.	10	160 Phlox Drummondii.	
65 Early White Flat Dutch.	5	161 Peperum, a. a. u. m.	
66 Long White French.	10	(Golden Feather).	
67 Imp. Lat. Strap Leaf.	5	162 Salpiglossis mixed.	
68 Round Leaf.	10	163 Stock (Ten Week).	
69 Large Flat.	10	164 Wallflower, fine mixed.	
PEAS.		165 Wallflower, purple.	
70 Extra Early.	10	166 Zinnia, mixed.	
71 Champion of England.	10	167 Zinnia, Scarlet, dbl.	
72 Yorkshire Hero.	10	168 B. he Perennis (Daisy)	
73 Rural New Yorker.	10	Single.	
PEA.		169 Campanula Medium	
82 Black German Wax.	10	(Canterbury Belle).	
83 Refugee.	10	170 Canna, Bire.	
84 Red Valentine.	10	171 Thunbergia, mixed.	
84 China Red Eye.	10	172 Aquilegia Alpina (Col-	
MISCELLANEOUS.		umbine).	
74 Kohlrabi.	10	173 He. iotropium, fine mixd	
75 Purple Kale.	10	174 Heliotrop, c. dark, mixd	
76 Curled Parsley.	10	175 Verbena, m. choice, mixd	
77 Sage.	10	176 Verbena, Blue.	
78 Thyme.	10	177 Balmam Camella, f.ow'd	
79 Tobacco.	10	178 Carnation, fine mixed.	
80 Blue Gum.	10	179 Digitalis.	
81 Marjoram Cypress.	10	180 Dorelost Hyac (Hean)	
FLOWER SEEDS.		181 Gaillardia Grandiflora	
107 Varieties.		182 H. H.	
85 Acroclitum.	5	183 N. nonipha.	
86 Alonosa, Grandiflora.	5	184 P. rillia Nankhensia.	
87 Alyssum, Sweet.	10	185 Saponaria Multiflora.	
88 Amaranthus Abyssin's	10	186 Scabiosa Atropurpurea	
89 Agratum Las cauxli.	10	187 Scabiosa-Runner's (Clum-	
90 Anemone Cithrosa.	10	ber).	
91 Ambrosia Ullulata.	10	188 Scabiosa, fine st.	
92 Amaranthus Cautatus	10	189 Scabiosa, fine st.	
(Love-lie-bleeding).	5	190 Myrsinhyllum Aspara-	
		gagoides (Smilax).	

Oroville Fair Awards.

The premiums for exhibits at the Citrus Fair at Oroville, Dec. 17th to 22d, 1888, were awarded as follows:

ORANGES.—Best individual exhibit—35 exhibitors—Joe Gardella, \$25; L. N. Eyer, \$20; Mrs. James C. Gray, \$17.50; W. M. Pence, \$15; Ella Wilcox, \$12.50; Mrs. B. Bussey, \$10; J. Seconi, \$7.50; Brier & Welch, \$5; J. B. Rider, \$3; Mrs. Z. M. Sexton, \$2. Best 12 budded—8 exhibitors—Oroville Citrus Ass'n, \$5; G. W. Sovereign, \$3; Mrs. White, \$2. Best 12 seedling—32 exhibitors—Mrs. S. J. Bussey, \$3; Brier & Welch, \$2; J. B. Rider, \$1. Best cluster—Joe Seconi, \$5; G. W. Sovereign, \$3; J. J. Smith, \$2; 12 largest—18 exhibitors—Wm. Dunforth, \$5; Mrs. S. Gummow, \$3; Mrs. Jas. C. Gray, \$2.50. Best budded—3 exhibitors—Ella Wilcox, \$10; Joe Seconi, \$5; Mrs. Jas. C. Gray, \$2.50. Largest exhibit of oranges by one individual grower—3 exhibitors—Joe Gardella, \$50; Mrs. N. Calkins, \$25. Largest single orange—Mrs. E. Breslau, \$1.

LEMONS.—1 exhibitor—John S. Hutchins, \$10. Most tastefully arranged exhibit of citrus fruit by 1 individual—7 exhibitors—Ella Wilcox, \$10; Joe Seconi, \$7.50; Mrs. Jas. C. Gray, \$5.

OLIVES.—4 exhibitors—Anna Ragan, \$5; Mrs. Z. M. Sexton, \$3; Joe Gardella, \$2.

OLIVE OIL.—3 exhibitors—Mrs. Sexton, \$5; Annie Ragan, \$2.50; Joe Gardella, \$1.

OLIVE OIL PRESS.—Mrs. Sexton, \$5.

GENERAL EXHIBIT.—Largest and most varied exhibit by one person—M. V. Rowe, \$50; W. W. Merrithew, Mesilla Valley, \$30; J. Entzman, South Table Mountain, \$20.

FLORAL.—2 exhibitors—Mrs. M. A. Varney, \$10; (Special \$10 to Mrs. Varney.) Thermalito Co., \$5. **TOBACCO.**—5 exhibitors—C. DeBock, \$5; J. Entzman, \$3; Joe Freydt, \$2.

Largest display of minerals—A. Heckart, \$10; M. V. Rowe, \$5.

POTATOES.—15 exhibitors—J. H. Hoad, \$5; E. C. Bowers, \$3; Henry Covert, \$2.

MELONS.—3 exhibitors—A. Heckart, \$2; M. V. Rowe, \$1.

COTTON.—7 exhibitors—J. J. Sanders, \$2; Mrs. M. A. Varney, \$1.

RAISINS.—16 exhibitors—C. H. Leggett & Son, \$10; C. L. Durban, \$5; Henry Preston, \$2.50.

PRUNES.—7 exhibitors—Jesse Wood, \$5; J. S. Hutchins, \$3; B. Russell, \$2.

FIGS.—18 exhibitors—White Adriatic, C. H. Leggett & Son, \$5; R. Parker, \$3; Mrs. A. S. Hendricks, \$2.

BLEACHED FRUITS.—6 exhibitors—S. L. Skil'in, \$10; Jesse Wood, \$5; M. V. Rowe, \$2.50.

SUN-DRIED FRUITS.—24 exhibitors—M. V. Rowe, \$5; B. Russell, \$3; Joe Entzman, \$2.

ALMONDS.—15 exhibitors—R. Parker, \$5; I. L. & R. Mansfield, \$3.

WALNUTS.—12 exhibitors—W. W. Merrithew, \$5; W. M. Pence, \$3.

CHESTNUTS.—3 exhibitors—Ole Lund, \$3; Joe Daniels, \$3.

QUINCES.—8 exhibitors—F. Simonson, \$2; L. N. Eyer, \$1.

GRAPES.—5 exhibitors—I. L. & R. Mansfield, \$5; Geo. Spitzler, \$2.

APPLES.—44 exhibitors—P. H. Perry, \$15; W. M. Pence, \$10; J. H. Hoad, \$7.50; M. V. Rowe, \$5; E. P. Zink, \$3.

PEARS.—17 exhibitors—M. V. Rowe, \$5; I. N. Eyer, \$3; G. B. Rogers, \$2.

POMEGRANATES.—7 exhibitors—R. Parker, \$3; W. W. Merrithew, \$2.

PERSIMMONS.—12 exhibitors—W. M. Pence, \$5; Mrs. H. C. B. H. \$3; M. V. Rowe, \$2.

PRESERVES AND CANNED FRUITS.—13 exhibitors—Mrs. Dr. Bussey, \$15; M. V. Rowe, \$10; Mrs. A. S. Hendricks, \$7.50.

MOST TASTEFULLY ARRANGED EXHIBIT.—Mrs. S. S. Boynton and Mrs. H. C. B. H., \$40; Argonaut Parlor, N. S. G. W., \$20; Golden Fleece Parlor, N. D. G. W., special prize, \$20.

Largest number of budded orange trees planted in orchard by individual exhibitor during the year 1888—Daly & Sargent, \$20; R. C. Chambers, \$10.

Special premium offered by E. W. Fogg and D. K. Perkins for largest and best exhibit of oranges in excess of 10,000, by individual producer—Joe Gardella, \$100; Mrs. N. Calkins, \$100. Special prize of \$25 to Palermo Co. for display of citrus and deciduous fruits, plants and flowers. Special prize of \$25 to Thermalito Co. for display of ornamental shade, citrus and tropical trees.

PUMPKINS.—John R. Hafferty, \$3; J. E. Allen, \$2; J. N. Howard, \$1.

ALFALFA HAY.—W. M. Pence, \$2.50.

POPCORN.—A. Parish, \$2; A. Heckart, \$1.

HOPS.—Frank Cress, \$2; David Whipple, \$1.

BEANS.—C. L. Yetter, \$2; H. Wright, \$1.

STRAWBERRIES.—Robert Frisbie, \$2.50.

SUGAR CANE.—Mon Ming, \$2; R. C. Grubbs, \$1.

BETTS.—G. R. Hill, \$2.

SUGAR BEETS.—Geo. Peters, \$2.

PEANUTS.—J. S. Hutchins, \$2; I. L. & R. Mansfield, \$1.

GREEN TOMATOES.—B. Russell, \$2; J. Gardella, \$1.

EGG PLANT.—H. Covert, \$2.

OILS AND EXTRACTS FROM CITRUS FRUITS.—Norton & Eckman, \$5.

SEEDLING DATE TREES.—Mrs. W. Elliott, \$1.

SEEDLING ORANGE TREES.—Christman & Hil-ton, \$2.50.

HONEY.—F. Peters, \$1.

CALIFORNIA WOODS.—A. Heckart, \$5.

VEGETABLES.—W. A. Coates, \$5.

LICORICE.—Wm. Dunstone, \$2.

GOLD QUARTZ.—McMillan Bros., \$3; E. W. Fogg, \$5; M. H. Morgan, \$5.

THE UTAH POULTRY ASSOCIATION will hold its second annual show in Ogden Feb. 11th to 13th, numerous premiums being offered for finely bred, fancy and game fowl. Last year's exhibition was a great success. W. W. Brown, the secretary, invites the co-operation of fowl breeders in adjoining States and Territories.

\$500,000

On Country Real Estate in large and small amounts at lowest rates, by A. Schuller, 106 Leidesdorff St. Room 8.

WELLS, RICHARDSON & Co's

IMPROVED
Butter
Color.

EXCELS IN { STRENGTH
PURITY
BRIGHTNESS

Always gives a bright natural color, never turns rancid. Will not color the Buttermilk. Used by thousands of the best Creameries and Dairies. Do not allow your dealer to convince you that some other kind is just as good. Tell him the BEST is what you want, and you must have Wells, Richardson & Co's Improved Butter Color. Three sizes, 25c. 50c. \$1.00. For sale everywhere.

WELLS, RICHARDSON & CO. Burlington, Vt.

(33 Colors.) **DIAMOND DYES**

are the Purest, Cheapest, Strongest, and most Durable Dyes ever made. One 10c. package will color 1 to 4 pounds of Dress Goods, Garments, Yarns, Rags, etc. Unequalled for Feathers, Ribbons, and all Fancy Dyeing. Also Diamond Paints, for Gilding, Bronzing, etc. Any color Dye or Paint, with full instructions and sample card mailed for 10 cents. At all Druggists

PRICE
50 CENTS.

For Coughs, Colds, Croup, Asthma, Bronchitis, Influenza, Loss of Voice, Incipient Consumption, and all Throat and Lung Troubles. J. R. GATES & CO., Proprietors, 417 Sansome St., San Francisco.

Seeds, Plants, Etc.

BARREN HILL NURSERIES,
NEVADA CITY, CAL.

SPECIALTIES:

Nuts, Prunes and Grapes.

The Largest and Finest Collection of "Nut-Bearing" Trees to be found in the United States.

21 Varieties of Walnuts.

9 Varieties of "Marrons,"

Or French Chestnuts (solely propagated by grafting).

10 Varieties of Filberts

(propagated by layering).

4 Varieties of Almonds.

HEADQUARTERS OF THE

PRÆPARTURIENS

Or Fertile Walnut.

Introduced into California in 1871 by FELIX GILLET.

"Second" Generation Præparturiens (California Grown).

GRAFTED WALNUTS.

"Barren Hill Nurseries" is the only establishment in the United States where grafted Walnuts may be found. The finest French varieties, highly recommended for the size, beauty and quality of the nuts; fertility and hardiness of the trees. Foremost among them: Mayette, Parisienne, Franquette, Chaberte, Meylan and Vourey.

PRUNES!

The purest types of the French Prune or Prune D'Ente, from the Valley of the Lot, France, viz:

Lot D'Ente,
Mont Barbat D'Ente,
ruymiroi D'Ente,
Also Saint Catherine Prune,
"True from the root."

231 Varieties of Grapes, from all parts of the world, including the earliest Table Varieties known, some of them 25 days earlier than Sweet Water.

61 Varieties of English Gooseberries, all shapes, colors and sizes.

April Cherries, Apricots, Pears, Figs, etc.
French, English, German and American Strawberries.

ORANGES and LEMONS.

Portugal Orange,
Blidah (Algeria) Mandarin Orange,
Corsica Lemon.

Large Fruited Lemon,
Imported from the south of France and expressly grafted for the California trade.

GRAFTING THE WALNUT,

By FELIX GILLET, of Nevada City, Cal., an essay on the different modes of Budding and Grafting the Walnut, so difficult to graft; illustrated with eight cuts made after nature and of natural size. Will be sent with Descriptive Catalogue, under the same cover, to any address on the receipt of 25 cents in postage stamps.

Send for General Descriptive Catalogue, illustrated with 37 cuts, representing Walnuts, Chestnuts, Almonds, Filberts, Prunes, etc.

CAUTION!

I do hereby caution Nurserymen all over the United States, that have been in the habit of stealing my Walnut and Chestnut cuts, and appropriating them to kinds that they do not represent, that I have had all the cuts of my General Descriptive Catalogue and those of my Essay on Grafting the Walnut duly "copyrighted," and that hereafter I will prosecute any one guilty of such contemptible piracy.

FELIX GILLET,
NEVADA CITY, CAL.

TEXAS UMBRELLA TREES,
California Walnuts and Locust Trees,
FOR SALE BY

J. R. SPRINGER,
P. O. Box 429, Woodland, Cal.

ENTOMOLOGICAL.

The Scale-Destroyer.

On page 556 of our last issue we had an interesting account of the recent arrival of scale-destroyers, sent by Mr. Koebele. We are now indebted to Mr. D. W. Coquillett of Los Angeles for an account of his observations on scale-destroyers, which he prepared for the Los Angeles Times as follows:

We recently had the pleasure, in company with Mr. A. Scott Chapman, of visiting some of the principal orange groves in the San Gabriel valley. * * * Rumors were afloat that the scales were dying in great numbers from some unknown cause, and it was mainly to satisfy ourselves of the nature of these rumors that the present visit was made. We found that the scales were indeed dying in large numbers, but the cause thereof was far from being unknown; a careful examination of the red scales revealed the presence of the tell-tale holes of their anatomy out of which the minute parasites had made their escape to the outside world. The scales which had thus met their death at the hands, or rather the mouths, of these little parasites were mostly females, and, what seemed very singular, were always located on the upper side of the leaves. As if it were not enough for us to have discovered these indications of parasitic attacks, it was our good fortune to meet Madam Parasite herself, a fusely, petite atom of animated nature, scarcely discernible with the naked eye, busily engaged in searching for new victims in which to consign her future progeny.

Evidences of the presence of this little, but powerful, friend of the orange-growers were found in three different orange groves, situated several miles apart, showing that already it is quite widely spread over this valley; and, although its legitimate victims—to which it is heartily welcome—may for a time carry everything with a high hand, still it is very evident that this parasite, which is carrying out one of the fundamental laws of nature, will eventually reduce their numbers to such a degree that they will no longer be able to prevent our orange groves from producing their accustomed quota of fruits.

In several places we found that the white scales of all sizes and ages had perished in large numbers, and Mr. Chapman, who has closely watched the progress of this mortality, tells me that it reached its greatest height in the month of August, when fully three-fourths of the scales succumbed to the inevitable. It would appear that this mortality was due to the enfeebled condition of the trees attacked. The fact that the greatest mortality occurred during the time when the trees were in their stage of partial dormancy, when the flow of sap is very limited, gives additional weight to this hypothesis.

While on the subject of scale diseases and parasites, I may state that several years ago Messrs. J. W. Wolfskill and Alexander Crawford found a pear orchard in this city very badly infested with San Jose scales, so badly infested that during the entire growing season the trees had scarcely made any growth; a few years later they were much surprised at the changed appearance of these trees, which had neither been sprayed nor fumigated, and upon carefully examining the scales they found that a very large proportion of them had been perforated by parasites. At the present time these trees are remarkably clean and healthy, while scarcely a living scale is to be found upon them.

The advent of these scale-destroying parasites among us is very opportune, and the fact that our National Department of Agriculture, through Prof. Riley and his assistants, is now engaged in introducing other scale-destroyers from foreign lands, gives us great hopes that in a few years, at the farthest, the reign of the ubiquitous scale bug will have drawn to a close, and our orchards and orange groves, the pride and groundwork of our delectable State, will again flourish in all their glory, as of yore. —D. W. Coquillett.

Another Account of Scale-Destroyers.

The imported Australian parasites for the extermination of the white scale are destined to work great benefit to the orchards of the State. A few days ago some of the imported scale-destroyers, among which are some resembling the ladybug, were placed under a tree in the scale-infested Wolfskill orchard in Los Angeles, and a small tent was constructed with a canvas roof protecting the entire tree. The sides are of mosquito netting of close texture. This protects the insects, confines their operations and enables those interested in the experiments to observe the habits of their pests. The ladybugs were found to be exceedingly voracious, and destroyed the scale so rapidly as to endanger the process of the less active Australian parasites. Accordingly, the ladybugs were taken to another tree and similarly inclosed. The two stations are, therefore, in operation within a few yards of each other. Already myriads of black flies can be seen within the netting, and they have begun their deadly work on their white enemies. Of course, the actual results can only be guessed at this time, as it requires fully three months for the flies to develop from the egg to the winged insect. Mr. Wolfskill is very confident that the natural enemy of the destructive orange pest has been discovered. It is now only a question of the effect of the climate upon

their existence and habits. They are very prolific, and if they can be successfully grown here, the country can be readily supplied with them, and the orchards will yet be saved. —Anaheim Gazette.

Convict Labor.

MESSRS. EDITORS:—In your report of resolutions passed by the State Grange was one referring to the employment of convict labor, which I think shows a little misapprehension of the position of the laboring classes on convict labor. As a farmer, an ex-Granger and a Knight of Labor, I think I know something of the principles of the Grange and also the position of the workers in their relations to labor in general, and I believe I am right in saying that both bodies are steadily working to the same end, and the principle that underlies both organizations is that to the producer belongs the thing produced. In other words, to the laborer belong the fruits of his toil. Selfishness may creep in sometimes and warp people's better judgment.

The position taken by the working classes generally in regard to convict labor is that their labor should not be hired out to contractors, who will put inferior articles on the market and undersell honest labor. I think, however, the Grange will not be able to point out any instance where fault has been found with convicts being employed in making jute bage or quarrying granite, as these industries are carried on in this State.

The principle is a sound one, that convicts should contribute to their own support; and not only that, but, if possible, they should be made to contribute toward the expenses that are caused by their crimes. All countries make their criminals do something useful; some, like England, putting them on the construction of roads and other public works. There are always works to be carried on in any community that can be done by convicts without interfering with honest labor, and there is where it will be found to be wisest to employ them. The convict question is a knotty one and one that will be hard to settle satisfactorily. Prevention is better than cure, and if the principles of the Patrons of Husbandry and of the Knights of Labor could be carried out, crime would be lessened. J. B.

Moore Station.

Moore Station, on the Northern California railroad, has a population of 700 and has been a distributing point for many years. It has become noted as the terminus of the great lumber flume from the Sierras. During the last two years its mild and equable climate has attracted attention of home-seekers. Mrs. Mary A. Varney, in January, 1888, commenced laying out and planting a flower garden. At the earnest request of the managers of the citrus fair at Oroville, she exhibited specimens of flowers and plants grown in her garden in the open air. Her exhibit attracted much attention and covered about 60 feet of space and consisted of very choice varieties of chrysanthemums, Chinese hibiscus, hedge hibiscus, abutilon, flowering maple, ipomoea bona nox or moon flower, ivy-leaved geraniums, seedling orange trees and mammoth vines of all descriptions; also geraniums, begonias, and roses and some very rare plants, as the umbrella plant, south sea onions, cotton, cuphea, Dutchman's pipe, caladium; also orange, cherry, peach, plum, lemon, apricot and Russian mulberry trees and many other choice varieties.

Marysville and Vicinity.

During the week of the Citrus Fair a Rural representative visited Yuba City and Marysville. There is a steady and growing demand for fruit land in this section, and expert horticulturists are very pronounced in their opinion in according this belt advantages for growing the orange. The yards surrounding most of the dwelling-houses have from 4 to 12 orange trees, and are now loaded with fine fruit. One party picked and sold \$110 worth of oranges from five trees this season. Messrs. Abbott & Montague have laid out a tract of land containing 3000 acres in 10 and 20 acre lots, six miles below Marysville at Reed's station, and known as the Colmena Colony.

A good portion of this tract is bottom land, and this vicinity furnished the peaches and grapes that took the first premium at the district fair of this year.

The counties of Yuba and Sutter for a quarter of a century have been prominent as the center of our great fruit production. During this year home-seekers and capitalists have sought investments in real estate, and it seems that this section will be a leading rendezvous for increasing immigration during the year 1889.

FISH-LADDER IN THE MOKELUMNE.—Senator Langford, president of the Mokelumne Ditch and Irrigation Co., has informed the District Attorney of Amador county that the fish-ladder, for the non-construction of which suits had been brought against both Mr. Langford and the company, has been completed at the Westmoreland dam on the Mokelumne river near Lancha Plana. It is said to be one of the best fish-ladders in the State. This will probably put a stop to all further proceedings in the matter when existing judgments and orders of courts are satisfied.

Who Can Afford to Keep Ground Squirrels?

The following is an extract from a treatise on the California Ground Squirrel, published by the manufacturer of Wheeler's Carbon Bismuthide. A copy of the complete book accompanies each package of this exterminator as sold in the market:

Under this head comes properly the treatment of the amount of damage which can be done by these rodents. As to their storing capacity, I have, myself, taken over half a bushel of corn, acorns and other food, stored by squirrels, from a single burrow; this was in mid-winter, and the material lay in a storage chamber close to a warm nest; a nest roughly composed of dry grass.

Referring to my file of the PACIFIC RURAL PRESS, I find that Mr. Lorenzo of Capay, Yolo Co., once took from the pouch of a single squirrel 1520 grains of wheat, weighing 1½ ounces. In July, 1877, Capt. Allender of Pajaro took 1270 grains of plump wheat from the pouch of one squirrel, and that half a mile from the nearest grainfield. Patrick Sexton of Atlanta, Contra Costa Co., once took 778 grains from the pouch of one squirrel, weighing ¾ ounce. Calculating on this last quantity, which is the smallest cited, it would require 1051 grains to make one ounce. Now, Mr. Sexton estimated that located in the harvest-field, a squirrel would fill his pouch every five minutes (which period is shorter than I should place it). This makes him gather eight pounds per day of 12 hours. Carrying this further, it would be seen that 100 squirrels would, in three weeks, steal nearly six tons, worth at any time several hundred dollars. This is an extravagant estimate, but it may serve to impress upon the owners of infested fields the incalculable damage they suffer.

Prominent farmers of California have variously estimated the annual tax imposed by ground squirrels. For instance, at a meeting of the Santa Clara Farmers' Club, in 1871, it was estimated that ground squirrels and gophers (principally the former) destroyed one-fifth of the crops annually. One gentleman here stated that he had known 81 squirrels killed in one burrow (some dry retreat, I should surmise, where numbers had congregated to escape the floods). Again, at a Squirrel Convention, held in Contra Costa Co. in 1873, it was estimated that the annual loss by squirrels, in this county, was not less than \$250,000, and Alameda as much. One farmer—Mr. Dougherty—it was stated, lost 5000 cents of grain, worth \$10,000. The loss to the State was placed in the millions, to say nothing of the damage done to young vineyards and orchards.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3.00 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Darwin's Theory.

Darwin's theory of the "survival of the fittest" is simply that the weakly die, while the robust and hardy thrive and live. How true this is of seed growth, and how necessary to sow only that which is suited by nature to live and develop. D. M. Ferry & Co., the great Seed Growers and Seed Dealers of Detroit, Michigan, supply only the best and purest raising their own seeds by the most improved methods and with the greatest care, bringing to their business the invaluable aid of more than 30 years' experience. Their Seed Annual for 1889 is a real help to the gardener, and should be in the hands of all who desire to purchase pure and true seeds. Send your name to the firm's address at Detroit, Michigan, and they will forward you a copy.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

Dewey & Co.'s Scientific Press Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

Lands For Sale and To Let.

A RARE BARGAIN!

The undersigned offers for sale, on good terms, his CLOVERDALE DAIRY FARM of 500 acres, situated on Squirrel Creek, 2 miles west of Grass Valley. It is well watered by springs and has excellent irrigation facilities, commodious farm buildings, orchard of 160 trees and 6 acres of vineyard. A fine herd of Holstein, Ayrshire, Jersey, and Durham (thoroughbred and grade) cattle for sale with or without the ranch. Holstein and Ayrshire premium bulls on lowest terms, including "Tehama," which, on account of kinship to the herd, can no longer be used in breeding. A good dairy route is also included in this offer.

H. B. NICHOLS, Proprietor.

Best Fruit & Vineyard Land

— IN —

Central California!

Reasonable Prices and Easy Terms.

BY ORDER OF THE

Natoma Water & Mining Co.

WE OFFER AT PRIVATE SALE

1000 ACRES!

— OF THEIR —

MOST PRODUCTIVE LANDS,

Suitable for Fruit, Vines and Vegetables, in subdivisions of

5, 10 and 20-Acre Tracts

The tract now offered in subdivisions is situated on the south side of the American river, 18 miles from the city of Sacramento, the Capital of the State, adjoining the town of Folsom, and on the Sacramento and Placerville Railroad.

Two hundred acres are now planted in fruit, in full bearing; the balance of the land, 800 acres, is now ready to plant either in fruit or vineyards.

The soil is of a very superior quality, being a deep rich loam, well drained, and capable of producing every variety of fruits or vegetables, including the peach, apple, apricot, cherry, pear, plum, prune, nectarine, quince, fig, almond and walnut. The topographical feature of this locality is the gentle slope of the land, in urging perfect drainage.

Facilities for Irrigation.

Water for irrigation and other purposes will be furnished to all who desire it at the Company's rates. The water is taken from the American river, near Salmon Falls, and the ditch has a capacity of 3000 miners' inches and a never-failing supply of water. All of the land now offered for sale lies below the ditch, and consequently can be irrigated therefrom. This is a very important item and greatly increases the value of the land, as by irrigation a sure crop can always be depended upon, even in the driest of seasons. The irrigation ditches run directly through the tract, and in addition to this, an unfailing supply of pure and soft water can be obtained from wells at a depth of from 40 to 100 feet.

Transportation Facilities

The transportation facilities, a very important factor to all fruit-growers, are of the very best; the Sacramento and Placerville Railroad running through the orchard its entire length and having a receiving depot in the most central location on the tract, so that no fruit has to be hauled more than half a mile.

Why the Land Offered is a Profitable Investment.

The soil is of the best, being sandy loam and sediment, and adapted to the choicest quality of all varieties of fruits and vegetables. The property is located in that portion of the State where all fruits ripen early, and naturally command the highest prices.

The property is also situated in the central part of California, and in the center of a great fruit-producing section, and immediately adjoining the principal markets of the coast—by the quick transportation facilities which it enjoys.

The company will assist purchasers of their lands by giving them employment in preference to all others, furnish them water for irrigation at very low rates, assist them by their knowledge of the property in planting the different varieties of fruit and vines on the lands to which they are best adapted, furnish pasture for stock, and in fact they will at times be prepared to render such assistance to purchasers that will be of benefit to them in cultivating, selling and shipping their products.

The products of the lands of the NATOMA WATER AND MINING COMPANY have always commanded the highest market prices both on the Pacific Coast and in the Eastern market. The fruit is loaded in the cars on the property and is transported intact to its destination in the East and other markets, a facility of transportation that is of the greatest importance, and with these great advantages prosperity is assured, and to-day there is no better field for solid and profitable investment on the Pacific Coast, as these lands are offered at prices below those of other lands not so advantageously located, and not paying an immediate income.

The portion of the property set out in orchard is all in bearing; thus purchasers will at once receive an income, thereby enabling them to pay for the land from the products. Good soil, abundance of water, healthy climate, easy of access, close proximity to schools and churches, with low prices and easy terms combine to make the purchase of these lands the most profitable investment ever offered.

Beet Sugar in Oregon.

The "beet-sugar industry" was pretty thoroughly discussed at Woodburn by Marion County Pomona Grange. Our people must find some new industry to take the place of excessive fruit-raising and grain-growing. "Farmer No. 1" has a most able letter upon this subject, which we clip from an exchange:

Many of your business-men have slow accounts on poor, hard-working men, who would gladly work it out on your roadways; and such labor would come back to you with compound interest, in the shape of increased trade that now stops in all the little towns that surround you. There is no excellence without effort. There is often pleasure and profit in seeing what we can do. The object of money is not to be hoarded. You have now among you men that have grown immensely rich off the industry of the surrounding country—men that count their interest money by the thousand. They are not willing to-day to help bear the burden of government in common with the poor farmers off whom they have made their riches. I know whereof I speak. When an individual will send his money out of the country to avoid his proper share of the public taxes, is he honest? Has he any patriotism? And when he loans, he does it under the name of some friend that is in Europe, New York, or perhaps that has been dead 40 years, to avoid the same burden. Can such a man be trusted? If so, how far? If an incendiary were to burn his smokehouse or dwelling, he would call upon the authorities to run the culprit down at any cost, because it is taken from the treasury of the very people he is helping to rob. It is almost a shame that such men are classed as citizens. Americans ought to be God-honoring, freedom-loving and strictly law-abiding citizens. Look at the last assessment. Oh, shame! The Shylocks knew the Willamette bridge and other improvements were to be paid for. I am not growling, but only speaking in defense of justice. I am an old taxpayer and have helped to build all the public buildings of this State and county. I have ridden past the foundation of the great structure, going in to pay my small share that was needed in its construction, when I was cold from being poorly clad, truly needing some of the tax-money to buy more comfortable clothes, and this only voiced the condition of thousands. I remember once riding to town with a friend who was going in to pay his taxes, and, just as we passed the Statehouse, he looked up at the imposing, half-finished structure and remarked that his poverty of dress was not in keeping with the immense pile of masonry that stood before us. The average farmer always pays his taxes cheerfully, and never winces unless he feels that the burden is not resting equally, or that the public funds are being recklessly applied.

But as no city or county ever became very prosperous from its citizens butt-n-holing each other and talking of the most probable candidate for the U. S. Senate or to fill the various other offices, let us turn to another part of the subject, and that is manufacturing.

The light of genius, industry and patriotism that lit up the French Empire during the days of the Great Napoleon and had also made them masters of the whole world, was fast smoldering in the ruins of their former greatness, when Germany, through a series of victorious contests, was enabled to lay a burden of several hundred millions of dollars to indemnify themselves for losses sustained consequent upon war. This heavy debt drove the French people into the various manufacturing industries, and, for many years following, almost every fashionable article found upon our own, and upon the markets of the world, bore the name of a French artisan. The opening up of these new industries enabled her people to liquidate the great debt in so short a time that it was an astonishment to the whole civilized world, proving beyond controversy that no State, nation or people can long maintain their national vigor and commercial standing among the nations of the world unless they become manufacturers to the extent of the natural resources by which they are environed.

Then, after reviewing a little short history of what industry, genius and home enterprise have, will and can do for a people, let us unite in asking the coming Legislature to offer a bounty of \$10,000, payable to the first man or company for the production of the first 150 pounds of beet sugar raised and manufactured anywhere in this State. We will not cavil about its location. Such an enterprise will not mislocate itself. Then, as Salem has the money and fine natural surroundings, let her come to the front and take the prize. The general advantage to

the State will be the same, locate it where they may. It probably would not exceed one-quarter mill tax to cover the outlay, and I am sure that is nothing when compared to the great good that would accrue to the people from such an outlay.

This is not a good corn country, and the question suggests itself to every farmer, what kind of a crop can be raised upon our fallow lands in order to get some return for the work? By introducing the beet-sugar industry, it would enable the farmers to plant some of their fields lying idle through the whole season, thereby getting pay for the work that must necessarily be done to prepare the land for wheat. Not only so, but it would help to diversify our products.

In order to set the sugar industry squarely on its pegs and enable it to succeed and pay from the beginning, it possibly would be wise to appropriate a few hundred dollars, to be used as premiums on the best five, ten, twenty-five, fifty, etc., acre lots during the first and second years. As the factory would be of no use without plenty of raw material to work, this course would insure a fair and speedy test. If the industry would prove as profitable as it has in France and Germany, many other factories would spring up all along the coast, which would give a new impetus to the agricultural interests of this country. I could mention many other advantages that would grow out of such an enterprise. As this article was penned only as a passing thought, I leave the subject for the public's candid consideration.

FARMER NO. 1.

The London Exhibit Convention to Re-assemble.

The following note has been sent to all members of the London Exposition Committee, etc. As the matter in consideration is very important, we trust that due notice will be taken and a full meeting be held:

DEAR SIR:—The Executive Committee of the London Exhibit for California, at its first regular meeting, held on the afternoon of Dec. 18th, after the close of the convention of which you were a member, by unanimous action called a meeting of the general convention to be held in the City of Sacramento, Jan. 22, 1889.

You are hereby notified that such meeting has been called, and will be held, and that matters to come before it are of the highest importance. Your presence and interested attention are solicited.—WM. H. MILLS, San Francisco, Chairman; CHAS. B. TURRILL, San Diego, Secretary.

A Card from Mr. Lubin.

EDITORS PRESS:—The house of John W. Draper & Son, of Covent Garden, London, England, has in the past, through me, given the fruit-growers much valuable information, and even now devote much of their valuable time in assisting the bringing about of the proposed exhibition of the products of California in London.

It behooves every fruit-grower in the State to remember this, and when agencies are to be established in London for the sale of our products, it would be rank ingratitude on our part to overlook the claims of this liberal and old-established house. They are now furnishing the Executive Committee of the London exhibition with valuable and necessary information.—DAVID LUBIN, Chairman Plan Committee on London Exhibit, Sacramento, Dec. 22, 1888.

Jersey Beef.

As additional testimony to the excellence of Jersey beef, referring to the mention on page 555 of last week's RURAL, we give the following letter written by Henry Lux, butcher of San Jose, to Henry Pierce, the well known breeder:

In reference to the Jersey steers from Yerba Buena ranch, I have to say that they weighed, for their size, more than any cattle I have ever killed, and I never cut up an animal that was in all respects better meat. I thought them stall-fed, until you told me they had not been, having gotten their entire living off the hills back of San Jose. Taking into account how they were raised, I am sure no breed of cattle could have equaled the quality of meat, three year-old steers weighing upward of 700 pounds and two close to 600 pounds.

NICARAGUA CANAL IN MINIATURE.—A model of the Nicaragua canal, by which it is proposed to connect the Atlantic and the Pacific, has lately been exhibited in New York. It occupied a space 20 feet long, 6 feet wide and 3 feet high, and presented a topographical picture which was much admired. The model ship was towed across the real water of the model canal, the locks were worked, and the two oceans heaved all day long. We note this with special interest, in view of the bird's-eye map of the canal mentioned last week as presented by the Grangers' Bank of this city.

A UNIQUE CALENDAR for 1889, with a quaint little colored picture for each month, illustrating the costume of some nationality, comes to us from Hoosick Falls, N. Y., with the compliments of the Walter A. Wood Company, whose mowing and reaping machines are famous the world over.

THE STOCK YARD.

Alfalfa-Growing.

EDITORS PRESS:—I saw in the RURAL recently a letter from some gentleman from Sacramento who wishes that more farmers would give their experience on raising alfalfa. I would like to give my experience on alfalfa, for I always have good hay.

First, I always sow early in spring—about the time of the last frost—as it is very tender when young.

After sowing, I harrow in same as for grain. For this reason it covers well and gives it a good chance to root before being exposed to the sun or frost. Put on plenty of seed—you need not be afraid of getting too thick a stand. You cannot reap unless you sow; that's the drawback to most of farmers. The first year you will be able to cut two crops of fine hay.

After the first season, I take a sharp harrow when the alfalfa begins to sprout in spring, and give it a thorough harrowing; this loosens up the soil and tears out all the foul seed. It does not injure the alfalfa root. You will find that it will pay you for all your trouble.

If on irrigated land, you want to irrigate freely when first sown, so as to keep the ground moist till it gets through.

I always cut my hay just before it blossoms, for this reason: You will find the stems much finer, and the strength retained in the stalk instead of in the blossom; besides, it will stand up much better to mow. What you will lose in cutting early, you will gain in cutting it much cleaner. Of course it will not yield so much to the acre, but you will find it will keep more stock to the acre, for they will eat every spear of it.

I consider alfalfa hay the best in existence for young stock, as it always keeps the bowels regular. It is more like natural grass. I feed no other hay, and when my neighbors' horses are all sick, my stock come in at night as they do in spring of year with their heels in the air—you don't know which end is going to get in first. Give plenty alfalfa and they will thrive, but do not do as some men do, fill up the barn and let the stock look through the cracks, and then curse the alfalfa hay.

I have found from long experience that grass is not fit for mares which you want to breed, for as long as they are feeding on it, you will find they are very hard to get with foal. Cows are the same way. Put them in a dry pasture a few weeks before you breed them, and you will find your mares will get with foal much quicker.

As to the best mode of curing alfalfa hay, I find it is to not let it lie too long after being mowed. Rake it into windrows and let it dry as much as possible in the windrow before being put in the cock, then haul it in immediately, for if too dry, the leaves drop off. Be sure to have it thoroughly cured before putting in the barn, for if the least moldy or damp, it will surely give your horses the heaves or a bad cough. This I know from experience of green farm hands. Salt it well when it is put in the barn—that will stop it from molding if too damp when hauling.

As for getting foul seed in your land, it is almost impossible to avoid, especially on a river-bottom, for your next neighbor above you may neglect to take the proper care, and the wild seed will wash down your land. I have known it to wash for miles. FARMER.

Calaveras Co.

Shorthorn Association Proposed.

EDITORS PRESS:—Will you kindly give place in your valuable paper to a suggestion I wish to make to all parties in California that feel an interest in breeding and improving Shorthorn cattle in the State. For one, I firmly believe that breed of cattle does not receive the attention they are entitled to. For beef, it is generally conceded they "take the cake." Their milk, I believe, in quality, will compare with the Jersey, and in quantity with the Holstein. I mean, with some little painstaking, to bring this about. I am not prepared to say that they are able to live in snowdrifts and on sagebrush as well as the little black Gallo-way, but as the country gets more peopled, and they all will have at least a few head of cattle, and as the more intelligent farmers advocate housing and feeding their stock, this quality of roughing it will be less appreciated.

Would it not be well for all parties that are interested in Shorthorns to organize an association, and meet, say two or three times a year and consult about the best way to advance the best interest for the breeders? I know of two or three that are of that opinion. Why could not some one suggest a meeting of the breeders at some place easily reached by all?

Sites, Dec. 10th.

P. PETERSON.

[It would be an excellent idea to have such an association. There was one 12 years ago, which expired for lack of interest, but probably more general interest would be taken now. It is well worth trying. What do breeders think about it?—EDS. PRESS.]

THE State of Nevada begins the new year with \$639,989.95 in its treasury in coin, and \$814,000 in bonds in the school fund.

Kern County Notes.

EDITORS PRESS:—Kern is waking out of sleep and is rubbing her eyes, which behold with astonishment the things which the days are bringing forth.

At the headquarters of the recently instituted Board of Trade are displayed the wonders of our productive county. Upon the streets are many new faces of the substantial business cast on the lookout for the main chance. Work upon the new system of canals and reservoirs to develop the lower lands of Messrs. Carr & Haggin and Miller & Lux estates is being pushed with the energy and thoroughness which characterize all their enterprises. As to the fact that the lands of these two vast estates are to be subdivided, all doubt is dispelled. After repeated rumors pro and con, Mr. Carr now makes the statement in print that the lands of that company will be placed on sale within 30 days. I make the statement of these facts to you because it is well known that many who are now in this State seeking homes consult your columns as being a reliable source of information.

What we need now is a class of thrifty people who are able and willing to subdue the soil of this genial valley which has been blessed in point of natural resources lavishly. Having seen much of this State, I have yet to find a location that combines all the good points that this does. For raisins we have a soil and climate as good as any location yet tested. The freedom from early fall rains and exemption from fogs makes this the banner county in point of requisite conditions. It has been proven beyond cavil that for the following-named fruits we are also in the front rank, viz.: Apriots, peaches, pears, raisins, grapes, either in green or dried product. Our proximity to the Mojave rainless district, combined with our ample supply of water for irrigation, furnishes conditions of superior excellence which have thus far escaped the notice of horticulturists generally. I predict that when a lapse of time shall have passed sufficient for our development, this will be the largest and most important point of production and shipment of fruit in the State.

The initial move has been made. As announced by the PRESS, the land sale came off, and many a resident of Kern was aroused at what seemed fabulous prices, and are inclined to question as to the bona-fide character of actual sales. To some who were wise in their day and generation, it is no matter of surprise, when we see the conservative railway company putting in thousands of dollars as an outlay for facilities to accommodate the trade which they see must come to them at this point. The conclusion is, that the time is not far distant when the dream of the wildest enthusiast is to be realized. Merit will win in the end, no matter what obstacles intervene. W.

Bakersfield, Cal.

Poisoned Wheat for Squirrels.

This is the very best time of the year to kill off these pests. A little expense in this month will save much time and trouble later on. * * * We have never found anything give so much satisfaction in the long run as the prepared poisoned wheat. If this is used in reasonable quantities, either on the very edge or just inside the squirrel hole, the squirrels will eat it greedily; there is little risk of killing off birds and practically no risk at all of injuring livestock, as the grain soon becomes so scattered that what any one animal bigger than a squirrel could get hold of would be little more than a medicinal dose. The material is cheap; it can be distributed by one man, and does the work as completely as anything we know of. There are several brands on the market, some of which are perfectly useless. At the Southern farm we have generally used Wakelee's, and it has done very good work.—San Leandro Reporter.

MR. GEO. A. WILEY, manager of the Cook Stock Farm, has just returned from the East, where he purchased and shipped one Cruikshank Shorthorn bull, one Polled-Angus bull of the "Urica" family, one imported Devon bull, eight brood mares of trotting strain, and one weanling colt by Red Wilkes, dam by Mambrino Patchen. A more extended description of this shipment of thoroughbred stock will appear in our columns.

NURSERIES AT LODI.—Jas. A. Anderson, a nurseryman of a dozen years' experience in the great valley of California, whose advertisement appears elsewhere, has issued a 14 page catalogue of the trees and plants which he is cultivating in his "Riverside Nursery" at Lodi, San Joaquin county, with hints as to transplanting and pruning.

CAPTAIN DALTON, chief patrolman of the Fish Commission, recently arrested and had convicted of illegal fishing 14 Italians, who were fined \$100 apiece. As one-half of the fine goes to Captain Dalton, it was a very good day's work. The parties were fishing on Russian river, in Mendocino county.

SHORTHORNS FROM KENTUCKY.—Cattle-breeders will be interested in the large importation of Durhams, advertised by Messrs. Goff & Prewett in another column, and now on exhibition in this city.

Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

HORSES AND CATTLE.

California Products at Chicago.

CHICAGO, Jan. 2.—Of California fruits there are some Easter Beurre pears left and sell in a small way at \$3.25 to \$3.50 per box.

Trade in California dried fruits, which ruled so active during the fall, became suddenly quiet late in the year, with the quietness attributed to stock-taking and other causes calculated to make the produce markets quiet around the holidays. Stocks are heavy and prices are very reasonable for all lines, and holders have no doubt but that the period of dullness lately experienced will soon pass. As yet a steady feeling prevails, with quotations as follows:

Apricots—Evaporated, bxs, 15c; bleached, bxs, 14c; do, sun-dried, sks, 9@10c. Peaches—New, bleached, unpeeled, 8 1/4 @ 10c; do, peeled, bxs, 14 @ 15c; do, sun-dried, sks, unpeeled, 6 1/4 @ 7c; do, new, evaporated, unpeeled, 10 @ 11c. Nectarines—White, bxs, 9 @ 12c; do, red, bxs, 8 @ 11c; do red to white, sks, 7 @ 10c. Plums, new, pitted, 9 @ 10c; new, do, unpitted, 4 @ 7c; Prunes, according to size, in sks, 5 @ 9c; Silver, 10 @ 13c.

Raisins—Loose Muscates, old, 30 lb box, \$1 @ 1.10; do, new, \$1.30 @ 1.50; London layers, new, \$2.25 @ \$2.40.

Beans are just about steady. The market has been ruling quiet for some time, but as the holiday season is now passed an increase in business is looked for. Current prices are as follows: California pea beans, \$1.95 @ 2. Lima beans, California, 30 lb, 4 1/4c.

WHEN completed, the dam across the American river at Folsom will contain over 20,000 cubic yards of masonry of the heaviest kind to be found on the coast. The water will fall over it from a height of 56 feet. That volume of power which the State proposes to utilize in the prison manufactures and for lighting by electricity and other purposes will be about 600-horse power. The company which is superintending the enterprise, however, will have at command at least 5000 horse power. It is intended by the projectors of the scheme to transmit a large volume of this power, by means of electricity, to Sacramento, there to be utilized in driving the machinery of factories and mills and also for electric lighting. Besides furnishing the great volume of power for Sacramento's industries, the water company will irrigate about 50,000 acres of land.

EXPLANATION.—Cl, for clear; Cy, cloudy; Fr, fair; Fy, foggy; Om, calm; — indicates too small to measure. Temperature, wind and weather at 12:30 M. (Pacific Standard time) with amount of rainfall in the preceding 24 hours. T indicates trace of rainfall. Observations taken at 5 P. M. instead of 12 M.

THE PACIFIC RURAL PRESS.

It is a Farm and Home Journal of the highest class, pure in tone and well informed on all matters of industrial interest. It is handsomely printed and illustrated. It is a 20-page weekly, and is furnished, postage paid, for \$3 per year in advance. Single copies, 10 cents, prepaid.

All branches of Farming, including the keeping and breeding of Horses, Cattle, Sheep, Swine, Bees, Poultry, etc.; Garden, Fruit, Vine, Grain, and Hop Culture; Reliable Market Reports, with other important departments devoted to the Grange, Home Circle, News, etc.

It is the Leading Agricultural Home Newspaper and standard authority on all branches of California Agriculture.

It has the fullest and most accurate REPORTS OF HORTICULTURAL MEETINGS, and is the best record of the EXPERIENCE OF INDIVIDUAL FARMERS AND FRUIT-GROWERS in all parts of the State.

Its market reports are prepared with care and the greatest reliability possible for the benefit of the producer.

THE PACIFIC RURAL PRESS has more circulation and influence in the Pacific States and Territories than all the other agricultural weeklies in the United States combined. Advertisers can reach nearly all the leading reading farmers through its columns.

A well-known horticulturist who was in attendance upon the meetings of fruit-growers, writes: "The greatest praise that could be bestowed on the RURAL PRESS at the late Fruit-Growers' Convention and, which shows, undoubtedly, the well-deserved popularity of that paper, is the fact that almost all the members of that Convention were subscribers to the Press."

Established 1870. Yearly subscription \$3. [Thirteen and one-half months are allowed new subscribers and old subscribers paying \$3, strictly in advance.]

What Others Say of the "Rural Press."

PROUD OF THE RURAL.—We feel proud of the RURAL PRESS. It is a paper that we are not ashamed to send to our friends in the East. Every farmer on the Pacific Coast should take it, and it is a valuable paper for any one to read. We appreciate your efforts. Long may you live to bless our cause.—James Blood, Santa Barbara Co.

INVALUABLE.—I congratulate you on the general excellence of the RURAL PRESS, and consider it simply invaluable to all residents of the Pacific Coast.—Frederick C. Sheldon, M. D., Los Angeles Co.

THE RURAL BEST OF ALL.—I take from four to six papers but if I could take but one, I should undoubtedly choose the PACIFIC RURAL PRESS.—J. M. Asher, San Diego Co.

DEWEY & CO., Publishers, No. 220 Market Street, San Francisco.

THE coal we receive from Baltimore under the name of Cumberland is largely used by ironmongers, instead of coke, though they use both. From 1870 to 1873, our receipts of Cumberland coal were comparatively small, varying from 2200 to 9800 tons per annum. Since 1874 we have been receiving larger supplies of that description. The imports from 1874 to 1877 were 11,400 to 16,172 tons per annum, or 54,483 tons, an average of 13,621 tons per annum. In 1878 the imports were only 9900 tons, and in 1879 only one cargo of 1800 tons came to hand. From 1880 to 1883 the imports were 138 769 tons, or 17,386 tons per annum. The total for 1887 was 26,675 tons, the largest quantity ever imported from Baltimore.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or of some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

Wanted.

A few tons Apricot and Peach Seed. Persons having such for sale address immediately, S. M. A., Box 2361, San Francisco, Cal.

Poultry and Stock Book

Niles's new manual and reference book on subjects connected with successful Poultry and Stock Raising on the Pacific Coast. A New Edition, over 100 pages, profusely illustrated with handsome, life-like illustrations of the different varieties of Poultry and Live-Stock. Price, postpaid 50 cts. Address PACIFIC RURAL PRESS Office, San Francisco, Cal.

BACK FILES of the PACIFIC RURAL PRESS (unbound) can be had for \$3 per volume of six months. Per year (two volumes) \$5. Inserted in Dewey's patent binder, 50 cents additional per volume.

Come, Fellow Farmers!

It is the good things and the new things you want. Here is a Catalogue full of them! Do you want tested seed, raised from stock selected with extra care, grown from the best strains, got from the original sources? I aim to have none just such. Do you want new varieties that are really good, and not merely novelties? I aim to have none such. Do you want seed that the dealer himself has faith enough in to warrant? I warrant mine, as see Catalogue. Do you want an exceptionally large collection to select from? Mine is such. Do you want them directly from the grower? I grow a large portion of mine—few seed-men grow any! My Vegetable and Flower Seed Catalogue for 1889 FREE to everybody. JAMES J. H. GREGORY, Marblehead, Mass.

One year old, \$300 for the lot, or \$20 per M; also Dormant Buds, Peach and Apricot, \$50 per M. Fan Palm, Ash Trees, Texas Umbrella, 10 cents each. PARADISE NURSERY, PHOENIX, ARIZONA. D. TURNER, Manager.

FOR PERFECT PLOWING!

There is nothing made equal to NEW DEAL PLOWS.

They are perfectly adapted for use in hard ground and are the lightest running, most easily handled and most perfect working Plows in the market.

They have grown more rapidly in public favor than any Plow ever made, and have received more testimonials of merit than almost any other tool in the market.

They take with the farmer, and satisfy where all
OTHER STYLES OF PLOWS HAVE FAILED.

A BONANZA TO THE FARMER!

ENABLING HIM TO DO HIS PLOWING WITH LESS LABOR, LESS EXPENSE, GREATER SATISFACTION AND GREATER PROFIT.

Never before has a Gang Plow been made that was suitable for use in a ten-acre patch as well as in a quarter section field.

The New Deal Gang turns square corners without lifting. It plows close to fences. The horses need not tramp down the plowed ground.

It saves its cost every time it plows 160 acres. It is the most economical plow a farmer can buy, as it saves horses, saves hired help, and so saves time and money.

The	2	Gang	is	equipped	with	8,	10,	12	and	14	inch	PloWS.

Shaw's Slip Share

GANG PLOWS.

The Reversible Gang Plow is used for shallow plowing and for plowing in grain. This is an economical plow and can be run at less expense than any plow made. Shaw's Slip Share Gang Plow is used for deep plowing or summer fallowing. It is the lightest draft plow made, and turns the ground in good shape. The bottoms for this plow are interchangeable with the reversible plow bottoms and are bolted on to the same frame. We have testimonials from numbers of the most prominent farmers in the State testifying as to the excellent qualities of this plow.

More Stockton Gang Plows Sold in 1887 and 1888 than any other Gang Plow.

The Cleveland Bay.

The Cleveland Bay is gaining popularity rapidly in California, and bids fair to occupy as important a place in the public mind on this Western Slope as it has already commanded east of the Rocky mountains. Some most ex-

United States by Stericker Bros. of Illinois in July, 1885. He is recorded as No. 68 in Vol. 1 of the American Cleveland Bay Stud Book. His sire was Young Candidate, winner of the first premium at the Great Yorkshire in 1875, and sold when 11 years old for \$2000 to go to Australia. He was counted the finest Cleve-

California and in 1886 took the first premium at the Contra Costa Fair. In 1887 Royal Studley was successful in taking first premiums in the "all work" class at Sonoma County Fair and at the Sonoma, Marin and Napa and Solano District, and the second premium at the Golden Gate Fair the same year. This record at the

all well exhibited in Royal Studley's form and carriage.

The Cook Stock Farm, of which a description is given by a contributor on another page of this issue, has quite a group of Cleveland Bays, as well as other breeds of horses and cattle. A colleague of Royal Studley is another famous

IMPORTED CLEVELAND BAY STALLION ROYAL STUDLEY 68, OWNED BY SETH COOK OF DANVILLE, CAL.

cellent representatives of the breed have been imported and are now being bred with care and intelligence and with full belief in the value and general acceptability of the breed by those who own them.

We have the pleasure of adorning our first page this week with the portrait of Royal Studley, a splendid imported stallion which heads the Cleveland Bays on the celebrated breeding farm of Seth Cook near Danville, Contra Costa county, California. Royal Studley was foaled in the spring of 1883, and was brought to the

land Bay of his day. Royal Studley's dam was by Whalebone, also a winner of Great Yorkshire and Royal honors. Royal Studley's earlier ancestry was also honorable, and he shows his descent in every feature and action. He is a fine, rich bay in color, has superior movement and wonderful style.

Royal Studley has had a full career as a prize-winner in this country. He began with the year of his arrival by taking the first premium in his class at the Illinois State Fair in 1885. After this victory he was brought to

Golden Gate Fair he beat in 1888, for he won the sweepstakes, open to all. He also stood first in the special class at the State Fair of 1888.

Royal Studley is a splendid specimen of the Cleveland Bay, which is confidently put forth as the best breed for carriage and general-purpose horses. We have previously given general notes on the characteristics of the breed. Their rich bay color, good hight, sloping shoulders, short back, powerful loins and long quarters, well-carried head and general aspect, betokening activity and strength, are

Cleveland Bay, Napoleon, whose portrait we give on page 37 of this issue. Napoleon was foaled in 1885 and imported in 1887. He has an excellent pedigree. He is a beautiful bay with black legs and deep girth. He took the first premium in London in 1887, besides a silver medal, showing against horses of all ages, the competition being open to all England. He also won other victories abroad, and in this country took the second premium at the Illinois State Fair in 1887, and the first at the great horse-show in Chicago the same year.

FLORICULTURE.

Spring Flowering Bulbs.

[Read at the last meeting of the State Floral Society by F. A. MILLER, San Francisco.]

To do full justice to this most interesting subject requires more time than I can give it now. I cheerfully give you my experience, hoping that others may improve on my remarks, and add what I may omit. I will confine myself to the more ordinary treatment of bulbs, by which any one may succeed, and shall not touch the artificial methods of manipulation used by practical florists for cut flower purposes in and out of season.

Hyacinths.

Beginning with the ever-popular hyacinth, three methods of treatment are practiced; they can be grown in water, for which purpose glasses of particular shape are made. Only very strong and sound bulbs should be selected for this method. The glass is filled with water up to the neck, so that the bulbs placed on top of the neck will just touch the water. After setting the bulb, place the glass in a dark, cool room for about three weeks. In doing so, roots are developed and top growth is retarded. Once a week the water should be changed without removing the bulb from the glass. In course of three weeks, more or less, the glass will be well filled with the roots, when it should be brought to the light near the window. The ordinary warmth of the room will stimulate top growth and eventually bring out a good spike of fragrant flowers. The process is an interesting one and generally quite satisfactory. I prefer the single varieties of hyacinths for this purpose. They are less top-heavy than the double flowers and keep the position of the plant better.

Another method is the cultivation in pots. Select good sound bulbs, one for a five-inch pot or three for a six-inch pot. The soil in which they are to be planted should consist of two-thirds good loam, mixed with one-third of sand and well-rotted manure. See that the pots are clean; fill them with the prepared soil, rather loose, to within one inch of the top; then place the bulb in position and press it firmly into the soil, so that the top of the bulb comes within one inch of the rim of the pot. Then fill in more soil, so as to cover the top of the bulb about a half-inch; press down the soil gently all around; water well with the rose of a watering pot and set the pot away in a dark, cool place in the house, or if outdoors, cover with a box; or, what is still better, plunge the pots in the ground and cover to the depth of three or four inches with moss or sand. All this is done for the purpose of developing roots and to retard top growth. After three or four weeks, when the pots are well filled with roots, bring them to the light and warmth of an ordinary room. The roots having been developed first, the bulbs have a proper support to develop their flowers to perfection.

The third method consists in planting the bulbs in the open ground, where they are expected to flower. This can be done at any time from November until January, or even later, if the bulbs are still in sound condition, and have not sprouted too much. Well-prepared soil, deeply cultivated, such as we would have for most other garden plants, will do very well for hyacinths. The bulbs should be planted about six to eight inches apart, three to four inches below the surface and set firmly. Nothing will prevent them from developing good flowers except insect pests, which may be kept away by an occasional application of wood ashes or other well-known remedies.

Crocuses and Snowdrops

Are great favorites with the Eastern and European people on account of their early blooming, when flowers of any kind are few and far between. I am told very often, and by practical gardeners, too, that they will not thrive in California. I cannot quite agree with this proposition. While I am not prepared to advocate a very extensive cultivation of these bulbs, because in our mild climate we can have other and perhaps more showy flowers, quite as early, I still hold that they should not be entirely neglected. A bed of crocus, with its bright and varied colors, is very attractive, and a clump of snowdrops, with their graceful little bells, very charming. The crocus bulbs should be planted about three to four inches apart and three inches deep; snowdrop about the same. Now the reason why many people do not succeed with them is because they plant them too late. The bulbs finish their growth in Europe very early, and are fully matured in May. They cannot be kept very well more than five or six months in a dormant condition. This makes the proper planting season in October, or as early as they can be procured from the importers. They soon lose their vitality after that time, and although the bulbs may look sound, they cannot be trusted after this month, and yet our good people will purchase them from the dealers as late as April, when the germ of the bulb is entirely gone. As I said before, if you wish to succeed with the crocus and snowdrop, plant them early in October. Do not disturb them after their flowering season, as they will produce their flowers for a number of years. About

Tulips

We hear the same story, and true enough their success so far is quite limited under open-ground cultivation. However, I have seen

some very good tulip flowers produced in Oakland and other places in the open ground. The tulip is another one of the bulbs which should be planted early, as it does not keep its vitality very well. In richness of coloring they are superior to hyacinths. For pot culture they are to be treated about the same as hyacinths, but they should be potted in October. For outdoor cultivation they can also be treated like hyacinths, and should be planted in October, four inches deep, and about five inches apart. They remain in the ground from three to four years, and are very apt to produce a better result the second season. Failures in growing tulips successfully may be attributed chiefly to late and shallow planting. They should be planted in groups or masses, and are then, on account of their brilliant coloring, very effective. Some good, sound tulips, especially of the late show tulips, can still be had at this time (Dec. 14th), and those who wish to plant had better not delay any longer, and be particular in the selection of sound bulbs which do not yet show any vegetation.

Narcissuses

Are doing so well with us here under ordinary treatment that it seems unnecessary to say anything about their cultivation. But as many of the better varieties are very little known, it may be well to speak of them, and encourage the cultivation of superior kinds. The family of narcissus is divided into various sections as follows:

(1) The Tazetta Section, or bunch-flowering narcissus, among which we find the common Chinese narcissus, the Paper White, Staten General, Grand Monarque and Prince of Orange, nearly all of which are cultivated here, and do well with everybody.

(2) The Jonquil Section, producing small yellow flowers, single and double, are well worth cultivating, as their exquisite fragrance and their productiveness of flowers are very much in their favor. If left in the ground undisturbed, they yield better after once becoming thoroughly established.

(3) The Daffodil Section is not so well known yet, and as lordly gems of their type, they should be in every garden. Such varieties as Incomparabilis and Balbe Codinzu (or Hoop Petticoat Narcissus) are very floriferous and most effective. They surpass in beauty of form and agreeable perfume all other flowering spring bulbs.

(4) The Trumpet Section is also quite scarce hereabout as yet. Their forms are most elegant, and are well adapted for ladies' wear. The bi-color variety, of a pure white perianth and rich yellow trumpet, is simply magnificent. The Scoticus (or Garland Lily) is also very fine; Trumpet Major of a rich yellow; the Nobilis and others are all very good.

(5) The Double Flowering Section is not so highly esteemed, and I myself much prefer the single-flowering Narcissus. Still some such as the Koman, the Van Lion, the Incomparable (regularly known as Butter and Eggs) and the Double White, which is as fragrant as a Cape Jasmine, are admired by many.

(6) The Poeticus Section should not be omitted. The variety called Dandy, white, with a lemon-yellow cup, and the Poeticus, which is white with an orange-red cup, are both very attractive and deserve to be cultivated.

Most of the Narcissus may be grown in water, but the Tazetta Section, or bunch-flowering Narcissus, are best adapted to this method. All Narcissus should remain undisturbed in the ground, and with a good annual top dressing they will hold their own for three or four years. I would advise, however, to dig them up after the third flowering season, replenish the soil with plenty of old rotten manure, and replant again early in the fall—as soon as the rainy season has fairly set in. The best time to take them up is in June, when the leaves begin to decay. The strongest bulb should be selected and kept as other bulbs, in a dry, cool place until fall.

Ranunculus and Anemones

Are worthy of better treatment than they generally receive. The flowers of both are beautiful in form as well as in diversity of color. They do not require any particular treatment. They also make good pot plants. A light loam well enriched with old manure suits them best. The bulbs are of a very dry nature, and have a lifeless appearance. I have found that on this coast they frequently lie in the ground a long time before they begin to vegetate. I cannot account for this. The bulbs keep well in a dry state, and they may be planted in autumn, or during winter, or in early spring. I would advise the following treatment for California: In February, a month earlier or later will not matter much; lay the bulbs between two layers of moss, which may be kept outside or in a cellar in a box. Moisten the moss well, and see that it is kept damp. The bulbs will readily begin to make roots and start to grow; then plant them in pots or in the garden, where they are expected to flower, and the result will be surprising. They will go ahead rapidly; will flower in spring and continue to bloom for a long time. They don't want to be disturbed, and will do well for a number of years, but the ground should be enriched every winter with a heavy top dressing. They should be watered freely in dry weather. They will amply repay the little care and trouble bestowed upon them.

The Lily.

Volumes might be written on the treatment of lilies, and yet we would ask for more in-

formation. They are not spring flowers exactly, but a great deal depends on the management of the bulbs at this particular time, when they are offered for sale, and therefore it is proper to speak of them now. The natural habitats of lilies are widely distributed, and this fact alone makes it difficult to cultivate them all successfully in any one locality. This is readily illustrated right here in California, the home of not less than eight distinct species. *Lilium Washingtonianum*, for instance, is found in the Sierra Nevada mountains, where it flourishes so well. It is a beautiful white lily, and very fragrant, but in vain has it so often been tried about here, and never succeeded. We may eventually succeed, but I doubt it. The atmospheric and probably other conditions under which they thrive there are not at their disposition here. But we do succeed well with *Lilium Rubraem*, a very beautiful lily, opening pure white and soon changing to a satiny pink. It is found in Mendocino and Lake counties. I find no difficulty in flowering it here. Out of over 100 varieties of lilies in cultivation in Europe, surely we ought to succeed here with 12 to 15 of them. The following kinds have been and are now grown with success here: *Lilium Candidum* (so-called St. Joseph lily), *L. Longiflorum Album*, *L. Harrisii*, *L. Auratum*, *L. Lancifolium Rubrum*, *L. Lancifolium Album* and *L. Thunbergianum*. In a few instances others may have grown to perfection, but not to my knowledge. I have flowered *Lilium Tenuifolium*, and got a beautiful and almost graceful flower of a brilliant red; Mr. Sievers, I believe, also had good success with it. But others ought to do fairly well here; our California *Lilium Humboldtii* I have been very successful with. *Lilium Hansonii* may do well enough here, and *Kramerii* might also do well. It is really worth while to give these and others a fair trial. However, there are several difficulties to be overcome. Lily roots should not be kept out of the ground a day longer than is absolutely necessary, and when once planted they should not be disturbed except for very urgent reasons.

Unfortunately, dealers in these bulbs are sometimes over-anxious to receive them early. They insist upon the importer delivering them early, and in order to satisfy the unreasonable demand of the dealer, the grower goes to work and takes the bulbs up before they are fully matured, and consequently are not in a condition to flower well, if at all. After these bulbs have been taken up before maturity, four to six weeks or more are consumed in their transit to destination, and, to say the least, they are in a deplorable condition. I give you a parallel case in my own experience. I supply California lily bulbs to Eastern and European houses. They all want them early; yes, I have been requested to have them in New York in September. Now our California lily bulbs are not in a matured condition before the middle to the end of October, and the best result during my 25 years in that business was obtained from bulbs dug up in November. Our lily bulbs which arrive from Japan in December will give a better result than those which have arrived in September or October. In our climate we are enabled to plant lilies out in mid-winter, and if we can procure well-matured sound bulbs in January, and plant without delay, we are very apt to succeed in flowering them.

The bulbs require a deep, rich sandy loam well drained; they should be planted at least four inches below the surface, and the soil should be pressed around them firmly during the operation, holding the scales firmly together, and not allowing any particle to lodge between the scales. This also shuts out water draining down from the surface, which is very important; the scales of these bulbs are in fact their life-preservers. Some cultivators not only do this, but give additional protection to the bulbs by laying a piece of tissue paper over the top to keep the soil from falling between the scales. In cultivation of lilies in pots, I would advise the use of pots large enough to complete their growth without shifting into larger ones.

The Lily of the Valley is the most admired spring flower of all, loved by everybody, and yet few are successful with it. Most people consider it an unyielding pet; still it will yield to the manipulation of the practical florist to such an extent that, in New York City, its flowers may be obtained for about eight months in the year. The Lily of the Valley is a native of Continental Europe, and its bulbs or roots come to us in two forms, one of which is in the shape of a number of flowering as well as leaf pipes grown together in one almost inseparable mass, a good clump containing from 5 to 8 flowering pipes. The other form is the single flowering pipe, with a few roots attached to it. These single pipes are imported annually by the million, and furnish the flowers offered for sale by the florists. They are preferred to clumps on account of their cheapness and light weight, and importation of clumps is fast becoming a thing of the past. The pipes are not adapted to permanent cultivation, and to establish them in the garden is totally impracticable, at least as far as our experience or knowledge goes, up to the present time. It is barely possible that a number of pipes shaded together in a protected and partially shaded place, may in the course of a few years establish themselves, but I could not advise the attempt. For successful cultivation out of doors, nothing will do but a clump, I believe; that we can establish the Lily of the Valley permanently in the garden is practically proven by the fact that Mr. Delaher of Oakland has succeeded in making them a complete success for years. There is no reason why others

should not do likewise. They should be planted in partial shade under trees, protected from dry summer winds, covered with leaf-mold to the depth of at least an inch, and should be watered during the dry summer season at least twice or three times a week. Under this treatment, clumps of the Lily of the Valley can be made a complete success, I think. The proper time for outdoor flowering would be about April in this climate. The flowers which we see in the florists' windows during the winter months are produced by forcing the pipes into bloom in a temperature of 80 to 90 degrees, which operation is impractical for most amateurs.

ENTOMOLOGICAL.

A New Foe of the Peach.

[The following was read at the Fruit-Growers' Convention at Chico by W. G. Klee, State Inspector of Fruit Pests.]

During the last year an insect belonging to the clear-winged moths (*Egerias*), and new to science, has attracted attention. I refer to the California peach root-borer. My attention was first called to this pest by Mr. J. Britton of Santa Clara, who in May last sent me specimens of the insect in various stages, but in such condition that the exact species could not be identified. Enough, however, could be seen from which to conclude that it was a near ally of the pernicious Eastern peach root-borer, *Sannania (Egeria) exitiosa*. In Mr. Britton's company I visited shortly afterward the infested region, which lies about 2½ miles southwest of San Jose, and I obtained some few specimens of larvæ and chrysalids. Not satisfied with my result, I again visited the place in company with Mr. Albert Koebel, Prof. Riley's agent, and Mr. H. Brinard of the Santa Clara Valley. Together we spent the greater part of the day on the place of Mr. Leigh, southwest of San Jose, and obtained a number of specimens of both larvæ and chrysalids. These were readily found by removing the soil from around the base of the trees and laying bare the bark for several inches. Gummy exudations indicated the presence of the borer, and with a knife it was easily extracted. This borer works directly under the bark, feeding on the cambium layer. Its tunnels, which are more or less vertical, vary from 4 to 8 inches in depth and from 2 to 4 inches in width. The larva has a great appetite, yet on account of its habit of working downward, the tree is not as quickly girdled as when the Eastern peach-borer is at work. Frequently three or four borers were found at work, and still the trees apparently were not suffering very severely. A tree badly attacked by the borer commences to look yellow, generally about the time the fruit commences to enlarge, and often after a hot spell of weather it begins to wilt; however, if only a portion of the bark is girdled, it may show no signs. To ascertain the presence of the borer, the soil must be removed, as it works invariably underground.

With the exceptions of two cherry trees, we found only peach root affected, but anything on this root is plainly liable to attack. It seems, however, that there is greatest danger of infection on lands of a heavy nature. In fact, in going over several acres of this character, we obtained mostly all of our specimens, while hardly any were found on sandy soil adjoining. In this respect our observations agreed with the experience of Mr. Leigh, who confidently asserted that these insects had been observed by him for ten years.

Whether the plum root is attacked or not, we have not been able to prove conclusively, as we saw but very few on plum-root trees in the immediate neighborhood; but there is strong probability that both plum and apricot are resistant. The matter requires thorough investigation and I intend to try the experiment of colonizing the borer on plum roots. The specimen I have collected shows the insects in their various stages. The grub or larva is pinkish when alive; the chrysalis is brown, and the cocoons spun of the castings and borings of the wood.

This species requires evidently a year for its full development, and as the moth appears in May and June, the egg must be laid at the time. These are laid just below the surface, and the reason that so few worms are found on sandy soil is probably because in ovipositing the female has to push the abdomen into the ground; when it finds that the soil falls in, its instinct leads it to avoid such places. Planting in sandy soil, or replacing the natural soil with a basin of fine sand, will probably prove a very good preventive of infection. The sand should be placed at least to the depth of four inches. A method recommended in the East for the peach-borer found there, is the wrapping of a stout piece of paper around the trunk to the depth of six inches, leaving two inches above the ground, this to be held in place by a collar of mortar. Gas lime, which has been recommended for this purpose, is too dangerous; while it might do no harm during the summer, it would invariably result in damage to the tree if thoroughly wetted, and the solution was percolating down the trunk. Indeed, I have already learned of damage from its use. In my recommendation of using gas lime for woolly aphid on the apple trees, I have invariably warned against putting it against the trunk. In this case, the material to be successfully used, must be placed against the

trunk. Air-slacked lime, however, may be used without any injury, but should be put on in the spring after the heavy rains are over, in the early part of April.

Whence Did this Insect Come?

It being a settled fact that this insect is new to science, having been named by Prof. Riley *Sannania pacifica*, we must look for its original food plants in this State. I have spent a little time looking over the creeks adjoining the infested district, and have failed to find any wild trees infested; but I shall continue the investigation further next spring, as it is of considerable importance to know the wild tree the borer inhabits. My conclusion is that it probably lives on one of our wild cherries (perhaps *Prunus demissa*), but owing, perhaps, to the fact that the soil generally is sandy along water-courses, and the trees of a kind are few and far between, the food for the borer has been so restricted that very little increase took place until orchard-planting commenced in the vicinity.

There is no question that the insect may be spread on nursery stock, the eggs being laid in the bark, and trees coming from suspected quarters should be thoroughly scrutinized and at least thoroughly disinfected by dipping in caustic solutions. So far I have only found the insect in the locality mentioned, 2½ miles southwest of San Jose; but being a native insect, we may look for it in all the orchards along water-courses in the coast valleys.

The mature insects of the California species are distinguished from the Eastern species by the absence of cross bands of the abdomen, which is of a black steel blue.

THE FIELD.

Wheat Facts and Figures.

NUMBER 4.

While the production of wheat has made rapid strides, the consumption also shows a remarkable increase. The latter not only comes from increasing population, but also from a larger individual requirement due to its cheapness, and also to its being served on the table in more different ways. In this country it is more difficult to arrive at the individual consumption than it is in the thickly populated countries of Europe where the system of compiling statistics is reduced to a science and its accuracy seldom proven wrong. With this as a starting-point to arrive at the average individual consumption, the writer will take England, France and Italy.

In England, the consumption of wheat averaged for the period 1876-77 to 1887-88—July 1st to July 1st of each fiscal year—338.4-10 pounds per head of the population. This figure naturally showed wide fluctuations, according to the crop in the United Kingdom; thus, in 1879-80, with a light crop and high prices, the consumption fell to 298.08 pounds per head, while in 1882-3 and 1883-4, seasons of large crops, it amounted to 393.72 pounds. To illustrate this to better advantage the following figures are given:

Year.	Population.	Consumption in Pounds.	Per Head
1885-6.....	36,580,000	12,112,840,000	331.2
1886-7.....	36,709,000	11,641,860,000	317.16
1887-8.....	37,091,000	12,660,444,000	342.00

In estimating on the probable wants of the United Kingdom there are three important factors that must be kept in view, viz., the home crop, the root crop and the meat supply, for the English are conceded to be great meat-eaters; but where correct information or statistics on these are not obtainable, it is hardly safe to estimate the consumption of wheat at 342 pounds to the head, but rather place it at about 340 pounds, or even less.

In France the consumption of wheat is much larger than in England, for the Frenchman is a proverbial bread-eater. On an average, it exceeds 432 pounds per head, and has reached as high as 446.4 pounds in 1885-6, 457.2 pounds in 1886-7, and 460.8 in 1887-8. The last three fiscal years show a steady increase in the consumption per head, independent of a greater requirement, owing to a growth in population.

The statistics of Italy are at fault regarding the consumption of wheat in that country, but, as near as it can be figured out, it is only about 290 pounds to the head, although some place it for the season of 1887-8 at 308 pounds, but then they did not deduct the requirements for seed, adding the latter in with the consumption. It is very generally conceded that the consumption of wheat in Italy is increasing, but not to the same extent as it is in England and France. This is probably due to the Italians being larger consumers of vegetables than either the French or English, and therefore their wants are not only more easily supplied, but also cheaper, which is quite a consideration.

Taking the countries England, France and Italy, and it is quite safe to base on their average consumption per head the average consumption of the civilized nations of the world, for France is the largest consumer per capita, Italy the smallest, and England a medium. Taking the average consumption per head, we have: England, 338.4-10 pounds; France, 433 pounds; Italy, 290—a total of 1061.4-10 pounds, or an average of 353.24-30 pounds per head. Take Italy, Germany and Russia, rye is largely grown and is used extensively as an article of

food, while in France, Spain and England its importance as an article of food is almost entirely ignored. In the United States, maize or corn takes the place of rye and reduces the general average consumption of wheat. But even with corn largely used as an article of food, yet the average consumption of wheat is placed at 355 pounds per head. There are some statisticians who place it at a higher average, but then the above is the generally accepted figure of the trade.

As the price of wheat has an important bearing on its consumption, it may not be amiss to give the following tables of prices per bushel of 60 pounds each compiled from official sources in this country, England and France (that of the United States is the export value at the port of New York):

Year.	U. S.	England.	France.
1870.....	\$1.28	\$1.42	\$1.39
1871.....	1.31	1.72	1.81
1872.....	1.47	1.73	1.66
1873.....	1.31	1.78	1.75
1874.....	1.42	1.69	1.65
1875.....	1.12	1.37	1.32
1876.....	1.24	1.40	1.40
1877.....	1.16	1.73	1.69
1878.....	1.33	1.41	1.67
1879.....	1.06	1.33	1.49
1880.....	1.24	1.35	1.66
1881.....	1.11	1.38	1.62
1882.....	1.15	1.37	1.44
1883.....	1.12	1.26	1.30
1884.....	1.06	1.08	1.21
1885.....	.86	1.00	1.14
1886.....	.87	.94	1.15
1887.....	.89	.99

It will be seen by the above that there has been a steady decline in values in France and the United States since 1880, and in England since 1881. In order to show this on a broader and plainer plane, the following prices per bushel since 1881 are given:

Year.	England.	France.	Germany.	Austria.	U. S.
1881.....	\$1.38	\$1.52	\$1.42	\$1.24	\$1.19
1882.....	1.37	1.46	1.32	1.01	.88
1883.....	1.26	1.50	1.21	1.06	.91
1884.....	1.08	1.21	1.05	.96	.64
1885.....	1.00	1.14	1.04	.82	.77
1886.....	.94	1.15	.98	.84	.68
1887.....	.99	1.0768

The price in the United States is the average received by the farmer, being on the same basis as are those of the other countries.

The above shows a decline from 1881 to 1886 of 42 per cent in the United States, 32 per cent in Austria, 31 in Germany, 24 in France, and nearly 32 in Great Britain. It is to be regretted that reliable data is not obtainable from Russia and India so as to extend the comparative prices, but sufficient is known to the trade to warrant the assertion that the decline in prices suffered by American farmers has been sharper and deeper than that of any other wheat-growing country. Indian farmers have been protected by the decline in silver, as to a certain extent have the Russian farmers. Farmers in France and Germany receive the highest prices, because neither country has a surplus and also both protect their farmers by custom duties. To the large surplus of wheat grown in this country is due the low prices here. Austria also has a surplus, while England has to import, but has no custom duties on wheat. Comparing the prices of protected Germany with free-trade England and the general average for the seven years does not show any decided difference, but between that of France and England it is quite marked.

In connection with the above and bearing directly on silver as an important factor in the world's wheat markets, and also throwing more light on "the why" England opposes remonetizing silver, the following is reproduced from a paper read by L. C. Probyn, at a late meeting in London of the British Association: Wheat is the article of Indian export which has been most generally referred to as having been stimulated by the fall in the gold price of silver. We have noticed the remarkable development which has taken place in this trade, checked only by occasional inferior harvests, and by the exhaustion of stores from which previous increases had been met. Other causes, however, have certainly contributed in a very important degree to this result. First of all, there is the immense railway development in India which has resulted in wheat districts, with considerable existing stocks in reserve, being opened up and connected with the ports of shipment. In October, 1878, the port of Kurachee was connected by railway direct with Lahore, the capital of the Punjab, a province with double the area under wheat of Great Britain; and in the same year the Rapor district of the Central Province was opened up by railway communication with Nagpore and Bombay. The Rajpootana and Malwa line was opened in January, 1881, and the Oudh and Rohilkund connection completed in June, 1883. In all, there are about three times as many miles of railway open in India now as there were in 1872. The result of this railway extension has been to level wheat prices all over India, and to lower them at the ports of shipment. Latterly, too, there have been on the whole good seasons. Then there is the reduction of sea freight, estimated by Mr. Comber for the last four or five years compared with 1873, at 8s. 3d. a quarter. Then there was the Indian export duty, coming to something over one rupee a quarter, which was taken off in the same year. But even with all these advantages, with the present price ruling in England, trade would not have been possible had not the fall in the gold price of silver taken place. It is contended by the gentleman to whose opinions I have referred that these low wheat prices are only the result of the appreciation of gold, and that the expansion of Indian wheat exports would have oc-

curred had there been no change in the relative value of silver. As, however, was pointed out by Mr. Balfour when examining a witness before the Gold and Silver Commission, a source of supply, though comparatively insignificant, may sometimes rule prices; and I venture to think that the fall of wheat prices in Europe is in part the result of the direct competition of Indian wheat. This competition was, indeed, rendered possible by the favorable circumstances which have been detailed; but it received a fresh stimulus from the fall in the gold value of silver, to whatever cause this fall was due—a stimulus resulting in increased competition and a further fall in the gold price of wheat. It is sometimes asserted that because the price of wheat has fallen more than silver, therefore the former is independent of the latter. This seems as illogical as to say that because one person unaided could not have done a certain task, therefore he could have had no part in doing it with the assistance of another.

THE DAIRY.

Cheese and Butter from the Same Milk.

The latest approved method of making butter and skim cheese in Oneida county, New York, is described by B. D. Gilbert, in the *American Cultivator*, as follows:

I propose to give a description of an establishment whose cheese has averaged the ruling price at Utica through the season, while the butter has sold at 19 to 25 cents. The Bagg Brothers of Holland Patent, Oneida county, N. Y., occupy an unpretentious building as a factory, but it contains all the needed appliances for the manufacture of butter and cheese. There are four vats of about 4500 pounds capacity each, heated by steam; gang presses, a large, square, revolving churn, a tank through which cold spring water flows, and in which the deep coolers of cream are set; and a large refrigerator storeroom where the butter is placed after packing, until the shipment is ready for market. In talking with these gentlemen they made the following statement concerning their method of making a skimmed cheese that stands in the front rank of this class of goods.

A Skimmed Cheese.

From May 1st to October 10th, the milk is delivered twice a day, and the same kind of cheese is made during all that time. We run four vats, holding 4500 pounds each. The night's milk is distributed in all the vats as evenly as possible, and cold water is run around them so that the temperature of the milk is reduced by morning to 60° to 65°. This milk is skimmed in the morning before any more milk is received. Morning's milk is delivered from 6 to 8:30 A. M., and is added directly to the skimmed milk in the vats. Thus only the cream that rises on half the milk during 12 hours of the night is taken out of the whole mess. We heat the milk up to 84° to set, then add rennet enough to have the curd ready to cut in about 40 minutes. We cut with perpendicular knife, both lengthwise and crosswise, and then with horizontal knife lengthwise, without any interval between the cuttings. We used to wait a short time between, but cannot see that it makes any difference in the quality of the cheese, and as it takes less time to go right on with the work, we generally do so. Then we let it stand until the whey becomes clear, from 5 to 15 minutes, and then begin to heat up the vat with steam. This takes about an hour and a quarter to a half before it reaches the desired limit of 96°, but if the vat is only half full we should heat about 2° more, as that amount of milk will not hold the heat so well. Then we stir the curd gently with our hands for about ten minutes. Then put in a rake and stir gently with that. The curd then lies in the whey until the proper amount of acidity is developed, which varies from half an hour to an hour, according to the weather and the condition of the milk. The acidity is determined by the hot-iron test, so that threads will string out about an inch in hot weather, but not so much in cooler weather. The whey is then drawn off and curds allowed to stand about 20 minutes, not to exceed that if there is acidity enough shown. The curd is cut half in two and folded back, and when the whey is nearly off we cut a channel down the middle, so that the whey will drain off entirely. Then the curd is again cut lengthwise on each side and folded back, making the strips narrower and the channel wider, and soon after it is turned completely over in order to aerate the under side. Then it is cut in strips, thrown into the curd sink, and from there put through the mill, one of the kind that tears but does not cut the curd. We do not salt until after grinding. We use 2½ pounds of salt to 1000 pounds of milk during warm weather. The salt is mixed with the curd by hand. The curd is then put to press, the pressure being applied gradually until it is as strong as we can get in the gang press. If the cheeses go to press at 1 or 2 o'clock they stay there until 7 or 8 o'clock the next morning. In hot weather we wash the cheese with a solution of potash, two pounds to four gallons of water. This gives a smoother face to the cheese, and they are not apt to mold. In summer-time we try

to keep the temperature of curing-room about 75°, while in spring and fall we heat it up to 80°. The cheese is shipped in about 20 days—the average, although a somewhat longer time for curing is allowed in the spring and fall.

The principal points of distinction between this process and that of making full cream cheese are as follows: We put the buttermilk back into the vats just before the rennet is added, not sooner, because it would sour the other milk and make it work too fast. We salt about one-quarter pound less, and do not heat as high, within about 2°. We also mix about a tablespoonful of saltpeter with the salt for a whole vat of milk. We think this prevents the cheese from going off in flavor, and has a tendency to make them "butter down" in the fingers and show the stock that is in them.

In the spring and fall a little more cream is taken from the milk, and we salt lighter and scald lighter than during the summer.

Butter-Making.

As I have already said, the butter of these creameries sells well, but not up to the mark of many fancy dairies. The cows are of mixed stock, such as may be found in any farmer's dairy, but there are two advantages which the butter would not have if made at home. Firstly, only the lightest and best part of the cream in the milk is used—that which rises in the first 12 hours. Secondly, the butter is made by an expert, in large quantities, and can therefore be relied on for uniformity in color and quality. The method is as follows:

After skimming, the cream is set in deep coolers, holding from 18 to 24 quarts. These are set in water, which in summer is kept at a temperature of 60°, and in cold weather is heated up to 75°, by means of steam introduced into the tank. This sours the cream in 24 hours, when it is put into a large square Blanchard revolving churn run by steam-power. In the summer the make ranges from 180 to 200 pounds per day. It is churned until the butter comes in granular form, then the churn is stopped. If not gathered enough, a portion of the buttermilk is drawn off, and the churn is made to revolve a few times more. When the buttermilk is all drawn off, enough cold water is thrown in to rinse the butter thoroughly. This is drawn off and a second rinsing is given to it with a larger amount of water. When the buttermilk has been thoroughly rinsed out, the butter is taken from the churn, weighed, placed on the worker, salted one ounce to the pound, and worked four or five times over, until the salt is well incorporated with it. It is then put into tubs, and in warm weather placed in a refrigerator until the next morning, when it is taken out and again worked over a few times, in order to make it even in color and in saltiness. Then it is packed in tubs holding about 56 pounds, and set away in the refrigerator until the next market day. The tubs are made of white ash and soaked in water about 24 hours before packing.

The heat of the water goes down during the night, so that the cream is churned at about 64°.

The coloring is put into the cream in the morning when it is first set in the coolers. The "standard" butter color is used. Of course in June less color is needed than in the early or late months. The "standard" color takes much less to produce the result than it would be necessary to use of annatto.

In hot weather it is preferable to have the temperature of cream as low as 56° for churning, but the butter will not come quite as quickly.

This is an outline of the methods in vogue in one of the most successful creameries in this part of the country. It is well to have some knowledge of the process by which a skimmed cheese is made that even the judgment of an expert finds it hard to detect.

LOOK OUT FOR YOUR CANARY BIRDS.—The *Sonora Independent* says: Mrs. Bernard Myers and Mrs. Geo. Mapes both had their singing canaries killed by butcher-birds a few days ago. We understand that Mrs. Myers put "rough-on-rats" on the body of the canary (the head alone being gone) and left it on the cage. The butcher-bird came back, ate it, and died. The way Mrs. Mapes' bird was killed, as witnessed from Dr. Eichelroth's back garden, was this: The butcher-bird swooped down on the cage (which was hanging on the piazza upstairs), screaming and fluttering its wings. The terrified canary stuck its head through the wires, trying to escape, and was instantly decapitated. It is said that the butcher only eats the heads, but the reason for this is that he cannot pull the body through the bars.

GRASSES IN SPONGES.—A very pretty foliage decoration for rooms or conservatories can be made of a white sponge. Fill the sponge full of rice, canary, hemp, grass or other seeds. Then place it in a shallow fancy-glass dish. The prettier the dish is, of course, the prettier the decoration will be. Pour water in the dish; the sponge will absorb this. Keep enough water to always have the sponge moist. In a short time the seeds will sprout and make the sponge look very pretty. The dish can then be placed on a table, or the sponge can be suspended without the dish in some position where it is exposed to the sunlight. It must be well watered, so that the sponge is always moist, and it will then exhibit a mass of delicate green foliage.—*N. Y. Mail & Express*.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Tulare Grange.

MESSRS. EDITORS:—I am very anxious that Tulare Grange shall be kept before the people, and that the name it has obtained through the instrumentality of the State Grange and its own honest, earnest earnings, shall be sustained and animated by a living spirit of growth and greatness.

We have commenced a new year with a new set of officers who were installed yesterday by Past Master A. J. Woods. At the close of the ceremony, the retiring Master, Capt. A. P. Merritt, who is now our Gate-keeper, was presented by the Grange with a watch and chain as a visible expression of its feelings and appreciation of his faithful services as Master of the Grange, from the dark days of its reurrection to its present recognized position, and as a recognition also of his earnest labors as a true Patron of Husbandry, and in which he has been so nobly supported by his faithful partner, who has obtained a high position in the hearts of her brothers and sisters of Tulare Grange. Bro. Woodman from Michigan was present, who told us he had never made a speech in his life. But if this effort was his maiden speech, I am sorry that it was not delivered 20 years ago, so that we now might have had a first-class orator in our midst. He pleased us with his flattering remarks, and hope that we will merit all he said of us. We also received Bro. Shoemaker of Pennsylvania by demit, who told us of the political power the Grangers had in his State, as Bro. Woodman did of the Grangers in Michigan.

We can hardly listen to the tales told of political power wielded by Granges east of the Rockies and sit easily in our seats. With so much at stake the Grange should be felt to some purpose at Sacramento. With an undeveloped country capable of sustaining in happy homes 30,000,000 of people, half of the present population of the United States, and having in it only a paltry million and a half of people, the whole country and its representatives should not rest night nor day till the means of its being so shall be inaugurated, which are a perfect system of irrigation, more and cheaper facilities for transportation, the breaking up of large ownership of land, a united Grange multiplied by 100, and other things which I cannot now think of.

As an entering wedge in this direction, Tulare Grange will at its next meeting discuss the adoption of resolutions prepared by an appointed committee, which I have already written you about.

They are that part of the surplus at Washington which so perplexes politicians be used in the development of this country, first, by storage of water in the Sierras; secondly, by a natural and just distribution of the water by canals and ditches, and thirdly, by the construction of a canal draining Tulare lake and connecting it with deep water on the San Joaquin river to render the transportation of produce easier and cheaper.

In this it is possible there may be something Quixotic—something more than can be accomplished with laws and constitutional requirements, standing Apollon-like right square in the way. All this, however, Tulare Grange is going to inquire into, and learn what the possibilities are, and press the question upon the Granges at large and from them to the sovereign people.

We will require to know whether those funds at Washington can be reached by the people for the general good as easily as they can by bankers for their private good; if there is a Hell-gate standing in the way, whether the action of the people through its representatives could not blow it up. The politically wise in the Grange shake their heads and say it cannot be done, and if it could our representation at Washington is so small that the States east of the Rockies would get away with us every time in the general scramble for the released surplus which would ensue.

Have our civilization and sense of justice advanced no further than this? Have we not risen above the petty greed exhibited by children scrambling for pennies thrown out from a window for fun? Sometimes it seems so. Yet I believe better of the great American people. They are long-suffering and indulgent, but when these things cease to be virtues, there will be a rattling among the dry bones; for in spite of inconsistencies and blunders, the heart of the people is in the right place.

You may look for a report of the discussion in prospect, and I hope other Grangers and other writers will perceive its importance and make it a matter of general discussion and co-operation. The subject of co-operation in farming interests is hanging on the hook in our Grange and will no doubt materialize itself in due time, which will be when dry years have not drained our purses and when we understand the matter better. It is really encouraging to note the increase of interest in co-operative subjects in Granges and Grange papers, and especially in insurance.

The average citizen hates taxes, whether local, State or national, and yet more money is paid in insurance than in all other taxes combined. If fire insurance could be arranged on

a fraternal basis, as life insurance is by the A. O. U. W., and payment only made when actual fires take place, we would pay less cash and have more justice. Or, if in a city, the municipal authorities insured all assessed property other than realty, there need be no other tax levied for the support of the city. Of course these are all open questions, very crudely presented, but I am convinced that they contain matter worthy of thought and action.

If the Grange is to be a success in this State, it must be by concentrated action on a given line which will have an evident bearing on personal interest. It will never be a success if confined to social gatherings, ritualistic observances and the wasted forces of inconsequential eloquence, though all these things are good in their place. All of which is fully recognized by Tulare Grange and J. W. MACKIE.

Tulare, Jan. 6, 1889.

Eden and Temescal Grange Meeting.

Joint Installation, Etc

HAYWARDS, Dec. 22, 1888.

Sister Nellie G. Babcock, Secretary—Eden Grange instructs me to send invitations to Temescal Grange to join them in installing officers on the second Saturday of January, at 10 A. M. sharp. Also if your Grange accept the invitation if you could make it convenient to be with us as early as 10 A. M., to send us such notice, as it is their desire to make preparation to install the officers in the morning in order to have more time for social intercourse and literary entertainment after dinner. (Our committee, Sisters Mary Anway, R. Dennis, H. Gading, ask assistance on the literary program from your Grange.) Hoping to extend the old-time greeting to each member of Temescal Grange, we are fraternally yours, JOSIE SHARAF, Sec'y Eden Grange.

By vote of Temescal Grange on Saturday evening last, the above invitation was heartily and unanimously accepted, and the members expect to make a full turnout, and, as usual, have a most enjoyable time. Worthy Master Overhiser and Past Master Coulter (with their Matrons, of course) have been specially invited through Worthy Master Blackwood, and can be counted upon for some good Grange talk. Past Masters Flint, Webster, and representatives and earnest Patrons from different parts of the field will certainly be present. So it will be good for all Patrons who can attend to be there, and we would bespeak a large Grange gathering. The Grange meets at 10 A. M. for installation. After Harvest Feast, speaking by veteran Patrons and others will be accompanied by literary and musical exercises by the younger folks.

At the last meeting of Temescal Grange Bro. Spencer, a good representative of young American Grangers, was present from Potter Valley, Mendocino county. He represents his Grange as holding good to the faith. With the improvement of that section of the State, they are hopeful of an increase of members and success.

His visit brought vividly to mind our old and esteemed brother, A. O. Carpenter, formerly of Ukiah Grange. He fought side by side with John Brown in Kansas, is a good soldier in the battle for human rights, and a man of true Grange grit. Also comes fresh to mind his sainted mother, Mrs. I. C. H. Nichols, who, as the first lady editor in Vermont, if not in the United States, made a strong fight for the inalienable rights of her sex by her able writings.

The Constitution of Kansas we believe is admitted to give the most fair and full protection to women in their property, political and educational rights, of any State. Mrs. Nichols was the leading champion and representative of the women of Kansas in their endeavors to secure the good and just privileges finally conceded to them in that Constitution, and it was largely, if we may not say mainly, through Mrs. Nichols' long and faithful labors, keen foresight, unimpeachable intentions and worthy character that the particular features were embodied in the Kansas Constitution which are to-day so satisfactory and beneficial to woman and her cause.

Bro. Wm. Kilbourne, who is the Past Master and the long-time faithful Secretary of Potter Valley Grange, was well known to us as a miner at La Porte, Plumas county, over 25 years ago. We admire his zeal in the cause, and rejoice in the maintenance of the Grange, located in one of our healthiest and prospectively (to say the least) prosperous counties.

Sister Chatterton, residing with Sister Babcock, who recently returned from a long visit to her native home, in Maine, was present, and gave some interesting remarks, saying that the Patrons in Maine are wide-awake, zealous and cautious in the work. They enjoy the social features of the Order there, have a good opinion of California, and were anxious to know how it is that our isolated Granges succeed in keeping up so much life and interest as they infer we enjoy through reports that they have received of our transactions.

The question of the Australian system of voting was mentioned in Temescal Grange as one of importance to be discussed early, in connection with the present session of the Legislature. We hope this subject will be well considered by all Granges in the State, and every effort possible made to secure legislation at this present session for such election laws as will prevent election frauds and abuses which all tax-payers so sensibly feel and all good citizens abhor.

The next meeting of Temescal Grange occurs on Saturday afternoon at 2 o'clock, Jan. 19th, to which all sojourning Patrons are invited.

The Value of a Farmer.

MESSRS. EDITORS:—The Salinas Index lately published a list of the Government offices that will probably be vacated at the next change of national administration. Among them were places suitable for mechanics at pay ranging from \$3.50 to \$7 a day, clerkships at \$1500 to \$2000 or upward per annum, and for the Indian reservations a few "farmers" at \$720 to \$900 per annum.

What a long-suffering animal this "farmer" is! Why is he to be regarded century after century as the drudge of the community, with double the hours of work and half the pay?

Hear how it was in Sir Thomas More's time (by the by, I wonder the bluff King Hal left that man's head so long on his shoulders)!

"I would gladly hear any man compare the justice that is among the Utopians with that of all other nations, among whom, may I perish if I see anything that looks either like justice or equity; for what justice is there in this, that a nobleman, a goldsmith, a banker, or any other man, that either does nothing at all, or at best is employed in things that are of no use to the public, should live in great luxury and splendor upon what is so ill-acquired, and a mean man, a carter, a smith or a plowman, that works harder even than the beasts themselves, and is employed in labors so necessary that no commonwealth could hold out a year without them, can only earn so poor a livelihood, and must lead so miserable a life that the condition of the beasts is much better than theirs?" etc. "Is not that government both unjust and ungrateful that is so prodigal of its favors to those that are called gentlemen, etc., and on the other hand takes no care of those of a meaner sort, such as plowmen, colliers and smiths, without whom it could not subsist?"

This, three centuries ago, under an imperious monarch, is what history has taught us to expect. But on what principle, in a government of the people, by the people and for the people, is a clerk paid twice as much as a farmer? It takes more brains to make an average farmer than an average clerk; it takes more grit, more mechanical skill and more general business capacity. Having had 6½ years' experience as a clerk prior to almost a quarter century's farming, and leaving my clerkship with the written regrets of the chairman of the London bankers, I know what I'm talking about. Not being an office-seeker, I have no personal interest in the matter, but I think it high time farmers sought and obtained due consideration at the hands of society and government, and no longer permitted themselves to be regarded and paid as the drudgers of their fellows. Perhaps some brother farmer can explain, in your columns, the justice of paying a "farmer" one half of the salary paid to a clerk. It seems to me that if only out of respect to our first and best President, farmer Washington, a higher esteem is due our agriculturists.

EDWARD BERWICK.

Carmel Valley, Jan. 6, 1889.

Resolutions of Respect.

The Patrons of Tulare Grange desire to express their sincere sorrow in common with other Granges in the loss which the Order has sustained in the death of our very much esteemed brother, Hon. A. L. Chandler, but feel the poverty of language in adequately expressing their feelings in the following resolutions:

Resolved, That Tulare Grange recognized in Bro. A. L. Chandler a moral Granger, citizen, and counselor in every walk of life, being always ready to defend the weak, to maintain the rights of the wronged, and serve at all times the cause of justice and charity.

Resolved, That we sympathize most sincerely with his afflicted wife and family in the loss which they must feel more keenly than us all.

Resolved, That his example will be constantly before us in emulating his generous and resolute conduct; that we will keep fresh the memory of the honest intelligence of his kindly countenance while with us here, in attendance at the State Grange.

Resolved, That these resolutions be entered on the minutes of the Grange; that a copy be forwarded to Sister Chandler, and to the *Patron* and *RURAL PRESS* for publication.

Adopted by Tulare Grange, No. 198, Jan. 5, 1889.

DURING the year ending Sept. 30, 1888, there were 197 new Granges organized in the United States, as follows: New York 27; Pennsylvania, 26; Massachusetts, 25; Oregon, 16; Connecticut, 15; Rhode Island, 13; New Hampshire, 11; Alabama, 10; Colorado, 9; North Carolina, 8; Maine and Michigan, 7 each; Nebraska, 6; Illinois, 4; South Carolina, 3; Maryland and Ohio, 2 each; Arkansas, Dakota, Delaware, Indiana, Missouri and Wisconsin, 1 each.

THE National Grange still insists and claims that the head of the Agricultural Department at Washington should be a member of the President's Cabinet.

NEWCASTLE GRANGE will install its officers on the 19th inst. All Patrons are invited to be present. A class of four will be instructed in the Fourth Degree.

Grange Elections.

FLORIN.—Wm. Johnston, M.; M. A. Casey, O.; Lillie Jones, L.; John Reese, S.; Jesse Casey, A. S.; Ella Dresser, C.; L. H. Fassett, Sec.; C. Towle, T.; D. Reese, G. K.; Mary Donovan, P.; Lillie Casey, F.; Mamie Brown, Ceres; Carrie Neehie, L. A. S.

FRANKLIN.—Wm. Johnston, M.; J. B. Bradford, O.; Mrs. J. W. Moore, L.; W. A. Johnston, S.; Mrs. I. F. Freeman, C.; Lake Freeman, A. S.; I. F. Freeman, T.; C. P. Freeman, Sec.; P. R. Beckley, G. K.; Mrs. S. G. Bradford, P.; Mrs. C. P. Freeman, F.; W. M. Johnston, Ceres; Belle Johnston, L. A. S.; M. W. Johnston, Organist.

NEWCASTLE.—J. L. Robertson, M.; A. P. Hall, O.; S. A. Wood, L.; R. M. Nixon, S.; F. B. Fitch, A. S.; Sister H. A. Blanchard, C.; Wm. Barter, T.; Sister A. P. Hall, Sec.; J. B. Evans, G. K.; Sister A. S. Robertson, Ceres; Sister Lena Jorey, P.; Sister Kate King, F.; Sister Belle Boggs, L. A. S.; A. P. Hall, Trustee.

SACRAMENTO COUNTY POMONA.—Morris Toomy, M.; H. W. Johnson, O.; Sister A. M. Jackman, L.; C. E. Mack, S.; D. Reese, A. S.; Geo. Wilson, C.; A. M. Plummer, T.; Sister D. D. Hull, Sec.; Geo. W. Hack, G. K.; Sister Belle Johnston, P.; Sister Etta Plummer, F.; Sister Morris Toomy, Ceres; Sister Hill, L. A. S.

TULARE.—J. M. Moore, M.; J. W. Mackie, O.; J. N. Balch, S.; Jessie Talbot, A. S.; L. B. Hawkins, L.; Sister M. Premo, C.; Bro. M. Premo, T.; D. O. Harrelson, Sec.; A. P. Merritt, G. K.; Sister M. A. Truscott, Ceres; Elizabeth Maples, P.; Berthaingham, F.; Edith Maples, L. A. S.

WALNUT CREEK.—C. Sharp, M.; J. Foster, O.; N. Jones, L.; J. W. Jones, S.; T. Jenkins, A. S.; J. Larkey, T.; Miss M. Baker, Sec.; C. S. Whitcomb, C.; J. Baker, G. K.; Miss E. Weedles, P.; Miss L. Sharp, F.; Miss E. Kusch, Ceres; Mrs. T. Jenkins, L. A. S.

WATSONVILLE.—Mrs. E. Z. Roache, M.; Mrs. N. A. Uren, O.; A. Cox, S.; N. A. Uren, A. S.; D. Tuttle, C.; G. W. Kidder, T.; Mrs. S. J. Kidder, Sec.; Mrs. M. E. Tuttle, G. K.; Mrs. P. Cox, P.; Mrs. M. NOTE.—The Secretaries of Granges are requested to forward reports of all election and other matters of interest relating to their Granges and the Order.

Sacramento County Pomona Grange.

MESSRS. EDITORS:—The Pomona Grange meeting of the 29th ult. had rather a slim attendance, owing to the condition of the roads. It was called to order about 2 P. M. The election of officers was a prominent matter for the day, and occupied nearly all the time, so that many retired before Grange closed. But little other business was reached. Bro. McConnell, however, announced the meeting of the Fire Insurance Committee; also made some very appropriate remarks explanatory of the condition of the *Patron*, and in regard to the disposition of it.

We intended to bring the matter of election reform before the Grange, but time did not admit of anything further. There is likely to be agitation in that direction during the coming session of our Legislature, as well as toward reform and improvement in every department of business, science, art and manufacture.

G. W.

San Jose Grange.

MESSRS. EDITORS:—Nature has put on her spring clothes to-day, and our venerable friend, "Old Sol," is unbending himself. If it wasn't for the almanac one would hardly realize that it is the midwinter month. We are impressed with the thought that our first meeting in the new year opened under favorable auspices and bright omens, for it was installation day and every officer-elect had interest enough to be present and be installed. Bro. Wingate officiated, assisted by Bro. Gilmore.

After installation, Bro. Pomeroy, the retiring Master, made some farewell remarks, and then the new officers severally responded to calls.

So now the good old Grange bark has started out on the sea of progression, the broad pennant at the main with "Excelsior" inscribed thereon. Fraternally yours, San Jose, Jan. 5. OFA.

A Flourishing Bank.

The annual meeting of the stockholders of the Grangers' Bank of California was held on last Tuesday, at which 8865 shares out of 10,000 were represented. The usual annual dividend of \$4 per share, making the fourteenth since its organization, was declared, amounting to \$42,000, besides which the sum of \$10,000 was carried to the surplus fund. Owing to the steady growth of the business of the bank, the directors by vote resolved to levy another installment, being the seventh, of \$10 per share, so as to increase its working capital. This last levy will make, when paid up, 70 per cent on the authorized capital of \$1,000,000. Since its organization nearly 15 years ago, only six installments, the last being in 1884, have been levied, aggregating the sum of \$600,000, while during the same time there has been disbursed to stockholders in dividends \$588,000. This is a capital showing and speaks volumes for the superior manner in which the affairs of the institution are conducted. This is the more conclusively shown in the usual annual dividend being declared this year in the face of unfavorable crop weather in several sections of the State.

That the stockholders repose the utmost confidence in the management of the bank was manifested by their unanimously re-electing the same Board of Directors, manager and officers, as follows:

Directors—I. C. Steele, San Mateo county; T. E. Tynan, Stanislaus county; Daniel Meyer, San Francisco; H. M. LaRue, Yolo county; C. J. Cressey, Merced county; Seneca Ewer, Napa county; Thos. McConnell, Sacramento county; John H. Gardiner, Solano county; Uriah Wood, Santa Clara county; A. D. Logan, Colusa county; H. J. Lewelling, Napa county. Officers—A. D. Logan, president; I. C. Steele, vice-president; Albert Montpellier, cashier and manager; Frank McMullen, secretary; Pillsbury & Bland ng, attorneys.

TALENT RECOGNIZED.—Sister E. Z. Roache, who served the State Grange so ably and gracefully as Pomona, will be installed Master of Watsonville Grange February 16. She ought to be grandly supported in her duties. We shall look confidently for an excellent report from Watsonville at Sacramento.

ROSEVILLE GRANGE officers were installed on the 5th inst. by Worthy Master Wm. L. Overhiser, assisted by Worthy Lecturer Daniel Flint. The Grange meets the first and third Saturdays of each month, and starts out with renewed vigor after the visit of the above-mentioned State officers.

A RESOLUTION adopted by the National Grange declared that body as utterly opposed to allowing aliens to acquire title to the soil of the United States, and urged upon Congress the enactment of stringent legislation of a prohibitory character.

TULARE GRANGE is in good working order and every member is taking hold with a will, writes Bro. D. O. Harrelson. He thinks before the summer is over the Grange will force the merchants of Tulare to accept reasonable profits on their goods.

WATSONVILLE GRANGE will install its officers February 16th. All members are requested to be present. A literary program will be prepared for the occasion.

SACRAMENTO COUNTY POMONA GRANGE will install its officers to-day, in conjunction with the installation of Sacramento Grange.

Placer's Own Display.

Messrs. Jones and Parker, lately commissioned by the Placer Board of Trade to make a showing in this city of that county's products, are just opening a "free citrus exhibit" in the new Starr King building.

The great show-window at No. 123 Geary street has been turned into a pillared citrus temple, within which are displayed on inclined planes a thousand of Penryn's and Newcastle's choicest oranges, while the foreground is filled with terra-cotta urns and vases (from Gladding & McBean's pottery at Lincoln) heaped high with splendid apples and Japanese persimmons. Strewed between are boxes of their finest figs, nuts and raisins, and the whole output is tastefully bedecked with sprays of greenery and bunches of crimson berries. Even in its incompleteness, the show is charming and must do much toward enhancing the fame of the already famous foothills of the Sierras.

EXORBITANT WOOD FREIGHTS.—Boulder Creek people complain that the S. P. Coast R. R. has, since its purchase by the Southern Pacific, raised freight rates on wood so high that it is impossible to ship it to San Jose with profit, and they say they will have to abandon the business.

A FAIR NEXT MONTH.—The Horticultural Hall Association at San Jose has decided to hold a midwinter fair, beginning February 11th and ending on the 16th.

The Legislature of 1889

Convened at Sacramento on Monday, 7th instant. The Senate was called to order by the president pro tem., S. M. White, of Los Angeles, who delivered an address eulogizing the late Gov. Bartlett and Senator Chandler. Mr. White was subsequently elected permanent President of the Senate, and Robert Howe of Sonoma Speaker of the Assembly, both being Democrats. Following are the Senatorial and Assembly districts and the counties constituting them, with the P. O. addresses of the members:

THE SENATE.		
DIST.—NAME.	COUNTIES.	POST OFFICE.
1—Frank McGowan, R.	Humboldt, Del Norte.	Eureka

California State Veterinary Association.

The first annual meeting of the association was held in the office of the Breeder and Sportsman on Thursday, the 13th December.

The president, Dr. Thos. Bowhill of San Francisco, was in the chair. There were present Drs. Thos. Maclay of Petaluma, A. M. McCollum of Sacramento, C. B. Orris of Stockton, C. Masero of San Francisco, H. A. Spencer of San Jose, F. A. Nief of San Francisco, W. H. Woodruff of San Francisco, I. P. Kleach of Santa Rosa, P. P. Parent of Fresno, and W. C. D. Morrison of Los Angeles.

The president then called upon Dr. Kleach to read his paper on "General Lymphangitis." A very animated discussion followed in which most of the members present took part.

The following members were then elected officers for the ensuing year: Dr. Thos. Maclay of Petaluma, president; Dr. W. C. D. Morrison of Los Angeles, vice-president; Dr. A. M. McCollum of Sacramento, secretary; and Dr. W. H. Woodruff of San Francisco, treasurer.

Dr. H. A. Spencer of San Jose then exhibited to the association a model of a new operating table. The table in question can be placed in a vertical position so that the animal to be operated upon, while standing erect, can be secured so firmly to the table that it is impossible for the animal to free itself. A crank is now lowered which brings the table and, of course, the animal, to a horizontal position.

The advantages of such a table are obvious. They may be summed up as follows: Avoidance of the dangers attending the ordinary system of throwing horses down; allowing the horse to get upon its feet again, easily and without danger; perfect safety of the operator, who can operate easily and comfortably; assistants are dispensed with; saving of time for the operator; economy in space and no expense for litter; greater cleanliness.

A vote of thanks was accorded Dr. Spencer for exhibiting the model.

A motion was then made that the association meet only three times per year instead of quarterly. The motion was lost.

Drs. Bowhill, McCollum and Kleach were appointed a committee to arrange for the incorporation of the association, and also to draft a bill, to be presented to the Legislature, providing against the practice of veterinary medicine and surgery by incompetent quacks. Drs. Maclay, Bowhill and Masero were appointed a Board of Examiners for the coming year. Proposals for membership were received from Dr. Egan, San Francisco; Dr. F. Cowper, Los Angeles; Dr. I. Oliver, Los Angeles; and Dr. Wm. Rowland, Pasadena.

Dr. Bowhill promised to prepare a paper, which he would read at the next meeting.

The association then adjourned to meet again in San Francisco, on the second Wednesday in March, 1889.

A Cordial Response.

In our statement concerning the close of the last volume of the RURAL we appealed to our readers for their kind help in extending the circulation and influence of our journal. The following cordial response comes from a man widely known and universally esteemed whose indorsement any one might well be proud of:

"Give us your kind words, kind friends, and we shall strive each year to better deserve them."—PACIFIC RURAL PRESS. The first time I saw the PACIFIC RURAL PRESS, I subscribed for it, and from that time to the present it has been a weekly visitor in my family, welcomed by every member as an able, clean production, containing valuable information in agriculture and all that is best in farm life. Such has been our appreciation of it, that my wife and myself have often selected it as a present for some dear friend, thinking it a fit expression of sincere regard; and when I read the above quotation in the closing number of 1888, pleasant recollections arose with a new meaning. Sympathy always exists in the hearts of true friends, but why not express it in words, when it is such a comfort to the weary worker in the cause of human progress?

Well do I remember the pleasure and profit derived from the RURAL PRESS when its editors and publishers were strangers to me and our first meeting in the Grange, and the fraternal relations there established with increasing confidence all along the intervening years. Not that we always see from the same standpoint (that would destroy individuality), but from evident integrity and the recognition of the right of individual judgment. The RURAL PRESS has ever cultivated the best qualities in human nature, and its freedom from egotism is a perfect illustration of the modesty of its editors.

It rests its facts and principles on intrinsic merit and invites candid criticism. In a word, it is a farmers' paper, and deserves a hearty welcome in every farmer's family in the land. Go on, worthy brothers; the PACIFIC RURAL PRESS is appreciated, whether the outward expression reaches you or not.

The reward of merit is always in store for noble, generous effort.

AN ORCHARD COMPANY INCORPORATES.—The Tehama Fruit & Orchard Co. has purchased a tract of land in Tehama county and filed articles of incorporation in Oakland. The capital stock is \$50,000, and the directors are Newton Benedict, D. J. Quimby, J. B. Richardson and W. F. Randolph of Oakland and W. C. Evans of Alameda. The purposes are declared to be for planting, growing, preserving, buying and selling of fruits and other farm products; buying and selling real estate, building houses, barns, fences, fruit evaporators and canneries; buying and selling and preserving nursery stock as well as borrowing and loaning money.

The Vegetable Garden.

In the first issue of the RURAL PRESS for taking a hint from our old friend, J. W. Mack, we called on readers, who have had experience in vegetable-growing in California, to tell that experience for the benefit of the tyro and "tenderfoot." The first response comes from our faithful Vacaville contributor. We hope others will send us notes on the subject, as terse and practical as his, from different sections of the State. Here is "G.'s" communication:

EDITORS PRESS:—In the last number of the PRESS, Bro. Mackie wishes a few hints on gardening. I will try to tell what little I know.

As to the time to plant garden seeds, that varies in different parts of the State. Here at Vacaville, peas, button onions, lettuce and radishes should be sown as soon as the ground is wet enough, or sooner if a person is particular about having them early and is not afraid of doing a little extra hoeing. Peas should be sown once or twice later in the season, so as to have green peas all summer. These vegetables the frost does not hurt.

The rule of the farmers in some of the States is to plant corn when the oak leaves are as big as a squirrel's foot, but here we plant corn, beans, potatoes, melons, cucumbers and squashes just as soon as we think the danger of frost is past.

Beets, carrots, turnips and parsnips can be sown as soon as the ground is warm enough for them to grow without stopping on account of the cold. If beets are sown very early, they are apt to go to seed the first year. Parsnips and carrots want a rich, deep soil, and if the parsnip seed is over one year old, it is not apt to grow.

Cabbage seed should be sown as early as the 1st of January in a bed, and when the plants are from three to six inches high they should be transplanted. Set the plants two by three feet apart, and just before a shower or in cloudy weather if possible. Cabbage plants should be hoed when the dew is on them, but beans should not.

Very often a cabbage or tomato plant will be found eaten off close to the ground, and it is always done in the night. Dig down to the root of the plant bitten off and you will find a brown grub-worm about half an inch long that has done the mischief. There are various ways of curing the worm of eating the plants after you catch him.

Tomato plants can be planted in a bed like cabbage, only later, as they are tender and a little frost kills them. The best way for a small garden would be to make

A Hot-Bed.

The cost would be but little if made as follows: Dig a hole 4 by 6 feet and 2 feet deep. Curb it up with any old boards handy, one foot above the ground on the south side and 2 1/2 on the north, stopping the ends to match the sides. Now fill in two feet deep with fresh stable manure—dry, if it can be had, but at any rate not so old as to have lost the heat. Wet it thoroughly and put on six inches of dirt. Sow the tomato seed about one inch deep. If glass is not handy for a cover, a piece of canvas, painted so as to turn water, will answer. The plants must be kept watered and the canvas rolled up to give them air and sun on warm days. The plants here are generally set out when the first blossoms are on the vines, but they are first transplanted into what are called cold frames, which are similar to hot-beds, only not so tight. Ashes sprinkled on melon-vines will sometimes drive off the spotted bugs which are quite numerous here, but if the bugs make up their minds to have the vines, they (like a woman) generally have their way.

Shorthorn-Breeders' Conference.

EDITORS PRESS:—Your valued paper of the 5th inst. contained a suggestion from Mr. Peterson of Sites, that the Shorthorn breeders of the Pacific Coast form an association for the purpose of having meetings to further the interests of that noble breed of cattle. I have talked with several breeders on the subject and all seem to favor the idea, and it seems all that is wanted is some one to lead and make a call for such a meeting. I believe the PRESS will also help the matter along by giving it a notice. Such meetings would bring out in discussion many things of great interest and value to those who are young in the business of breeding pure-blooded cattle. I would here suggest a meeting for the purpose of organization be held at the rooms of the Secretary of State Agricultural Society, Sacramento, at an early date, hoping other breeders may consult and make a call through your valued paper, and fix the date for the first meeting.

Perkins, Jan. 8, 1889.
[This indicates progress—what say other breeders?—EDS. PRESS]

FRUIT SHIPMENTS FROM SANTA CLARA CO.—We are indebted to I. A. Wilcox of Santa Clara for a copy of an account of fruit shipments from Santa Clara during 1888, furnished him by Mr. Stubbs of the Railroad Company as follows:

	Pounds.
Dried fruit	8,974,430
Green fruit	28,443,140
Canned goods	18,675,470

BIG PEARS.—One of our agents saw, on a recent trip to Contra Costa county, large Pound pears gathered from a limb over 60 feet high—pears that weighed from 2 to 2 1/2 pounds. These pears were grown in the orchard of Dorr Sharp, in San Ramon valley, three miles up the valley from Walnut Creek.

Little Feet.

Two little feet, so small that both may nestle
In one caressing hand—
Two tender feet upon the untrodden border
Of Life's mysterious land.

Dimpled and soft, and pink as peach-tree blossoms
In April's fragrant days—
How can they walk among the briery tangles
Edging the world's rough ways?

These white-rose feet along the doubtful future
Must bear a woman's load;
Alas! since woman has the heaviest burden,
And walks the hardest road.

Love for awhile will make the path before them
All dainty, smooth and fair—
Will cull away the brambles, letting only
The roses blossom there;

But when the mother's watchful eyes are shrouded
Away from sight of men,
And these dear feet are left without her guiding,
Who shall direct them then?

How will they be allured, betrayed, deluded—
Poor little untaught feet!
Into what weary mazes will they wander,
What dangers will they meet?

Will they go stumbling blindly in the darkness
Of sorrow's tearful shades?
Or find the upland slopes of Peace and Beauty,
Whose sunlight never fades?

Will they go toiling up Ambition's summit,
The common world above?
Or in some nameless vale securely sheltered,
Walk side by side with Love?

Some feet there be that walk Life's track unwounded,
Which find but pleasant ways,
Some hearts there be to which this life is only
A round of happy days.

But they are few. Far more there are who wander
Without a hope or friend—
Who find their journey full of pain and losses,
And long to reach the end.

How shall it be with her, the tender stranger,
Fair-faced and gentle eyed,
Before whose unstained feet the world's rude high-
way
Stretches so strange and wide?

Ah! who may read the future? For our darling
We crave all blessings sweet—
And pray that He who feeds the crying ravens
Will guide the baby's feet.

—Florence Percy.

Joaquin Miller on the Storming of Chapultepec.

Not long ago I wrote an Open Letter to the War Department on behalf of an old soldier here. This brought so many letters to me from this class that I am almost compelled to say to one and all that I have but little respect for any man who is and has been nothing but a soldier. So don't write to me for either money or sympathy simply because you went to war. You were paid for it, and paid well. Why, nearly every man in California in the old days went out to fight Indians time and again and never got a cent. And General Fremont says in his new book that there is no fighting so terrible as these fights with savages. Yet I know a man who took part in six Indian wars, was three times wounded, and never asked or had a cent for his work or his wounds.

But here comes a man who claims to have been wounded at the storming of Chapultepec, and he wants an increase of pension.

Now as I have broken bread on the heights of Chapultepec, the Mexican West Point, and know all about the Mexican side of that most dastardly piece of work called "The Storming of Chapultepec," I am going to tell the country what the Mexicans told me about it. I think the less we brag about "the storming of Chapultepec" the better. Like all battles, this has two sides to it.

Not long ago I mounted my horse in Mexico City and rode on out toward, and past, Chapultepec by way of the gate by which the American Army entered toward the close of the Mexican War. The great stone gate-posts, and walls, and the grand aqueduct by which the city is supplied with water, all these are still badly torn and shattered by cannon-balls. The poor disheartened Mexicans have never, from that day, attempted to restore either the gates or the walls of their city. In one place I saw a cannon-ball still sticking in the high stone

aqueduct. For you must remember that his long and costly water-way is on lofty arches. It is many miles in length and is not much inferior to the once famous aqueduct of Rome, the broken arches of which may still be seen stretching from "the city of seven hills" far out toward the olive hills of Froskata and Tivoli.

I must not forget to tell you that it is the fashion here to spend much of the day on horseback, although many rich people drive, especially the ladies. They have street cars here now in great numbers passing in and out at nearly every gate of the city. They are drawn by very small mules and always go on a run from one town to the other. They go in long strings, like the steam cars, and never stop to take in passengers by the way. The guidebooks tell you that this is done as a prevention against brigands! Once for all, let me say that Mexico is as safe from brigands as is Texas, or any other broad and sparsely settled country. The streets of the City of Mexico are much safer from all sorts of bad people later night and day than are those of the lower part of New York City. On the occasion of my ride before referred to, I passed by the old baths of Montezuma, on the southern base of Chapultepec. And here on the warm rocks this pleasant winter day I saw, basking in the sun, an enormous rattlesnake.

Ten minutes' gallop farther on up the most excellent roads—for this is the fashionable drive—and I entered the wonderful cypress woods. The trees here are of most stately dimensions. They are hung with long gray moss, much like those of the Southern States, and are indescribably grand and solemn. Many of them are thirty feet in diameter, and lofty in proportion.

The Spanish conquerors found those two here. A little to the north of Chapultepec stands the cypress tree under which Cortez sat and wept after he had been driven from the city by the Aztecs.

A gallop of ten minutes more took me entirely through this noble grove of mournful and majestic cypress trees, and brought me to the battle-field of El Molino del Rey: *The Mill of the King.*

An old mill stands here, still grinding. A dozen dismal mud huts make a sad and ugly border for the beautiful forest of Montezuma. On each of these huts sat at least a dozen hideous bald-headed vultures, stretching their long necks now and then out toward where I had thrown myself on the short brown grass to muse and meditate; while my horse nibbled daintily at the blossoms of a cactus hedge. The vultures continually bowed their bald old heads, continually stretched their long, ugly necks toward me, and seemed in their lazy fashion to be asking me, as I lay there, if I were really dead and ready to be eaten!

A naked Mexican, nearly black, trotted by with a pigskin full of their native drink on his back. They are always naked when at work or bearing burdens. They carry their clothes under their left arm till they come to the gates of the city. And this poor fellow with the pigskin, a woman and child pulling grass which they put in a bag, the dozens of bald-headed vultures—were the only living things to be seen on the famous battle-field of Molino del Rey.

But pretty soon I heard singing—such soft and old-fashioned and far-away singing as I had not heard since I sat cracking nuts at my father's hearthstone forty years before. I listened as I lay there, scarcely daring to breathe for fear of breaking the tender thread of melody and the holy memories of home and childhood that were interwoven with it. But it kept on, sweet on, like an æolian harp, now low, now louder, but always in such sweet harmony; so tender, so soft, so far away, so full of childhood, of home. . . . I could not see the blue sky above me at last, here on the brave old battle-field. Maybe the wind began to blow, and maybe some dust of the battle-field blew into my tired old eyes. Surely I was a child again.

Rising up on my elbow to dig out a handkerchief from my pocket, I looked down and saw that my legs were almost black with crickets—pretty little flat-backed, black, hearthstone crickets! And these were my little charmers, "charming never so wisely."

Ah, mournful little cricket clad in black, sing on; sing on forever above the brave Mexican defenders, and the valiant invaders too, who fell on the battle-field of Molino del Rey behind the heights of beautiful Chapultepec! I know of nothing more tender, more touching to the heart of an American, than this pretty and pathetic fact. And in this fact you read the real meaning of the name "Chapultepec." It is these pretty little black mourners who mourn and sing their sad melodies here forever over the battle-field. It is these crickets that have given the sweet name Che-pul-ta-pec—the singing of the grasshopper—to these glorious and battle-torn heights; translate it as you

please. But these little black crickets have been saying and singing continually, and for thousands of years, I reckon, Chi-pul-ta-pec! Chi-pul-ta-pec! Chi-pul-ta-pec!

There is a great big hideous battle-picture hanging in the Capitol of our Nation called "The Storming of Chapultepec," which must be taken down; and not entirely because it is so badly painted, either. Listen to the true story of the storming of Chapultepec: This high overlooking the City of Mexico is, as said before, and was at the time of the Mexican War, the Military Academy of Mexico—the Mexican West Point.

Well, nearly all the boys here had gone down to battle, had fallen in the various battles that had already been fought under the walls of the city and within sight of the Academy. But there still remained nearly one hundred too small to bear arms, all being under the age of fourteen—some being no more than nine years of age.

When the summons came to surrender, the only surviving man there was the old white-headed schoolmaster of the very small boys. Now bear in mind this is the Mexican side of the story I am telling. But I believe it to be entirely true, or I certainly should not write it down for my own country to read. The old man hesitated, not knowing what to do, as the leaders had all been killed or captured. And so the storming party of Americans came pouring on through the cypress trees and up the hill. The old man meantime kept urging his little boys to go down the hill on the other side, still open to escape, and get out of the way. He even pushed some of the party down the hill, notably one little boy of nine years who had a widowed mother depending on his future, and who afterward became famous. But some of the little fellows, forty-one in all, were too full of fight to go. They turned about, drew their little swords, and, with the old man at their head, fell and died all in a heap there at the door of the Academy!

Down at the foot of this high stands a modest little monument with an inscription to this effect: "IN MEMORY OF A SCHOOLMASTER AND FORTY-ONE OF HIS PUPILS." That is all. But on the little mound there every day of the year, rain or shine, peace or war, is laid a wreath of flowers.

And so I say that the insolent and false and absurd battle-piece which looks down over one of our great marble stairways in the Capitol of our great Nation has got to come down. It has been there too long already. It should never have been put up there. For it is as false to art as it is to history. Besides all that, the less we say about some of these battles the better for American honor and patriotism. 'Twas a sad war at best. The little crickets seem to know it, too. For over and over their sad song runs: "Cha-pul-ta-pec! Cha-pul-ta-pec! Cha-pul-ta-pec!"

And this is about all I have to say to you or any other "veteran of the Mexican War." If you were wounded at the "storming of Chapultepec," you were most likely wounded by one of your own comrades or by a beardless little boy fighting for the home of his fathers; and as you already have a pension according to your own account, and were certainly well paid at the time of our ignoble invasion of the sister Republic, I think your present mournful letter to me a miserable and most unsoldierlike piece of impertinence. At the same time I ought to add that I am only one of our sixty millions and speak only for myself. But I have been in too many battles to hold any man in great respect who can do nothing but fight and brag about his wounds. Why, the dogs of the street can fight. A dog can fight better than a man any day, and he doesn't brag about it, either. Give me a man who, like Coriolanus, refused to show his scars or sell them to the country for coin or place, and "I will wear him in my heart of hearts."

JOAQUIN MILLER.

The Heights, Oakland, Cal.

WHAT SHE DID WITH A TRAMP—A dispatch from Tacoma says: At about 4 o'clock this afternoon the servant girl employed at the residence of Mr. and Mrs. David Lester, on Pacific avenue and Fifteenth street, noticed a burly young tramp enter the basement of the house from the back door. The girl was some distance from the house, and immediately notified Mrs. Cotes, who lives next door. This plucky woman took her husband's Winchester rifle, loaded it, and, going to Mr. Lester's house, found the intruding tramp, and covering him with the rifle forced him to come out of the house quietly. Mr. and Mrs. Lester, returning home, were just in time to see Mrs. Cotes raining blows upon the head and shoulders of the tramp, using the gun as a club. A large crowd had collected at the corner, and witnessed the proceedings with great hilarity. When he had been beaten for some time the would-be-beaten thief slunk off in abject fear of being shot. Mrs. Cotes weighs not much over 100 pounds, but has pluck in abundance.

Another Image Broken.

(Written for the RURAL PRESS by DAGMAR MARIAGER.)

Mr. S. and wife didn't have any turkey for Christmas, and neither did I; and the strange thing connected with these facts was this, that we didn't want any. Indeed, we had, baby and all, gotten a wave of that Christian charity which we are told is scarce, and the consequence was that the two turkeys our neighbor expected us to buy actually had their Christmas, too, on their legs, subject to voluntary motion, and with their gobbling organs in working order. I don't know but our two families may be accused of putting our heads together and plotting against our neighbor's time-honored custom, the demand-and-supply enthusiast, the world at large, and even sacred laws. If so, then, of course, we propose to plead innocence with all the barefacedness possible. And if that doesn't annihilate the anticipated storm of blame, we expect to ask "I. H.," author of "Hints for a Christmas Dinner," in the Dec. 22d issue, to help us bear the burden of it. We know something about nervous headaches and their causes, and so could afford to shed a tear of sympathy for Aunt Sarah and her numerous duplicates, followed by a "bravo" for the true gentleman, Uncle John.

True, we did put our heads together, repeating significantly Ethel's words: "Holidays! What are they for but to add new burdens to those we women have to bear already? If there could be a holiday without eating and drinking I could enjoy it." Yes, we whispered to each other, if only holidays were worshipful in some more humane and less sensual way than the wholesale "stuffing" and "swilling" so widely practiced, we might feel more conscientious in persecuting the intidel who ignores them.

We then slept and dreamed over the germ of rebellion that had entered our souls, and we saw turkeys, happy turkeys, gossiping among themselves, and enjoying the air and sunshine nature gave alike to turkey and man; and we awoke with the germ briek as the Hindoo magician's mango seed, grown to a fruit-bearing maturity.

Yes, we put our heads together, and our labors, too, though they were not very fatiguing. We doubled our families, so to speak, and bustled about for a little while in getting up the dinner, which is to pass into history, by way of our diaries, as an exceptionally pleasant affair. The table was spread with things warm, good to the taste and wholesome, and we all helped ourselves to what best suited us. Those who preferred their pudding first and soup last had it so, and vice versa. We had no animal flesh on the table, yet I doubt if any Christmas dinner in the State, with its accompanying chat, was more merry and generally satisfactory than was ours.

Mrs. S. and I spared ourselves the bruises of the Juggernaut wheels, and we feel rather proud than guilty in having done so, as we are not partial to blood atonement nor to the making of burnt human sacrifices over the kitchen range.

Santa Barbara.

Chautauquan Program.

The annual meeting of the Pacific Coast branch of the Chautauqua Circle took place at San Jose on the 31 instant.

It was resolved to hold the summer meeting at Pacific Grove, Monterey, during two weeks, beginning July 8th. Rev. Dr. Sinex was authorized to procure a tent and have it erected near the seashore for the purpose of vesper services and round-table discussions. Dr. A. C. Hirst, president of the University of the Pacific, was appointed to preach the morning sermon on the first Sunday and Rev. Dr. Wheeler of Sacramento the evening sermon.

It was decided to add an art department to the course of study, and Miss Kennedy, of the University of the Pacific, was selected to conduct it.

It was decided to invite the following gentlemen to speak at the summer meeting: Rev. H. C. Minton of San Jose, Rev. Dr. McKenzie of S. F., Rev. Dr. Dille of Oakland, Prof. E. S. Holden of the Lick Observatory, President Davis of the State University, Prof. Le Conte of Oakland and Prof. Thoburn of the University of the Pacific.

"CHESTNUT," as a slang phrase, is done with, and an equally meaningless word has been substituted. It is "dusty." Do you admire anything from a stylish toilet to a dainty dish, you are privileged to say: "There is nothing 'dusty' about that." On the whole, when one takes time to consider, there is more sense in "dusty" than in most fashionable slang. A dusty object suggests one whose freshness is despoiled. Just how the "chestnut" was ever significant, no one has yet clearly defined.—*Table Talk.*

LANE LECTURES.—The seventh course of free popular lectures at the Cooper Medical College in this city opened on Friday evening, Jan. 4th, with an address by Prof. L. C. Lane on "Sorcery." The lectures are to be continued on alternate Friday evenings up to and including May 10th by Profs. Barkan, Wythe, Gibbons, and others distinguished in the profession.

The Ethics of Marriage.

Every now and then a book is written because the author *has* to do it; because he feels that a word must be said, and, since no one else will say it *now*, he must try to utter it. Such an one is "The Ethics of Marriage," by Dr. H. L. Pomeroy of Boston, lately published by Funk & Wagnalls of New York.

The scope of the work may be seen in these chapter headings: The Family and the State; Marriage; The Perversion of Marriage the American Sin; The Mission of the Child; Heredity; Woman's Work; Over-Population; Other Bars to Parenthood; Suggestions. And the spirit in which the doctor has written shows forth in the title-page motto: "A little child shall lead them," and the inscription: "To my mother this little book is affectionately and reverently dedicated."

A few brief extracts, taken here and there, may give some notion of the wise and noble way in which the author treats his momentous theme:

In a republic all civil reform must have its roots in reform of the individual and the family. * * The voter's will is usually the expression of his birth and home training. And so we may trace reform back to the nursery.

We pride ourselves on our zeal for the sanctity of the family relation; and yet we entertain false and dangerous ideas respecting marriage; and these ideas are leading to practices which will, if unchecked, soon corrupt and destroy our national life. A healthy marriage begets a healthy family, and a sufficient number of healthy families beget a healthy State. So the ideal State may be traced back to true views and treatment of the marriage relation.

We can never have satisfactory laws which shall be vigorously executed until each home in the land becomes an institution for rearing and educating intelligent, conscientious voters who will be ashamed not to vote when it is possible to do so.

When men and women understand and appreciate the mission of the little child, they will have regard for the welfare of that which may by and by be born to them. The child even before birth is able to lead the parent out of selfish thought into loving care for another.

A young woman should not forget that her lover virtually proposes himself as the future father of her children; only from this standpoint can she make an intelligent and safe estimate of him.

An honorable spinsterhood is a hundred times better than a dishonorable wifehood. No woman should marry unless she loves; marriage which is not a union of hearts as well as hands must always be a virtual failure.

A good time to learn to be a prudent, temperate and virtuous husband and father is during the 20 years before one begins.

Children who are given pre-natal love and care, so that they have a clean and noble birthright, and who are afterward thoroughly and reverently instructed in regard to the nature and functions of the bodies God has given them, may be expected to possess characters which, by strength from within, will hold out against almost any attack on their virtue.

It would be well for the world if the theologian, the scientist, the philosopher, the political economist, the philanthropist, and all the others who are working for the good of humanity, have the little child set in their midst, and learn from it that their interests are not many, but one, and that each is a co-worker with all who are at work on the various problems of life, which are, after all, but one problem—in what manner and by what means to form character and bring it into harmony with the Creator and His creation.

We are informed that Dr. Pomeroy is a physician and surgeon of large experience in constant and varied practice; and the fact that a minister of so high standing as Rev. J. T. Duryea, D. D., has written an introduction to the volume, and given it his hearty indorsement, is very gratifying and encouraging to those who have at heart the cause of moral education. We hope that this modest, earnest little work will find a million of attentive and reverent readers.

Temperate, Self-Denying, Honest.

Remarkable for their temperance and gentleness in expression, as well as uncompromising protests against tippling and gambling of all sorts, are these resolutions adopted by the recent Unitarian Conference at San Diego:

"Resolved, That our conference expresses its profound sympathy with the National Unitarian Temperance Society, the Woman's Christian Temperance Union and all other organizations that are battling the giant evils of intemperance in our land; and that we will, during the coming year, use renewed endeavors to bring to the attention of our parishioners the aims and objects of these organizations.

"Resolved, That since it is agreed on all sides that such beverages form no part of a necessary diet for men and women in health, we affectionately call on those who may regard their moderate use as innocent to give up such use out of compassion for their weaker brethren.

"Resolved, Seeing that the common weal requires each to do his share of the common work as well as enjoy his share of the common product, and that to get value from others without rendering an equivalent is demoralizing, we record our protest against gambling of all descriptions, whether home or foreign lotteries, faro games, betting upon races, raffles and gift enterprises, as well as speculating schemes in merchandise, mines or lands, whose success to the few means the impoverishment and demoralization of great numbers."

YOUNG FOLKS' COLUMN.

A Tale of Long Ago.

[Written for the RURAL PRESS by MAUDE S. PEASLEE.]

There was great rejoicing in a land across the sea when the king came home from a victorious battle. The city was hung with bright garlands of flowers, and the children strewed blossoms under the feet of the returning warriors. Even the horses seemed to partake of the general rejoicing, for, although weary and footsore, they carried their heads proudly and stepped lightly.

Behind the escort of the king came a little band of worn and haggard prisoners. One among them was a boy in years, but manly in his undaunted spirit.

"Away with them!" cried Alfric the king, as they reached the castle gate. "Cast them into the strongest dungeon beneath the castle walls!"

He then passed into the castle to carry the good news of victory to his queen. His little daughter Gerda had been awakened by the clash of arms in the courtyard below, and was sobbing piteously in her cradle. Her mother could not quiet her, and the king took her in his mailed arms and carried her to and fro while he told the queen of the success he had had in battle.

The child looked up through her tears, and smiled in the father's face.

"God keep thee safe from harm, my babe," he said, and laid her down in her cradle.

The gentle mother sighed, for she felt that none were safe while bloodshed ruled the land.

The years had passed in peace and quiet, and the little Gerda's flaxen hair now reached below her waist. She had often heard of the terrible war that shook the land seven years before, but most she liked the tales her old nurse Hedwig told her of the fairies and gnomes who lived under ground.

One day she was playing about the castle, and in an old room she found hid under the tapestry a picture of two men fighting. The victorious one had his foot on the chest of the other, and his battle-axe was lifted to kill him.

"Thou hateful, hateful fellow!" cried the tender-hearted little princess; and clenching her little fist, she struck the victor.

At the blow, the picture swung back on hinges like a door, and disclosed a flight of steps leading down into darkness.

"Ah! now I shall find the fairies!" cried Gerda joyfully, and she started fearlessly down the steps.

Down, down she went until, through winding passages, she lost her way and wandered to and fro, crying softly and calling to her good nurse Hedwig to come and show her the way.

Suddenly she heard a voice, and listening, it said:

"Who weeps?"

"Tis I, 'tis Princess Gerda," she cried. "I cannot find the way."

Then the voice said:

"Fear not, O Princess Gerda! If thou wilt turn the key, How gladly will I offer To be a guide to thee."

She felt about in the darkness and found the rusty key, but she could not turn it in the lock.

"Oh! try once more," the voice cried.

She tried again and again, and at last turned it round, and the door swung open.

Some one came out and bent over her. She could not see him, but his voice was kind, and she was not afraid, but put her hand in his.

"Now, little maiden, will you promise me to never tell how you came down here, nor of what you found? If so, I will lead you up to the glad sunlight again."

She promised eagerly, and they began going up the stairs. Before long they reached the door in the wall made by the picture of the two men fighting. When she turned to thank her companion, he was gone, and she could see only the picture against the wall. She wondered much, but, remembering her promise, she told no one nor asked any questions.

Ten years more passed away, and Gerda stood in the old room once more. Outside was the clash of arms again, and she was sick at heart at the thought of the danger her father was in.

The cruel Alaric, King in the North, had swept down upon the land, and driving all before him, was now storming the castle itself.

Just as a shriek from within was followed by a shout from the besiegers, "The drawbridge is down!" a crash of arms was heard on the right side.

The superstitious army stood a second in dismay, and then a murmur ran through its ranks.

"The gods! the gods! they are against us!" and with one accord the whole army turned and fled. They were followed and many slain by the king's hosts.

Poor Gerda stood within the old room, trembling still for the fate of her father.

When the king's men returned, he himself sought the stranger who had so aided him.

"Who art thou?" he asked, "and what brings thee here?"

"I am Eric, son of Alfric," he answered. At this the king paled.

"I have heard of thee, and how well thou

rulest thy kingdom by the sea. But thy father sleeps on yonder plain slain by my hand; why comest thou to help me?"

"I come for thy daughter's hand," said brave Eric. "Have I thy permission to ask her will?"

The king bowed his head, for he could not well refuse; and going first to his daughter, he told her the news.

"It would please me well," he said, and she bowed her head in meek submission to her father's will.

Great was her surprise when Eric entered to hear softly whispered in her ear, as he took her willing hand:

"Fear not, O Princess Gerda! If thou wilt turn the key, How gladly will I offer To be a guide to thee."

DOMESTIC ECONOMY.

Savory Fragments.

The table is the place where most waste can occur; so guard it well and pay strict attention to the second serving of food. The people who prefer an economical table, which in their own mind means broiled steak and roast beef, are the most difficult to cater for. Study to make the warmed-over dishes decidedly more than ordinary hashes. Employ judicious combinations and pleasant seasonings—for instance, use sage with warmed-over pork, parsley with poultry, sprig of mint with your mutton or lamb, and a little onion to stimulate the beef. Cucumber catsup, inexpensive if you make it yourself, brightens the flavor of fish. An acid jelly with tame duck, and tomato sauce with warmed-over veal. For warming over dark meats use brown sauces, made from browned butter and flour; for white meats, cream sauces, which, of course, can be made of milk. One or two potatoes, left from dinner, will make a comfortable dish of Lyonnaise potatoes for breakfast. The two tablespoonfuls of green peas left may be turned into an omelet for another meal. Boiled rice may be made into croquettes. Fish into scallops, cutlets or cream fish. Ham into croquettes. Beef into hash, meat balls, ragouts, rissoles, or warmed up in its own gravy. Soup meat may be pressed or potted. Game and duck made over into salmis. Chicken and turkey into salads, croquettes, rissoles, boudins and timbale. Pieces of bread left at the table may be used for toast, croutons, bread puddings, or crumbs for breading. Veal rewarmed makes delicious blanquette or cromesqui.

Many vegetables suffer but little from a second warming, and even if only in small quantity, may be served as a garnish for a little meat dish, thereby rendering it palatable and sightly.

In all these little points we must be on the alert, or the garbage bucket will devour our substance. Those who have the responsibility of the household management must not forget the necessity of practical work in the kitchen. The power of giving directions so clearly that the maid will from them produce the desired results, is, perhaps, all that is required in some cases; but to teach others thoroughly, so that no waste will occur, one must be able to do the thing one's self. It is well to give at least one hour a day to the study of cooking as an experimental science; also, to study the chemistry and physiology of food, and I have no hesitation in saying that in three months you will be well repaid for the time thus spent. Look, for instance, at a combination like this: Roast pork and mashed potatoes; such occurs frequently in families of some intelligence, but nothing shows one's ignorance so quickly as such menus. Pork and beans or peas show some sense, but pork and potatoes none. No domestic art shows so much thought, care, judgment, intelligence, inventiveness and taste as good cooking.—Mrs. Rorer in *January Table Talk*.

Making Wine Vinegar.

In answer to a request for information how to make vinegar from wine, we reprint the following, written by D. R. for the RURAL some years since:

Our California white wines contain from 14 to 18 per cent alcohol according to where they have been raised, the wines from the foothills being much heavier than those from the lower lands, especially if they have been irrigated. For vinegar, you do not want more than eight or nine per cent alcohol, so you have to add from three-fourths to one part of water; the best is rain-water, or else take spring-water and boil it for awhile; pour the mixture into a barrel or pipe, but don't quite fill it up; bore a hole in each head near the bungstave to give a good circulation of air, and close the bunghole with a bottle, neck down; keep as near as you can at a temperature of from 80° to 86°, and if your vinegar gets sufficiently sour, draw off and refill, and it will sour much quicker the next time. To create a quicker fermentation you can add some yeast of any kind, sour dough, or, if you can get it, mother of vinegar, in filling the barrel the first time—afterward it is not necessary.

SNOW CAKE.—Two cups sugar pulverized, one cup butter, one cup sweet milk, one cup cornstarch, two cups flour, two heaping teaspoonfuls baking powder, lemon.

GOOD HEALTH.

Points About Pneumonia.

According to a medical contemporary, Dr. Gouverneur L. Smith of New York has just given some interesting and startling facts in regard to pneumonia. Dr. Smith points out that the disease is becoming worse every year, increasing rather than decreasing, both in the number of cases and the percentage of mortality. The statistics of the Pennsylvania hospital show that the mortality from pneumonia there advanced from 15½ per cent in 1847 to 31 per cent in 1886. Similarly, in the New York hospital the ratio of mortality from this disease is more than double what it was in 1878. Thirty or forty years ago it was regarded as serious, but it did not excite anything like the alarm it does to-day. Dr. Smith is rather inclined to believe that the medical art, instead of progressing in its treatment of pneumonia, has actually gone back, and holds that the old methods of treating the disease at the time it was less deadly have been abandoned for methods more final, but less efficacious.

Symptoms of Approaching Pneumonia.

Dr. J. B. Johnson writes in the *Medical Summary* as follows:

The approach of pneumonia is not always without warning. There are usually certain feelings or sensations of the body which tell, with greater or less certainty, that an attack is beginning. An individual, for a day or two prior to the actual invasion of the disease, feels badly in a general way. These bad feelings consist of a chilliness of the whole body, and if his clothes be at all damp with perspiration he feels cold and uncomfortable. He is feverish, and yet it seems impossible for him to get warm. This feverishness is attended with great chilliness, which increases when he is exposed to a draft of cold air.

As evening approaches all these bad feelings are increased, and when night comes on he has pains in his back and limbs, accompanied by a slight cough and unnatural frequency of breathing, with unusual quickness of the pulse and a feeling of uneasiness or oppression about the chest. His sleep is disturbed by chilliness, restlessness and unpleasant dreams. The warmth of his bed and bed-chamber may cause a slight cessation of his bad feelings, and in the morning, feeling better, he goes out attending to his business, only to have all his bad feelings return with increased force at the approach of the coming night.

Should he heed the warning implied by the return of his bad feelings and confine himself to an equal temperature of about 65 degrees, and partake of copious drinks of hot tea, coffee or milk, he may possibly avert an attack of the disease.

DIFFERENT PHASES OF "MIND CURE."—Now that all forms of mental healing are much talked of and largely adopted, it might be well for the public to know that the disciples of the different schools resent the common practice of outsiders bulking them all under the head of "mind cure." Mind enters into each one, to be sure, but in different forms and through different doors. They who practice "Christian science" draw healing force from the Infinite Mind, and consider their own minds as at most a mere telegraph line through which the vivifying power reaches the patient's mind. Plain "mind cure" works by the operation of the healer's individual mind on the subject, and partakes of what is known as mesmerism or hypnotism. "Faith cure" and "prayer cure" are one and the same, both relying upon faith to override disease. If any one doubts that the healing of disease by mental methods is going on briskly in this city, let him drop into the offices of some of the best-known practitioners and see the collection of patients waiting hour after hour in order that each may get a treatment. Nine o'clock is the hour for beginning the business of healing. An hour before that, six and eight patients are in readiness to get their slice of life and health as drawn from the infinite source of all life and wholeness. From that time on until the office closes at night it is never empty, and most of these reach a point when they declare themselves healed.—*New York Press*.

EFFECT OF PETROLEUM ON THE HUMAN BODY.—A German physician has recently issued a report of his observations on the effects of petroleum on the human body. The facts on which his conclusions are based have been gathered during extensive travels in the American petroleum districts. He found that a skin disease was very prevalent among the workmen who were employed at the wells, and on closer examination he concluded that the disease especially attacked those who were engaged with the heavier and more inflammable oil. Numerous cases were discovered of large quantities of petroleum having been swallowed, with the result of violent affections of the stomach, kidneys, and nervous system. In one case where a glassful of petroleum had been drunk, the greatest difficulty was experienced in preventing the patient from falling asleep, an eventuality which is especially fatal in such instances. Symptoms of poisoning could also be traced after a lengthened period of inhalation of the vapor, but the symptoms were only noticeable when the subject was in a bad state of health.

TABLE OF CONTENTS.

EDITORIALS.—The Cleveland Bay, 25. The Week; The Right Time; California Fruit Union; The Legislature, 32. Agricultural Review, 33.
ILLUSTRATIONS.—Cleveland Bay Stallion, Royal Studley, 25. Cleveland Bay Stallion Napoleon, 37. Ladies' Costumes, 38.
PATRONS OF HUSBANDRY.—Grange Elections; Tulare Grange; Resolutions of Respect; Eden and Tenesca Grange Meetings; The Value of a Farmer; San Jose Grange, 28.
FLORICULTURE.—Spring Flowering Bulbs, 26.
ENTOMOLOGICAL.—A New Foe of the Peach, 26.
THE FIELD.—Wheat Facts and Figures, 27.
THE DAIRY.—Cheese and Butter from the Same Milk, 27.
THE HOME CIRCLE.—Little Feet; Joaquin Miller on the Storming of Chapultepec; What She Did with a Tramp; Another Image Broken; Chautauquan Program; The Ethics of Marriage; Temperate, Self-Denying, Honest, 31.
YOUNG FOLKS' COLUMN.—A Tale of Long Ago, 31.
DOMESTIC ECONOMY.—Savory Erasmegs; Making Wine Vinegar; Snow Cake, 31.
GOOD HEALTH.—Points About Pneumonia; Different Phases of "Mind Cure"; Effect of Petroleum on the Human Body, 31.
POULTRY YARD.—Experience in Incubation; Poultry in the Orchard, 35.
AGRICULTURAL NOTES.—From the various counties of California, 38.
THE PUBLIC LANDS.—Revision of the Land Laws, 38.

The Week.

We give much space this week to the review of California agricultural production for the year 1888. Statistics are often looked upon as dry reading, and yet there is no way at all comparable to carefully arranged figures for presenting facts and tendencies of industrial moment. The review, aside from showing the achievements in various individual lines of productive effort, gives the impression on the whole that our State is growing, and that it is proceeding upon the safe basis of diversified agriculture. Though people generally hear most of two or three branches in which there is much life and action, still there is commendable growth and progress in other lines which are perhaps quieter, but none the less honorable and important.

The weather has been, as a rule, clear, and some nights frosty, though intervening days were warm. We need a season of working weather for winter plowing and sowing and planting. The frosts are valuable, too, for the trees would soon be in full bloom were they in-

fluenced only by day temperatures. As it is, some trees on dry, shallow soil which became dormant early were in bloom on New Year's, but it is not well even for tree or human kind to be too forward. The modest man escapes many snubs and the backward tree saves its buds.

The Right Time.

It has become an adage, "strike when the iron is hot." Men often fail in their purposes of good because they do not act at the right time. The success of every good movement largely depends upon its being vigorously prosecuted at the proper time. History is full of examples. Take inventions for instance: Discoveries usually come when the times are ripe for them. When the progress of humanity culminates in some want or demand, an inventive genius is always ready to furnish what the public needs. The cotton-gin, the sewing machine, the reapers and mowers, the steam engine, the telegraph, the telephone, and hundreds of other useful inventions that we have no space to catalogue, came at the moment when society was ripe for them.

Take another illustration more fitting to the case now in view. Fifty years ago slavery in the United States was pretty generally regarded as a fixed and permanent institution. The only prevalent idea in the North was to prevent its spread over new territory. Perhaps nineteen-twentieths of the people in the North, while regarding slavery as a great evil, were willing to let it remain, provided it did not ask for new territory. They saw no hope of its abolition. But slavery was aggressive—it demanded the right to spread itself over the land. This in a few swift years brought on the eventful moment for wiping out the curse from the soil and Constitution of the American people; and the proclamation struck the fetters from 4,000,000 of bondmen. It could not have been accomplished at an earlier date. The convictions of the people were ripe for the event when it occurred, and the idea of liberty was placed as a star in the firmament of the Constitution at the most auspicious moment. It certainly could not have been so well done earlier or later. It came in the right moment, and the members of all political parties are satisfied with the result. Even the South to-day would not vote itself back to slavery.

Let us heed the lesson. It is certain that the legislation in this country for a number of years has been strongly in the direction of creating and upholding monopolies and special privileges in the shape of railway companies, water companies, gas companies, and other forms of monopoly. But this despotic power was not content to stop here, but has sought within a few years, like slavery, to extend its scepter over new territory. There is now scarcely an article of necessity and utility in the American household which has not fallen into the hands of monopolizing corporations or "trusts," from the sugar that sweetens our tea to the steel rails over which the commodities and products of the land are transported. This state of things has bred 500 millionaires where there were five before, and the workingman is just about as poor as he was in the beginning. But he is 25 years older in experience, and indications are not wanting that the workmen of the United States are becoming thoroughly aroused to the abuses and mischiefs of a legislative system which has so long been sustained by their votes. The numerous guilds, labor organizations and anti-poverty movements all show that new ideas are fermenting in the minds of the masses, in regard to legislative policy, that may portend great events.

"Strike when the iron is hot," if you expect the metal to be readily shaped by the hammer. Changes in the moral or the political world are most successfully made when the elements are right for the change; and surely there is no better time to stop, suppress, or remake this new form of slavery, that levies a tax on every article of the household, than just now while it is seeking wider dominion, and there is everywhere a feeling of uneasiness and irritation. There is a time for everything and the field is ripe.

APPLES WASTED.—According to the Nevada City Transcript, thousands of tons of apples rotted on the ground this season in the Bartlett pear belt.

California Fruit Union.

The annual meeting of stockholders of the California Fruit Union will be held at the office of the State Board of Horticulture at 220 Sutter street, San Francisco, on Wednesday, January 16th, beginning at 1 o'clock P. M.

The approaching meeting will be of exceeding great importance, and every man or woman owning a share of the stock should be present. The Union has been of great direct and indirect value to the fruit interest of the State. It has done as much and as well, probably, as could be expected of an organization working amid conflicting interests in an unknown field. It was an experiment at first; it is an experiment still so far as answering producers' needs is concerned. Its policy has been molded according to various interests which have been apparently merged in its management, but individuals have never forgotten or failed to strive for the paramount advantage of these interests. This is possibly only what might be expected, and we do not write in condemnation. If there is condemnation deserved it will no doubt be freely expressed at the meeting. What we desire as one of the earliest advocates of the organization and as a firm friend of it throughout, is that this year there may be a full and free review of its methods and policies, and that this review be followed by approval of the good and unhesitating elimination of the evil. There is an open fight being made against the methods and policies which have prevailed during the last year. We do not espouse that cause because we cannot claim sufficient acquaintance with the subject, but we know that the meeting will bring out claims and statements which should be calmly considered and passed upon by the whole body of the stockholders. For this reason we urge personal attendance wherever possible, and where proxies are unavoidable, let them be given to those in whose judgment to act in your best interest as occasion may require, you have confidence. As we have said, there is an open fight under way and efforts being made to mass proxies for the support of certain aims and policies; for this reason be careful in whose hands proxies are placed. Unless you are sure where your interest lies, withhold your proxy from all solicitants and place it as we have said—with some one who will act judiciously on the presentation of facts at the meeting.

Besides the issue as to internal policies there is exceedingly important work to be done. The proportion of gross receipts which is paid for freights and commissions is altogether too great and can be reduced by proper action.

The auction plan of selling, which has proved of such incalculable value, ended its season in Chicago with a most disgraceful row between rival concerns which should be thoroughly investigated and prompt and effective remedies applied.

The distribution of fruit at the East is still altogether imperfect and narrow and apparently hedged about by private interests. It must be given free field or we can never dispose of the mass of fruit which our rapidly growing orchards and vineyards promise.

There is much complaint too that all members of the Union here were not accorded shipping privileges to which they are entitled, and that some were favored and others disfavored. How far this was avoidable or otherwise we do not know, but such being the complaint it should be fairly considered by all stockholders, and the future guarded against the chance of such trouble whether it be from accident or interest.

For these reasons, and many more like them, we desire to give the greatest prominence to the coming meeting. It is far more than an annual meeting of an incorporation; it is the pursuit of a general movement which may hold in its progress vast benefits or ills to the great producing interest of the State. It does not concern alone the prosperity of those who grow shipping fruits. The work of the Union so far has possibly been of more value indirectly than it has directly, by the vast increase of shipment which it has accomplished. The value of every pound of fruit which has been marketed in the State has been more or less favorably affected by the operations of the Fruit Union. The organization may almost be said to hold the keys to the future of our fruit interest. Looking at the matter thus broadly, the importance of wise and comprehensive action at the coming meeting of stockholders appears in its true light.

Therefore let no slight excuse prevent the participation in its deliberations by all who have the right to speak and vote. Such action may not be for individual advantage alone, it may color the whole outlook of our fruit interest.

Opening of the Legislature.

The Legislature of California is now in session in Sacramento, the Senate under the presidency of Hon. Stephen M. White of Los Angeles, and the Assembly under the speakership of Hon. Robert Howe of Sonoma. Both Houses are Democratic, in each case by a majority of four. In another column of this issue may be found a full list of the members of both Houses and the districts they represent. This list should be kept for reference during the session.

The real work of the session began on Wednesday with the reading of Gov. Waterman's message, a straightforward and business-like document, necessarily long, because of the evident desire of the Governor to acquaint the Legislature and the public with the status of all the varied interests entrusted to his supervision. The telegraph brings an outline of the document just as the RURAL is going to press, and we have, therefore, no time to properly consider or comment upon it, or deduce those facts which seem to us of most importance. We shall present such a summary of the message in our next issue.

We bespeak for the session of the Legislature which will continue during the coming 60 days the careful attention of the people. There will no doubt be many measures which will need watching, some to promote, some to crush out. If the constituents of the respective members do their duty, they will communicate freely to them their earnest wishes and the reasons for urging them. Fair-minded members welcome such help, and to those prone to err, if such there be, a little wholesome advice will be useful, if not always welcome. The legislators are the servants of the public; the public has a duty not only in choice of its servants, but in seeing to it that the work is well done. If the people watch the legislators as closely as the bosses do, the latter will accomplish little.

In Furtherance of Forestry.

The State Board of Forestry has lately issued a bulletin (No. 5) calling the attention of our citizens, especially farmers and irrigators, to the usefulness of mountain forests, not only as sources of timber and fuel supplies, but also in hindering the flow of surface-water, retaining the rainfall in Nature's reservoirs, tempering the violence of winds and regulating temperature. In view of the value of the woodlands in these regards, the reckless denuding of Californian watersheds by ax and fire is deplored, and the aid of all good citizens is asked in preserving the forests from timber thieves and conflagrations, and securing State support for the work of the board in experimental stations and otherwise.

To this appeal the Merced Board of Trade has responded in the following timely preamble and resolutions:

WHEREAS, The preservation of our mountain water supply is of supreme importance to the agriculturists and irrigators of the interior of this State; and, whereas, the integrity of this water supply is mainly dependent on the preservation of brush and timber lands of our mountain water-sheds; and, whereas, the native timber and fuel supply of the San Joaquin valley is wholly inadequate to supply the demand; therefore, be it

Resolved, By the Merced Board of Trade, that the attention of the Governor and Legislature of this State be respectfully called to the efficient and conscientious work of the State Board of Forestry in the preservation of our mountain water-sources; and

Resolved, That this Board particularly asks for a generous support for our forest experimental stations as tending to encourage and promote general forest planting, and adding beautiful places of resort to the attractions of this State.

We hope that other organizations having at heart the welfare of our State will follow Merced's worthy lead in this important matter.

THE VITICULTURAL HEADQUARTERS.—It is announced that on Tuesday, January 15th, in the afternoon, the new establishment of the Viticultural Commission in Platt's hall, on Montgomery street, will be opened with fitting ceremonial. We have already given sketches of the plans and purposes of the commission in this connection, and no doubt their housewarming will be interesting.

Agricultural Review.

Leading Articles of California Production in 1888.

Notwithstanding 1888 was a dry year, the State enjoyed more than an average prosperous season. The land boom of 1887 gave way to more legitimate prices, which created better buying for investment by those in search of homes. Many large tracts of land were subdivided and sold out in small farming tracts, with the railroad selling the larger proportion in this way. The influx of immigration, although not on an extended scale as in 1886 and 1887, was, nevertheless, quite large and of a very desirable class. Railroad construction was unexampled, the number of miles added to the system being over 400—larger than any one State in the Union. The planting of vines and fruit and olive trees was very large, with many orchards set out on the foothills in localities where only experimental growing had been made to prove their adaptability to cultivation of fruits. The irrigation system of the State received a decided impetus during the year, causing the friends of irrigation to look forward to the reclaiming of many sections which now only give good crops semi-occasionally. This certainty of crops by irrigation will assure the settling up of all parts of the State with thriving, industrious farmers. The railroads last year gave better facilities to the transportation of fruits, etc., to the East, with a promise of a still further improvement in that direction in this year, which, if carried out, will do much in promoting the State's fruit industry. The high reputation being won by California fruit in the face of all opposition will, if sustained by growers, packers and others, cause it to be sought by distributors at a higher range of values than rule for fruits cultivated either at the East or abroad. The mild character of the past few winters has promoted the live-stock industry, causing a steady increase in their numbers, notwithstanding a large increased consumption of neat cattle and sheep in the State. There are several other industries that can be noted to advantage, but space forbids an enlargement in the introductory, especially as more general particulars are given in the subjoined review of each leading article of farm produce, to which the reader is referred.

Produce Receipts.

The receipts of California produce at this port in 1888 and 1887, not elsewhere specified, included the following:

	1887.	1888.
Flour, bbls.	932,385	1,099,391
Wheat, cts.	10,450,383	12,780,691
Barley, cts.	2,078,402	2,785,790
Oats, cts.	998,620	621,364
Wool, bales.	109,738	105,422
Hops, bales.	15,624	18,007
Wine, gals.	8,494,348	8,866,636
Brandy, gals.	251,204	252,696
Potatoes, sks.	1,006,093	1,091,170
Onions, sks.	134,358	134,959
Corn, cts.	188,891	174,117
Rye, cts.	27,631	20,835
Beans, sks.	320,769	272,599
Bran, sks.	434,486	431,907
Middlings, sks.	112,429	152,832
Hay, tons.	117,565	126,659
Straw, tons.	7,349	6,888
Hides, No.	114,435	131,378
Rabbits, bxs.	101,355	138,926
Buckwheat, cts.	2,299	4,668
Mustard Seed, cts.	38,071	26,019
Dried Peas, sks.	4,899	6,354

Wheat.

January 1888 opened weak at \$1.37½ to \$1.40 per cental, with the sales made reported to be principally the "syndicate" wheat. With free rains in January and harvest prospects of the most flattering character, prices shaded off 2½ cents, with a still further decline under a strong selling pressure, closing February at \$1.30 to \$1.32½ per cental. In March prices set back still more, No. 1 white shipping selling as low as \$1.27½ to \$1.32½. These low prices ruled in April, but with reports of dry weather values began to appreciate until \$1.40 was reached. In May prices dropped to \$1.37½, but soon recovered to \$1.42½ and \$1.45. In June the ruling price was \$1.30 to \$1.32½. Prices recovered in July, closing that month at \$1.37½ to \$1.40. In August there was a steady appreciation from the 15th until \$1.55 to \$1.57½ was reached on the 24th; from this range it advanced slightly, until, on the 29th, quotations were given at \$1.57½ to \$1.60. September opened at \$1.57½ to \$1.60, but prices gradually settled until they touched \$1.45 to \$1.47½ on the 26th, when they began to advance, the month closing at \$1.58½ to \$1.60. October opened at \$1.62½ and advanced to \$1.62½ and \$1.65 on the 3d. From this figure it settled to \$1.57½ and \$1.60, at which figures it held until the 25th, after which it gained strength, closing the month at \$1.60 to \$1.63½. November opened at \$1.62½ to \$1.65, but prices settled,

along the month at \$1.52½ to \$1.55, at which price December opened, and settled until \$1.41½ to \$1.42½ was touched, after which values recovered from 1½ to 2½ cents per cental. Shipments from July 1, 1888, to January 1, 1889, were the largest in the history of the State for the like time, as will be seen by reference to the table of exports.

A leading wheat operator says in confirmation of what has appeared, statistical and otherwise, from time to time the past year in the commercial department of the RURAL PRESS: "We started the year 1888 with light stocks throughout the world; this, combined with unfavorable harvest weather on the continent and in England, caused European operators, particularly in France, to enter the market as heavy buyers. The American speculators jumped in, and, as usual, ran away ahead of even the naturally consequent high prices. They ran them so high that dealers stopped buying any more than they could help, and exportations fell off. High prices always bring out wheat, and the Liverpool market was all of a sudden flooded by wheat which had been held back there. The inevitable consequence, a crash in prices, followed, for wheat prices are like a sand-bank which can be built quite high, but comes down all at once. The American system of speculating so largely in futures is bound to cause this sort of a disaster every now and then. The evil is not confined to those who deal in wheat. It affects trade generally." In our State, California, the market was not only affected by the movements abroad but also moved up, owing to the dry weather during the crop growing period. The unfavorable weather ruined many fields of grain, and also caused many farmers to cut their fields of wheat for hay. The cool, spraying weather in the month of June produced a radical change for the better and brought out a much larger crop and of better quality than was harvested in 1887.

The following table gives the highest and lowest prices per quarter in the English markets for cargoes of California No. 1 white shipping wheat:

	Off coast.	J'st ship'd.	Nearly due.
	High. Low.	High. Low.	High. Low.
Jan.	34s 6d 33s 6d	35s 6d 33s 9d	34s 6d 33s 0d
Feb.	33 9 33 3	33 9 33 6	33 6 33 3
March	34 0 33 0	33 6 33 0	33 9 33 0
April	33 9 32 6	33 9 32 6	33 9 32 6
May	34 6 33 6	34 9 34 0	34 6 33 9
June	33 9 32 6	33 9 32 6	33 6 32 6
July	35 0 32 9	36 3 32 6	35 0 32 6
Aug.	41 6 36 0	41 9 36 6	40 9 36 0
Sept.	41 6 36 0	42 0 39 0	41 6 39 0
Oct.	42 9 40 3	43 0 41 0	42 9 40 3
Nov.	43 3 41 0	43 3 41 0	43 3 40 6
Dec.	40 9 39 3	40 9 39 6	40 9 39 3

The following table gives the Department of Agriculture estimate by States of the acreage and output of the wheat crop in comparison with 1887:

States.	1888.	1887.
Winter.	Acreage.	Yield, bu.
Ohio	2,356,474	22,386,000
Michigan	1,466,521	17,598,000
Indiana	2,549,895	23,969,000
Illinois	1,983,574	23,266,000
Missouri	1,541,343	18,881,000
Kansas	1,037,000	15,451,000
Kentucky	1,035,018	9,377,000
Tennessee	1,199,400	9,595,000
Connecticut	2,170	37,500
New York	620,202	8,217,000
New Jersey	141,653	1,770,000
Pennsylvania	1,406,940	18,290,000
Delaware	94,790	1,033,000
Maryland	545,952	6,495,000
Virginia	610,413	5,310,000
N. Carolina	695,919	3,723,000
S. Carolina	190,711	1,068,000
Georgia	374,453	1,797,000
Alabama	196,760	1,033,000
Mississippi	40,617	304,000
Texas	572,225	6,752,000
Arkansas	233,672	2,103,000
West Virginia	305,198	2,786,000
California	2,627,924	29,129,000
Oregon	910,826	15,256,000
Totals	22,744,550	245,667,000

States.	1888.	1887.
Spring.	Acreage.	Yield, bu.
Minnesota	2,990,000	34,850,000
Wisconsin	1,240,000	14,880,000
Iowa	2,400,000	33,480,000
Nebraska	1,640,000	20,919,000
Dakota	3,700,000	55,500,000
Colorado	190,000	4,085,000
Washington	560,000	9,800,000
Idaho	75,000	1,425,000
Montana	100,000	1,750,000
New Mexico	81,000	1,215,000
Utah	125,000	2,437,000
Other States	100,000	1,300,000
Totals	13,281,000	181,632,000

Grand totals. 36,026,000 427,299,000 37,641,783 456,329,000

Note—Acreage of spring wheat estimated.

The exports of wheat and flour from this port for the calendar year 1888 were as follows:

Months.	Wheat.	Flour.
	Centals.	Barrels.
January	714,057	71,108
February	975,354	71,529
March	900,051	98,405
April	633,404	52,034
May	399,467	35,893
June	246,097	119,453
July	787,640	44,793
August	1,531,697	76,506
September	1,671,268	25,343
October	1,462,575	50,234
November	1,088,300	97,043
December	1,353,528	78,299

Total 11,763,436 824,655
1887 9,065,152 797,232
1888 15,832,155 1,124,615
1885 11,727,895 1,295,657

Reducing the flour to wheat, there was exported 14,237,401 centals. Of this quantity the United Kingdom took in wheat 9,532,568 centals and flour 272,781 barrels. France took 1,858,175 centals of wheat, Belgium, 181,400, Peru 106,274, Brazil 44,361, Central America 18,499, and elsewhere 22,150. Of the flour shipment, China took 275,848 barrels, Japan

21,919, Hawaiian islands 46,192, Central America 120,595, Panama 17,076, British Columbia 1909, Mexico 5750, Society islands 14,448, Australia 12,392, Asiatic Russia 7160, South America 11,053, Manila 16,323, elsewhere 1237.

Stocks in Liverpool compare as follows:

	Wheat, quarts.	Flour, sacks.
Jan. 1, 1889	550,575,000	150,180,000
Jan. 1, 1888	750,775,000	140,150,000
Dec. 1, 1888	550,575,000	110,120,000

Compared with the forepart of the year the quantity of wheat at the close of 1888 on the way to the continent decreased from 620,000 to 458,000 quarters (a quarter is eight bushels), and on the way to the United Kingdom from 2,439,000 quarters to 2,377,000.

The wheat crop in this State last year is estimated as follows by county:

	Aeres.	Centals.
Alameda	70,000	300,000
Butte	220,000	1,500,000
Calaveras	40,000	180,000
Colusa	364,944	2,400,000
Contra Costa	78,415	750,000
Fresno	56,000	600,000
Humboldt	22,463	210,000
Kern	26,000	300,000
Los Angeles	180,000	1,800,000
Mariposa	1,500	120,000
Mendocino	18,000	180,000
Merced	254,100	300,000
Monterey	115,700	1,200,000
Napa	8,469	180,000
Sacramento	85,000	600,000
San Benito	45,515	300,000
San Bernardino	6,000	60,000
San Joaquin	766,562	900,000
San Luis Obispo	100,000	600,000
Santa Barbara	60,000	450,000
Santa Clara	23,721	600,000
San Mateo	2,214	330,000
Santa Cruz	4,969	240,000
Siskiyou	8,227	90,000
Solano	60,000	600,000
Sonoma	19,845	210,000
Stanislaus	250,000	750,000
Sutter	125,000	900,000
Tehama	100,000	900,000
Tulare	300,000	1,200,000
Tuolumne	5,000	30,000
Yolo	145,000	900,000
Yuba	30,000	300,000
Ventura	13,336	90,000
Other counties	6,000	60,000
Totals	3,082,010	20,202,000

Barley.

Barley, which for several years was the chief center of speculation on Call, has been relegated to second place, and although the consumption in this State, owing to the light production of corn, is quite heavy, reaching over 375,000 tons a year, yet prices move in keeping with the supply and demand. The market for feed grades the past year was very satisfactory to the selling interest, but bright, plump brewing and Chevalier moved off quite freely under a good export movement. Europe took largely of choice bright Chevalier, owing to poor crops in England, France and Germany. Australia took more than last year. The East drew quite freely the forepart of the season of choice brewing, due to exaggerated reports of damage to the crop in Canada and in the Central States.

The crop in this State the past year was very heavy, aggregating fully 50,000 tons more than that of 1887. The low stage of water in the San Joaquin and Sacramento rivers in the spring months admitted of a very large acreage being seeded on bottom lands—lands subjected to overflow. Besides this, there was an increased acreage seeded to barley in the coast counties. Owing to the damp, spraying weather during the last three weeks before harvest, there were more dark grades of barley, thus increasing the supply of feed. That the consumption of feed is increasing is witnessed in the large yearly additions to the work-horses in use on the vineyards, orchards, and in railroad construction and general teaming in all parts of the State. Besides the above, it is growing in favor as a feed for the dairy and other purposes when crushed or ground. The consumption last year was very heavy, larger proportionately than in 1887, owing to the dry weather and poor pasture for several months preceding the month of December.

Prices opened the year 1888 fairly firm and changed very little, except during the dry spells, throughout the year. The year, without doubt, showed more stability, with less fluctuations, than ever before marked the market. These changes have been so few and of such insignificance as not to demand any particular review. The year closed fairly steady for both feed and brewing.

The exports of barley from this port last year were as follows:

Months.	Centals.
January	146,066
February	200,960
March	187,147
April	22,536
May	21,746
June	15,534
July	101,724
August	87,305
September	504,977
October	209,165
November	121,464
December	1,690,055

Total 493,457
1887 969,343
1885 278,057

The above are the heaviest shipments within the history of the State. The destinations were as follows: New York, by sea, 316,592 cts.; overland, 665,989; United Kingdom, 425,411; Australia, 145,699; New Zealand, 3183; Hawaiian islands, 120,175; elsewhere, 13,906.

Oats.

The crop last year in Oregon and Washington was very heavy, largely in excess of their

wants, necessitating heavy shipments to city. These shipments, combined with the price of feed barley, caused values to shrink from the high prices that ruled the first half of the year. With continued free receipts and buyers only taking in a hand-to-mouth way, set values on the down grade until the year closed on a lower range than has ruled for several seasons past. It is claimed that the very low prices, with the market largely overstocked, will cause a lessened acreage to be seeded in both Oregon and Washington Territory.

Corn.

Under light supplies and a good steady demand, the market, the forepart of 1888, held to firm prices. The high prices restricted to some extent the consumption. The high range of values caused more attention to be paid in the favored corn-growing sections to planting corn, and as a result the crop of Californian last year was among the largest on record. With a very large crop in the corn belt of the Central States, prices declined there the last quarter of the year, causing sellers to offer Nebraska corn for early delivery at a decided shading in values. This action necessitated concessions by California growers, which was taken advantage of by dealers and consumers to hammer prices to lower levels. This was done by confining their purchases and bidding low prices for every parcel offered on the market, only paying full asking prices when pressed by actual and immediate requirements. The year closed at such a low range of values as to preclude the possibility of heavy shipments from the central markets unless our market recovers somewhat, or the former markets shade off some.

Rye.

The year opened at high prices, \$2.50 to \$2.75 being the range of values. The market held up fairly well, only settling as harvest approached. The high prices lessened the consumption and caused, in some localities, more to be seeded to rye. The new crop came on an unsteady market with buyers offish. Under a stronger selling pressure and some Eastern coming on the market, prices settled only to recover again, closing the year fairly firm under stronger holding.

Buckwheat.

The market throughout 1888 ruled very strong, with the year closing on high prices, \$2.90 to \$3.25 per cental. The consumption is steadily increasing, which calls for more attention to its cultivation.

Stocks of Grain, Etc., in the State.

The San Francisco Produce Exchange has issued the following report of grain, etc., remaining in this State December 1, 1888.

LOCALITIES.	Flour, bbls.	Wheat, cts.	Barley, cts.	Oats, cts.	Beans, bks.	Corn, cts.	Rye, cts.
San Francisco and Oakland wharf, including grain aboard in harbor.	27,605	1,067.34	986,370	73,400	71,440	8,967	600

January 1, 1884	177,500	6,936,725	2,404,190	149,350			

plies to large consuming centers direct, which, of course, do not figure in the receipts at this port. The production in this State was not as large of bran and middlings as it was in 1887, but that of ground and rolled barley was more. With many the latter is growing in favor, being preferred when mixed with out feed. With heavy rains and improving pasture in December the demand for ground feed fell off, but prices were fairly well maintained under lessened receipts.

Hay.

By reference to the receipts of produce, it will be noticed that there was a marked increase at this port in last year compared with 1887. This, no doubt, was due to the extreme dry weather in the latter part of the summer months following a poor natural pasture season in the spring months. The unfavorable weather in the spring caused producers to advance their views, and made feeders more anxious to contract for liberal supplies. Several dairymen, it is claimed, contracted for from 500 tons up to 1000 tons at from \$10 to \$12 a ton, according to quality and cost of delivery. These high prices naturally induced a larger acreage of grain to be out for hay than otherwise would. With cool, spraying weather in part of May and June causing an improvement in pasture, large feeders reduced their bids on hay under free-selling offers, and fully \$2 a ton less was paid than ruled previous to the better-growing weather. The consumption in this State was considerably larger last year than in 1887, due to poor pasture and the high prices of butter inducing more feeding to dairy cows. There were also more horses fed, estimated at fully 25 per cent over 1887. The crop of hay in 1888 is claimed to have been fully one-third greater than that of 1887, but notwithstanding which the supply in the State at the close of the year is quite light. The light obtainable supplies was an important factor in keeping up prices in December in the face of improving pastures under favorable growing weather.

Bags.

The following table gives the importation into this port of Calcutta bags, the consumption and the lowest and highest prices since 1870:

Year.	Imports.	Consumption.	Highest Prices.	Lowest Prices.
1870	5,711,000	6,500,000	13	21
1871	5,714,000	5,400,000	13	14
1872	13,512,000	12,000,000	18	14
1873	8,708,000	10,398,000	16	12
1874	16,052,882	15,002,883	13	14
1875	12,500,000	13,000,000	12	10
1876	15,040,000	20,888,407	13	8
1877	10,652,864	21,400,000	13	8
1878	13,608,000	24,104,069	14	7
1879	17,536,000	38,111,550	11	7
1880	32,342,000	30,000,000	11	8
1881	30,614,000	27,000,000	9	7
1882	18,630,000	20,000,000	10	8
1883	25,282,000	37,821,000	8	7
1884	31,221,000	29,000,000	7	5
1885	26,580,000	35,000,000	6	4
1886	25,500,000	32,000,000	10	4
1887	27,733,000	33,000,000	8	4
1888	24,150,000		8	6

The market opened in 1888 at 8 cents spot. Sales were very brisk in January and February for future delivery, ranging from 7 to 8 cents. The latter figure ruled the forepart of February, but toward the close of that month values shaded off under a dry-weather scare. In March values moved up to 8½ and 8¾ cents buyer June. In April the price set back one-quarter cent. Toward the close of that month sales were made at 7½ cents, with a still further reduction in May, or as low as 6½ cents, under continued dry weather. With better crop reports the market advanced in June to as high as 7½ cents for spot parcels and 8 to 8½ cents on Call. At the close of June values set off one-half cent under heavy receipts and Call Board contracts maturing causing large quantities to be thrown on the market. Prices advanced again, reaching 8½ cents in July. After that month values gradually settled up to December, when an improved tone set in and a slight advance was obtained. For June-July delivery sales were made as low as 7 to 7½ cents, but afterward advanced to 7½ and 7¾ cents. The primary market is reported to be very strong, causing importers to be firm in their advanced views.

Cabbages.

High prices which ruled from November, 1886, to March, 1887, and from November, 1887, to March, 1888, stimulated gardeners to put in larger crops, and consequently supplies have been so far in excess of the demand, causing a low range of values. In December, 1887, prices were as high as \$1.25 to \$1.35 per 100 pounds, under a strong Eastern demand, but at no time in December, 1888, have prices advanced to over 60 cents per 100 pounds. The demand from the markets in the Central States has so far this year been disappointing, owing to better crops there and high overland freights being against shipments.

For root vegetables the past year was strong the first few months under light supplies, but with the new crop values weakened off and have remained at the lower levels the remainder of the year under large supplies and only a fair consumption demand.

Potatoes.

The market opened strong and held firm until well into March, when with increasing supplies and more new coming in, values began to shade off and by July quite a low range of values ruled, followed by further shading in August and September under very large receipts from all producing centers in this State, Oregon and Washington. Many points that drew direct from here in 1887 obtained their sup-

plies from other places, which, of course, caused our market to feel the unfavorable effect of a lessened outlet. The crop on this coast last year was the largest on record, with the quality being uniformly good. The fore part of the season heavy shipments of new were made to the large distribution markets in the Central States, principally to Chicago. This trade for new potatoes is growing, and therefore it is expected that the coming season the shipments of new overland will be largely in excess of the like time in 1887.

Onions.

The market opened in 1888 strong under a good demand and light supplies. Under the stimulus of high prices and favorable planting weather, there was a large increased acreage set to onions, not only in this State, but also in Oregon. Like potatoes, onions held well up until the new season opened, when prices fell off quite rapidly, from which they did not recover the remainder of the year. The heavy production created stronger selling pressure, which sent many points that have drawn their supplies from hence to the large producing sections, from whence shipments were made direct to the demand markets.

Fruits.

It is to be regretted that data cannot be obtained so as to correctly give the number of the different kinds of bearing fruit trees, the number that will come into bearing this year, also the number set out in 1888. There can be no doubt but the increase in bearing trees will be quite large this year, and that, too, of the best known variety of each kind of fruit. The number of bearing trees last year is placed at about 12,000,000. That this is none too large is attested in the heavy shipments of green fruits to the East, the large quantity dried and also the large quantity canned. An exchange says that the Fruit Union largely increased the quantity of green deciduous fruits shipped out of the State and the outside fruit shippers had a splendid year. The Southern Pacific Co. handled altogether 2184 carloads, or 1,616 160 packages of fruit, aggregating a total of 43,681,180 pounds, on which were paid freight charges of \$840,840. If a total of 50 carloads be estimated as the amount handled by the Atchison, Topeka & Santa Fe out of the State and as many more by steamer—the actual figures in either case not being obtainable—there would be altogether fully 45,000,000 pounds as representing the total green deciduous fruit export from California, or at least 10,000,000 pounds more than last year. The California Fruit Union began its shipments of green fruit to the East for the season of 1888 in the early part of May. All the fruit shipments up to June 20th went forward in single cars attached to the regular overland passenger trains, which was formerly the chief means of shipping. About 60 carloads were forwarded in this manner, consisting of cherries, early apricots and peaches. Of these about 50 cars went to Chicago and were sold at private sale, and the others went to New York. From June 21st to October 1st the movement of green fruits to the East was very brisk, and 416 carloads were disposed of at auction in Chicago and over 50 carloads in New York. The sales made at Boston amounted to 77 cars, while in Minneapolis there were sold 72 cars and in St. Paul 23. These are all Fruit Union figures and have nothing to do with outside shipments. In all, the California Fruit Union handled 850 carloads of fruit, or about 100 more than in 1887. The average carload sent East last season was 850 boxes of 20 pounds of fruit net. The average cost of fruit packages for Eastern shipment was as follows: Pear boxes, 10 cents; peach boxes, 5½, 6, 6½ and 7 cents, according to size; plum boxes, 5½ to 6 cents; cherry boxes, average 5 cents; grape crates, single or half, including four baskets, 17 cents; double or whole, including eight baskets, 21 cents. Last season the expense of packing grapes was heavy, equal to about one cent a pound, owing to the poor condition of much of the fruit, each bunch having to be handled and the poor and unburned fruit trimmed out. With a good crop in the coming season it is confidently hoped by the shippers that fully 60,000,000 pounds of green fruits can be sent to the East this year. The New York shipments will be much heavier, as good returns are realized there and there is a very active demand at all times for California fruits. The orange crop of last season reached very nearly 1,000,000 boxes. It is estimated that the total orange crop of the present season will be 1,200,000 boxes, of which about one-third will go for home consumption.

The following remarks by a member of a prominent firm dealing in fruits give a fair, succinct report of the dried fruit market: "As compared with last year, 1888 has been a poor one taking it altogether, but then last year was remarkable for the extraordinary prices obtained, especially in dried fruits. Large stocks of dried fruits were carried over to this year on the Eastern market, and the still larger crops produced this year of everything except apricots, one would have thought, would have ruined dried fruit men. Still, prices remained tolerably good till about 60 days ago. Now the market is badly demoralized in dried fruit of all kinds. A good deal of this surplus will now come into consumption to the relief of the market, and next year's business will depend entirely upon the crop. Certainly more than three-fourths of the California dried fruit is consumed outside the State. Most of it goes East, though Oregon and Washington Territory

consume a good deal. The extremely low prices at which dried fruit is now being offered to housekeepers, all over the country, will make new markets for our product, and will do much to offset the undoubted frequent large losses of this year. Our export trade in dried fruits has been pretty well limited to Australia. Freight rates are cheaper to Liverpool than to Chicago or New York, and I have great faith in the effort being made to create a market in London. The dealers have done well in green fruit this year as a rule, and have every reason for being hopeful of the future."

The past year witnessed a most decided improvement in the dried-fruit pack of our principal driers, and therefore it is safe to state that their name on future packs will have great weight with buyers, and if the fruit sustains the reputation earned will command higher prices than unknown packs. But then much can be done in sustaining and promoting the different packs of California dried fruits by the recently formed Dried Fruit Association, John T. Cutting, general manager. Although at the start the association has had no influence on the market, it is believed that it will have an effect in coming seasons. It was organized last year, after three-fourths of the crop had been shipped, so that there was really no chance to demonstrate its utility. That the producers have faith in it is amply proved by the numberless subscriptions that have been flowing in daily of late from various sources.

The Eastern dried-fruit market has shown great dullness as compared with the preceding season, owing to the big fruit crops east of the Mississippi. Prices were by no means as high as in 1887, which, owing to the failure of crops in the East, were almost fabulous. The prevailing rates have been: Evaporated peaches, 8½ to 9 cents a pound; prunes, 6 to 10 cents, according to size; peeled peaches, 14 to 16 cents; pitted plums, 11 to 13 cents. One lot of 1500 tons of California evaporated silver prunes sold in New York at 15 cents a pound. The New York market for French prunes has been dull and neglected. The crop in France last year was not excessive, but the fruit ran very low in size. A peculiar feature of the French prunes was their poor keeping quality, while the California prunes of the season were handled without injury.

The canned-fruit industry continues to make rapid strides. The pack in 1888 is placed by the best-known authority at the following figures: Two and a half pound table fruits, 1,225,000 cases, 2 dozen each; gallon table fruits, 12,000 cases, 1 dozen each; 2½ pound pie fruits, 32,000 cases, 2 dozen each; gallon pie fruit, 47,000 cases, 1 dozen each; 2 pound vegetables, 35,000 cases, 2 dozen each; 2½ pound vegetables, 135,000 cases, 2 dozen each; gallon vegetables, 8000 cases, 1 dozen each; 2 pound jam and jellies, 32,000 cases, 2 dozen each. California canned fruits are making inroads at a rapid rate into the trade of all competitors, with the best-known packs fetching good round prices over all others. The demand continues to grow and the distribution points at home and abroad increase in numbers. The stock in the State at the close of the year is quite light.

The raisin industry of this State continues to grow in importance and bids fair in the near future not only to drive the foreign raisin out of the American market, but also make large inroads into the markets abroad, now controlled by the Spanish production. To this end our packers must exercise the utmost vigilance in putting up uniform grades and branding or marking each package so that no mistake can be made as to the quality. In this connection the following remarks by G. W. Meade & Co. are deserving of careful attention by all packers: "Now that all first class packed raisins in California are well established in the Eastern markets, it is to be hoped that our packers the coming year will not pursue the senseless policy which seems to have guided them to a large extent in the past, but will hold their goods, whose equal the Malaga, at a price that is equal to the Malaga, and not anywhere from 10 to 40 per cent under the figures obtained from the Spanish product. There is no reason now whatever for doing this. There might have been some reason when California raisins were first introduced, but that time has now gone by. A first-class California raisin is equal or superior to anything that now comes from Spain; and when our packers realize this, and demand for their goods an equal price for an equal quality, they will get it; but just as long as they throw their goods away, and climb over the backs of one another to see who can sell the cheapest, just so long will the Eastern wholesale jobber go into New York and pay a fancy price for a Malaga London Layer, and then offer a ridiculously low price for a California London Layer, which, in every respect, is as good or better. The imitation of foreign wrappers is being generally discarded, and something more distinctively Californian is being used year by year, which is a very pleasing fact to note. We wish, however, that our packers would agree, which we think could easily be done at a meeting, to drop entirely the terms Three Crown Loose or Three Crown London Layer, and to adopt something more distinctively Californian or American. The bulk of the pack of California raisins this year has principally gone East, and at the present time the San Francisco market is almost entirely bare of stock. Especially does this apply to London Layers, and of really choice Loose the supply is also inadequate."

Shipments were made the past year of California raisins to Australia and also to England, and so far as can be ascertained the venture

will lead to freer shipments in 1889 to the same countries.

The year closed with a light stock in this State, smaller, if anything, than on Dec. 31, 1887, and this, too, in the face of a largely increased pack. The prices at which the bulk of the pack was placed are said to have been quite satisfactory.

The overland shipments from Jan. 1, 1888, to Nov. 30, 1888, were as follows:

Months.	Green.	Dried.
January	603,280	261,300
February	3,166,180	343,300
March	5,081,160	221,500
April	4,544,070	95,530
May	960,390	116,510
June	3,004,000	75,690
July	2,530,410	52,610
August	11,987,620	2,358,510
September	6,700,320	5,010,990
October	4,800,250	5,801,530
November	400,960	3,551,170
December (1887)	71,080	711,810
Totals	69,640,800	19,968,400
1887	50,749,750	15,865,050
1888	49,542,020	5,076,630

The shipments of raisins for the year ending Nov. 30, 1888, and the two previous calendar years, were as follows:

From—	Pounds.
San Francisco	618,200
Interior	15,648,880
Total	16,267,080
Year 1887	15,484,550
Year 1888	12,697,330

Following is a comparison of the shipments for the 12 months ending Nov. 30, 1888 and 1887:

Articles.	1887.	1-88.
Green Fruit	51,040,450	52,640,800
Dried Fruit	15,064,280	18,968,400
Raisins	12,799,160	15,648,880

Last year's product of dried fruits is estimated as follows:

Raisins, 20-lb. boxes	1,025,000
Honey, extracted, lbs.	3,000,000
Honey, comb, lbs.	325,000
Beeswax, lbs.	20,000
French prunes, lbs.	2,250,000
German prunes, lbs.	125,000
Apples, sun-dried, lbs.	100,000
Peaches, sun-dried, lbs.	2,500,000
Plums, sun-dried, lbs.	250,000
Pears, sun-dried, lbs.	25,000
Grapes, sun-dried, lbs.	2,250,000
Nectarines, sun-dried, lbs.	100,000
Apricots, sun-dried, lbs.	250,000
Figs, sun-dried, lbs.	75,000
Apples, evaporated, lbs.	250,000
Apricots, bleached, lbs.	2,500,000
Peaches, bleached, peeled, lbs.	400,000

The raisin pack last year is estimated by districts as follows:

District.	Boxes.	Pounds.
Fresno	425,000	8,500,000
Tulare	21,000	4,200,000
Riverside	200,000	4,000,000
Orange, Santa Ana and Tustin	40,000	800,000
San Bernardino, outside of Riverside district	52,000	1,040,000
San Diego	38,000	760,000
Solano and Yuba	125,000	2,500,000
Other localities, Sacramento, Yuba, Placer, Butte, etc.	37,000	740,000
Totals	1,025,000	20,560,000

Nuts.

California nuts are fast gaining recognition at the East as possessing merit superior to the imported, and consequently the trade is beginning to give them preference at the price ruling for the imported. This fact, combined with a more general desire to have as diversified a crop as possible, has caused orchardists in sections where they thrive well to set out the various kinds of nut trees. The past two years witnessed a large increase in the number of almond and walnut trees set out. In sending the nuts to market, more attention is beginning to be paid to their grading and bleaching, which, of course, tells greatly in their favor. With continued attention in this direction, it is asserted with a degree of confidence that does not brook a denial that the California product will supplant the foreign in all the leading centers of trade on this continent.

Olive Oil.

Our native olive-oil industry is in a fair way to cut an important figure among the various industries in this State. Like all of California's products, it should be sold on its own merits and not by an assumed French or other foreign name. Pure goods will always command attention, and when once tried make friends and gain ground on merit. It is asserted with some degree of confidence that one or two parties claiming to put up the oil adulterate it with cotton-seed oil, the same as is now being extensively done at the East and also abroad. If such is the case, their names and methods should be made public, for the industry is too important to be stabbed in the house of its friends. The planting of olive trees is spreading in this State, and before many years the exporting of California olive oil bids fair to be on a large scale.

Honey.

Alternate warm with cold freezing weather in the winter of 1887-88 was against the bees, which was not improved by the dry weather in the spring months of 1888. The crop in this State last year is placed at from 2,750,000 to 3,250,000 pounds of extracted and 300,000 pounds of comb. The market ruled satisfactorily throughout the year to the selling interest, owing to the light crop at the East, although the wholesale adulteration practiced in some of the markets at the East is against the pure product. The shipments to Europe direct from this port do not show any materia

change from 1887. The product is being put up in better shape for handling by the trade, and therefore it is taken the more readily. In referring to the market, G. W. Meade & Co., in their annual circular, say: The output of comb honey, like extracted, has been comparatively light this year, and good prices for choice goods have been pretty readily obtained. We repeat our suggestion of last year, that the sale of California honey, if packed in one-pound frames, could be very largely increased. Eastern and Western dealers are accustomed almost entirely to one-pound frames, and if our honey-producers here would change their style of packing and put up their honey in one-pound frames, we think they would find almost immediately the demand increase two or three times what they are now selling. On some parts of this coast where dealers generally do not pay much attention to small items, the two-pound frame is all right; but when we come in competition with the Eastern honey men, we ought to have our goods in one-pound frames. The stock of both comb and extracted honey here for this season of the year is comparatively light. Large shipments of extracted have been made to Europe on direct orders and the comb has been principally placed here and in Eastern cities. We think we shall go into the new crop with a bare market.

Dairy Products.

The receipts of dairy products in 1888, compared with previous years, were as follows:

BUTTER.			
	California.	Eastern.	Totals.
	Pounds.	Pounds.	Pounds.
1888.....	8,376,700	3,597,500	11,974,200
1887.....	9,547,100	733,600	10,280,700
1886.....	9,979,200	67,800	10,047,000
1885.....	8,019,600	494,400	8,514,000
CHEESE.			
	Pounds.	Pounds.	Pounds.

1886.....	1,663,200	2,192,900	3,856,100
1885.....	2,778,280	1,154,090	3,932,370

Butter Product.

Butter.—The market opened on January 1, 1888, with the following stock on hand: 315 kegs and 800 cases in rolls, and closed on December 31, 1888, with the following on hand: 709 boxes in rolls; 1240 barrels pickled; 2976 kegs, and of Eastern 2871 packages; so that the stock on hand at the close of the year was very largely in excess of that held at the beginning. The market held to good prices throughout the year. While they did not go into fancy figures they did not touch the low prices they did in 1887, so that on the whole the market was quite satisfactory. The production of butter in this State does not keep pace with the increasing consumption, but then the deficit is met by heavy importations from the Central States. For the first time in the history of the trade, butter in rolls was brought from the Central markets, but the venture did not prove a success, consequently it is not at all likely the shipments will be repeated. The importation of creamery in tubs was largely in excess of any preceding year. As the quality was good the trade took more kindly to it and disposed of large quantities. The market closed the year weak under heavy stocks and large production of California, owing to improved pasture.

Cheese.—The stock on hand at the close of the year was 75,240 lbs. Throughout the year, the market held to good prices—higher on an average than in 1887. This was due to a larger consumption, a lessened production, and only moderate importations from the East—the market there being above the parity of ours.

Eggs.—The market throughout the year was poorly supplied with choice to fancy California eggs, and consequently these were in good demand and ranged from 10 to 30 per cent above the imported. The importation from the central markets last year showed an increase of fully 33 per cent over that of 1887. Of the receipts, this city did not get quite 50 per cent, the balance going direct to other distributive centers. With an improvement in the feed the last two months of the year, receipts of Californian have increased, causing a lowering of values. The stock on hand in this city on Dec. 31st was 4800 dozen California and 54,140 dozen of Eastern.

Hops.

The year 1888 was entered with quite a stock of 1887 hops on this coast, but as the year shortened there were rumors of a probable light crop at the East and an almost certainty of a light yield abroad, owing to unfavorable weather. As these rumors gained confirmation, buyers entered the market and secured all the old hops, and contracted for this year's at from 12½ to 15 cents per pound. As the season advanced they raised the prices to 18 and 20 cents, at which prices large numbers of hop-growers sold. The markets at the East and abroad, still appreciating, brought about a still higher range of values, and as much as 25 cents was paid for something extra for shipment direct to England. This market never was so well cleared up at the close of any year as it was on December 31, 1888. The crop of the coast last year was 90,085 bales, against 76,500 bales in 1887. Of the 90,085 bales, California raised 34,085, Oregon 18,000 and Washington Territory 38,000. Last year Australia drew from hence, 155,668 pounds; Calcutta, 29,083

pounds; Japan, 23,278 pounds; New Zealand, 13,529 pounds; Central America, 10,897 pounds; and other foreign ports on the Pacific, 19,164 pounds. There was sent overland 7,008,270 pounds and 108,505 pounds by sea to New York.

Live-Stock.

The past year was a disappointment to stockmen, owing to prices averaging lower for cattle and sheep than for many years past. This was due to better railroad connections with distant sections that have a large surplus of live-stock, which enabled them to market in this city, and also to the reported cattle ring at the East being broken up. The poor pasturage in this State induced free selling so as to avoid the expense of feeding. Prices under free selling went off from the year's opening from one to two cents a pound for bullocks and also mutton sheep. Toward November the market began to recover, and by the middle of December prices were from 1 to 1½ cents per pound higher than ruled in August. Owing to the low prices under strong selling, with supplies apparently increasing, many cattlemen have been induced to spray their heifers. This has not only been done in parts of this State, but also in Arizona. The packing of beef in barrels and half-barrels was on a larger scale in 1888 than ever before. This was due to the low price of bullocks and a better export and ship demand. More attention was also given to the canning of beef. Fresh milk cows commanded good prices throughout the year for the dairy, but for the family the inquiry was light up to December, when there was quite an improvement in the green feed. Prices ranged for fresh cows from \$25 to \$50, with at times a slight advance paid on the latter price for something above the best average. The market for hogs has ruled strong throughout the year, with very slight change in values. The demand was chiefly for the block, although packers in the season took quite freely. The consumption of fresh pork is very large and increasing. The supply of hogs in the State is quite light, but the high range of values is attracting more attention to the industry. Horses the past year met with a good demand for single-forters at from \$200 to \$350 each, matched teams from \$500 to \$1000 a span, general utility horses at from \$125 to \$300. Large workhorses met with ready sales at from \$500 to \$1000 a span. Common workhorses were in oversupply, consequently buyers had the whip-handle and kept prices down to from \$75 to \$125 each. The above prices were the general average paid.

Seed.

The demand last year for grass seed was disappointing, but prices kept up owing to a general scarcity, particularly alfalfa. With general rains in November and December, a call from all points of the coast sprang up, and a large distribution trade followed. Alfalfa advanced in price, but other seeds were unchanged. It is claimed that there is a decided increase in the acreage seeded to alfalfa. For flaxseed there has been a steady demand, with the market showing few changes in prices. The consumption on this coast is increasing, but the production is also larger. The crop of mustard seed was large of yellow but light of brown. The quality, as a rule, was only fair, causing good prices to obtain for the more choice. The year closed on a firm market.

Wool.

The shipments of wool from San Francisco by sea during the past year were as follows:

To—	Pounds.
New York.....	4,897,566
Massachusetts.....	2,011,283
Connecticut.....	104,757
New Hampshire.....	382,070
British Columbia.....	2,342
Total.....	7,397,988
1887.....	7,394,252
Increase.....	13,736

The total by sea in 1886 was 3,510,330 pounds. Since the completion of the Canadian Pacific Railroad, a large part of the wool shipped from this port by sea for the Eastern States has been sent out by the Victoria steamers and reloaded via Port Moody and the extreme northern route.

The shipments by the Southern Pacific Company's lines during the 12 months ending November 30, 1888, aggregated 22,480,110 lbs., and by sea, 7,397,988; total, 29,878,098, against 28,523,882 lbs. in 1887. The descriptions which made up the overland shipments in 1888 were as follows:

	Pounds.
Grease.....	16,831,600
Pulled.....	1,648,040
Scoured.....	4,000,510
Total.....	22,480,110

A local dealer furnishes the following to the press, which is about as correct as can be learned from others in the trade: "In volume the spring clip fell short about 2,000,000 pounds from that of 1887, but with the better feeling in the fall, shearing was very general, and the amount was fully up to that of the preceding season. We estimate the production of the State as follows: Spring and fall shearing, 31,500,000 pounds; pulled wool, 2,000,000 pounds; total, 33,500,000 pounds. In addition to this, 10,000,000 pounds were received from Oregon, which is an increase over last year from that quarter. From Nevada, Utah and Arizona we received 2,000,000 pounds additional, this being a slight falling off from each section in comparison with the receipts last year. The condition of the spring clip was a

fair average as to shrinkage and freedom from defects, but it was not so well grown or so bright in color as in seasons where the rain was more plentiful. The fall clip was good, being clearer of seed and fully as good in color and shrinkage as in average years. The Oregon clip was not up to its usual average condition, the Eastern Oregon wool especially being very heavy, dusty and unsightly, and a large proportion weak in staple, showing the effects of a lack of rain during the preceding winter, and this also was the case with nearly all the Territory wool received this year. Our scouring-mills have again been a large factor in moving the clip, fully one-third of the entire amount having been sorted and scoured before being sent East, and for the bulk of the Oregon and Territory wool and the dusty clip from this State this is the only way to handle the article in order to realize anything for the growers like a fair value for their clips. The early experiences of all the scouring companies were not very satisfactory, and it required years of patient toil to convince Eastern manufacturers that the work was properly done and the scoured product was ready for their cards without further labor. But this is now beyond being an experiment, and all are now meeting with the success their long experience entitles them to, and with a more liberal policy from the overland transportation company the business could be largely extended and be a benefit to every wool-grower on the coast. The present freight rates on scoured wool being double that of grease wool, seems to be an excessive discrimination against this industry, as the mills are required at an extra expense to press the scoured product so compact as to enable them to put full weight into a car. The stock on hand January 1, 1889, does not exceed 2,000,000 pounds, as against 6,500,000 pounds a year ago. The consumption by the local mills during 1888 was about 4,500,000 pounds."

The average prices of California spring wool were as follows from April to September 1st: Choice northern, 16@18½c per lb.; Sacramento valley and foothill clips, 14@16½c; San Joaquin, 11@13c; Southern Coast, 10@12½c. The shipments of each class were in about equal proportions. Scoured wool, free, 45@48c; defective do, 35@37½c; pulled, 16@20c; Eastern Oregon, 11@17c; Valley Oregon, 18@20c; Nevada and Arizona, 13@16c; Utah, 15@18c; scoured Oregon and Territory, fine, 47@55c; medium, 42@50c; coarse, 38@48c.

After Sept. 1st there was an advance on all spring wools held over of 2@3c per lb. in the grease.

Fall wools.—The average prices of fall wools were as follows: Humboldt and Mendocino (400,000 pounds), 16@18½c per lb.; free mountain, 12@15c; Sacramento valley, 12@14c; San Joaquin, 9@12c; Southern Coast, 8@10c. The only wools of this class shipped in the grease were the Humboldt and Mendocino, and a portion of the free mountain, all the balance being scoured here or used by the local mills. Scoured stocks have ruled at 45@50c per lb. for free and 35@40c for defective.

The year 1888 closed on a strong market with a very light stock of wool in this city. The strength of the market was in sympathy with higher prices at the East brought about by very small supplies of wool—about one-half of the quantity on December 31, 1887—and also a higher and advancing market in Europe, due to light supplies of wool and a large demand from continental and English manufacturers. Even at the advance the English market is above the parity of the New York, Boston and Philadelphia markets.

POULTRY YARD.

Experience in Incubation.

W. M. Barris of the Los Angeles Poultry Ranch writes as follows for the *Cackler* concerning his use of incubators:

I am running at present two machines of 650-egg capacity each (Petaluma). In August, out of the eggs put in, about 70 per cent were fertile. In September about 50 per cent were fertile. Of the August hatch, now six weeks old, I only lost about one per cent of those hatched, and of the September hatch, now one week old, I have not lost more than one-half of one per cent. The eggs in both instances were gathered from farmers promiscuously.

I have made some study of the causes of so many infertile eggs, because the loss is no small one where we have to pay 35 and 40 cents per dozen for eggs, as I did for my September hatch.

If parties interested would take the pains to inquire into the conditions of the fowls from which eggs were obtained, they could easily find the cause. One party using an incubator, who had good success, found upon inquiry that the fowls from which his eggs were obtained were healthy, had plenty of exercise, and cockerels of about one year of age were mated with two-year-old hens.

Another party, who made almost an entire failure, states that though about 65 per cent of his eggs were fertile, nearly every chick perished in the shell, being too weak to break out. Investigation showed that the hens from which his eggs were obtained were mated with broilers and had been inbred for three years. The consequence was, that while there was life in each egg, there was not sufficient vitality in

the chick to enable it to break out. I think that causes such as the above affect the fertility of the eggs and vitality of the chicks more than any others.

But there are other reasons for not obtaining full hatches. Eggs from very young pullets scarcely ever turn out well; neither do eggs from very fat hens; yet they may be fertile. Frequent handling, chilling, a slight fall or jar, and delay in placing them in the incubators, affect the result. I aim to place eggs which are not over a week old, although others claim that an egg not over three weeks old is all right.

Messrs. Ray & Warren, in the article above mentioned, speak about the chicks standing about the fountains drinking till they die. Perhaps the difficulty is that they give them water too soon after hatching.

I am well satisfied with the results from my manner of feeding which I now give. In the first place I call attention to the difference of opinion in regard to feeding eggs. Some say that nothing is equal to it and that it should be kept up for ten days; others condemn it altogether. I have adopted a medium. From the very first I take the whole egg boiled, not too hard, and chop it up (white, yolk and shell) very fine, and then add bread-crumbs sufficient to make the mass crumbly. I feed nothing else for two days. After that I put with the bread-crumbs oatmeal or cracked wheat, alternately, working out the eggs gradually, so that at the end of a week no more egg is used. I do not let them have any water at all for four or five days. Should they be attacked with diarrhea before this, commence giving them water with unslacked lime in it. Lime in the water is the best remedy for diarrhea at any time. During the second week I feed them rice, oatmeal, boiled cracked wheat and mashed potatoes. I do not mix them, but feed one of them at a time. I think the changes make them relish their food better. First meal during the third week I give bran scalded with hot milk or hot water (milk is preferable) mixed with oatmeal or cracked wheat. At one of the daily meals during this week, I chop up cooked meat mixed with oatmeal or cracked wheat. At another meal I give mashed potatoes mixed with cabbage chopped fine, and about twice during the week change to onions. I find they eat the green food better mixed with something else. I feed every two hours during the first week, every three hours during the second and third weeks. After this I feed every four hours until three months old, as follows: First, warm mash of bran or of bran and vegetables mixed; second, feed at ten o'clock, whole wheat; third, feed at two o'clock, green feed; fourth, five o'clock, whole wheat. Rice, oatmeal and cracked wheat may appear to be too expensive, but if you try it you will find it will pay, and pay big.

In conclusion I would say to our friends, do not give up on account of difficulties. These ought to make us more thoughtful and teach us more than if we were successful. I do not expect satisfactory results with my incubators until I have hens enough of my own, properly mated, to supply me with eggs. Until that time I intend to seek out a few farmers who have healthy fowls, properly mated, and engage eggs from them, even if I have to pay more for them.

POULTRY IN THE ORCHARD.—While it is undisputed that an orchard is one of the best places in the world in which to establish a poultry-yard, we have also found that poultry is good for trees. We have 16 Shockley apple trees, seven years old, standing in and around the poultry-yard. Some of them standing directly in the runs of the fowls have as many apples on them as any five on the outside. This is conclusive evidence that the one is beneficial to the other. The chickens destroy all bugs and insects that prey upon the trees and fruit; at the same time they keep down all grass and weeds and keep the surface of the ground well scratched up and in a mellow condition, thus promoting the health and vigor of the trees, causing them to bear larger and better fruit. Some of the trees in our yard are literally hanging with nice apples, and so heavily laden that we are compelled to keep the trees well propped to keep them from breaking down. Shade is one of the indispensables about a poultry-yard in the summer months, and it is certainly better and more profitable to have some good variety of fruit. We at the same time get the needed shade and a bountiful supply of delicious fruit, if of the same kind. We should certainly advise all to have orchards for poultry and poultry for orchards, for the one will be greatly benefited by the other.—*Poultry Guide*.

STEEL-WIRE MATS, a new article in metal-lurgical industry, are fast coming into use. They are made from steel wire, with steel frame and steel braces, all perfectly galvanized, and are wear and weather proof, are self-cleaning, require no shaking, and by the slightest scrape, snow, ice, mud, clay and water are wiped out of sight.

CASTOR-OIL LEAVES, fresh from the plant, bruised or rubbed in the hands, and then stuffed tightly into a stiff boot or shoe and left to remain for 12 or 24 hours, according to the character of the leather, will render the same quite supple—so it is said.

The largest carpet in the world has been on exhibition at the Cincinnati exposition. It contains 2700 square yards.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

MUCH GRAIN SOWN.—*Oakland Enquirer*, Dec. 29: The acreage that will be plowed and seeded to grain this year in this county promises to be greater than any year heretofore. If the weather continues warm for some weeks and there is not too great a rainfall, farmers will be able to get in the balance of their lands and the prospects are that all land heretofore cultivated will be plowed and planted this year and also a large amount of hill land that had never been before broken. Good crops of a very fine quality are always produced on hillside farms, during a year when there has been an average rainfall, and during a heavy downpour these lands produce as heavy a yield as the average low lands, and the quality is far superior. When there is too much rain the crops planted on the low lands are apt to be injured if not completely ruined. It is said the acreage of grain sown in the vicinity of Mt. Eden will be larger this year than has been known for six years past. All along the bay from the lower end of the county to Melrose the low lands are being plowed, and in Contra Costa county from North Oakland to northward the lands lying between the bay and the foothills are being cultivated and farmers are already beginning to complain that the price of hay and grain will be so low that they will not make anything.

Fresno.

RAISIN OUTPUT.—*Fresno Expositor*, Jan. 2: We desire to call attention to the glaring mistakes of some parties who have made estimates of the output of raisins from this county. We have only been credited with an exportation of some 400 carloads or 8,000,000 lbs. The actual and official figures are as follows: From Fresno, 6,850,000 lbs.; from other stations in the county, 3,803,270 lbs.; a total of 10,653,270 lbs. Allowing 20 lbs. to a box and 1000 boxes to the carload, the accepted estimate, we have 532 carloads and a trifle over. This is an increase over last year of 4,388,770 lbs., or over 220 carloads.

SHEEP OUTLOOK.—W. W. Shipp, one of the oldest sheep-raisers in the county, was to-day asked the prospects of a sheep crop for the coming season. "Never better; never better, sir. This is my 21st year in the business in this county. I came here in 1867, and have experienced many good and many bad years in my business, as you may judge. I have 4600 sheep this season. They commence to lamb between the 25th of January and the 1st of February. The feed is at least a month ahead of last season, and is at its very best when we want it. Everything is favorable for a good lambing season all over the country."

Inyo.

IN OWENS VALLEY.—*Independent*, Dec. 29: So far, stockmen in Owens valley have not fed any hay to their cattle this season. There is plenty of good feed on the pastures and grass is still making good growth. During the past few weeks alfalfa has made good growth; the recent warm rain has been very favorable. At his place at George's Creek, James R. Moffat planted some young Monterey cypress trees two years ago. They have made fine growth and are now beautiful trees. It was doubted if Monterey cypress would grow in Owens valley, but Mr. Moffat has removed the doubt; and last winter was the coldest known here in many years. Mr. McIver, sup't of the East-side canal, has ordered 30,000 grape-cuttings for setting out on his own land in the spring. The cuttings will come from Woodland and Davisville. A good deal of work is being done improving the grade and straightening and widening Stevens ditch. The ditch will be in good condition to supply water for several thousand acres of land early in the spring. The land and canal are now valuable property and their values will rapidly increase.

HORSE-BREEDING.—W. S. Enos is rapidly growing up a fine stock of horses. He now has 70 head of brood mares; among these are quite a number of the best strains of various breeds. He has a few very promising colts from the celebrated horse Fallis, recently taken to Kentucky under a contract for breeding. Mr. Enos contemplates going East soon for an imported Percheron stallion. Should he do so, he will bring here a first-class horse that will be of great value to the country. Several horse-raisers have offered Mr. Enos to breed a large number of mares to the horse he may bring.

Kern.

SEEKING PASTURE.—*Bakersfield Echo*, Jan. 3: Some gentlemen engaged in the butcher business in Fresno have recently been here looking for alfalfa lands on which to fatten cattle and sheep for their markets. It has been known in all the adjoining counties for years that Kern was the Egypt of the State for feed in years of scarcity. Those wanting hay or temporary pasture naturally turn this way. If now, as seems probable, butchers have awakened to the value of a Kern county alfalfa-field as a backing to their business—pastures where they may place thin cattle and sheep for fattening—a new value will be given to our lands for that purpose.

MUCH GRAIN SOWN.—Heretofore the wheat-fields of Kern have been dwarfed by the vast area of alfalfa; but from present appearances the acreage sown to wheat and barley this year

will cut no unimportant figure. In the Delano and Poso Creek countries a very large amount of unirrigated land is being seeded, and should the rains continue through the spring months the yield of hay and thrashed grain will be an important factor in the county's export this year. Many of these grain farmers are living on homestead and pre-emption claims, and a liberal crop will be a welcome boon to them. There is little more than the usual amount being sown on irrigated lands, but in the mountain valleys the fields are being extended to their utmost.

Los Angeles.

POMOLOGISTS IN COUNCIL.—U. A. P. dispatch, Santa Ana, Jan. 3: The regular meeting of the Los Angeles Co. Pomological Society was held at Neill's hall this afternoon and evening. The address of welcome was delivered by Prof. Manley, sup't of the city schools. Interesting papers and discussions were had upon "Scale Pests and Their Remedies," "The Culture of Prunes in Southern California," "The Marketing of Fruits in Southern California," "Climatic Phenomena and Deciduous Tree Culture," etc. The attendance from a distance was fair, but of citizens, small. A display of fruits and products of the valley, neatly arranged, attracted universal attention.

Modoc.

CATTLE NOTES.—*Alturas Independent*, Dec. 27: Stock-raisers and farmers in this vicinity are unanimous in the opinion that the winter so far is all that could be desired. We understand that only a small number of beef cattle are being fed this winter. In the vicinity of Fort Bidwell Peter Peterson is feeding a small lot to supply a contract. In the lower end of the valley H. L. Merrifield, R. W. Minto and one or two others are feeding small lots. The South Fork cattle-men are busy riding over the range and getting the cattle into the valley. They will be turned into the fields and swamps, where there is excellent feed. C. W. Williams of South Fork was in town yesterday. He informs us that in his section a great many cattle have been gathered in, but the majority of them are still on the outside, and he thinks it will probably be the middle or last of January before the range is clear.

GOOD SIZED HOGS.—W. B. Whittemore of Fort Bidwell butchered 17 hogs last week, and their average weight was 282 pounds dressed. The largest of the lot weighed 465 pounds. The amount of lard obtained was an average of 42 pounds to the hog. If any of our hog-raisers can beat this we would be glad to hear from them.

Nevada.

BARREN HILL NURSERIES.—*Nevada City Herald*: Nevada City has one institution which is widely known in this and other States of the Union; it is also known in other countries. The institution is Barren Hill Nursery, owned by Felix Gillet. It is known chiefly for the superior trees, plants and shrubs it sends forth. Mr. Gillet sends out only the choicest varieties, and the demand exceeds his means of supply four-fold. He has this season accepted orders for 20,000 prune trees and 3000 walnut trees, mostly for Southern California. He has had to decline orders aggregating five times that amount. His walnut and prune trees he imports from France. The specimens of walnuts he has on hand speak for themselves. Mr. Gillet started in a few years since on a barren hill, the soil from which had been washed for gold. He has persevered and made it a garden-spot unexcelled anywhere. The most of it is the result of the work of his own hands. It is a living example of what knowledge and labor will accomplish in California. The place will well repay a visit.

San Bernardino.

SOLD ON THE TREES.—*Ontario Record*, Dec. 26: A. Oakley has sold the oranges on his 10-acre lot, the Holt orchard, for \$3.25 per box. The purchaser is J. Sterovich of Los Angeles, who takes the crop on the trees and pays the figures named for the entire lot. That seems a good price, and we understand that it is as high as is being offered at Riverside; but then Ontario Navels and Mediterranean Sweeties are equal to the best.

San Diego.

SWEET POTATOES.—*Fallbrook Cor. Union*: At J. W. Cheatham's office there is on exhibition a hill of sweet potatoes adhering to a single root which weighed 50 pounds when first unearthed. One sweet potato weighing 16 pounds was an object of curiosity at the same office some time ago.

San Joaquin.

THE MOKELUMNE DAM.—*Lodi Sentinel*: The Mokelumne Ditch & Irrigation Co.'s dam is situated a few yards below Westmoreland's bridge, the banks of the river at that place being solid rock. The dam, a small portion of which was built a number of years ago, is 277 feet long, 40 wide at the base, and 7 feet wide at the top, and is 32 feet high. It is built of rock and cement, containing over 8000 cubic yards of material. At the east end of the dam is a solid stone pier, 30 feet long, 10 feet wide and 22 feet high, between which and the stone bank is the headgate, 34 feet long, built of best and heaviest timber, firmly cemented and mortised into the rock at the bottom and sides. From here the canal, 32 feet wide on the bottom, is cut through solid rock for some distance. About 55 yards from the headgate is the waste-gate, 16 feet wide, which, like the headgate, is built of heavy timber, and is cemented and mortised between two massive stone pillars, and is there to stay. From this gate to the

river is constructed a fish-ladder substantially built of redwood, the sides and bottom being of three-inch plank. It is 108 feet long, 5 feet wide and 22 inches deep, the pitch being one foot in four. At intervals of two feet on each side of the ladder are built aprons three feet long, slanting toward the waste-gate, thus breaking the force of the current so the fish can "go up the flume."

Santa Clara.

AGRICULTURAL SOCIETY.—*Herald*, Jan. 4: The Santa Clara Valley Agricultural Society held its annual meeting yesterday, 38 life members being present. The report of Sec'y G. H. Bragg showed total receipts for the society, \$14,414.06; total disbursements, \$13,889.53; balance on hand, \$524.53. D. J. Murphy was elected September 10th to fill the vacancy caused by the death of Director H. W. Seale. During the year three of the oldest members have died, viz.: H. W. Seale, L. R. Mills and A. S. Beatty. The report was accepted. N. B. Edwards, T. S. Montgomery and Wm. Buckley were appointed a committee to examine the report and the books of the secretary and report at the next meeting of the directors. The following officers were elected: President, E. Topham (re-elected); directors, three-year-term, Wm. Boots and D. J. Murphy. Mr. Chase moved to strike from the constitution the clause requiring that the officers of the association be residents of the county. The motion, which required a two-thirds vote to carry, was lost by a vote of 24 to 13. The meeting then adjourned.

Santa Cruz.

MODEL SLAUGHTER-HOUSE.—H. C. Peckham has just finished a new slaughter house, beyond the lower Salapuedes bridge, and it is the most finely equipped we have seen. Everything connected with the building is arranged in a systematic manner, so as to prevent as much hard work as possible. The meat is hauled up to be dressed and moved from one place to another by a system of pulleys; the various yards are arranged so that the cattle can easily be driven into the house, and the place is a perfect network of doors, each one being for some purpose. The building is so constructed that it has perfect drainage and can always be kept clean. A few yards from the slaughter-house is a large and convenient barn with a great number of cattle-stalls. The Salapuedes creek borders his place, thereby allowing the stock to drink from the stream of flowing water. Above all, a person may go anywhere around the place in winter without soiling his shoes or being troubled by a stenoh of any kind.

EXCELLENT FLAX.—*Pajaronian*, Dec. 27: Early this year Geo. A. Trafton distributed a lot of flaxseed among farmers of this valley for trial cultivation. The yield in each instance was good and the straw was long and of tough fiber. The seed was sent here by W. M. Hatfield, who has a flax-mill near Menlo Park, San Mateo county, and samples of the flax grown here were sent him for trial. Mr. Hatfield has had long experience in scutching (flax) mills in Canada, is thoroughly posted in the business, and hence his opinion as to the result of the Pajaro valley flax experiments is worthy of much weight. On Monday, Mr. Trafton received a letter from Mr. Hatfield in reference to the flax sent him. He stated that the weather had been against proper rotting of the straw, that his force of employees was new to the business, but that he had been able to give the straw a fair test and had produced a fiber which the owners of the Oakland Cotton-Mill and the Pacific Flax-Mills had pronounced the toughest, longest and best fiber they had ever seen. In this opinion Mr. Hatfield fully concurs. He considers the fiber unequaled. The result of this test has convinced him that Watsonville is the proper site for a scutching and twine mill, and that sufficient flax to keep it in operation the year round can be raised in Pajaro valley. He proposes that a joint stock company of farmers and business men of this valley be formed—say with a capital of \$100,000. He will subscribe 20 or 25 per cent of that amount. Here is another chance to secure a labor-employing factory for our town and a coin-on-delivery crop for our farmers. The lesson of the best factory should not be lost. We trust that Mr. Trafton will call a public meeting in the near future. We want the flax-mill.

Sonoma.

AN APPROPRIATE LABEL.—*Santa Rosa Democrat*: Capt. Guy E. Grosse has had a photograph taken of an olive branch, containing a number of well-developed berries, from his olive orchard on the heights east of this city, copies of which he proposes to distribute among his friends here and patrons in the East. He will also have an engraving made of the picture and use it as a label on his pickled olives.

CHRISTMAS AT SANTA ROSA.—*Cor. Chronicle*: Tomatoes growing in the open air were gathered fresh from gardens on Christmas Day, and served on tables in addition to the regulation turkey and cranberries. Roses and other flowers, blooming almost as luxuriantly as in springtime, decorated houses for the festive occasion. Frost has not yet visited this section, and we have passed from autumn to early spring without a total destruction of vegetation from climatic changes.

Tulare.

NEW YEAR'S IN VISALIA.—*Delta*: Here on the first day of January, 1889, are violets and geraniums, nasturtiums and roses, growing and blooming in the gardens. A splendid growth of fresh green grass, 10 or 12 inches long in

places, covers every pasture, field and roadside, and even decorates the unused parts of our streets, dooryards and gardens. J. B. Smith had ripe grapes for Christmas, and still has some on his vines. In a number of gardens in town ripe tomatoes are still gathered for use, while almost any kind of vegetable can be procured from the Chinese peddlers. Perhaps some of our Eastern friends would like a sample package of our January radishes or lettuce? If so, we can easily accommodate them.

A HANFORD MAN VISITS S. F.—*Cor. Delta*: Our raisin-makers have considerable complaint to make concerning the action of some S. F. commission men to whom they sold their raisins this year. One well-known raisin-grower sent a shipment "below," and got word back that they could not sell his fruit at the figures expected. He boarded the train and went to the city. Hunting up the house of his consignee, he (being personally unknown to the merchant) wanted to buy the goods bearing his own brand. He was told what fine raisins they were, and that they would have to bring the top of the market. "Well," said the granger, "if they are so fine and worth so much, what's the matter of your paying me the price you agreed to? I am the grower of those raisins." The commissioner was struck amidships, as it were, and paid the price he had agreed to, and the old boy of Mussel Slough came home with a smile of satisfaction gleaming from his countenance.

Yuba.

VARIED PRODUCTS.—*Marysville Appeal*, Dec. 28: During the past two weeks the Sutter Fruit Co. has shipped from this city to Fresno over 200 boxes of apples. The same concern has been shipping Marysville oranges for some time past. There are few other spots on the face of the earth that can boast with Yuba county of producing both the apple and the orange to perfection, along with strawberries, blackberries and raspberries, table and wine grapes, apricots, cherries, plums, prunes, pears, persimmons, nectarines, peaches, figs, olives, almonds, raisins, walnuts; in addition to all sorts of vegetables, alfalfa, wheat, barley and other grains.

MARYSVILLE ITEMS.—*Appeal*, Jan. 4: The fine weather of the past two days has made mushrooms very plentiful upon the plains, and large quantities of them have been gathered. A small wagon-load of hay, which took six horses to draw over the muddy roads, was one of the things which the pleasant weather caused to appear on the streets yesterday. Judge J. H. Craddock had a box of oranges packed yesterday and shipped to New York, where they will be put upon the banquet-table of the Elk club, which will be spread on the 9th inst. Mayor Slattery, as a Christmas gift to some friends in Ireland, recently had a large cluster of oranges packed and shipped to them.

ARIZONA.

MIDWINTER MUSCATS AND "GARDEN TRUCK"—*Florence Enterprise*, Dec. 29: Last Sunday Mr. Peter Will plucked from his vines on Main street a fine bunch of Muscat grapes that were of flavor and quality equal to the best productions of the summer season. On his vines there are still several bunches of grapes that will mature within the next two weeks. These vines have been given no special care and they bore the usual crop of summer grapes. This circumstance suggests the feasibility of producing grapes in quantities during the entire winter season, if the subject is properly studied and the necessary conditions supplied. H. G. Ballou has a fine lot of green peas in his garden ready for picking, and the vines are still covered with blossoms and young pods. He also has a full assortment of tender summer vegetables growing, that were planted in October. They will furnish a full supply until the early spring crop begins to take their place.

OREGON.

SOUTHERN JOSEPHINE COUNTY.—*Cor. Grant's Pass Courier*: Commencing at Deer creek, a tributary of the Illinois river, there is some of the finest farming land found, known as the Deer Creek valley, which is about 12 miles long with creeks branching out from it every few miles, containing good farming land on all of them and several magnificent farms. There is also some vacant land on all the branches, but the main Deer Creek valley is about all cleared, and a great quantity of timothy hay, as well as wheat, oats, barley, rye, corn and vegetables, are produced. On the low rolling hills on either side of this valley is one of the finest belts of sugar-pine timber, accessible with wagons, to be found on the Pacific Coast, not mentioning the red and yellow fir, yellow pine, white and black oak, as well as ash, maple and other species of timber. To see the orchards here left to the care they get from horses, cattle and hogs being pastured on them, and yet to behold the immense amount of fruit they bear, is astonishing, and conveys the impression that with proper care and attention this can be made one of the largest producers of choice apples to be found in Southern Oregon. Plums, pears and prunes also grow here to perfection, as well as a large variety of berries. On these low hills is good range for stock, but on the mountains, at the head of these streams, is as fine bunchgrass as the most fastidious stock-raiser could reasonably expect to find, and the many large springs of pure cold water make this one of the most desirable locations for the production of choice grades of horses and cattle.

Cook Stock Farm.

Green Valley, Contra Costa County.

(Written for the RURAL PRESS by J. C. H.)

Although Contra Costa county is situated so near to the metropolis, and contains a large area of the most productive land in California, her great industrial enterprises, her manufacturing and shipping, her orchards, vineyards, stock farms and palatial homes have had but meager notice from the press of our State.

A RURAL reporter made a trip through the county last week. From Martinez, the county seat, 35 miles from our city, southeasterly, there is a succession of small valleys and low hills divided into small farms with neat cottages and a few more imposing edifices, around which are large pear orchards in the valleys, while the hills are set with vines.

From Pacheco, near which are the county fair grounds, the road leads southward through a very productive valley (although fences and residences are in a somewhat dilapidated condition) to the thriving town of Walnut Creek, which takes its name from the many native walnut trees that line its banks. From Walnut Creek the route is south through San Ramon valley, a great broad area of rich alluvial soil that rivals for varied productions and exuberant growth in tree and plant any portion of California. The attention of some of our leading fruitmen—for instance, A. T. Hatch and August Hemme—has been attracted

grove that flowers profusely every year. Mr. Jas. S. Henderson, an experienced horticulturist, has charge of this department. He is of opinion that this section is one of the best in the world for growing fruit and ornamental trees.

The home residence is a large, imposing edifice with broad porticos. The adjacent ravine is spanned by numerous quaint and rustic bridges, and beyond it are the clubhouse, laundry and dairy-house. The latter is most complete in its appointments, with cement floor, marble tables and a fountain of cold mountain water in the center.

The family-carriage barn is 80x125 feet with one large and three small cupolas. The large farm stable for workhorses, carpenter shop, blacksmith shop, wagon and machine shop, 40x250 feet, are situated at convenient distances from each other, while to the right can be seen the great training stable, 80x125 feet, with a walking alley 25 feet wide in the center. The nursery, or colt stable, higher up the valley, is built in a semi-circle 20 feet wide and 500 feet long, in front of which is a large corral. It is constructed with box stalls, each of which is occupied by a pair of the weanlings at night. There were 40 colts in the inclosure, and they soon learn to take the positions assigned them. A neat cottage close by is occupied by the resident trainer.

The brood mares' barn is 60 feet wide by 200 feet long, with a driveway in the center and corrals on each side. There were 30 standard bred trotting mares in the inclosure, 18 of

Each laborer has good rooms with patent hospital beds, which are well provided with clean sheets and ample bed-clothes. It is a significant feature of this farm that a large number of the employes have been there continuously for 8 and 12 years, and have now in savings banks from \$1000 to \$2000 each.

The proprietor, Mr. Seth Cook, has adopted a liberal policy and employed the best talent in securing noted strains of blooded stock, and by such judicious management and reinforcing has gained for the Cook Stock Farm the reputation of having the purest blooded animals with pedigrees and records true and reliable. He has taken pleasure in introducing the highest grades of stock with a view of improving our State, and during all these years his prices have been very low as compared with those of many breeding establishments.

We append a succinct account of the livestock:

Cattle.

SHORTHORNS.—Noble King (Vol. 34), at the head of the herd, is by Imp. King of Aberdeen; four other bulls and 24 recorded cows.

DEVONS.—At the head of the Devon herd is imported Charming Lad, 4231. Calved Jan. 31, 1885. Bred by A. C. Skinner of Taunton, England. Sire, Lord Currypool (1589), by Lord Stowey (1601). Dam, Charmer (5151), by Druid (1317). G. D. Chivey (3279), bred by W. Cook of Coveithome Tiverton. Charming Lad won first prize at the Illinois State Fair, 1887, in the two-year-old class. He was placed second in the three-year-old class at the same

Imported August, 1887. Sire, Salesman (4) Dam by Lucks All (187).

Barrowby Lass. Foaled spring, 1883. Imported August, 1886. Sire, Sportsman (299). Dam by Champion of England (55).

Kaiserin. Foaled spring, 1883. Imported July, 1885. Sire, Emcorer (377). Dam by Champion of England (55).

Queen of Trumps. Foaled spring, 1882. Imported July, 1886. Sire, The General. Dam, Polly.

Lady Hilton. Foaled Feb. 10, 1887. Bred by Seth Cook, Danville, Cal. Sire, Baron Hilton (584). Dam, Kaiserin.

Bay Queen. Foaled May 23, 1887. Bred by Stericker Bros. Springfield, Ill. Sire, Herdsman (620). Dam, Queen of Trumps.

Trotting Stallions.

Steinway. Bred by Col. R. G. Stoner, Ky. Sire, Strathmore. Dam, Abbess. Now in training at Bay District. Trial, 2:21; half mile, 1:08.

Cresco. Bred by Col. R. G. Stoner, Ky. Sire, Strathmore. Dam, Alia. Record, 2:21.

Charles Darby. Bred by the late Daniel Cook. Sire, Steinway. Dam, Kitty G. Now in training at Bay District.

Prince Red. Brown colt imported by Seth Cook in December, 1888. Foaled May 13, 1888. Sired by Red Wilkes, the sire of Prince Wilkes. Record, 2:14½. First dam, Mollie Stout, sister to Lady Stout, three-year old. Record, 2:29 (Membrino time). Second dam, Pus Prall, by Bertrand.

Standard Brood Mares.

Katie G., by B. Electioneer. Leah, by Woodford, Membrino. Princess, by Administrator; dam, by Volunteer. Steinola, by Steinway. Carry Stoner, by Steinway. Calypso, by Steinway. Bertha, by Alcantara. Maggie McGregor, by Robt. McGregor. Nebata, by Belmont. Inex, by Sweepstakes. Lydia Bright, by Triumph. Addie Ash, by Indianapolis. Clementine, by Yosemite. Etna G., by Guy Wilkes. Ramona, by Anteo.

Mares in Training.

None Better, by Allendorf. Dam, Bashaw's Belle.

Nanny Smith, full sister to Phil, Thompson. Record, 2:16. By Red Wilkes. Dam, Nellie Grey.

Algerdatta, by Allendorf. D.m., King Girl.

Alhambra Valley.

The Alhambra valley lies just south of Martinez, and extends back ten miles to the Contra Costa range of hills, being from one to three miles wide. It is under a high state of cultivation, and a large number of our leading citizens have built fine residences there and are making it their country homes. Among these are H. Rapp, Prof. John Muir, Dr. John Strentzel, the veteran horticulturist, O. C. Huefner, of the German *Demokrat*. Prof. John Swett, T. G. Hogan of the I X L, Wm. Cluff and others.

One of our reporters lately visited the residence of Prof. John Swett, four miles from Martinez. Six years ago the professor began to improve this portion of the valley, and now has a country seat whose loveliness can be realized only by personal inspection. The valley here is about one mile wide and surrounded with hills covered with evergreen trees, except in portions where the oaks have been leveled and their places taken by the choicest vines, deciduous fruits and olive trees. The mildness of the climate is attested by the fact that there is growing on his place a tomato-vine over five feet high, which now has hanging upon it more than 100 tomatoes, many of them almost full-grown.

POLLED ANGUS BEEF.—A Polled Angus steer was recently purchased from the herd of the Cook Stock Farm in Contra Costa county by Arthur Williams, a butcher at Walnut Creek. The animal was 30 months old, weighed gross 1345 pounds, and dressed net 835 pounds. The carcass was seen on the block by a RURAL reporter and showed the complete marble that is claimed for beef of this stock. Mr. Williams, who has been in business at Walnut Creek for 16 consecutive years, pronounced it the finest specimen of marbled beef he had ever seen. Several old farmers and stock-raisers who had come to the village to see this beef expressed themselves in terms of surprise as to quality and gave the highest commendation of this breed of cattle as beef-producers.

DEATH TO SQUIRRELS.—J. J. Elliott has followed the business of poisoning squirrels for several years. His system of procedure is to take a section and rid it of these vermin, guaranteeing satisfaction or no pay. He uses a combination of poisons and a compound that attracts the squirrels. Parties desiring it can secure this compound at \$1.50 per gallon by addressing him at Danville, Contra Costa county.

MARTINEZ HOTEL.—This new and commodious hotel has recently been renovated and furnished by E. A. Montgomery and is now ready for guests. The service and table will compare favorably with any hotel outside of our city, and tourist and traveler will find this one of the best houses at this popular summer resort.

McAFEE & BALDWIN is the newly-adopted name of the firm of wide-awake and reliable real estate agents and auctioneers, hitherto known as McAfee Bros.

CLEVELAND BAY STALLION NAPOLEON 754, OWNED BY SETH COOK, DANVILLE, CAL.

to this section, and miles and miles of trees have been planted, especially the pear and cherry.

From Danville, a small village near the center of this valley, we go east 2½ miles into Green Valley, where is situated the celebrated "Cook Stock Farm." This picturesque and charming tract is about 3½ miles long and from half a mile to three miles wide, stocked with great baronial oaks, while on the rolling hills around are groups of evergreen trees common to our State, and Mt. Diablo stands sentinel at the head of the valley.

The natural advantages of this section for making an ideal home induced men of ample means to enlist all the ingenuity of the mechanic and artisan in constructing and adorning a magnificent country seat and family resort. In this connection the projectors have utilized the resources of this rich, productive land and established one of the most notable and extensive breeding farms for fine stock in this State.

The Cook Stock Farm contains 5000 acres and is watered by numerous springs, the largest of which has been tapped by a tunnel 2000 feet long, one mile from the summit of Mt. Diablo, and give a supply sufficient to fill a reservoir containing 25,000,000 gallons of water. The road leading up to the residence is nicely gravelled and has ornamental trees on each side; while about half a mile to the left can be seen a great cattle barn with a mile racetrack adjacent.

There are 100 acres used for ornamental grounds, planted with the choicest varieties of shrubs and flowering plants; 70 acres in orchard, principally pears; 15 acres in olives, of which there are 18 varieties; Japanese fruits, 8 varieties; three acres of oranges with ten trees now in bearing, besides currants, gooseberries, strawberries, raspberries, blackberries, pomegranates, guavas, mulberries, walnuts, chestnuts, almonds, quinces, and a large magnolia

which were imported from Kentucky.

The granary, 40x60 feet, and piggery, 80x50 feet, with an ell 150 long, are to the left and in front of the great cattle barn, 80x200 feet, with a shed 25x400 feet long on the south side. In this building are stabled, in their several departments, the families of Shorthorns, Devons, Polled Angus and Galloways.

Next to the county road is the winter stallion-paddock, where each animal can enjoy shelter or sunshine at its will. We noticed here one of Tiffany's operating tables, by which a horse can be thrown and secured without risk or injury. A short distance from the training stable are 20 acres fenced off in paddocks 200 feet square. The Devon breeding barn, 200 feet long, is placed at the upper end of the valley; the calf barn, 250 feet long, a half-mile lower down; while the Polled-Angus barn, 250 feet long, is at the lower end of the ranch, about 1½ miles from the home residence. This whole tract is suitably divided into fields with substantial board fences, no barbed wire being used on any portion of the farm, except the outside fence next to the mountain. All the home buildings are models in their architectural designs and proportions, with vanes, cupolas and spires, painted, from base-board to comb of roof, in different colors, and so disposed as to form a group that has the appearance of a village.

Mr. Geo. A. Wiley, the manager, has been superintendent for 12 years, and with the assistance of his accomplished wife has done and is doing a great deal to make this farm an attractive and luxurious home, where a hearty and generous hospitality is given to rich and poor alike. In the management of this ranch he has adopted a system of mixed farming and rotation of crops. There are departments with a foreman at the head of each, and a large force of men, from 40 to 50 the year around, is moved with less friction than some farms of one-tenth the magnitude.

show, 1888, and he was shown at the head of the herd, and won the Devon herd sweepstakes, with four herds in competition. He also won sweepstakes at St. Louis fair, 1888, as best Devon bull in the show. He won first prize in class, and sweepstakes at the Moweauqua fair in 1887, and was first in class and sweepstakes at the same show, 1888. Charming Lad was imported by John Hudson of Moweauqua, Shelby county, Ill., July 6, 1886. Sold to Seth Cook, Danville, Cal., Nov. 30, 1888.

ABERDEEN ANGUS.—This herd consists of 62 cows and 19 bulls with Imp. Marathon of Finkay, No. 2021, at the head.

GALLOWAY.—Imp. Scottish Champion, 1218, at the head, with 19 other bulls and 50 cows and heifers.

Horses.

CLEVELAND BAYS.—The stock of Cleveland Bay horses of the Cook Stock Farm was imported by Messrs. Stericker Brothers, Springfield, Ill.

We herewith give the names and pedigree of some of the most notable animals:

Stallions.—Basides Royal Studly and Napoleon, which are illustrated in this issue of the RURAL, there are in the Cleveland Bay stud the following:

Baron Hilton 584. Foaled spring, 1883. Imported 1885. Sire, Lucks All (189); dam by Sportsman (291).

Kingscote 154. Foaled spring, 1884. Imported Dec., 1886. Sire, Competitor (101). Dam, Smiler.

Saxon Prince 83. Foaled spring, 1884. Imported July, 1886. Sire, Sportsman (299). Dam by Brilliant (42).

General 249. Foaled spring, 1885. Imported May, 1887. Sire, Salesman (417). Dam by Barnaby (18).

Bonanza 246. Foaled spring, 1885. Imported August, 1887. Sire, General (177). Dam by Field Marshal (161).

Mares.—Sunbeam 71. Foaled spring, 1883.

THE PUBLIC LANDS.

Revision of the Land Laws.

WASHINGTON, January 31.—The House Committee on Public Lands today took action on the Senate bill relating to public lands, by means of which it is hoped to secure legislation at this session of Congress which will greatly modify the public land policy of the Government. The House passed during last session a bill repealing pre-emption and timber culture and otherwise amending the land laws, but no action has been taken on the measure by the Senate. In order to facilitate the passage of the essential features of this general land bill, the House Committee today took up the bill passed by the Senate in December, providing that the public lands of the United States now subject to private entry shall be disposed of under homestead laws only. After making numerous amendments to the bill, Holman was instructed to report to the House and ask its early consideration.

It is the purpose of the committee in this way to endeavor to throw the proposed land reform legislation into the hands of a Conference Committee of the House and Senate to secure, if possible, the substantial changes desired to be effected in the land laws. The bill agreed upon by the committee today provides that public lands chiefly valuable for agriculture and not subject to private entry shall be disposed of under the homestead law only, and that the pre-emption law shall be repealed. Persons who have made pre-emption or homestead entry of land, but have not perfected title thereto, are given the right to make another homestead entry. Whenever a settler upon the public domain is unable, on account of destruction of crops, sickness or other unavoidable casualty, to secure support from the land located upon, the local land officers may grant leave of absence from the claim to the settler for a term not exceeding one year. Homestead settlers who have made entry to less than one-quarter section of land are given the privilege of making another entry, the aggregate quantity under the entries not to exceed 160 acres.

An Important Decision.

WASHINGTON, January 31.—In the case of the United States vs. the State of California, involving the question of the right of the State to indemnity for school lands to compensate for deficiencies in fractional townships, made so by reason of swamp land found therein, the Secretary of the Interior has reversed the decision of the Commissioner of the General Land Office and sustained the validity of such selections. The selections in this case were approved and certified to by the State prior to the Act of March, 1877, as land inuring to the State under the Act of February 26, 1859, providing for school land indemnity to compensate for deficiencies where school sections are wanting, or where townships are fractional from any cause whatever. The Commissioner held that such selections were invalid whenever based upon the alleged deficiencies in fractional townships, caused by swamp lands found therein, and held the selections for cancellation. He directed that they be disposed of under the provision of the second section of the Act of March 1, 1877, which allows a purchaser from the State to purchase said lands of the Government where said selections are invalid and not confirmed by the Act of 1877.

In reversing this decision, the Secretary held that the State is not entitled, as others, under the language of the various Acts providing for indemnity school lands in the State of California, to make selections in lieu of swamp lands, merely because they are swamp and overflowed, but he holds that under the statute applicable to the State of California directing surveys in said State, townships were made fractional by reason of the existence of swamp and overflowed lands in the same manner and with the same effect as in other States, and resulted from surveys, being made fractional by bodies of water, whether fresh or salt, of such character as to be meandered, and before such fractional townships, made so by reason of the survey thereof, furnished a basis for indemnity selections under the Act of February 26, 1859, which provided for selections to compensate for deficiencies for school sections where Sections 16 and 36 are fractional in quantity, or where one or both are wanting by reason of townships being fractional; or from any natural cause whatever.

He also holds that the Act of 1877 confirmed to the State all selections of land made prior to the passage of said Act, and not sold the State, whether basis for such selections existed or not.

This decision, it is said, controls the case of Elisha Wright et al., appellants, against the State of California and J. W. Warner et al., respondents, and involves a large quantity of land.

MARYSVILLE, January 31.—The decision of the Commissioners of the General Land Office, rendered about a year ago, held for cancellation about 5000 acres in the counties of Yolo, Colusa, Tehama and Siskiyou, held by numerous parties under title from this State as indemnity selections based upon swamp-land lien. The parties had been in undisturbed possession for a dozen years, and the decision occasioned much indignation. Decker & Jewett, the bankers of this city, were the owners of 2400 acres of this land. They, with a number of others, engaged coun-

sel and took an appeal to the Secretary of the Interior. To-day, Decker, Jewett & Co. received a telegram from Washington, announcing that the appeal had been sustained. This leaves the present owners again in undisturbed possession.

Ladies' Costumes.

The two figures herewith illustrate the same pattern. A back view of the costume is shown, the material illustrated being cheviot suiting, with applied braid ornaments for trimming. The basque-like body is closely adjusted, and to it between the side seams is joined the gathered edge of a full drapery that falls in straight folds over a pad to the edge. On the back, extending

standing collar, the back and the shoulders are trimmed with braid ornaments. On each jacket front is applied a braid ornament that is widest at the bust and extends from the shoulder to the lower edge.

The skirt is in the four-gored shape, and on its front-gore is a panel that is laid in two deep, forward-turning plaits, which meet at the belt and flare slightly toward the lower edge. On each side are arranged two lapped panels that are cut in deep scoops and pinked down their front edges, and in the scoops are cut holes that show a star-like margin. Underlying each panel for some depth from its front edge is a similarly pinked strip of cloth in the light shade of gray, which shows beyond the edges of the panels and also through the holes with most

LADIES' COSTUMES.

from the neck nearly to the waist-line, is a V ornament of braid that also includes shoulder ornaments, from which extend pointed ornaments that lie upon the jacket fronts all the way down. The standing collar is covered with braid ornaments.

The bonnet is of velvet and is trimmed with ribbon, beads and an aigrette.

The superb effect of the costume is fully displayed in the front view of Fig. 5, where the materials combined are velvet and cloth in a dark shade of Gobelin-gray and Surah in the lightest shade of Gobelin-gray. On the closely-fitting fronts, which reach only to the waist-line, is arranged a full plastron vest that is laid in fine tucks from the neck nearly to the bust and allowed to fall naturally to the top of a broad, plaited girdle of velvet, which apparently confines the fullness. Jacket fronts open widely over the vest and girdle, below which they hang in points. Above the bust they are turned over in Directoire revers and faced with velvet; the

attractive effect. The coat sleeves are trimmed at their wrists with a wrinkled band of velvet that is caught down at the center of the upper side.

One or two of the panels in the costume may be of one of the contrasting materials in the body, and the plain panels may show elaborate arrangements of braid, either in embroidery or applied ornaments. Fur is a handsome border decoration for the side-panels and the jacket fronts. All sorts of dress goods are devoted to these costumes, and, if desired, the vest may furnish the only contrast. For the vest, soft, flexible material should be selected, and Surah will be associated with the most wintry fabrics.

The cap is of velvet and is in the Tam O'Shanter style, with a puff crown that has a small, smooth center-piece, near which several shirrings are ornamentally arranged. The band is covered with fancy galloon, and a bird is placed at the left side well up against the crown.

THE PACIFIC RURAL PRESS.

It is a Farm and Home Journal of the highest class, pure in tone and well informed on all matters of industrial interest. It is handsomely printed and illustrated. It is a 20-page weekly, and is furnished, postage paid, for \$3 per year in advance. Single copies, 10 cents, prepaid.

All branches of Farming, including the keeping and breeding of Horses, Cattle, Sheep, Swine, Bees, Poultry, etc.; Gardening, Fruit, Vine, Grain, and Hop Culture; Reliable Market Reports, with other important departments devoted to the Grange, Home Circle, News, etc.

It is the Leading Agricultural Home Newspaper and standard authority on all branches of California Agriculture.

It has the fullest and most accurate REPORTS OF HORTICULTURAL MEETINGS, and is the best record of the EXPERIENCE OF INDIVIDUAL FARMERS AND FRUIT-GROWERS in all parts of the State.

Its market reports are prepared with care and the greatest reliability possible for the benefit of the producer.

THE PACIFIC RURAL PRESS has more circulation and influence in the Pacific States and Territories than all the other agricultural weeklies in the United States combined. Advertisers can reach nearly all the leading reading farmers through its columns.

A well-known horticulturist who was in attendance upon the meetings of fruit-growers, writes: "The greatest praise that could be bestowed on the RURAL PRESS at the late Fruit-Growers' Convention and, which shows, undoubtedly, the well-deserved popularity of that paper, is the fact that almost all the members of that Convention were subscribers to the Press."

Established 1870. Yearly subscription \$3. [Thirteen and one-half months are allowed new subscribers and old subscribers paying \$3, strictly in advance.]

What Others Say of the "Rural Press."

PROUD OF THE RURAL.—We feel proud of the RURAL PRESS. It is a paper that we are not ashamed to send to our friends in the East. Every farmer on the Pacific Coast should take it, and it is a valuable paper for any one to read. We appreciate your efforts. Long may you live to bless our cause. James Blood, Santa Barbara, Cal.

INVALUABLE.—I congratulate you on the general excellence of the RURAL PRESS, and consider it simply invaluable to all residents of the Pacific Coast.—Frederick C. Sheldon, M. D., Los Angeles, Cal.

THE RURAL BEST OF ALL.—I take from four to six papers but if I could but one, I should unhesitatingly choose the PACIFIC RURAL PRESS. J. M. Asher, San Diego, Cal.

DEWEY & CO., Publishers.

No. 220 Market Street, San Francisco.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, if requested the following articles (while this notice continues), at the very greatly reduced figures named at the right:

Electricity and Plant-Life.

From time to time, of late years, says the *Scientific American*, experiments have been made of the effect of the electrical light on flowers and plants, with results seemingly the same, to wit, feeble efforts of some plant to prolong their periods of bloom into the night and then premature decay. One has only to study their actions, as observed, to conclude that even plants need rest, or to be more precise, they seem to thrive best under the conditions which Nature has imposed—the period of darkness and the period of the light which is heat as well, or else that the family of plants, as they now are, sprung from these exact conditions, and will not thrive without them. It is the nature of some flowers, as every one knows, to open at one period of light and close at another; of others to open only at night and close before or at the moment when the orb of day tops the horizon. So strictly do some of these follow their unwritten laws, that floral clocks have been constructed, so that one may step out into his garden, of a bright day or clear night, and learn the time by the condition of bloom on the floral dial.

Prof. Wollney of Munich, satisfied by experiment that electrical light will not advance or improve plant growth, recently tried the effect upon them of the current itself. We quote the following, being the means employed and its result:

He "took patches of ground 12 feet square, separated by boards penetrating the earth to the depth of a foot. In one case he applied two earth plates and interposed five earth cells; in another he inserted an induction apparatus; and in a third, a plate of copper at one side and a plate of zinc at the other side to form a natural battery. Peas, potatoes, carrots, etc., were planted on these and other patches; but the electricity, whether of high or low potential, seemed to have either no influence or a bad one upon their growth."

Plants being full of sap, and sap a fairly good conductor, every fiber must have been reached, and, so far as the professor was enabled to perceive, the only effect of the current was to provoke a perturbation on the protoplasm.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

The Use of Butter Color not Contrary to Law.

In a recent communication from Hon. J. S. Miller, Commissioner of Internal Revenue, he distinctly states that his office has never ruled that the coloring of butter renders it liable to a tax under Internal Revenue Laws; and he further states that in the Law in question, which was passed August 2, 1886, butter is defined to be "a food product usually known as butter, and which is made exclusively from cream, or milk, or both, with or without common salt, and with or without additional coloring matter." The law distinctly recognizes the fact that the use of a Butter Color is necessary and lawful, and there need be no fear on the part of any makers of butter that the United States law will ever be used against them because of their making use of Butter Color.

CONSUMPTION CURED.

An old physician retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper, W. A. NOYES, 149 Powers Block, Rochester, N. Y.

To those wishing roses, hardy plants, bulbs and seeds for home planting we cordially recommend the old reliable House of The Dingee & Conard Co., West Grove, Pa. They are admitted to be the largest rose growers in America, and their roses and plants are well and favorably known all over the United States and Canada. Their New Guide, 110 pages, handsomely illustrated, describes and tells how to grow more than 2000 varieties of the newest and choicest roses, hardy plants, bulbs and seeds, and is sent free to all who write for it. See advertisement in this paper, and address The Dingee & Conard Co., West Grove, Pa.

METALLIC PENS NOT OF MODERN INVENTION. At Acosta a Roman metal pen has been found. It is a bronze pen slit in exactly the same fashion as the present steel pen. The Dutch invented a metal pen in 1717, but it was not until many years later that the hand-screw press, which made the first cheap steel pen, came into use.

FOR REMOVING OLD VARNISH.—A mixture for the removal of old varnish has been patented in Germany by a Mr. Meyer. It is obtained by mixing 5 parts of 36 per cent silicate of potash, 1 of 40 per cent soda lye, and 1 of sal-ammoniac (hydrochlorate of ammonia).

A GERMAN is reported to have invented a paper that resists the action of both fire and water. Asbestos, aluminum, sulphate, chloride of zinc and resin soap are the ingredients.

BACK FILES of the PACIFIC RURAL PRESS (unbound) can be had for \$3 per volume of six months. Per year (two volumes) \$6. Inserted in Dewey's patent binder, 50 cents additional per volume.

Lands For Sale and To Let.

A RARE BARGAIN!

The undersigned offers for sale, on good terms, his CLOVERDALE DAIRY FARM of 300 acres, situated on Squirrel Creek, 2 miles west of Grass Valley. It is well watered by springs and has excellent irrigation facilities, commodious farm buildings, orchard of 150 trees and 6 acres of vineyard. A fine herd of Holstein, Ayrshire, Jersey, and Durham (thoroughbred and grade) cattle for sale with or without the ranch. Holstein and Ayrshire premium bulls on lowest terms, including "Tehama," which, on account of kinship to the herd, can no longer be used in breeding. A good dairy route is also included in this offer.

Come, Fellow Farmers!

It is the good things and the new things you want. Here is a Catalogue full of them! Do you want tested seed, raised from stock selected with extra care, grown from the best strains, and from the original sources? I aim to have mine just such. Do you want new varieties that are really good, and not merely novelties? I aim to have mine such. Do you want seed that the dealer himself has faith enough in to warrant? I warrant mine, as see Catalogue. Do you want an exceptionally large collection to select from? Mine is such. Do you want them directly from the grower? I grow a large portion of mine—few seed-men grow any! My Vegetable and Flower Seed Catalogue for 1889 FREE to everybody. JAMES J. H. GREGORY, Marblehead, Mass.

THREE RIVERS, MICHIGAN.

Contra Costa County.

From a pamphlet published by the Contra Costa Board of Trade, we make the following extracts:

Contra Costa county has an area of 444,491 acres, the Coast Range of mountains running parallel with the ocean, crossing the county, extending in a southeasterly direction. The most distinguished feature of this range is Mt. Diablo, standing out boldly 3896 feet above the sea level, its location being very near the center of the State. It has been selected as an initial point by the Government as the base and meridian line in the survey for nearly two-thirds of the State's area.

The Contra Costa range of hills marks the county's western border. Between Diablo and these hills runs the central valley of the county, beginning at the Bay of Suisun, a short distance east of Martinez, and stretching, with various widths and under various names, to the Livermore and Sunol valleys, where it is divided from the great Santa Clara valley by only a slight elevation. The central valley is about 30 miles in length, and varies from one-half of a mile to six miles in width. It comprises portions known as Pacheco, Diablo, Ygnacio and San Ramon valleys, and nearly every foot of it is composed of the most fertile of soils.

Interspersed in the Contra Costa hills and between the Diablo ridges nestle numerous other valleys, rich in soil, prolific in products. San Pablo valley, on the west, reaches to San Francisco bay, embodying a fine section of country. It is a continuation of the valley in which the city of Oakland is situated, being, in fact, a portion of the Santa Clara valley. East of Diablo, facing the San Joaquin, lies a vast sunny valley which comprises nearly one-third of the entire area of the county.

Farther than the eye can reach to the eastward and southward, extending from Bay Point to Byron, lie the 80,000 acres of wheat-field level almost as the floor, from which come the great quantities of grain shipped annually from Antioch. These lands yield such a generous and regular return that their owners are, with few exceptions, content to grow the staff of life rather than devote the soil to vineyards and orchards with their increased care and labor of cultivation.

The hills dividing these valleys are no less valuable or productive than the valleys. Rising gently and symmetrically, every foot of their sloping sides, to their very summit, is susceptible of cultivation, producing the choicest wine and the best of grain and pasturage.

Mr. Wetmore, Chief Officer of the National Viticultural Association, says of this section: "The long chain of beautiful valleys extending northward to Martinez are sections destined to rival the most noted vineyards of the world. To the east, and south and west, even over the slopes of Mount Diablo, lie the most fertile fruit and vegetable lands on earth."

The tourist, passing through the many beautiful valleys and over the rolling hills throughout Contra Costa county, is impressed with its similarity and general characteristics to the gentle slopes of sunny France. Scattered in all directions are numerous small vineyards and orchards that, with but little cultivation, produce the highest results.

YOLO COUNTY CHARMS AND RESOURCES.—We are indebted to R. B. Blowers, Esq., of Woodland for a copy of the New Year's edition of the *Yolo Mail*, which is a very creditable publication, well filled with facts showing the delights, resources and progress of this favored portion of our State. The editor of the *Mail* followed the wise plan of inviting special articles from leading citizens of his county whose names would carry weight to the statements they make about their localities and industries. There are a dozen such contributions which are valuable and should have wide circulation. We recognize several of the writers as friends of the *RURAL*, and among them Mr. Blowers himself, whose article on climate should be printed by the hundred thousand and distributed at the East by our State Board of Trade. The New Year's edition is well illustrated, a portrait of the famous trotter "Yolo Maid" and several excellent engravings of public buildings being by the Dewey Engraving Co. of this city.

CONVENTION OF RAISIN PRODUCERS AND PACKERS—There will be held at the office of the State Board of Horticulture, 220 Sutter St., S. F., at 1:30 P. M., Saturday, January 19th—a meeting to which all interested in growing, packing or dealing in California raisins are earnestly invited. The published call for the meeting suggests reforms in grading and packing, the establishment of proper grades under local names, and emblems befitting the country; also certain prevailing methods in marketing raisins. These matters are all of importance, and should bring out a large assemblage of those in the raisin interest.

THORBURN'S SEEDS.—The long-established house of Jas. M. Thorburn & Co., 15 John St., N. Y., sends us their annual catalogue of seeds—a handsomely illustrated pamphlet of over 100 pages.

COACH AND DRAFT STALLIONS COMING.—Holbert, Stimson & Co. are bringing to Los Angeles a lot of full-blooded stallions, which were selected in France and England last autumn. See their advertisement for further particulars.

BENNETT'S STABLE, MARTINEZ.

Mr. Seeley J. Bennett, one of the pioneers of Contra Costa county, has borne an important part in developing her resources and bringing into notice her advantages for home-builders. The large edifice shown in the illustration was built in 1884 to meet the growing demand for

livery, and provided the exceptionally fine turnouts for taking tourists and parties to the summit of Mt. Diablo. This stable has become a place of note within the last few years as the headquarters of blooded stock that is shipped to or from the "Cook Stock Farm."

In the upper story a very fine hall and lodge-room have been finished and well equipped for societies and public meetings.

COLMENA COLONY.

The accompanying map presents a view of the Colmena Colony, containing 3100 acres of choice vine and fruit lands finely watered by creeks and an abundance of pure well-water. Its location in the center of one of our prominent fruit sections, on the line of the California & Oregon R. R., in subdivisions of 20 acres, should attract attention.

Grapes that were grown in close proximity to this tract were awarded the first premium at the district fair held in Marysville in 1888. For nearly a quarter of a century Marysville has been one of the prominent fruit-shipping points of the State. In that time it has been demonstrated that the fruits of that section are among the earliest and best in the State. Along the Honcut, the Feather, the Yuba, the Bear and the Sacramento, there are large areas of sediment land of unsurpassed fertility. On these sedimentary soils great quantities of vegetables are raised, with large profit to the tillers of the soil and to the land-owners.

It is now more than a quarter of a century since citrus and other semi-tropic fruit trees were planted in Yuba and Sutter counties. On the Hook Farm, General Sutter's old place, there is a grove of fig trees, the oldest in the northern part of the State. There are now in Marysville 3000 bearing orange trees, and many of them have been in bearing for a number of years. They present incontrovertible evidence

that this is a citrus-fruit country. With the proper shelter of cypress hedges or rows of trees, orange and lemon trees will grow and produce on all the valley lands.

The "Abbott orchard," the largest peach orchard in California, is located nine miles from Marysville, in Sutter county, and contains 425 acres. The first 50 acres was planted in February, 1883. In 1885 the sales of fruit from this 50 acre lot amounted in round numbers to \$6000, and the next season to \$12,000.

About one-third of this tract is bottom land, bordering on the creeks, and is especially adapted to deciduous fruits. No irrigation is required.

Should any purchaser desire irrigation, there is ample water supply at command from the Excelsior Water and Mining Co., who have an abundance of water which can be brought to the land very cheaply.

During the year 1888, large crops of wheat, barley, and hay were raised on this tract, and it is confidently believed that home-seekers will find in this colony an investment that will be satisfactory.

The proprietors, Messrs. Abbott & Montague of Marysville, have undertaken to plant orchards or vines on any tract sold, and take care of the same this year. Lots will be sold on easy terms, and the projectors will make great efforts to establish one of the most notable colonies in California.

THE new depot of the S. P. at Los Angeles was opened New Year's Day with a ball given by the railroad employees. The structure is 507x90 feet. The main waiting-room is 64x57 feet, the baggage-room 60x36 feet, and all appointments are of the best. The depot will not be used for some time, as a question of right of way has not been settled.

R. R. TAXES PAID—On the 28th of December the Southern Pacific Co. paid into the State Treasury at Sacramento taxes for 1888, amounting to \$521,679.70.

A POSTOFFICE has been established at Orosi, Tulare county, and O. C. Goodin appointed postmaster.

California Products at Chicago.

CHICAGO, Jan. 9.—Easter Beurre pears are the only green California fruit remaining on the market; they sell in a small way at \$3.25@3.50 per box. Oranges are quite plenty; Florida and Mexico sending in all supplies. Large fruit is rather easy. Smaller sizes, when of good quality, meet with fair sale and rule rather steady. Some stock arrives in bad order and has to be sold for lower prices. Prices rule at \$2.40@6 per box, according to kind and quality.

California dried fruits remain steadily held at late quotations; trade, however, is very quiet, quotable as follows:

Appricots—Evaporated, bxs, 15c; bleached, bxs, 14c; do, sun-dried, sks, 9@10c. Peaches—New, bleached, unpeeled, 8½@10c; do, peeled, bxs, 14@15c; do, sun-dried, sks, unpeeled, 6½@7c; do, new, evaporated, unpeeled, 10@11c. Nectarines—White, bxs, 9@12c; do, red, bxs, 8@11c; do red to white, sks, 7@10c. Plums, new, pitted, 9@11c; new do, unpitted, 4@7c; Prunes, according to size, in sks, 5@9c; Silver, 10@13c.

Raisins—Loose Muscatels, old, per box, \$1@1.16; do, new, \$1.30@1.60; London layers, new, \$2.25@2.40.

Choice grades of hops are meeting with moderate sale, and as the quantity is not large a steady feeling prevails. Hops, more or less off in quality, however, are in fair supply but rather slow. Prices were ranging as follows: Pacific Coast, prime, 22@24c; do, fair to good, 18@20c; do, low grade, 14@16c.

Beans rule steady; the market, however, appears to be rather quiet. Off-rings are not large, and the supply may be said to be about fair. Quotations range as follows: California pea beans, \$1.95@2; Lima beans, California, per lb., 4½c.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 220 Market St., S. F.

FOR WEEK ENDING DEC. 25, 1888.

- 395,096.—FIRE ALARM—Alex. Watson, S. F.
- 395,097.—CANDLESTICK—G. Wernitz, Placerville, Cal.

NOTE.—Copies of U. S. and Foreign Patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

CHOICE POLAND-CHINAS IMPORTED.

Andrew Smith of Redwood City, who is famous on this coast as a successful breeder of dish-faced Berkshire swine and an habitual prize-winner at State and district fairs, has had so many inquiries for Poland Chinas, also, that he has decided to breed the latter as well as the former. He has just imported, from the very best blood to be found in the Western States, two boars and four sows of different strains, at prices ranging as high as \$100 per head (exclusive of freight charges), and will soon be in position to supply young Poland-Chinas, as well as Berkshires, according to the preferences of buyers.

Mr. Smith informs us that his sales for 1888 exceeded 100 head of both sexes, his customers being found not only in California, Oregon and Washington Territory, but also in Honolulu, Mexico, Central and South America; and he has heaps of letters from purchasers, who express unvarying satisfaction with the animals he has forwarded to them. His latest importation of Berkshires from England is now on the way hither.

His prices are reasonable, being but \$20 apiece for pigs of either breed, old enough for safe shipment, nicely boxed and delivered free on board, with feed sufficient for transportation any ordinary distance, every animal being guaranteed, the same as has been his custom heretofore.

Mr. Smith is making arrangements to have their pictures taken, and we hope in the course of a few weeks to be able to show our readers original portraits of some of the choicest swine in his unequalled breeding-herd.

What Every Subscriber Should Have.

AN EASY BINDER.—A. T. Dewey's Patent Elastic Binder, for periodicals, music and other printed sheets, is the handiest, best and cheapest of all economical and practical file binders. Newspapers are quickly placed in it and held neatly, as in a cloth-bound book. It is durable, and so simple a child can use it. Price, size of Mining and Scientific Press, Rural Press, Watchman, Fraternal Publishing Co.'s journals, Harper's Weekly and Scientific American, 85 cents; postage 10 cents. Postpaid to subscribers of this paper, 50 cents. Send to this office for illustrated circular. Agents wanted.

Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

S. F. MARKET REPORT

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Jan. 9, 1889.

There was more general trading the past week in farm products, causing a steadier feeling in some of the cereals and higher prices for wheat. Clear skies and drying weather allowed the starting of more plows in localities where heavy rainfalls had interfered with outdoor work. At the East and also abroad the wheat market showed more strength, with a slight gain in prices.

LIVERPOOL, Jan. 9.—Wheat—Firm. California spot lots, 7s 7d to 7s 10d; off coast, 39s; just shipped, 39s 6d; nearly due, 39s 3d; cargoes off coast, quiet but steady; on passage, not much demand; Mark Lane wheat, very few buyers in market; English country markets, firm; French, steady; wheat and flour in Paris, steady; weather in England, some rain.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt:

	Jan.	Feb.	Mar.	Apr.	May.	June.
Thursday	75 1/2	75 1/2	75 1/2	75 1/2	75 1/2	75 1/2
Friday	75 1/2	75 1/2	75 1/2	75 1/2	75 1/2	75 1/2
Saturday	75 1/2	75 1/2	75 1/2	75 1/2	75 1/2	75 1/2
Monday	75 1/2	75 1/2	75 1/2	75 1/2	75 1/2	75 1/2
Tuesday	75 1/2	75 1/2	75 1/2	75 1/2	75 1/2	75 1/2

The following are the prices for California cargoes for off coast, nearly due and prompt shipments:

	U. C.	P. S.	N. D.	Market.
Thursday	39-3d	39s 1/2	39s 3/4	Steady.
Friday	39-3d	39s 1/2	39s 3/4	Steady.
Saturday	39-3d	39s 1/2	39s 3/4	Firm.
Monday	39-3d	39s 1/2	39s 3/4	Steady.
Tuesday	39-3d	39s 1/2	39s 3/4	Steady.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York:

Day.	Jan.	Feb.	May.
Thursday	100 1/2	102 1/2	100 1/2
Friday	100 1/2	102 1/2	100 1/2
Saturday	101	102 1/2	100 1/2
Monday	101 1/2	102 1/2	100 1/2
Tuesday	101 1/2	102 1/2	100 1/2

The closing prices for wheat have been as follows, at Chicago:

Day.	Jan.	Feb.	May.
Thursday	101 1/2	102 1/2	100 1/2
Friday	101 1/2	102 1/2	100 1/2
Saturday	101 1/2	102 1/2	100 1/2
Monday	101 1/2	102 1/2	100 1/2
Tuesday	101 1/2	102 1/2	100 1/2

The Foreign Grain Trade.

LONDON, Jan. 7.—The *Mark Lane Express*, in its weekly review of the British grain trade, says: Freezing and foggy weather encourages wheat farmers. Owing to good reserves of the leading cereals the exchanges have not shown the buoyancy which frequently characterizes the opening of the new year. There is but little change in prices from those of December. There is improved retail inquiry. Three cargoes of California wheat have been sold. One cargo sold at 38s 9d for 15,230 quarters and two cargoes at 39s. English wheat was firm. The prices of foreign showed a hardening tendency. Flour was dearer, and the opinion prevails that the best English is kept too high. Round corn was firm, but flat was 3d cheaper. Beans and peas declined 6d. The demand was disappointing. Oats were 3d dearer for lighter sorts, owing to the close of Russian navigation.

Eastern Wool Market.

NEW YORK, Jan. 4.—*Bradstreet's* says: Though trade in wool reached only moderate proportions this week, the year opens with a strong undertone and fair prospect for continued activity. Many manufacturers are still in need of supplies, and their purchases ought to be more liberal soon. Coarse, heavy-weight goods are finally settled. It is generally thought somewhat higher prices for fabrics will be secured during the coming season than were obtained last year. The *American Wool Reporter* estimates supplies of wool in various markets of the country at 80,189,157 lbs., as against 124,995,096 a year ago, not including stocks of foreign wool in bond, which amount to 12,973,802 lbs. at Boston alone. Manufacturers have more material on hand than a year ago, when the market was falling instead of rising. This, of course, must be taken into account in the estimates of supplies for the coming season. Sales will be resumed at London on the 29th, when good selections promise to be offered. At Philadelphia the volume of business has been moderate, but sales have exceeded receipts and stocks are steadily dwindling away. The total supply in this market at the close of the year is estimated to have been not over 8,000,000 lbs., which is nearly 50 per cent less than the stock available a year ago. The market is very strong, but there is no quotable change from last week's prices.

BOSTON, Jan. 4.—The new year opens with a very strong market for wool, with dealers in a very confident mood. The demand was not very active during the week, but this is nothing unusual for the initial week of the year, trade being usually quiet at this time. It is a noticeable fact that for many years there has not been such a buoyant feeling prevalent at this season as can be found to-day. Throughout the country stocks show material falling off compared with a year ago, and the tendency of prices is consequently upward. There is still some uncertainty about the position of heavy-weight goods, but the bulk of opinion seems to be on the side of higher prices before the season advances much further. Medium wools of all kinds are a very strong feature of the market. Total sales 2,264,300.

California Products at Chicago.

See page 41.

Miscellaneous.

NEW YORK, Jan. 7.—Fine raisins are out of first-class hands here, and in New England many loose remain rated as poor, because overcured. Lima beans are steady, with a glimmer of improvement.

Hops—Shippers are more disposed to recognize quality and merit and bid higher for selection. State and Oregon of lower grades are neglected and receipts are falling off. Exports for the week were 893 bales. Good to best State was quoted at 18@22 1/2c; other, 15@17c; Pacifics, 16@21c; all old, 5@12c.

Local Markets.

The following tables give the highest and lowest prices paid on Call during the past week:

	WHEAT.	S. S.	R. S.	B. '89.	S. '89.	Jan.
Thursday	140	140	140	140	140	140
Friday	140	140	140	140	140	140
Saturday	140	140	140	140	140	140
Monday	140	140	140	140	140	140
Tuesday	140	140	140	140	140	140

	Buyer Season.	Seller 1889.	Buyer 1889.
Thursday	90	89 1/2	90 1/2
Friday	90	89 1/2	90 1/2
Saturday	90	89 1/2	90 1/2
Monday	90	89 1/2	90 1/2
Tuesday	90	89 1/2	90 1/2

BAGS—Holders of Calcuttas report a strong tone to the market at 7 1/2c for June-July delivery.

BARLEY—There is no life to the market. On Call, options are inactive, with transactions barely affording a basis for quotations of futures. The stock here consists largely of poor grades.

The following are to-day's Call Board sales: Morning Session: Buyer season—200 tons, 89c; 200, 88 1/2c per cwt. Afternoon Session: Buyer season—100 tons, 88 1/2c per cwt.

BUTTER—Heavy receipts and a strong selling pressure have sent values to a still lower range, but at the close a steadier feeling is reported, owing to more buying orders coming in and receipts lessening.

CHEESE—The market is barely steady under a light demand and a desire in some quarters to clean up stocks.

EGGS—Under light receipts the market strengthened, but with unexpected supplies received from the central markets, the closing is weaker.

FLOUR—The market is without essential change. The demand is about as heretofore reported.

WHEAT—The past week has witnessed a stronger market, with buyers of sample parcels bidding an advance, but owing to holders' advanced views, trading was light. On Call, dealings in futures have been more active with a steady advance, under strong buying in all options.

The following are to-day's Call Board sales: Morning Session: Buyer 1889—300 tons \$1.56; 100, \$1.55 1/2; 300, \$1.55 1/2; 600, \$1.55 1/2; 200, \$1.55 1/2. Buyer Season—200 tons, \$1.58 1/2; 600, \$1.58 1/2; 1700, \$1.50 per cwt. Afternoon Session: Spot, season's storage paid—100 tons, \$1.44 1/2; Buyer 1889—100 tons, \$1.54 1/2; 400, \$1.54 1/2; 300, \$1.55. Buyer season—100 tons, \$1.49 1/2; 400, \$1.49 1/2 per cwt.

Market Information.

Cereals.

The *Mark Lane Express*, Dec. 17th, says: The foggy and disagreeable weather which has prevailed in the great cities, and especially in London, should not lead us to forget that the past week, agriculturally speaking, has been of a distinctly seasonable character. Undue forwardness in the growth of wheat plant has been satisfactorily checked by the fall in the temperature and by the night frosts, at the same time that these latter have not been severe enough to penetrate at all deep into the soil, or do any injury to the grain in the ground. This autumn's sowings of wheat may now be regarded as having made a promising start; they were well-rooted and have come up well; a winter of seasonable, without excessive, cold should hand over to the spring a large acreage of wheat land promising to atone in 1889 for the deficient quantity and quality of the previous year.

The *London Farmer and the Chamber of Agricultural Journal* says: It is now stated that a great flour ring is being formed from the Tweed to the Humber. As much as £2,000,000 has been underwritten in connection with this movement, which, by the way, does not stand from the financial point of view on all fours with the salt trust. The American and European millers, to say nothing of the exporters of the raw material (including India), will have to be reckoned with. However, it is thought that if local competition were suppressed by the proposed trust, an increase to that extent might be made without opening the gate too wide to the foreigner. Next it is calculated that savings could be effected on railway transit, competition leading to unnecessary movement of flour from one district to another, on salaries of travelers, and on other payments to middlemen, which, taken together, would mean another 15 per cent, or in all £200,000 per annum, which would be equal to ten per cent on a capital of £2,000,000. That is the scheme briefly on paper, but its basis is questioned by men fully conversant with the trade.

The wheat market holds very strong, with an advance bid for the more choice shipping and milling grades. The general feeling among holders is that there will be a much higher range of values before spring fairly opens. Acting under this impression, the selling offers are light, and when any parcel is put on the market it is at a higher figure than quoted by buyers. Yesterday, Tuesday, a bid of \$1.45 was made for a sound parcel of milling delivered at Stockton, but declined, owing to a much higher price being obtainable there. The same day an offer of \$1.45 was made for a parcel of good shipping, Port Costa delivery. It is claimed that the quantity of wheat unsold is quite large, but not, taking the State as a whole, equal to that unsold at this date in 1888. The inroad made by Oregon millers into the China flour trade cuts off quite a slice from the outlet for California flour; this necessarily reduces the wheat requirements of our millers.

Plowing is reported to be very active in the agricultural districts. From all that can be ascertained, the acreage of summer-fallow seeded to wheat is a full average, while the winter-seeded will be considerably larger than at any time within the past four or five years. While this is the case it is out of the question guessing as to what the outcome will be this year, for that is contingent on the spring rains.

Barley is very dull. This is said to be due to an entire absence of any speculative movement, and al-

so to large consumers either well stocked or else confining their purchases to as small parcels as possible. Large handlers of the grain report the supply of good to choice grades of feed, brewing and Chevalier to be quite light, but that the poorer grades of feed are in heavy supply. There is some buying of better grades of common barley for seed purposes at 85 to 90c per cwt, and of Chevalier at \$1.40 to \$1.60. It is very generally claimed that the acreage that will be put into barley this year will be less than either in 1888 or 1887.

Oats continue to crowd the market, causing buyers to bid down for all parcels offered for sale. The stock now here is fully double that held at like time in 1888. The surplus in Oregon and Washington which is seeking this market is a source of surprise, and creates more or less of a demoralized feeling with the trade, and causes buyers to hesitate in meeting their wants.

Corn is, if anything, more inactive than last week, with a still lower range of values quoted by dealers. Consumers are indifferent, unless offered further inducements in the way of concessions.

Rye and buckwheat are slow, with quotations more or less nominal.

Fruit.

Eastern apples continue to press the market, causing a lower range of values to obtain, although choice hold comparatively fairly firm. The receipts of Oregon are fair, with the more choice received moving off quite freely at relatively better prices than the Eastern do.

In citrus fruits the general trade shows more activity owing to a lower range of values for oranges under heavy receipts. The distributive demand is increasing, principally from the north. Limes and lemons show few changes. The shipments of oranges overland are increasing, with the more choice going forward.

In dried fruits there is absolutely nothing doing. A large holder tried the market yesterday, but except at lower prices for immediate delivery buyers would not operate. It is claimed that with the February and March demand more will go out on orders to distant points, when large distributors will come in as buyers.

Raisins are dull and heavy, with buyers only tempted by marked concessions in prices, which holders will not submit to, believing that before the next season the trade will take all that there is here.

Feedstuff.

Ground feed moves more slowly, but lessened receipts keep prices from shading off much. Consumers only buy in a hand-to-mouth way, and any selling pressure is met by lower bids.

It is claimed that with clearer weather and improved roads the delivery of hay will be larger; laboring under this impression, buyers confine their purchases as much as possible. Holders, so far as can be learned, express confidence in the market, and will only name lower prices so as to effect sales for the poorer grades, believing that the light obtainable supply of choice justifies full figures. The consumption is large, considering the improved pasturage reported in all parts of the State.

Vegetables.

Cabbages are slow at the low prices. Los Angeles is now sending us string beans, green peas, cucumbers, tomatoes, egg plant and green peppers. Owing to the high prices, the demand is light.

The potato market is irregular; while some are higher and strong, others are weak. Oregon Burbank that came to hand by the last steamer were placed at \$1.20 per cental. The more choice grades of potatoes move fairly well, but the poorer grades are slow. The surplus in the Salinas valley and in Oregon is reported to be very heavy. Sweet potatoes are strong at an advance.

Choice onions are wanted, and fetch good prices compared with values in December, but poor are hard to sell. The market is overstocked with poor and defective, which sell "as is" at from 20 to 50c a sack. Selected onions fetch more money.

Live-Stock.

Both bullocks and mutton sheep show a weaker tone under freer obtainable supplies. The improved roads, without rains soon, will, it is claimed, allow freer deliveries at shipping points and cause more competitive selling. But on the other hand, the selling interest claim that owing to better pasturage stockmen will want their stock to take on more flesh before selling. Fresh milk cows are scarce at an average range of from \$30 to \$50 a head. In horses the market is without change. Hogs are wanted for the block and fetch good prices. The supply continues light.

The market for dressed meat is quoted as follows by slaughterers to butchers (to get the price of stock on foot, take off one-third of the price for stall and grain fed and one-half from the price of grass fed, that is animals running at large).

HOGS—On foot, grain fed, 6 1/2@6 3/4c per lb.; dressed, 9@9 1/2c per lb.; soft, 5 1/2@6 1/2c per lb.; dressed, 8 1/2@8 3/4c per lb. Stock hogs, 4@5c per lb. BEEF—Stall fed, 8@8 1/2c per lb.; grass fed, extra, 7 1/2@— per lb.; first quality, 6@7c per lb.; second quality 4 1/2@6 1/2c per lb.; third quality, 4@5c per lb.; fourth, 3@4c per lb.

VEAL—Small, 8@10c per lb.; large, 6@8c. MUTTON—Wethers, 6 1/2@7c per lb.; ewes, 6@6 1/2c per lb.; lamb, spring, 7@9c per lb.

Miscellaneous.

From the *Commercial News* of Jan. 8th, the following summary of tonnage movement is compiled:

	1889.	1888.
On the way to this port	179,991	254,532
On the way to neighboring ports	39,508	55,805
In port, disengaged	20,649	107,204
In port, engaged for wheat	44,501	26,225

Totals.....284,649 443,766

To get the carrying capacity, add 60 per cent to the registered tons as given above.

From July 1st to Jan. 8th, the following are the exports from this port:

	1889.	1888.
Wheat, cts.	7,659,484	4,876,047
Flour, bbls.	352,213	371,621
Barley, cts.	1,062,540	378,906

Poultry has a firmer tone for choice hens, roosters and ducks, but turkeys are weak. Eastern continue to come to hand, causing prices for dressed to be shaded on free receipts.

Beans are slow, with a weak tone to the market. Poor grades are placed with considerable difficulty

even at concessions. The East is not drawing freely as yet.

In grass seeds the feeling is weaker, with a lighter call reported.

Yellow mustard seed is in liberal supply, dull and heavy, but brown mustard is in light supply and being in good inquiry commands full prices, particularly for choice.

Honey is in light supply, with holders asking full prices.

In wool there is very little doing, owing to assortments being badly broken. It now looks as if the market will be cleaned up before this year's clip comes on.

Hops are dull and heavy, with no improvement in the demand looked for until after this month.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations while very poor grades sell less than the lower quotations. WEDNESDAY, Jan. 9, 1889.

To pay the delinquent installment, together with costs
of advertising and expenses o sale.
A. D. LOGAN, President,
FRANK McMULLEN, Secretary.

Injurious Insects of the Orchard, Vineyard
Field, Garden, Conservatory, etc.,
—WITH—
Remedies for their Extermination.
By MATTHEW COOKE.
Late Chief Executive Horticultural Officer of California.
Illustrated with over 750 wood-cuts and 25 pages of classi-
fied illustrations. This book is designed for the use of
orchardists, vineyardists, farmers and others interested
in the subjects treated. It is designed to convey practical
information concerning some of the species of in-
sects injurious to the industries of cultivators of the
soil, and those interested in earth produce generally.
Price \$4, postpaid. For sale by DEWEY & Co., publish-
ers, 220 Market St., San Francisco.

Los Angeles, Cal., Jan. 7, 1889.

Japanese Oranges.
We caution parties against buying trees from inex-
perienced Japanese and other irresponsible parties who
have been shipping Orange Trees here under different
names. Many farmers, etc., had a severe lesson last
season, losing, in some instances, four-fifths, without the
prospect of a single one being replaced. We were the
first to introduce the OONSHIU to the notice of orchard-
ists, recommending it strongly, and will replace any
trees that die after receiving proper care. Our importa-
tions, so far, are over 100,000, and we do not offer any
that have not been acclimated in our (7) nurseries at
least a year.
New arrivals preserve their leaves for a time, but
sooner or later wilt nearly to the ground, the result of
the long voyage and the disinfecting process. Our Mr.
H. E. Amore has lately returned from China and Japan,
where he has lived for nearly 28 years, and will be happy
to correspond with any one interested in the Citrus and
other fruits of Japan. We employ nearly 40 Japanese
gardeners, and are planting out on shares, in different
parts of the State, trees against land, feeling perfectly
assured of pecuniary success. See various complimen-
tary notices in PACIFIC RURAL PRESS, San Francisco
Chronicle of Dec. 3d, etc.
JAPANESE TREE IMPORTING CO.,
120 Sutter St., San Francisco.

DIVIDEND NOTICE.
The German Savings and Loan Society,
526 California Street.
For the half-year ending December 31, 1888, a dividend
has been declared at the rate of five and one-tenth (5 1-10)
per cent per annum on Term Deposits, and four and one-
fourth (4 1/4) per cent per annum on Ordinary Deposits.
Payable on and after Wednesday, January 2, 1889.
GEO. TOURNEY, Secretary.

POLLED ANGUS CATTLE
For Sale.

We are authorized to offer at Private Sale a choice
herd of POLLED ANGUS CATTLE, 15 head, comprising
one bull two years old, weight about 1800 pounds; ten
two-year-old heifers; two yearling heifers and two
calves. The heifers will weigh from 1200 to 1400 pounds.
These are a superior lot of cattle and offer a fine oppor-
tunity to any one desiring to found a herd of this popu-
lar breed. For further particulars apply to
KILLIP & CO.,
22 Montgomery St., San Francisco.

Dewey & Co.'s Scientific Press
Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY
presents many and important advantages as a
Home Agency over all others, by reason of long
establishment, great experience, thorough sys-
tem, intimate acquaintance with the subjects of
inventions in our own community, and our
most extensive law and reference library, con-
taining official American and foreign reports,
files of scientific and mechanical publications,
etc. All worthy inventions patented through
our Agency will have the benefit of an illustra-
tion or a description in the MINING AND SCIENTIFIC
PRESS. We transact every branch of
Patent business, and obtain Patents in all coun-
tries which grant protection to inventors. The
large majority of U. S. and Foreign Patents
issued to inventors on the Pacific Coast have
been obtained through our Agency. We can
give the best and most reliable advice as to the
patentability of new inventions. Our prices
are as low as any first-class agencies in the
Eastern States, while our advantages for Pacific
Coast inventors are far superior. Advice and
Circulars free.

Nuts, Prunes and Grapes.

The Largest and Finest Collection of "Nut-Bearing" Trees to be found in the United States.

- 21 Varieties of Walnuts.
- 9 Varieties of "Marrons," Or French Chestnuts (solely propagated by grafting).
- 10 Varieties of Filberts (propagated by layering).
- 4 Varieties of Almonds.

HEADQUARTERS OF THE PREPARURIENS Or Fertile Walnut.

Introduced into California in 1871 by FELIX GILLET.

"Second" Generation Preparuriens
(California Grown).

GRAFTED WALNUTS.

"Barren Hill Nurseries" is the only establishment in the United States where grafted Walnuts may be found. The finest French varieties, highly recommended for the size, beauty and quality of the nuts; fertility and hardiness of the trees. Foremost among them: Mayette, Parisienne, Franquette, Chaberte, Meylan and Vourey.

PRUNES!

The purest types of the French Prune or Prune D'Ente, from the Valley of the Lot, France, viz.:

- Lot D'Ente,
- Mont Barbat D'Ente,
- Fuymiroi D'Ente.
- Also Saint Catherine Prune,
- "True from the root."

231 Varieties of Grapes, from all parts of the world, including the earliest Table Varieties known, some of them 25 days earlier than Sweet Water.

61 Varieties of English Gooseberries, all shapes, colors and sizes.

April Cherries, Apricots, Pears, Figs, etc.
French, English, German and American Strawberries.

ORANGES and LEMONS.

Portugal Orange,
Blidah (Algeria) Mandarin Orange,
Corsica Lemon.
Large Fruited Lemon.
Imported from the south of France and expressly grafted for the California trade.

GRAFTING THE WALNUT,

By FELIX GILLET, of Nevada City, Cal., an essay on the different modes of Budding and Grafting the Walnut, so difficult to graft; illustrated with eight cuts made after nature and of natural size. Will be sent with Descriptive Catalogue, under the same cover, to any address on the receipt of 25 cents in postage stamps.

Send for General Descriptive Catalogue, illustrated with 37 cuts, representing Walnuts, Chestnuts, Almonds, Filberts, Prunes, etc.

CAUTION!

I do hereby caution Nurserymen all over the United States, that have been in the habit of stealing my Walnut and Chestnut cuts, and appropriating them to the cuts that they do not represent, that I have had all the cuts of my General Descriptive Catalogue and those of my Essay on Grafting the Walnut duly "copyrighted," and that hereafter I will prosecute any one guilty of such contemptible piracy.

FELIX GILLET,
NEVADA CITY, CAL.

SALZER'S WHITE WONDER OATS.

PROLIFIC

Over 100,000 customers of 1888 gladly testify that they INCREASED ALL YIELDS. Yes, often DOUBLED them by sowing SALZER'S NORTHERN GROWN SEEDS. Because no other seed is so full of life, vigor and vitality—so prolific and early as Salzer's.

OAT NOVELTY--WHITE WONDER!

This is the most wonderful Oat we have ever seen or heard of, and we have tested EVERY sort offered by EVERY seedsmen in America, but none come half way up to it in YIELD, vigor, beauty and quality. Scores of 1888 customers say: "SALZER'S GIANT FLAT DUTCH." Yielded 5 to 10 times as much as common oats! Its enormous yield is due to its great standing properties, long ears and plump kernels. Early, fine, wonderful.

\$750 in prizes for Largest Yield in 1889. See Catalogue about it. First Prize \$500. Who wins it? The farmer wants big crops. Well, he can have them every time by sowing my seeds—yielding on wheat, 40 bu., barley 70 bu., new corn 125 bu., potatoes 600 bu., etc. Headquarters for all Farm Seeds, Grasses, Clovers, LUCERNE CLOVER, MILLET and ENSLAVE CORN.

Floor area of seed store 2 acres. Potato cellar capacity 60,000 bu. 26 Packages Earliest Vegetable Novelties, post paid, \$1.25. Send 8c for Wonder Oat and Grain Samples or 10c for Giant Cabbage and receive elegant Catalogue.

NATOMA

Grand Opportunity

— TO ACQUIRE —

A Small Tract

— OF THE —

Best Fruit & Vineyard Land

Central California!

Reasonable Prices and Easy Terms.

BY ORDER OF THE

Natoma Water & Mining Co.

WE OFFER AT PRIVATE SALE

1000 ACRES!

— OF THEIR —

MOST PRODUCTIVE LANDS,

Suitable for Fruit, Vines and Vegetables, in subdivisions of

5, 10 and 20-Acre Tracts.

The tract now offered in subdivisions is situated on the south side of the American river, 18 miles from the city of Sacramento, the Capital of the State, adjoining the town of Folsom, and on the Sacramento and Placer-ville Railroad.

Two hundred acres are now planted in fruit, in full bearing; the balance of the land, 800 acres, is now ready to plant either in fruit or vineyards.

The soil is of a very superior quality, being a deep rich loam, well drained, and capable of producing every variety of fruits or vegetables, including the peach, apple, apricot, cherry, pear, plum, nectarine, quince, fig, almond and walnut. The topographical feature of this locality is the gentle slope of the land, insuring perfect drainage.

Facilities for Irrigation.

Water for irrigation and other purposes will be furnished to all who desire it at the Company's rates. The water is taken from the American river, near Salmon Falls, and the ditch has a capacity of 3000 miners' inches and a never-failing supply of water. All of the land now offered for sale lies below the ditch, and consequently can be irrigated therefrom. This is a very important item and greatly increases the value of the land, as by irrigation a sure crop can always be depended upon, even in the driest of seasons. The irrigating ditches run directly through the tract, and in addition to this, an unfailing supply of pure and soft water can be obtained from wells at a depth of from 40 to 100 feet.

Transportation Facilities.

The transportation facilities, a very important factor to all fruit-growers, are of the very best; the Sacramento and Placer-ville Railroad running through the orchard its entire length and having a receiving depot in the most central location on the tract, so that no fruit has to be hauled more than half a mile.

Why the Land Offered is a Profitable Investment.

The soil is of the best, being sandy loam and sediment, and adapted to the choicest quality of all varieties of fruits and vegetables. The property is located in that portion of the State where all fruits ripen early, and naturally command the highest prices.

The property is also situated in the central part of California, and in the center of a great fruit-producing section, and immediately adjoining the principal markets of the coast—by the quick transportation facilities which it enjoys.

The company will assist purchasers of their lands by giving them employment in preference to all others, furnish them water for irrigation at very low rates, assist them by their knowledge of the property in planting the different varieties of fruit and vines on the lands to which they are best adapted, furnish pasture for stock, and in fact they will at times be prepared to render such assistance to purchasers that will be of benefit to them in cultivating, selling and shipping their products.

The products of the lands of the NATOMA WATER AND MINING COMPANY have always commanded the highest market prices both on the Pacific Coast and in the Eastern market. The fruit is loaded in the cars on the property and is transported intact to its destination in the East and other markets, a facility of transportation that is of the greatest importance, and with these great advantages prosperity is assured, and to day there is no better field for solid and profitable investment on the Pacific Coast, as these lands are offered at prices below those of other lands not so advantageously located, and not paying an immediate income.

The portion of the property set out in orchard is all in bearing; thus purchasers will at once receive an income, thereby enabling them to pay for the land from the products. Good soil, abundance of water, healthy climate, easy of access, close proximity to schools and churches, with low prices and easy terms combine to make the purchase of these lands the most profitable investment ever offered.

A Foothill Peach.

We give on this page a photo-facsimile by the Dewey Engraving Co. of a California seedling peach which is coming into great popularity in Placer county. The plate is one of the series of photo representations of new California varieties, which will appear in Mr. Wickson's book on "California Fruits and How to Grow Them" which is now in the hands of the printer, and of which a definite, formal announcement will appear in an early issue. The picture is from a photograph of a specimen of the fruit sent us last summer from Placer county. During the transmission, the leaves became badly wilted and shriveled, hence their unhandsome appearance in the plate. The fine form of the peach is, however, easily discerned and a statement of its origin and qualities will be read with interest by peach-growers.

The fruit is the Albright Cling, which originated on the farm of a grower, whose name it bears, in the neighborhood of Placerville, El Dorado county. Our notes on the fruit include a statement of P. W. Butler of Penryn, that in 1882 he heard of the fruit and went to visit the orchard of Mr. Foster, near Placerville, who had, at that time, about 600 trees of this variety in bearing. Mr. Butler found the trees laden with fully ripened peaches of remarkably fine form, color and quality. As compared with Orange Clings growing near by, the Albright Cling was more highly colored, of better flavor, and the tree a more prolific bearer. Mr. Butler assures us that he has never seen peaches of larger average size than those in the orchard of Mr. Foster, where they had plenty of irrigation.

The ripening season of the Albright at Penryn is from August 15th to 30th, while at Placerville it is a week later. The peach, as the engraving shows, is almost perfect in shape and it is more regular and less liable to be misshapen than some other favorite varieties. Its colors are those of the Orange Cling but apparently more intense, and its flavor and general quality unexceptionable.

Naturally being so favorably impressed with the peach, Mr. Butler secured stock of it, and in 1888 he gathered about 4000 boxes from 1000

trees four years old from dormant bud, or three years old as the age of trees is usually counted.

The experience of Ira F. White, Willard Hazen and other growers of the Albright peach in the Placer-county peach region is, as we understand, enthusiastically in favor of the variety. The following is Mr. Butler's enumeration of its excellencies: Very fine in appearance and high colored; perfectly and uniformly shaped; large and regular in size; tree of good habit and a strong grower, and capable of sup-

POTENT THOUGH SILENT pleas in favor of protecting Californian industries have been made in the Senate cloak-room at Washington by Senator Stanford, who has been having samples of our fruit products placed there, day after day. "On one occasion," says a correspondent, "it may be a box of Fresno raisins, and handfuls of the delicious fruit are greatly relished. At another time it will be a basket of figs, often finer than any the Senator ever saw before. Then it will be Riverside oranges, large and luscious,

Desert Lands in Lassen.

At the second session of the Forty-third Congress, and two years prior to the general desert-land law, there was passed an Act providing that any citizen of the United States may file with the proper local land officers a sworn declaration of his intention to reclaim a tract of desert land situated in Lassen county, Cal., and not exceeding one section, by conducting water upon it so as to reclaim all said land within two years. The Act was designed to cover all public lands within the county (excluding mineral and timber) which do not produce grass, or will not, without such reclamation, produce any agricultural crop. On making satisfactory proof within the time specified, that the whole tract described has been reclaimed in the manner aforesaid, the applicant is entitled to enter the land at \$1.25 per acre and receive a patent therefor.

At that time several San Francisco capitalists became interested in a project for tapping Eagle lake by means of a tunnel, 18 feet below its surface, and thence irrigating a wide area; but after \$200,000 or \$300,000 had been expended in furtherance of this plan the work was suspended, though not abandoned, by those who have

porting a large crop; pit, small; flesh, rich yellow, remarkably tender and juicy, and remains in eatable condition for a longer time than any other peach known to him.

The last point was enforced upon Mr. Butler's observation in this way: In gathering for drying he found that the culls which had been rejected in packing for shipping as under-sized and were allowed to hang on or lie under the trees for two weeks after picking for shipping had stopped, were found to be perfectly sound and good even for a period of two weeks after reaching a good eating condition. Mr. Butler does not know another peach which has such durability. A sample-box of this fruit sent to this office the first week in September fully attested this characteristic as noted by Mr. Butler.

We understand that the Albright Cling made an excellent shipping record this season and seems destined to become one of the coming peaches of the yellow cling style in regions to which it proves itself to be adapted.

and the arrival of a box is whispered around the chamber until every Senator who knows the quality of 'Stanford's oranges' has buried his lips in their sweet, juicy pulp. When everybody has satisfied himself as to the quality of the fruit which happens to be on exhibition, Senator Stanford incidentally remarks that the fruit-raising industries of the United States must be protected from competition on uneven terms with the fruits of foreign lands. The argument is unanswerable." The Senator is also reported mindful of our beet-sugar producers and will not give his consent to any tariff changes which threaten to militate against that interest.

JAMES G. SWAN, U. S. Fish Commissioner, has received notification from Washington that a carload of lobsters has been shipped to Port Townsend, W. T., for transplanting. Scow bay, opposite Port Townsend and near Point Wilson, has been chosen for lobster-beds.

most money there invested. Meanwhile—we are informed by a gentleman who has himself staked a good deal on his faith in the Susan River valley's future—too many "innocent victims" have been led by real-estate schemers to sink their money in land which they have no means of reclaiming. And he says the public should be made aware that while there are myriads of acres of public land still open for settlement in Modoc and Lassen, yet for successful farming on most of these tracts irrigation is quite indispensable. There is, therefore, ample room for private enterprise in the line of developing water and constructing storage reservoirs at the base of the mountains in these counties; but no one should be induced to buy out "claims" unless a supply of water is guaranteed.

THE Riverside Press says more bona-fide sales of real estate are now made than one year ago.

SHEEP AND WOOL.

The Wool-Growers' Program.

J. H. Kirkpatrick, the well-known California wool-grower, who is now in Washington attending a meeting of wool-growers, sends us the following letter from Hon. Columbus Delano, president of the National Wool-Growers' Association, which describes the position of the organization with reference to pending tariff legislation by Congress:

The wool schedule in the Senate Tariff Bill as it now stands fails to give such protection as the wool-growing industry requires. If no better assistance is afforded this pursuit when the tariff bill is enacted into law the flocks of the United States will continue to decline in numbers, and the clip will diminish in quantity as rapidly as they have done since the Act of 1883.

Protest against the injustice of this schedule would have been made sooner had not the adjournment of Congress and other circumstances rendered it apparent that such protest had better be delayed until Congress again convened. It is known to those familiar with this subject that the carpet manufacturers, and some other manufacturers who desire free wool, procured the changes in the wool schedule, to which objection is now made, after that schedule had been agreed to by the producers, the dealers, and a part of the manufacturers. It can be easily demonstrated that the representations made before the Senate Committee or sub-Committee, in order to procure the present objectionable features of the wool schedule, were erroneous and misleading, and that the carpet manufacturers and their colleagues in this matter have no reason arising from their business to justify the demand they have made. No industry in the United States is in better condition than the carpet-manufacturing business, and none has been more prosperous for many years past, and none approaches nearer the condition of a perfectly protected industry. I know of one establishment that has made during the past five years more net gains than all the wool-growers of the United States added together have made. While this is said, it seems fit, in this connection, to refer to the condition of the wool-producing interest. Our flocks have diminished in numbers since 1883 to the full extent of 10,000,000, whereas they should have increased by the natural increase of the country not less than 10,000,000. Our annual clip has diminished in quantity to the extent of 55,000,000 pounds, and the price has been reduced not less than 20 per cent.

The reduction of the clip and the declination in price have created an annual loss of \$40,000,000. It does not seem just that a great agricultural industry (if it is so diversified as to prevent those who pursue it from fully presenting their claims to Congress) should be overlooked or neglected while marked and needless encouragement is afforded to a kindred but not more worthy business.

If all members of Congress could understand how important sheep husbandry is to agriculture in general, it would be much better for us.

This industry it is that makes useful our rolling and hilly lands that cannot be cultivated without destruction by reason of washing and waste when plowed and that are comparatively of little value except for grazing. And the advantage resulting from the fertilization of cultivated lands by means of sheep husbandry is an important consideration little known, but which, with increasing population, is growing constantly in importance.

The representatives of this industry have ever stood faithfully by the principle of protection. They and their friends and advisers have insisted that by so doing they would assist in establishing an economic system that will sustain all of our practical and useful industries. It is apparent that this system needs the aid of all its friends, and I am directed by some of those whom I represent to inform you that the wool growers cannot acquiesce in the present schedule, and that they intend to hold a meeting as soon as convenient to consider the situation and present to Congress and the people, if necessary, their just claims and demands, with their reasons therefor.

They respectfully urge the reconsideration of this schedule and the adoption of provisions relating to secured and carpet wool equivalent to those insisted on last summer.

More should be given—less will leave their industry in a condition to cause in future what has been seen in the past, a constant diminution in the number of our sheep and a steady decline in the quantity and value of the clip. This, in a short time, will substantially surrender to foreign nations an industry the importance of which is not now appreciated.

Wool-growers are impressed with the importance of the step they propose. They understand the necessity of harmony and unity among the friends of protection. They have made every concession compatible with the preservation of their industry; but events have forced upon them a conviction that the injustice which they have heretofore suffered is likely to be prolonged if not perpetuated by the passage of the bill now before the Senate of the United States.

They deem it best, therefore, to frankly advise Congress that if it is found impossible to afford the producers of wool no better encour-

agement than is offered in the present bill, those who pursue this industry will be compelled to determine each for himself whether to continue a fruitless struggle that has entailed constant loss and disappointment, or surrender to the inevitable, and abandon their business, relying upon the hope that the loss to the nation, resulting from the destruction of their industry, may soon lead to an economical policy sufficiently comprehensive and just to restore it.

C. DELANO,
Pres. Nat. Wool-Growers' Ass'n.

THE DAIRY.

Dairy Progress in Oregon.

At the Farmers' Institute held in Salem, Oregon, January 4th, there was an address by W. W. Baker of Portland, from which we take the following relating to the progress of the dairy in our sister State:

A little less than four years ago the butter industry of this State was so depressed by the large importations of imitation butter that to talk to any one about the advantages of the dairy industry was but to insult him. Butter was selling in the market at 10 to 20 cents per pound, and on April 1, 1885, it was estimated that there were from 40 to 50 tons in the city of Portland alone that could not be sold at even the price named.

The Oregon State-Dairy law went into effect at that time. By a vigorous enforcement of the law, the arrest and conviction of unprincipled dealers, the gang were glad to throw up their hands. They quit dealing in the article, and in less than six months butter had advanced to 20 and 30 cents.

It is estimated that each inhabitant consumes 26 pounds of butter per annum. Supposing that Oregon, including transient travel, has a population of 300,000 people, and that half that number bought their butter, they would pay the butter-makers for 3,900,000 pounds. This, at 15 cents per pound—the average price when the Oregon Dairy law went into effect—would amount to \$585,000; at 25 cents, the price since the advance, they will pay \$975,000, or a difference of \$390,000.

This is not all, and I always regret to stand as a lone witness when there is other proof at hand. In the fall of 1886, desiring to present valuable facts in my report to the Governor relative to the working of the dairy law, I had the following correspondence with business gentlemen in Portland:

PORTLAND, OR., Dec. 31, 1886.

Henry Everding, Esq.—I am aware that your dealings in dairy products are sufficient to enable you to form very correct ideas as to the present standard of Oregon dairy products. I would therefore be pleased if you would state in writing your opinion regarding the Oregon dairy products now as compared with 21 months ago, or in other words before the Oregon State dairy law went into effect. I would also esteem it a favor if you would give your opinion as to the influence of the Oregon dairy law.

Mr. Everding replied as follows:

Dear Sir: In reply to your favor of the 31st ult., I am pleased to say that I believe that our Oregon butter has improved in its quality at least 40 per cent during the last 21 months, or since the Oregon State dairy law went into effect. The banishment from our State of oleomargarine and butterine made a market for the cheaper Oregon butter particularly. The law has had the effect to stimulate the Oregon dairymen, for in the law they believe they have a friend.

Then again I am satisfied that if there had been no law regarding imitation butter there would not now be a creamery in the State. There are some six of these, and as a consequence, we are being supplied with good butter, to the exclusion of butter heretofore imported from other States. Yours truly,

HENRY EVERDING,
Commission Merchant, 47 Front St., Portland, Or.

I called on Messrs. E. Larsen & Co., commission merchants, corner of Washington and Front streets, who are large dealers in Oregon dairy products, and showed them a copy of the letter written to Mr. Henry Everding, as well as that gentleman's reply. Mr. Larsen wrote:

I endorse all said in Mr. Everding's letter, except I say that, in my judgment, the improvement has been from 35 to 40 per cent. Yours truly,

E. LARSEN & CO.

Then there were six creameries within our borders; now there are some 16, and new ones are going into operation every little while. The great success of the imitation butter traffic has, it is believed, induced manufacturers and dealers in other foods to adulterate them that it is now believed the State dairy laws have all had their day, and that we must meet the food adulterators by enacting laws which will cover the whole ground. In this connection I am pleased to note the fact that there will be a bill introduced in the coming Legislature to regulate the manufacturing, offering or selling of adulterated foods. Should such a law be enacted and properly enforced, it will be worth more than a million of dollars annually to the producers of this State.

Assuming that we have the very best climate and soil, and that our people will have the cows, and withal the intelligence and energy to make the North Pacific a land where no wolf will ever be seen at the door, may we not reasonably expect this will become a large exporting State in place of an importing one as now?

The Truth About "Johnson Grass."

EDITORS PRESS:—I am a new arrival upon this coast and have read a great many glowing "reports" in certain prominent seedsmen's catalogues regarding the virtues of evergreen millet for a dry soil. These reports claim it as a very valuable forage plant, and add that a fine quality of hay is produced if cut while green and tender.

In contradiction to these statements comes the sorrowful cry of one from Fresno in your issue of December 15, 1888, asking how to kill "Johnson grass," asserting that it is a worthless pest. Now I would really like to know the truth about the matter.

1. Is evergreen millet valuable for hay and grazing for cattle?
2. Does it become worthless after a few years?
3. Will it really stand the average summers of such coast counties as Mendocino and Humboldt?

4. Providing that the land is never required for any other purpose, would it pay to plant upon average corn land? Some of your rural readers are doubtless perfectly competent to answer the above queries from their own personal experiences, and in so doing will greatly benefit this section of Mendocino.

For the benefit of others, let me state my case. When I located here I found that the wool craze of a few years ago had ruined this section by overstocking with sheep. All the natural grasses had been eaten out and killed off by close feeding. Never giving anything eatable a chance to seed itself, the consequence is that a growth of worthless vegetation is the final result, as nature protests against going bareheaded. Camphor-weed, tar-weed, etc., have almost taken possession, and what we earnestly desire is to find out some robust perennial plant that will clean out all useless weeds—one that, once planted, will hold its own against all weeds, and at the same time withstand California's dry summers. This much, and more, is claimed for "Johnson grass," but before going to the expense of planting, I would like to learn from others.

I have heard of an Italian clover, said to be grown for trial in San Luis Obispo county, a perennial with a taproot like alfalfa and to withstand drought. Can any one give me any information regarding such a valuable plant? Where can the seed be obtained?

T. H. BURGOYNE.

Cummings, Mendocino Co.

THE VINEYARD.

Experience in Grape-Grafting.

Eli F. Sheppard of the Madrone vineyards writes for the *Bulletin* an account of his experience in grape-grafting, which is a subject widely occupying the attention of grape-growers at the present time. We quote as follows:

I wish to answer the numerous inquiries addressed to me by vine-growers in different parts of the State, regarding a method of grafting European vines upon American resistant stocks, which has been attended with success at the Madrone vineyards since 1885.

Until quite recently there has existed a popular distrust, if not a downright prejudice, against grafting vineyards on resistant stocks; first, because of the great labor and expense which the operation was believed to entail; secondly, on account of the added time supposed to be necessary to bring grafted vineyards into productive bearing; and thirdly, because of the accredited uncertainty generally of its success—the popular idea being, that the vine does not graft with the same certainty and ease as the apple, pear and other fruit trees.

After repeated practical experiments, extending over a series of years, and attended with uniform success, I feel warranted in saying that the planting of American resistant vines and grafting the same with European varieties is neither a very expensive operation, nor is it necessarily attended with any more uncertainty than the grafting of common fruit trees.

Like everything else, success in this matter is largely dependent, no doubt, upon the amount of care and skill bestowed in the performance of the work, and there is no reason to believe that like satisfactory results in grafting the vine may not be obtained by other methods than the one employed by myself; but as the method which I have pursued has proven uniformly successful, while other attempts have, in some instances at least, failed to give good results, it will scarcely be deemed presumption on my part to offer it as so much positive knowledge gained—knowledge of a subject of undoubted interest and importance to every California vineyardist.

Experience in France and in this country sufficiently demonstrates that all the native varieties of American vines, with the exception of the *Scuppernon*, successfully bear the vineifers; but up to the present, owing to the want of experimental knowledge of the subject, no particular process or method of grafting vines has been generally accepted as the best.

Experience has, however, shown that the really serious obstacle to successfully grafting vines, particularly on stocks of small diameter, arises from the difficulty of sufficiently excluding the air from the joint of the graft and in finding a suitable, convenient and easily

applied ligature for holding the graft securely in place while the union is being formed.

Numerous devices for the attainment of these objects have been recommended and tried with greater or less success. The most common method is the use of small pieces of hemp or cotton string, or cord of *Raphia*; but it is found that while these are about the best in general use, the material is liable to rot in wet seasons before a union has formed, and in dry seasons it has to be loosened once or twice, and finally cut away just as soon as the graft starts its growth, which is both tedious and expensive. Different kinds of wire have also been employed for the same purpose; but it possesses no elasticity whatever, is exceedingly difficult of application, and is always liable to strangle the young graft.

One of the cleverest devices perhaps is that of Mr. Comy, which consists of a flat elastic rubber band. It has been found, however, that a rubber band is too elastic to hold the graft securely, and as it will not rot it has to be cut away, which is both laborious and expensive; but none of the devices have proven entirely satisfactory, for the reason, mainly, that they are all more or less inconvenient and impracticable, and none of them are designed to sufficiently exclude the air from the joint during the time of union of the graft with the stock.

And just here another obstacle presents itself. It is well understood that the application of an absolutely impervious mastic or grafting wax to the joint of the graft is impracticable for the reason that it is liable to induce fermentation of the redundant sap, which causes a fatal rot of the roots of the vine.

The exclusion of the air from the joint must, therefore, be accomplished, if at all, by some method or agency which will absorb or permit the escape of the surplus sap from the stock. For this purpose the application of soft, porous clay has been used with satisfactory results in France and with varying success in California. But the labor of applying it and its constant tendency to crack and fall off in dry seasons renders its use too precarious for general adoption.

About five years ago, while conducting a series of experiments in grafting vines by the several methods above described, I conceived the idea of a modified, or partly waxed cotton bandage for tying the graft, the idea being to make it sufficiently impervious to the air, so adjusted as not to bring the wax in direct contact with the graft joint and which would allow the superfluous sap to escape.

My first experiments with these bandages were attended with the most gratifying results. Out of some 300 Semillon grafts on Lenoir stock, treated in this way, all except eight grew and flourished vigorously, while fully 12 per cent of the same varieties grafted in the ordinary way but otherwise equally well cared for and surrounded by like conditions, failed to unite and died outright. When I came to examine them later in the season, I discovered, what I have ever since observed—that the grafts with wax bandages had uniformly made a perceptibly smoother and more perfect union with the native stock than those by other methods.

Another equally gratifying result from the use of the waxed bandage is that it does not require to be loosened, as it has proved sufficiently expansive to permit the natural growth of the vine without strangling the grape or deforming the joint. Subsequent experience has demonstrated to my entire satisfaction that, if properly prepared and applied, the bandage does not require to be cut away, but rots off in due time, leaving a clean, healthy union without further interference or labor, after it is once put on. Last, but not least, it does not require to be tied when it is put on, an immense saving in labor. It only remains for me to add that in all my subsequent experience in grafting vines I have met with uniform success in the use of the waxed bandage. The following is the formula for preparing the same: Take old soft muslin—the coarser the better—cut it across the grain into narrow slips half an inch wide and eight inches in length; arrange the slips in bundles of 100 each, for convenience in applying the wax; melt, in a shallow iron pan, a pound each of beef tallow and beeswax, add four ounces of resin; heat the whole to the boiling point. Then take the bundle of prepared muslin slips and dip one-half its length only into the boiling liquid, take it out quickly and hang up in a cool place till the wax hardens; and the bandages are ready for use. The bandage so prepared is applied as follows: After carefully inserting the graft in the cleft, begin a little below the joint and wrap the dry or unwaxed end of the bandage closely and firmly three or four times, spirally upward around the cleft, completely covering it; when the waxed portion of the bandage is reached, draw it tightly around, going spirally downward and over the now covered cleft joint until the whole is completely inclosed, air-tight, with the waxed cloth. Press the bandaged joint gently between the thumb and forefinger to close up any exposed points, and carefully cover up the graft to the terminal bud with dry, fresh earth.

Any workman with ordinary skill and intelligence, after mastering the theory of grafting, may be safely intrusted with the work, provided he exercises a proper amount of care. A careless man should never be intrusted with grafting vines under any circumstances. As a rule, I have found that green, inexperienced men, who were willing to receive instruction from me, succeed better than those—and there are plenty such—who think they "know more than the boss."

THE LUMBERMAN.

Our Lumber Interests.

The past year has afforded to the lumber-mills on the Pacific Coast the longest and most profitable season they have enjoyed for many years. Quite recently, however, the prices of lumber have fallen to a very low figure, but even this has not worked any special hardship to the lumbermen, for the reason that it has greatly increased building enterprises and turned hundreds of young men in the direction of home-getting. Every family should have a home of its own. The whole State prospers from any condition of things that tends in that direction.

Sawmill men report that notwithstanding the fact that they manufactured a large amount of fencing lumber this season, they have not now on hand a sufficient quantity to supply the demands, and in several instances the mills have not had a foot on hand. Thus, notwithstanding two dry seasons, our farmers have apparently enough money on hand to improve their ranches by fencing them and building houses where none existed before.

The San Bernardino Index speaks of the immense amount of lumber that is being hauled into that town from the neighboring mountains, and determined to ascertain just how many mills were running, and about how many thousand feet have been cut this season. It was ascertained that there were eight mills in operation, and that their total output would aggregate 7,410,000 feet.

High up in the Sierras the mills are obliged to close down in the winter. Advice from Carson of Dec. 5th state that all the sawmills, railroads, flumes, wood and logging camps around Lake Tahoe have closed down for the season. All the men employed around the lakes have left for Carson, Truckee, Sacramento and San Francisco, where they will remain until work opens up again in the spring. The Carson & Tahoe Lake Co. sawed 25,600,000 feet of lumber in their two mills during the season, and cut 28,300 cords of wood, which has been flumed to Carson during the summer.

Puget Sound advices of Dec. 22d say that all the sawmills on the Sound, except the local mills, have shut down and will remain closed till Jan. 2d. The object is to make a "clean-up" for the year, take account of logs on hand, make estimates of the future supply of logs, and in a general way to make preparations for work next year. The past season has been prosperous, and the outlook is good.

Reports from Tulare and Fresno counties say that the lumbermen of that vicinity have had a prosperous season, and immense quantities of timber land have been bought and taken up the past season with a view to active operations in the early future. The mills belonging to the Madera Flume & Trading Co. were closed down about the last of November. Some idea of the immense amount of business transacted by the company can be gleaned from the fact that over 14,500,000 feet of lumber have been turned out by it during the season. The Sequel mill sawed 7,500,000 feet and the California mills 7,500,000 feet. Most of this lumber has been floated down the flume to Madera.

Numerous capitalists, says the Yreka Journal, are taking up timber land along the Klamath river in the Happy Camp section, in the southern part of Siskiyou county, with the intention of floating the timber down to the coast line, where it can be cut up and shipped by ocean to San Francisco and other seaports.

Redwood lumber is being shipped to Europe in considerable quantities. The ship India recently took a full cargo of redwood lumber for the United Kingdom. A few years ago several cargoes of this kind were sent to Europe. The last previous cargo was cleared January 24, 1887, by the Remittent, which carried 336,436 feet. The India carries a much larger cargo. Considerable business will no doubt, ere long, be developed in shipping California redwood to Europe. Large quantities have been sent to domestic Atlantic markets both by sea and overland, and with satisfactory results. Even the stumps of redwood trees have been turned to profitable account. The wood is susceptible of fine finish, and the grain and coloring make a pleasing effect. Recently (October 19th) the Norwegian bark Orion left Puget Sound for London with 456,452 feet of lumber. This is the first cargo of the kind to clear from the Sound for Europe in some time.

The Humboldt Mail says: The Pacific Lumber Company is building a large pond, or reservoir, for holding logs about two miles above the mill. It will cover 12 acres, and will hold an enormous amount of timber.

A large shingle-mill at Trinidad, Col., has been started to fill contracts for supplying several million shingles to San Francisco.

Over 500,000 feet of logs were recently tied up at Seattle by suits to foreclose loggers' liens. There were only two suits, and the amount claimed was only \$129.

As an instance of quick work the Antioch Ledger says: The schooner Jewel recently discharged a cargo at the lumber company's wharf in time that broke the record of all former work in that line. Her cargo of 208,000 feet of lumber was discharged in 19 hours.

No more log rafts are to be permitted to go

out from the Canadian seaboard forests. A fairly prohibitory duty has been placed on such enterprises at the instance of the owners of sailing vessels. This is parallel to smashing up machinery because it reduces prices and calls for less labor.

The timber-raft business has found its way into Europe. It is stated that a timber raft 700 feet long, 170 wide, carrying 170 men and worth \$60,000, recently went down the Rhine; but it was nearly wrecked when passing the famous curve of the Lorelei.

ENTOMOLOGICALS.

Apricot Scale, Codlin Moth and Plum Knots.

[The following is the concluding portion of the essay read at the Chico Fruit-Growers' Convention by State Inspector W. G. Klee, of which the opening part was given in last week's RURAL.]

Brown Apricot Scale.

Another insect which has forced itself to the attention of fruit-growers in certain counties is a large brown soft scale, a yet unnamed species of *Lecanium*, which I prefer to call popularly the "brown apricot scale," because it is one of the few scales troubling this tree. It, however, also infests many other kinds of trees, especially prunes, peaches and pears. The young appear from the eggs in May or June, and scatter all over the trees, settling on the leaves, which become viscid and soon covered with black smut. The whole tree suffers severely by the pores being clogged up, resulting in small and inferior fruit. So small and transparent are the young scale that they are hardly perceptible on the leaves, except through a magnifying glass. They gradually increase in size, however, but not very materially before the following spring, when with the rise of the sap their growth is enormous, their soft, sticky bodies covering the branches completely, often measuring one-fifth of an inch in length. When detached from the branches the numerous white oval eggs are seen surrounded with a white, mealy powder. The young hatch in comparatively short time, and there is only one brood in the season, other statements to the contrary. This insect has spread rapidly in the prune districts of Santa Clara, and I have also seen it in Alameda county. Although much less dangerous than the pernicious scale (San Jose scale—EDS. PRESS), it is very troublesome to exterminate and its appearance in an orchard should cause thorough measures to be taken. This scale is evidently a native of the State, having been found on oak trees, from which it spread and has proved itself even adapted to our fruit trees.

This scale is hard to kill when most conspicuous in the spring. It is then best protected and the tree too tender to use strong remedies. It must be fought either before or after this. In the winter it can be killed with remedies half the strength of what is necessary to kill the San Jose scale. A solution can be used as follows: $\frac{1}{2}$ pound of potash, $\frac{1}{2}$ pound of soda lye to 4 gallons of water, to which $\frac{1}{2}$ pound whale-oil soap is added to each gallon of the solution. A strong solution of whale-oil soap ($\frac{1}{2}$ pound to the gallon of water) will also suffice, but most thorough work is necessary.

Used early in the season, immediately after the fruit has been harvested, the following summer wash, previously recommended, is of good service: $1\frac{1}{2}$ pounds of sulphur, 1 pound of American concentrated lye or four-fifths of a pound of powdered caustic soda, 12 pounds of best whale-oil soap (80 per cent), 55 gallons of water. Dissolve the lye in one gallon of water, boil the sulphur until dissolved; dissolve the soap in water; mix the two and boil them a short time; use at 130° F. (in vessel.)

The Codlin Moth.

The past season, unlike the previous one, proved exceedingly favorable to the propagation of this pest, and more wormy fruit appears this year than perhaps in any other previous one. The remedies for the moth have also proved less effective, and in many instances spraying with arsenites proves altogether ineffective. In most cases, except with early fruit, only one spraying has done no good whatever. The reason of this is obviously due to the wet weather in the early part of the summer which removed the arsenic and left the fruit unprotected. When two sprayings have been made, especially after the rains, the good effect has been plain.

In my own experience in Santa Cruz mountains I found that all early apples, and also Bell-flowers, were pretty free, from five to ten per cent of the latter only being affected. The damage done to the trees by spraying (strength 1 pound to 180 gallons) was again, as last year, quite severe, and the same circumstance presented itself as last year, that trees in position to dry out quickly (after damp nights) suffered but very little, showing conclusively that the damage was due to the arsenic being leached out by the moisture during the night. My statement made last year that the strength of solution endured by different varieties varies considerably, is again supported by experience elsewhere, particularly in the case of Bell-flowers. This may perhaps be solely due to their dense foliage.

While the Bellflower with me was pretty clean, it was not the case with Esopus Spitzenburg, which proves itself very badly infested. As these two apples, Bellflower and Spitzen-

burg, were harvested but a short time apart, and were almost of the same degree of ripeness, the difference must be sought in other causes. The reason in this case was evidently that in the Spitzenburg and Yellow Newtown pippin also, but especially the first, there was a distinct second blooming some three weeks after the first, which did not receive any spraying, as there was only one spraying given. These blossoms, which were small and inconspicuous, the moth evidently made the most of, and the apples were so badly affected that they never reached any size, and although many were picked off, a great many fell between the vines growing among the trees and were lost sight of. This proves conclusively the necessity of picking off such secondary bloom.

In this connection I will call attention to the importance in all early fruit regions, such as Sacramento river, to not allow a second crop to develop. By growing early varieties, and observing this closely, it has been the experience of such men as Mr. S. Runyon that the codlin moth will do comparatively little damage.

But while my own experience has not been as encouraging as it might be, other people, partly following my advice, have succeeded very well. Mr. W. W. Brier of Centerville, Alameda county, used London purple. He reports his early apples, such as Astrachan and Alexander, free from worms. Fall apples, when sprayed only once, were badly infested, as well as winter apples, when only one treatment was given. But when two treatments were given, the last in the beginning of July (using a strength of 1 pound to 225 gallons), the improvement was great, resulting in having at least 50% of clean apples, against only 10% when not treated. Whether we can safely recommend so late a spraying may be doubtful, yet when the apple has several months to grow in, the danger of poisoning from eating it is infinitesimal, especially as it has been proved that the arsenic is gradually leached out of the compound.

In Coloma, El Dorado county, a widely different section and climate from Alameda county, and where dry nights prevail, it seems that one spraying accomplished as much as two with Mr. Brier, probably owing to the absence of rain and dew. Under date of Oct. 15th, Mr. A. J. Mahler writes: "We have used the mixture of Paris green, 1 pound to 160 gallons of water, for codlin moth; we gave the trees only one spraying in April (the 18th), and the result is that we have saved at least 50% of the apples treated. The apples that have been treated are large and of excellent color; the trees show no damage from the poison."

Mr. C. I. Settle of San Jose has obtained the best results of any one, although surrounded with badly infested orchards. He has succeeded in saving 75% of a very large crop of late apples—Yellow Newtown pippin and W. W. Pearmain, but it was done with no less than four sprayings with Paris green. The foliage was but little damaged when I saw them in August last. In answer to a letter addressed to Mr. Settle on this point, he writes, under date of Nov. 13: "I washed my apples four times with Paris green, using 10 ounces of the latter to 100 gallons of water, commencing when the apples were very small and washing about every 25 days, and saved 75% of the apples that were on the trees at picking-time. I also used bands, removing these every eight to ten days."

Knots on Roots of Fruit Trees.

Last month my attention was called to the condition of a large number of plum trees in a young orchard near Mountain View. Subsequently I visited the place and found that something like one-quarter of the trees were affected with knots on the roots. These knots were found below ground on the junction with the stock or on the Myrobalan root itself, on which root all of the trees were growing. All of the trees affected in this manner are sensibly smaller than those that are free. That these knots are the result of fungoid growth allied to the black knot I am quite confident, and the probability is that the disease is being propagated on the cuttings which produced the tree, which served as stock, the mother tree doubtless being affected. This is an additional argument against using cuttings of the Myrobalan stock, another being that the root system formed by them is often defective.

Similar excrescences are found on peach and pear root and have been sent me from different parts of the State. Young trees affected by them should be avoided, as under certain conditions they will result in the death of the trees. Such knots should, however, not be confounded with those sometimes produced by the tying material of a bud or graft being left in by accident. For trees affected by these knots I have recommended the complete removal, if possible, by cutting close into their point of attachment. If this is not possible without seriously injuring the roots, the tree had better be destroyed. When the knots have been removed the cuts should be washed over with a strong solution of bluestone, or better still, the following mixture put on it: 2 pounds of resin, 1 pound of beeswax, 1 pint of spirits of turpentine, $\frac{1}{2}$ ounce of carbolic acid. Melt the resin and beeswax by heat; when dissolved, add the turpentine and acid, the latter having been previously dissolved in a little alcohol or hot water.

The Fresno *Expositor* says the raisin shipments in 1888 were over 332 carloads, a total of 10,653,270 pounds.

THE IRRIGATOR.

Irrigation in Inyo.

We take the following extracts from an article written for the *Chronicle's* annual review, among which is the following on

Irrigation

"For the reclamation of probably the best watered 'desert' in or about the great basin we have:"

Ditch.	Miles.	Inches w'tr.	Acres.
Upper Bishop creek.....	15	10 000	20,000
Bishop creek.....	14	4,000	10,000
Rawson & Ford.....	—	4,000	8,000
Big Pine.....	—	4,000	8,000
Sanger.....	9	2,000	4,000
East Side canal.....	22	15 000	30,000
West Side canal.....	40	25 000	45,000
Stevens' ditch.....	11	4,500	7,000
Pihol's ditch.....	3	250	300

"Water now flowing in 15 miles of the East Side canal will this year transform a wide strip of sagebrush along the railroad into beautiful vineyards. Most of the foregoing are under construction, except the West Side canal, projected by ex-County Surveyor Seely. The Irrigation District organized under the Wright law for this enterprise has failed, and it yet offers a big show for private capital. Two schemes for the settlement of Eastern and foreign colonists are well under way. By no means has all the land been taken, and 20 sections or more will revert to the public domain this summer through failure of speculators to reclaim desert locations. Doubtless all the water is appropriated, but the unevaporated part will ultimately find its way back to the river channel and stay for a time the drying up of Big Owens lake. At the northern end, storage of water has been undertaken. All along the Sierras are natural sites for reservoirs and perennial streams affording infinite scope for Major Powell's surveys. Local land-owners have lacked the nerve to test the artesian proposition. Such experiment and the demonstrated fact that low spongy lands will produce crops without irrigation may yet materially figure in the aggregate."

The *Register* remarks on the above that the list of irrigating propositions under way or finished is not complete. To it add, for this section: The McNally ditch; the Hillside Water Company's enterprise; the Owens river canal; the Russell ditch. All are canals of some consequence. The McNally ditch has practically made the valley east of the river in this northern section; the Owens river canal will do for sandy lands west of town what the Bishop creek ditch has done for the region east of us; and the Hillside Company will convert the foothill lands to the west into vine-clad slope and productive "forties."

Irrigation Meeting at Tracy.

The meeting to take final action on the preliminary steps to organize an irrigation district on the west side of the San Joaquin river, under the provisions of the Wright Irrigation law, took place at Tracy Jan. 5th, of which the *Turlock Pioneer* gives the following report: The meeting was an enthusiastic one and the entire proposed district was fully represented. At the meeting held at Newman on Nov. 24th a tax of five cents per acre was levied on all land in the district, and the committee report that all but two readily paid the tax, which supplies ample means to carry on the preliminary work.

The route known as the Tulare grade line, including all the land on the west side of the San Joaquin valley, was unanimously adopted and a committee of five appointed to carry on the organization work with full power to act on all questions arising. The proposed district will include 310,000 acres of land. The following resolution was adopted:

WHEREAS, The great central valleys of California are to a great extent dependent on irrigation to bring out their full productiveness and to a great extent are comparatively valueless without irrigation; and

Whereas, There is an abundance of water for all if properly handled, but which now runs unappropriated to the sea, and which by the proper expenditure of a few millions of dollars could be stored in the mountains for use when wanted; and

Whereas, California has furnished hundreds of millions of gold to the United States Government at a time when it was much in need of gold; and

Whereas, It is stated that there is a large surplus in the United States Treasury unappropriated which should be distributed among the people by making improvements for their benefit; now, therefore, be it

Resolved, By the people of the West Side Irrigation District, in convention assembled, that our representatives in Congress be requested to use all honorable means to secure an appropriation sufficient to thoroughly examine the Sierra Nevada mountains and the streams thereof, with a view to ascertaining the feasibility of storing the water and the probable cost of the work.

The secretary was ordered to send copies to the Senators and Congressmen.

ORANGES FROM COLUSA Co.—We have received from N. K. Spect & Co. of Orland a cluster of four clean, handsome seedling oranges, which, when subjected to the final test, showed rind of moderate thickness, and proved juicy, well-flavored and fairly sweet.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Greater Inducements for Subscriptions.

NEW RATES for PACIFIC RURAL PRESS.

Trial club of ten or more, 3 months, paid in advance, each 60 cents.

DEWEY & CO., Publishers.
No. 220 Market St., S. F.

Official Endorsement.

In consideration of a certain contract entered into this day between Dewey & Co., publishers, and the California Patron Publishing Company of San Francisco for the publication of a weekly Grange edition of the PACIFIC RURAL PRESS and the California Patron, as a monthly, resolved that the Executive Committee of the State Grange of California hereby designate and endorse the PACIFIC RURAL PRESS as the weekly organ and the California Patron as the monthly organ of the State Grange of California.

W. L. OVERHISER,
Master of State Grange of Cal.

A. T. DEWEY, Sec'y S. G. of Cal.
San Francisco, Cal., Jan. 11, 1889.

The Good Time at Haywards.

MESSRS. EDITORS:—The joint installation of the officers of Eden and Temescal Granges occurred at Haywards on Saturday, Jan. 12th, and was one of the most enjoyable meetings it has been our good fortune to attend. At an early hour members of Temescal Grange might have been seen wending their way to the station, there to wait with scant patience for the train which was to convey them to the "land of promise" (i. e., Haywards). On arriving, we found that we were quite a numerous company, and only for the thoughtfulness of Bro. Dennis, who was waiting with a two-seated conveyance, the "bus" would hardly have had capacity for carrying all at one trip.

At the hall, or rather church, where Eden Grange has her home, were found the busy sisters on hospitable works intent, as was shown later when the bounteous feast was served. All other business was deferred and installation of officers proceeded with; the Worthy Master of the S. G., Bro. Overhiser, acting as installing officer, ably assisted by Bro. Flint, State Lecturer, and Bro. Dewey, State Secretary. All the officers made neat little speeches expressing their love for the Order and its work, and promising zeal in the fulfillment of the duties of the office to which they were severally elected.

I said all the officers made speeches, but I should have excepted the "twin Secretaries," as Bro. Dewey styles them, who, being pretty well down the line, had time to think of many fine things to say, but had the wind all taken out of their sails when Bro. Flint, in behalf of some unnamed friends, presented them each with a beautiful Fifth-Degree pin. Though unable to say but little more than "thank you," it was not because they did not appreciate the kind feeling that prompted the gift, and it will always be cherished as a treasure and will remind them ever of their duty.

There were tears in many eyes when dear "Grandma Brooks" was installed Ceres of Temescal Grange. The remarks of Bro. Overhiser were very touching, and her reply full of love for her Grange home and friends. Bro. Overhiser said one reason he was anxious for the National Grange to come to California was that Grandma Brooks might take the last and highest step in our Order, the Seventh Degree.

After the installation was through with, W. M., Blackwood declared a recess till 2 P. M., and we were invited to partake of the collation so lavishly spread on tables that were almost groaning under the weight of baked beans and brownbread, chicken pie, cold meats in variety, salad, biscuits, and beautiful golden butter, cheese, pickles, jelly, pastry of various kinds, cakes too numerous to mention; oranges and French candy, tea and coffee, with real milk and cream—in fact it was the real Grangers' Harvest Feast, and much credit is due the sisters for the excellence of everything.

After all had been well supplied, we were called to order, and speeches from those who would favor us, interspersed with vocal and instrumental music from the young sisters of Eden Grange, a recitation from Jessie Weed of Temescal Grange, made the

time fly so fast that it did not seem possible that 4 P. M. had come.

Among those who spoke were Bro. J. V. Webster, Past State Master, Bro. McConnell, M. of Elk Grove Grange, Sister Russell of Eden Grange, Bro. Flint, State Lecturer, Sister Chatterton of White Oak Grange, Me., who rather startled some with her statement of the operation of the prohibition law in that State.

Bro. Dennis of Eden kept up his reputation of orator of Eden by a forcible speech in reply to the last sister. Bro. Chester, Past State Secretary, on being called upon, responded briefly. Sister Hollister (formerly of Wheatland, but now of Eden Grange) also made a few remarks. Sister Smith of Yuba City Grange expressed her pleasure at being present and her enjoyment of the day.

Bro. Dewey, State Secretary, paid a high compliment to the members of Eden Grange for their hospitality, and stated that the affairs of the California Patron had been settled by the company making the RURAL PRESS the weekly organ of the Order and providing for the Patron to be published monthly. Bro. Dewey invoked the aid of all members of the Order in sustaining the paper.

The Chaplain of the State Grange was Goodenough to favor us with a very interesting though necessarily short speech owing to the lateness of the hour.

Following is the literary program as rendered: Opening chorus by the young ladies of the Grange, "Behold the Song," recitation, Jessie Weed, "The Water-Mill," "The Song that Reached My Heart," Miss A. Obermiller; duet, Misses Dennis and Obermiller.

We were sorry the time had come to say good-by, but "time waits for no man," neither does the train, and wishing for a speedy return of this most happy day, we returned to our several homes feeling that it was a day to be marked with a "white stone," and had been profitably spent. I wish all the farmers who are not Grangers could have been with us and have been made to feel the necessity of their organizing and the benefit that would accrue to them if they would join the Grange. There is such an immense extent of country to be made into farms, and it would be so much more desirable if there was a Grange in each town. Can we not each exert ourselves to revive dormant Granges and organize new ones? Let us each do all we can in this matter, and if the National Grange comes here it will finish the work.

N. G. B.

The Sacramento Joint Installation.

MESSRS. EDITORS:—Sacramento County Pomona Grange united with Sacramento Grange, No. 12, last Saturday to install the officers for the year 1889. An inviting dinner was spread at noontide, after which the officers were installed by Bro. Wm. Johnston, assisted by Sisters G. W. Hack and Flo. Greenlaw. The elected officers favored the audience with a few short remarks, after which we were entertained by some of our visiting brothers. Respectfully,

ALICE L. GREENLAW, Sec.
Sacramento, Jan. 14.

Merced Grange.

MESSRS. EDITORS:—I am happy to say Merced has no more smallpox. On account of the scare we held no Grange meetings in December. We elected our officers January 5th. There was more interest manifested in the election of officers this time than I ever witnessed before. It is a good sign for an awakening of the Grange interests in Merced county. I hope we will continue in this good work, and all take a hand and try to entertain the Grange. Some call us stupid, but do not try to make it any more pleasant for those who do their best. We shall have a feast and installation on the first Saturday in February, our next regular meeting. A cordial invitation is extended to all the Granges in good standing. They will receive a hearty welcome. Merced Grange knows how to entertain right royally and will do her best at this feast. Fraternal yours,

E. S. ELLIOTT, Sec'y.

Colorado State Grange.

Our Eastern neighbor and nearest link in the fraternal Grange chain—Colorado—has just closed a very profitable and encouraging State Grange session. The Worthy Master, Bro. Levi Booth, closes a friendly letter by saying:

"The present meeting of our State Grange has been a very profitable one. We had about 100 in attendance and 60 took the higher degree. We formed a new Pomona Grange with 50 charter members. The prospect for the coming year looks bright."

To Old Subscribers of the California Patron.

We will send you the WEEKLY OFFICIAL GRANGE EDITION of the RURAL PRESS and the monthly issue of the California Patron both for one month, in order that you may examine and determine which of the two papers you prefer to have continued to you after that date, according to the terms plainly stated in our contract with the California Patron Publishing Co., published herewith.

Choose, then, which paper you prefer to receive, and notify us by letter, giving your name and post-office address plainly and in full, with complete directions as to your wishes in the matter. During the trial month no charge will be made for the paper you do not choose to continue.

We hope many will take both issues, and with a view to give or send one away for the good the copies may do the readers, our cause and our State.

However, if no word is heard from any subscriber by the end of the first month, we shall continue the weekly Grange edition of the RURAL PRESS, as successor to the weekly issues of the Patron, and discontinue sending the monthly beyond a single issue.

The next issue of the Patron, and the first as a monthly publication, will be issued for Saturday, February 2d.

We hope (after receiving a few copies at least) to hear from our readers how they like this new Grange edition of the RURAL PRESS.

Worthy Master Brigham at the National Capital.

MESSRS. EDITORS:—Worthy Master J. H. Brigham of the National Grange arrived here January 7th and will remain for some time. He is in consultation with Senators and Representatives relative to matters of legislation now before Congress which have the indorsement of the National Grange.

Colonel Brigham's well-known ability is an assurance that the farmers of the United States have an able representative at the right place—the National Capital.

This action on the part of the National Grange in sending its chief executive officer to see that the interests of the farmers of the country are properly presented to Congress will meet the hearty approval of the members of the Order and convince the farmers not members of the Grange that the Order means business.

The State Grange of Vermont has arranged through its Master, Bro. Messer, with Colonel Brigham to visit that State the latter part of January and deliver some 10 or 15 lectures in the interest of the Order.

We expect now to hear of a boom in Grange work in Vermont, and it would be money well expended for other States to follow the lead of the Green Mountain State and secure the services of Colonel Brigham. Fraternaly, ALEX. J. WEDDERBURN.

Washington, D. C., Jan. 8.

Grange Elections.

MERCED.—M. D. Atwater, M.; L. H. Applegate, O.; H. J. Ostrander, L.; E. D. Kahl, S.; Wm. P. Applegate, A. S.; Sister L. A. Atwater, C.; H. C. Healy, T.; Sister E. S. Elliott, Sec.; J. T. Lander, G. K.; Sister Mary Arthur, Ceres; Sister L. Robinson, P.; Sister E. Shriver, F.; Sister J. T. Lander, L. A. S.

SANTA ROSA.—E. A. Rogers, M.; Chas. D. Bonner, O.; H. Gregory, L.; Geo. Rogers, S.; Mrs. J. H. Newman, C.; J. Strong, T.; Miss Martha Lumsden, Sec.; S. F. Chinn, G. K.; Miss Fannie Gamble, Ceres; Miss Ella Sutherland, L. A. S.; L. C. Cnopius, A. S.; Mrs. Chas. D. Bonner, P.; Miss Ida Godman, F.

Installations.

Newcastle.....January 19
San Joaquin County Pomona.....February 28
Watsonville.....February 16

NOTE.—The Secretaries of Granges are requested to forward reports of all election and other matters of interest relating to their Granges and the Order.

YUBA CITY GRANGE installed its officers January 5. Owing to the wretched condition of the roads the attendance was not as large as on some former occasions, and only about half of the officers-elect were able to reach town and be installed. It was, however, thought best to proceed with the installation ceremonies with those present and finish at the next regular meeting in February. The Worthy Master-elect, J. B. Wilkie, was also absent, being somewhere in the north and east between Portland, Oregon, and St. Paul, Minnesota, laboring in the interest of the Sutter Fruit Company, of which he is a member. Mr. W. is establishing agencies for the sale of fruit, in which he has been very successful. But we digress. Not being here, of course

he was not installed; but he paid his compliments to the Grange by sending them gratis a box of specially selected Oregon apples that in size and quality can hardly be duplicated, even in Oregon, the land of apples. The Grangers at once gave him a unanimous vote of thanks, and then dispatched the apples with an appetite like a buzz-saw. The installation was, however, a grand success.—Sutter Farmer.

The Insurance Fight.

Frank Leach of the Oakland L. brings out his double gun and shoots brightly and left at greedy lobbyists and underwriters, thus:

It is reported that the boss lobbyist has notified the insurance companies that if they do not wish unfriendly legislation they must raise a sack of \$50,000 to give to him and his lambs. These infamous tactics may succeed; it is not improbable that the insurance companies may have to do as they are bid, for they have been successfully "stood up" before by the same highwaymen. The shame of it is that a branch of the State government can be prostituted to the purposes of blackmailers. Members of the Legislature who are capable of entering into such a plot have, of course, lost the sense of shame, but the people should feel keenly the disgrace of not being able to elect better men.

As for the insurance companies, our sympathies are not so much excited; their case shows how wrong invites wrong, and that injustice is never profitable in the long run. By charging exorbitant premiums the insurance compact has invited this attack, just as much as a man would invite highwaymen if he advertised that he would fill his pockets with gold and go out walking in the night on the back streets. We do not say that an agreement between insurance companies to maintain rates is in itself wrong; when started it was probably necessary to prevent ruinous cut-throat competition. But the same greed which stimulated the companies to that kind of competition before they had a contract stimulates them, after they unite, to demand unreasonable profits and bleed the property-owners. They cannot be content with fair profits, and by their tyrannous use of the power of the compact they have brought on themselves this terrible evil of a blackmailing lobby armed with the power of legislation. All around the affair exhibits the meanest aspects of human nature.

THE SOAP SWINDLE.—We see by our exchanges that small towns throughout the State are complaining of a new phase of an old swindle. Female agents, claiming to be from Chicago, canvass at houses, leaving a cake of soap as sample. They return and ask the lady to sign a printed "testimonial," the same to be presented to the grocers to influence the latter to handle the trade. The testimonials afterward turn up as "orders," calling for soap in various quantities at fancy prices. The wording of the so-called "testimonial" is very ingenious. We reiterate the old, old caution: Refuse to sign your name to anything for a stranger.

SEBASTOPOL GRANGE is reported as in good working order and prosperous. Secretary Geo. Harris, in a letter, refers to the installation on the 5th inst., and the visit of Col. Donahue and party, which was mentioned in our correspondence last week. Bro. Harris thinks that Sebastopol will soon have railroad connection with the outside world.

ROSEVILLE GRANGE feels that January 5th (installation day) was a day well spent for the good of the Order. Seemingly every office has been filled by the proper person and it is hoped that good feeling and harmony may prevail throughout the year.—MRS. M. F. LEAVELL, Sec.

GREETING FROM MAINE.—Bro. J. W. Lang, Member Executive Committee Maine State Grange, writes: "Maine sends her fraternal greetings from the pine-clad hills of the Atlantic to the vine-clad hills of the Pacific. May joy, peace and prosperity attend the Patrons of the Eureka State."

INVITATION TO NATIONAL GRANGE.—In the State Senate, Jan. 15, Senator Langford offered a resolution inviting the National Grange of the United States to hold its next annual session in this State, and instructing the Governor to send an engrossed copy to the Master of the National Grange. Adopted.

SANTA ROSA GRANGE installed its officers on the 12th inst., with the exception of the Assistant Steward, Pomona and Flora, who will be installed on the 26th.

The Transfer of the "Patron."

An adjourned meeting of the Board of Directors of the *Patron* Publishing Company was held at the office of the Secretary of the State Grange at 10 A. M., January 11th. Present, I. C. Steele, President, J. V. Webster, Vice-President, A. D. Logan, Treasurer, W. L. Overhiser, G. P. Loucks, S. T. Coulter and Secretary. Besides the above were present the following shareholders who participated in the meeting: W. Adams and Amos Adams of San Francisco, D. C. Feely of Sacramento, D. C. Feely of San Jose, Judge Blackwood and O. Dennis of Haywards, and T. Hooper of Rio Vista.

A. T. Dewey, Manager, stated that Dewey & Co. could not afford to carry on the publication any longer under the contract made Oct. 15, 1887, and with his partner was willing to surrender all claims under said contract, leaving the board free to make any arrangements or contract with other parties for the publication of the *Patron*.

No propositions being presented, Mr. Dewey made an offer on the part of Dewey & Co. for publishing a weekly Grange edition of the *PACIFIC RURAL PRESS*, containing four or more pages of Grange matter on an average, as the official organ of the State Grange, and for issuing the *Patron* once a month as the official monthly organ of the State Grange, which proposition embodied the essential features of the contract as it was finally adopted by the Board of Directors, upon a call of the roll, by a unanimous vote.

The offer of Dewey & Co. to advance \$1000 on the advertising and subscription accounts due the *Patron* Publishing Co. previous to Oct. 15, 1887, enabled the company (by the generosity of I. C. Steele) to provide for all debts due the association, whether any considerable amount is ever realized from the assets under the contract or not.

On motion, the board accepted the proposition, as finally submitted in writing, and the President appointed the following committee to draw up a contract: T. McConnell, S. T. Coulter, W. L. Overhiser, W. C. Blackwood and J. Chester.

The following resolution was offered by the Secretary:

Resolved, That the proposition of Bro. Steele to give the *California Patron* Publishing Co. a receipt in full for his claim against said company, amounting to \$1256.25, on condition that Secretary Chester accepts the \$1000 offered by Dewey & Co. as part of the contract this day made by them with the *California Patron* Publishing Co. in full for his claim of \$1517.18, which has been accepted by said Chester, be acknowledged with gratitude by this company as only equaled by his other acts of magnanimity to the *Patron* and to the Order.

Resolved, That Dewey & Co. give an obligation to said Chester for the amount of \$1000 as provided in said contract on the terms offered therein, and upon receiving a receipt in full of said claim and the entry by the Secretary on the books of the company of full settlement therefor.

Several directors objected to accepting the generous proposition of Bro. Steele, believing that means should be raised in some way to pay him in full, but the resolution was finally adopted with the feeling that due recognition of Bro. Steele's self-sacrificing spirit would be kindly recognized at some future time.

Brother Dewey and others having, with affectionate regard, alluded to the death of Brother Chandler, who was for several years an active and zealous member of the Board and Executive Committee of the California State Grange, the following, offered by Brother J. Chester, was unanimously adopted:

Resolved, That in the death of Brother Chandler this Board and Executive Committee here present have lost one of their most estimable members, and one of the most generous promoters of their labors in the interest of the Order of Patrons.

The labors of the day were completed after 10 o'clock P. M., and congratulations expressed by those present that the matter had finally been so amicably, and it was hoped satisfactorily and lastingly, disposed of.

It is hoped that the officers and members of the Order throughout California and Oregon will heartily and unitedly use their efforts to ratify this new arrangement with success by extending the circulation and usefulness of the newly endorsed official organ. That relieved from much of the care of providing for and conducting an official organ, more time and attention and hard labor can be bestowed upon the work of reorganizing dormant Granges and instituting new Granges throughout the jurisdiction than has been possible during the past few years.

As publishers, we pledge to do our very best to meet all reasonable demands that can possibly be expected of us under the new arrangements.

With the help of all our old friends, and the many new ones we shall try to deserve, we hope to make a success of the Grange organ and do our part in the front ranks, and do it well in a grand forward movement of the whole Order.

Fellow-Patrons and Matrons, what say you?

Bro. Mackie's Answer to "Pansy."

MESSRS. EDITORS:—"Pansy" has laid out a large field of labor for me in telling "the Grange what their correspondence should consist of, that influence and self-respect might be the effects."

In my contribution to that same number of the *Patron* on "Tulare Grange" I believe there is an installment—at least enough to show that I agree perfectly with all that Pansy has said.

It is to me a puzzling problem that every class of society can unite, with the exception of the farmer. A brother Granger tells me in his queer, quaint way that disunion and poverty is reduced to a science among the farmers. It looks like it. We have trades unions, Knights of Labor, boards of trade, articles of agreement between merchants, railroad corporations, federated corporations of every kind, with trusts and united deviltry of everything that means monopoly and oppression in this free land of ours, but no union among farmers. These poor innocent sheep think that the extent of their liberties and privileges is the right to vote for the wolf who should eat them. It never occurs to them to be represented by a respectable sheep who will see to the interests of mutton and wool. When will our politics cease to be influenced by Mason and Dixon's line? When are we to contend for principles that influence us to-day instead of the worn-out antecedents of parties who have long ago outlived their usefulness and are permeated all through with ways that are dark and tricks that are vain? How will "Pansy" or "any other man" tell how a union among farmers can be effected which will consolidate farming interests? The Declaration of Principles of the Grange tells on what farmers should unite, and the Grange is presumed to be the means by which this union shall be brought about. Then what? What is a farmer? He is the basis of society. Nearly all the wealth of the world is made from what he produces, but so situated that he is the most dependent instead of being what is his natural right, the most independent. He has permitted himself to be so situated that everything he buys to stock his farm with is at prices according to the pleasure of the merchant. If, like other men of business, he should need money in advance, not only must he give better security, at a higher rate of interest, but the avenues of access to it are blockaded with more expense and every means of vexatious hindrance.

Then after labor and vexation of spirit, if the elements grant him a crop, the whole social fabric is united in giving him as little as possible for it. And he assists society in this nefarious business. In order to produce cheaply, he lives as cheaply as possible. A wretched excuse for a dwelling, that the poorest tailor or shoemaker in a city would not dream of living in, is all that the farmer can afford, not enough often for common decency, let alone comfort. But then they have got used to this sort of thing and *can do it*.

Whether it be a farmer, a mechanic, or a laborer, society will endeavor to reduce them to the minimum by which life can be supported. It becomes then the duty of all who labor for society to raise the standard of their life as high as possible in order to share with society all the benefits of modern civilization. In this, society is also benefited, for it is for the general good that each individual should be living, so as to make himself all that he is capable of becoming—not in accumulation of wealth, but in all that belongs to the physical, mental, moral, and spiritual development of manhood which requires certain refinement of environment and freedom from embarrassing poverty.

To reach this condition, farmers must unite on a sound business basis, to buy what they need as near headquarters, with as little handling as possible. Then they must form a market for home produce where they can place their butter, eggs, etc., instead of having to peddle produce from store to store or from house to house; and for the heavier and more staple articles there should be headquarters in some commercial center, where their interests would be honestly looked after.

All this looks as of the simplest form, but it is too complex for the slipshodness of the average farmer to comprehend. It is not for want of natural shrewdness, for in a horse trade they can outlie a Chatham-street Jew, outtalk an auctioneer and brag more than any peddler of cheap jewelry. They are not even behind in the tricks of trade, placing the best potatoes and strawberries, etc., always on the top, and only he and the consumer can know what is in the center. And as for general ability, he is compelled to know a little of everything—to be a man-of-all-work.

The farmer is not lacking in natural ability, general intelligence and business tactics, but fearfully lacking in union ideas. It is for union that we must work. For in that union which produces strength the farmer should be master of the situation, and at least command the respect of the millions who are dependent upon him.

Please say to "Pansy" on the matter of that recipe for corned beef that she has it as I got it; and I find in other recipes since come to light the same proportion of $1\frac{1}{2}$ pounds of salt to the gallon. So far I have found such beef eatable enough, but as I do not like salt much better than an Indian, I could easily be persuaded to put only one pound of salt to the

gallon or just as much as will keep the meat from spoiling. Also my thanks to "G" for garden hints, and hope that he and others will continue the good work. J. W. M.

Tulare, Jan. 13th.

The Order of Patrons of Husbandry.

The following essay read at the anniversary meeting of Sacramento Grange last month is worthy of perusal:

Worthy Master, Sisters and Brothers:—We have met on this occasion to celebrate this day as the 22d anniversary of our beloved Order, and to honor the men and women who 21 years ago laid the foundation of the Grange and built thereon the beautiful superstructure contained in our ritual, which is acknowledged by those who belong to other societies to be the most beautiful in phraseology and sentiment ever indited by man. And when we learn the purposes of its organization, the benefit sought to be conferred on the agricultural classes in particular and mankind in general, it commands our attention and wins our admiration, together with our united efforts to advance its cause and carry into effect its principles, which are as grand as any ever voiced by mankind.

And pray in what way is the Grange to accomplish the purposes of its organization? some one may ask. Allow me to say its mission is to go to the farmers of this country, inviting them with their wives, the partners of their purses and cares (I am sorry to say she gets the most of the cares, while he retains the purse), together with their manly sons and lovely daughters, within the secret recesses of a Grange home, and there, surrounded on three sides by impenetrable walls, while two strong and well guarded gates on the other shut out from intrusion the outside world, the farmer learns facts he can hardly believe—that he is being systematically defrauded out of his hard-earned gains, and that, too, by those in whom he had reposed implicit confidence. More than this, he discovers that the people of our towns and cities are far in advance of the tillers of the soil in questions of political economy, in business principles; that they are organized into societies to advance and protect their own interests, and reap such further advantage as accrue to thorough organization. And here within the sacred precincts of our Grange home, the farmers learn a great truth—that they are the ones who have suffered the most and to the greatest extent, because they have been the last to organize for mutual help and protection. But having learned this lesson, they are quick to profit by its teaching, and embrace the opportunity presented through the Grange to regain our lost estate; and by thousands, yes, by hundreds of thousands, the farmers have united themselves together as brothers and sisters, to do battle in a common cause, to develop among ourselves a higher and better manhood and womanhood—declaring to the world that we wage no war against class or business that is just and legitimate. With malice toward none and charity to all, we demand for ourselves a just share of the profits of our labor. We don't propose any longer to permit ourselves to be defrauded out of 64 per cent of the profits and products of our farms for the benefit of those who toil not, neither do they spin; but we propose by intelligent co-operation to reserve unto ourselves the greater part of this 64 per cent, and apply it in paying our debts, buying more and better clothes for our families, beautifying our homes, both inside and out, so that our wives may be proud, our children happy; while the brothers are delighted with homes presided over by lovely and loving wives, made lively and cheerful by the voices of happy and obedient children; filled with love and peace within, surrounded by plenty without.

But, Worthy Master, while our progress thus far has been great, grand and glorious, we must not forget our comrades who have been overtaken by misfortune; and while Sacramento Grange is rejoicing in the strength of a fully developed manhood, made happy on this occasion with the smiles and presence of many of our sisters and brothers from sister Granges, we are called upon to pause and shed a tear, as we are reminded that some of our Granges have halted, while others have fallen by the way; and it would seem both meet and proper that we should seriously consider at this time the means and best methods to be used to revive and infuse new and living vitality into their lifeless bodies. To this end it might not be considered improper for me to offer a suggestion, and as I aim to be practical in all things, I can best present my plan by asking one or two questions. First, I will ask our Worthy Treasurer, Bro. Reith, what is it that induces men to buy or rent land for the purpose of raising wheat? He will answer: When land will produce 30 or 40 bushels per acre, and you can realize \$1.25 per bushel, then people are anxious to become wheat farmers. Why? For the reason that it pays. I will ask the Past Master of the State Grange, Bro. Johnston: What has induced so many people throughout this State to engage in horticultural pursuits? He answers: The high prices realized for fruit in the past, with the expectation that good fruit and an unlimited market in the East will make it a paying business.

I would ask the Worthy Lecturer of the State Grange: Why is it that, when hops go hopping up to \$1 per pound, so many butchers and bankers hop around to get good

hop-land to go into the hop-raising business? With his face all wreathed in smiles as he thinks of the many dollars that hops hopped into his pockets, he observes: Take me for an example. Hop farms down the river, hop farms up the river, more hop farms out on the Cosumnes river, my home a mansion in the capital city of California. And who will deny that hop-raising is not a paying business?

By the foregoing observations, Worthy Master, you see the point I desire to make. If we would make the Grange what it was destined to be, the means to enable the agricultural classes to better their social, educational and financial condition, one important fact becomes self-evident: That while we ourselves can only know how well the Grange has fulfilled its mission as an educator, it yet remains our imperative duty to ourselves and to the Grange that we, who have been intrusted with its financial and business enterprises, see to it that they are made financial successes. We should know no such word as failure or defeat. With a store such as we have in Sacramento, where you can buy goods as cheap and in some instances 40 per cent cheaper than you could before we started our business, and the stockholders enabled to realize 10 per cent interest on their stock; with the successful operation of a Patrons' Mutual Fire Insurance Association in this county, insuring its members for less than one-fifth of one per cent, and possibly for one-tenth of one per cent, which has been done in New York, then will it be manifest to all that it pays to be a Granger. When men can feel the coin put or kept in their pockets, they will be only too anxious to join our ranks and reap with us all the benefits that accrue to the active members of the Grange.

And now, Worthy Master, one more observation and I am done. To-day our beloved Order has attained her majority. She has overcome all the afflictions that youth is heir to, and to-day she starts out on her mission in all the beauty of full-grown maturity. May it be our part to advocate its principles and defend its honor, and be sure that no word or act of ours shall bring a dark spot or tarnish the name or fair fame of our beloved Order.

GEO. W. HACK.

Valuable to Advertisers.

This week we print a largely increased issue of the *RURAL PRESS* to accommodate the entire list of subscribers of the *California Patron and Agriculturist*, which has been consolidated with the *RURAL PRESS* in a weekly official Grange edition. This "hitching teams" and doubling up the advertising power of the paper is an important consideration for all our advertising patrons.

It has been conceded that the *RURAL* was the most effective weekly advertising medium on this coast for many years. Certainly hereafter its advertising value to those who wish to reach the leading representative farmers, the most thrifty and reliable purchasers in the land, must be beyond comparison with that of any other journal on this coast, if not superior to any other in the United States.

Official Circular to Granges.

An official circular will be sent by the Secretary to each Grange in this jurisdiction, soon, giving the contract relating to the change in the publication of the Grange organ and other matters of importance to every Patron. Let every member attend the Grange and keep posted.

A BRAZEN FRAUD.—Our farmers should keep an eye open for the agent who sells the "wheat binder," who is swindling farmers in different parts of the West getting postal-card orders for one binder and raising them to 100. The "binder" is a small stick about 18 inches long, with a brass ferule on the end, on which there is a slot for fastening a string which binds the wheat.—*Salem Journal*.

FROM "FLORA."—Sister Pauline Newkom, Flora of the State Grange, writes from Yuba City with good faith and interest in the Grange, alluding hopefully to our next session at Sacramento.

THE *Carrier Dove* for January contains a fair lithographic likeness of Bro. I. C. Steele, with a brief but very good historical sketch of his life.

SACRAMENTO COUNTY POMONA GRANGE will meet January 22, 1889, at Grangers' hall, Sacramento, at 1 P. M.

SIXTH DEGREE CERTIFICATES.—Certificates of Sixth-Degree membership have been sent to the Secretaries of Subordinate Granges for all Patrons initiated in the degree of "Flora" at the late session of the State Grange.

THE meeting and harvest feast at Haywards last Saturday was all that could be desired, and reflected much credit on the officers, Eden Grange and those who participated in the exercises.

THE *Fresno Republican* says the prospects for one or two competing lines of railroad from San Francisco and Stockton to that place are first rate.

Gulbadan's Song.

All in a Garden fair I sate, and spied
The Tulips dancing, dancing side by side,
With scarlet turbans dressed;
All in a Garden green at night I heard
The glad voice of night's melodious Bird
Singing that "Love is Best!"

The shy white jasmine drew aside her veil,
Breathing faint fragrance on the loitering gale,
And nodded, nodded "Yes!"
"Sweetest of all sweet things is Love! and wise!
Dance, Tulip! Pipe, fond Bird, thy melodies!
Wake, Rose of Loveliness!"

"Yet," sighed the swaying Cypress, "who can tell
If Love be wise as sweet? if it be well
For Love to dance and sing?
I see—growing here always—year by year
The Bulbuls die, and on their grassy bier
Rose-petals scattering!"

All in that Garden green the Rose replied:
"Ah! Cypress, look! I put my leaves aside;
Mark what is 'mid this bush!
Three blue eggs in a closely-woven nest,
Sheltered, for music's sake, by branch and breast!
There will be Bulbuls! hush!"

All in that Garden green the Bulbul trilled:
"Oh, foolish Cypress! thinking Love was killed
Because he seemed to cease!
My best Belov'd hath secrets at her heart,
Gold seeds of summer-time, new buds to start;
There will be Roses! peace!"

Then lightlier danced the Tulips than before
To waftings of the perfumed breeze, and more
Chanted the Nightingale.
The fireflies in the palms fresh lanterns lit;
Her zone of grace the blushing Rose unknit,
And blossomed, pure and pale!

—Sir Edwin Arnold.

Women Don't Want to Vote.

[Written for the RURAL PRESS by ASSENATH CARVER COOLIDGE.]

There was silence in Car 1400. A big fat man with a big red face and a small red nose, squeezed himself into a seat with a pretty young girl and asked her to dine with him at the next eating-house. Then he shuffled over a bundle of documents, one of which he laid in her lap.

"That," said he, in a loud voice, "is a bill to let women vote, got up by a strong-minded critter in my district."

The girl took it up, looked at it, smelled of it, and then handed it back.

"The truth is," continued the fat man in still louder tones, as though he meant to make the whole nation hear, "the truth is, women don't want to vote."

"They don't, hey?" said a lean woman who sat on the opposite side of the car, throwing back her veil and bracing herself up with a hand on each seat. "Hev you got any proofs handy?"

"Plenty, ma'am. Hundreds of 'em have told me so with their own lips."

"And of their own accord, 'thout bein' jammed into a corner?" said the woman, peering around at the girl.

"Yes ma'am," bleated the fat man; "absolutely of their own free will."

"How many mile did they come to tell you that?" asked the woman.

"I never asked them how many miles they came," said the fat man, shooting a sarcastic glance at the woman across his small red nose.

"I never ask impertinent Yankee questions."

"An' didn't you ask 'em to dine with you nuther?" said the woman, smiling at the young girl.

The fat man cast a look of red indignation at the lean woman, and another silence would have ensued except for the tittering of a few of the women passengers.

"I asked for information," said the woman, after a two-minute's pause. "My experience haint ben a mite like yours. I beg your pardon, sir, but would you object to tellin' me where you keep yer proofs?"

"In my head," snapped the fat man.

"Waal, that's whar I keep mine mostly," said the lean woman, "but I've got some on 'em to hum locked up in an ole hair trunk; but they're all jest to the contrary o' yours; an' I didn't pay nuthin' fur nuth on 'em, nuther. I didn't offer nobody no dinners nor dimons nor silks nor eatins nor any kind o' vittals nor dry goods. 'Pon honor I didn't, an' I kent see into it how our tu proofs should be so ontirely opperite. I swan tu man I kent."

The fat man stiffened up in his seat like a brick, a red brick, seated his eye-glasses across his little red nose and plunged into his newspaper with a deep and desperate plunge.

The lean woman continued:

"Come tu think on't, mister, I shouldn't wonder of them women 'tyu speak on wuz tu young tu vote, enyhow. Mebbey tha wuzent more'n sixteen or seventeen at the most, ur mebbey tha wuz hoazin'. Tha du hoax like tunket sometimes. They pretend tha don't

want a thin', wouldn't look at it, nor smell on't hardly, when they're hankerin' fur't the wunst kind, an' wud grab it up quicker'n lightnin' of yer baak wuz turned. It makes me think of a dorg I hed charge on once. I hed charge on one twice't, but this wuz the fust charge. He wuz a fine huntin' dorg, full grown and handsome, but very young, scassely more'n a pup. My brother left him for me tu keep while he went tu the war. We hedn't any huntin' fur the critter tu du on our promises, so I thought I'd train him up fur an ornamin't, ur a sort o' house pet yu know—an teech him as many of the domestic vertews as he'd be apt ter hold. So I trained an' trained an' teecht him jest what things he must tech an' jest what he must leave unteched 'til I thort he must be nigh perfect. Would a' gin' 'im a diplomer of he'd axed fur one; but he didn't; p'raps he didn't hev so much faith in his trainin' as I did. My faith was perfect. It was pinned onter that dorg as fast as faith's pins could pin it. I hedn't never put him tu no great tests, I don't bleeve in temptin' dorgs no more'n foaks, peticularly when ther young; but I hed faith tu bleeve that a dorg who'd ben raised as I'd raised that dorg couldn't help bein' honest an' straightforrd tu say the least; but I got awfully deceived in that dorg.

"One day father killed a chicken and laid it on the woodhouse bench.

"Dorg won't touch that chicken, I s'pose," said father.

"Oh no!" said I; "you see he won't even look at it."

"An' sure 'nuff he trotted along by my side, parst the dead chick an' baak agin, with his nose high in air. He wouldn't even lower his nose enuf tu look at it, much less smell on't. He even went so fur as tu turn his head the opperite way as tho' he wuz turribly interested in the woodpile ur barn door.

"Well," said father, looking at the dorg with admiration in his eye, "I guess he's tu well fed, enyhow, tu eat undressed chicken."

"Father was one who pinned his faith as firm on feed as I did on edgeration. I thought well of it, too, fur an extra guard; so I went off saying to myself: 'Ther's nothin' like treatin' even a dorg well. Edgerate him and feed him well an' it makes an honest dorg of him.' Full o' these elevatin' thoughts I went tu the winder an' lookt owt, an' as sure as yu live their wuz that air good dorgy—that air honest dorgy—that air well-edgerated an' well-fed dorgy, a kiverin' up that air chicken with autum leaves!"

"He warn't hungry an' didn't want to eat it, of course not, but yu see he had wild huntin' blood in his veins an' he sort o' hankered fur sumthin' like game.

"I didn't keer so much fur the chicken, but tu think that air dorg 'ad took s' much pains to fool me. I tell yu whar 'tis, I've lost my faith in dorgs an' in everybody else who pretends tha don't want things it's natral fur 'em tu hev, and it's my advice tu yu, mister, not tu leave the ballot-box a lyin' round loose. I guess mebbe women's got sum o' the wild votin' blood o' the Adamases and Jeffersons and Linkenses in their veins an' they can't be trusted with the ballot-box tho' they stick up thur noses an' say they don't want nothin' tu du with it. No sur-ee, tha can't be trusted tho' yu bring 'em up tu despise it an' tu love the kitchen an' female prayer-meetin' an' feed 'em up with candies an' invite 'em tu dinner at evry station. They ain't hungry fur vittals, mebbey, but they'll take the ballot the fust good chance tha git, yu better bleeve."

The lean woman ceased. The train rumbled up to the eating station. The fat man waddled out, but the young girl did not accompany him.
Goleta, Cal.

A Happy Home.

[Written for the RURAL PRESS by ADA E. TAYLOR.]

A happy home! Ah, ye who have known such will never know and never fully appreciate the true blessedness and pure love those few words contain. They hold in their power the summit of all earthly happiness. The greatest care possible should be taken in endeavoring to have a home where the air is filled with harmony and peace. Allow no cross, harsh words to enter such a sacred abode. The lack of thorough good temper is often the cause of a great deal of trouble and sorrow. The owners of sunny, cheerful and contented dispositions are blessed far beyond measure, and all through the trials of life they will find it a gift that will stand them in good stead, and to which nearly all their happiness is due. "A soft answer turneth away wrath" is a good family motto, and is very often successful in soothing quarrels. Harsh, hasty words often destroy the peace of more homes than even drink—that fatal curse to family happiness. A happy, peaceful home is a taste of heaven on earth, and our taste should be carefully cultivated, for such can be done, even though it seems hard for some at first. There is no excuse for unhappiness in any home, should every member of the household use soft, loving words to each other, and not get impatient because everything does not go just right. Too many men seem to forget that a kind word, a caress or a loving look are all the wages their wives get in return for their manifold labors. Every husband and father should leave all troublesome business cares behind as he turns his face homeward, and try to increase the joys of the family circle. How one's memory loves to dwell on one's

youthful home; but oh, how dearly, how sacredly, one holds that memory if his or her home was a happy one, if it was placed where no jarring, cross-grained words were allowed to enter. That was a home that calls one's memory back to days filled with joy and pleasure, and when the years were one long, unbroken summer's day, without the slightest cloud to fleck its heavenly purity. Ah, how little we know how much depends on our own selves for making such a home. We are all too liable to blame others and look at their faults and overlook our own. If we would commence with ourselves to be happy and cheerful, we would soon find out it would be catching among the others. Let every one try, and see what a speedy cure it will be for crossness and irritability of temper.

"Speak not hastily! words are living;
They are serpents with deep stings,
Or they may be bright words flying
With a love-light on their wings."

The Other Side.

[Written for the RURAL PRESS by DOROTHY SHIRLEY.]

How often are the praises of a "sunshiny woman" sung by poets and novelists! Whoever expects to find sunshine radiating from a man's presence?

Yet in the case of husband and wife, the man should be the stronger and nobler by very virtue of his position as head of the house.

"Every lassie has her laddie," the old song tells us, but they seem to be very queerly paired off sometimes in this funny old world of ours.

If girls would only learn to think of the character and habits of the man in whose hands they lay the result of their future life, instead of his heavenly eyes and drooping mustache, there would be far less weary, heartsick women to regret their wedding-day.

"To love, honor and obey." A man to whom a girl could safely promise these three things, would be one she could always rely on, lean on, and rest content in assurance that he would "love, cherish and protect" her—his part of the sacred marriage vow.

How could he better cherish her than by maintaining a pleasant, cheerful demeanor in her presence?

If she is tired and overworked, your very cheeriness will, in spite of herself, infuse itself into her tired brain.

No doubt you have been working hard as well as she, but it is done now for the day; and unfortunately women grow up heir to the various little trifling petty cares that would set a man crazy if laid upon his shoulders.

Any tired housekeeper would be much more cheerful over her washtub if she knew she could drown the remaining duties of the day in her last tub of suds. But these minor duties which keep tired hands and feet busy till bedtime are all for the comfort of you and yours. Remember this and be cheerful, O ye "man of the house!"

Do not be exuberant in your cheerfulness, but be quietly happy and contented in your home, and show due appreciation of the comforts her busy hands keep ready for you.

If she is a sensitive, loving woman, a fit of the blues in you will set her wondering where she has failed in wisely duty; she will rarely attribute it to business cares, and she will see from the supper you ate that you are not ill. She will wish she had taken time to crimp her hair last night, and wonder if you are thinking of Daisy Rosewood, who was so much prettier than she, and who, she knows, tried awful hard to get you.

Just tell her once in awhile that she is the dearest, sweetest little woman you ever knew, and watch her face color up and brighten. She will look happier for hours—you may even hear her singing softly about her work; she has been too tired of late to care to sing.

Tell her a joke once in awhile, and hear her hearty laugh once more; consult her about your business, and above all give her a pleasant look and smile when you look at her. Perhaps she has not been out of the house for a week; carry her sunshine to her, in your manner.

Wants or Wishes.

"I desire to insert this small advertisement in your paper to-morrow morning," she said.

"This," said the advertising clerk, looking it over, "will go among the 'wants.'"

"Have you no 'wish' column?"

"No, mum."

"Then, sir," said the young lady from Boston, haughtily, "you need not insert it. I simply wish a situation as governess. That is all. It is not a case of want. Is there any newspaper printed in English in this place?"—Chicago Tribune.

A UNIQUE MATCH-BOX.—Jack Wallace has quite a novelty in the shape of a match-safe. It consists of a section of a black oak tree, about six inches long, out just where a branch springs from the trunk. In the joint is an old worn-out mule shoe, with the nails bent just as it fell from the animal's foot. Jack's explanation is that, fourteen years ago, one of the Ten Eicks, while teaming in Trinity county, picked up the shoe and hung it on a twig growing out of the trunk, where it remained undisturbed for years. The twig had grown to a sturdy branch,

three inches thick, in the meantime, the wood growing over the shoe and holding it as tightly as in a vise. Some time ago a friend cut out the section holding the shoe and presented it to Jack, who bored holes into it for matches and placed it on the counter.—Redding Democrat

The Eclipse as Seen from Howell Mountain.

[Written for the RURAL PRESS by MALLIE STAFFORD.]

Happy it was for the thousands of eager sight-seers that the day was a lovely golden one, amid the recent long and dreary rainy period. Our point of observation, though about 100 miles south of the direct line of totality, was yet one highly favorable to the viewing of the splendid spectacle, being on the northern slope of Howell mountain, in Napa county.

It was during our late New Year's lunch that we first noticed that singular diminution of the sun's brightness, so peculiar in eclipses, and immediately our little party hastened to the top of the hill as the best point of observation. Here we had a clear and unobstructed view. The dark shadow of the moon had already crept across the western margin of the sun, describing a dark crescent on the luminous body.

With the aid of our smoked glasses we slowly and silently watched its progress and the singular change in color that nature was assuming. At the same time a chilliness pervaded the atmosphere, unlike that of night or cloudy day.

We did not fail to observe and admire the beautiful crescent-shaped images, formed by the sun's rays, glancing through the foliage of trees, small twigs and branches, forming a lace-work of crescents, shadow and sunlight, of exquisite and singular beauty, which is one of the most interesting as well as among the most beautiful and singular phases of an eclipse, and peculiar only to eclipses.

About the grand and glorious orb of light, a few thin, transparent clouds lingered, but not enough to mar the scene.

With almost breathless interest we watched the opaque body, now rapidly and silently shutting out the glorious effulgence of day. What a grand and impressive sight! Now, now is the supreme moment! It is almost obscured, save on the lower rim a stream of splendor, like a thin jet, pours out irradiating the dark, rosy and emerald glow of the landscape. We lower our glasses and view with naked eye the magnificent spectacle, a sight so rare and grand that, once seen, remains in memory while life lasts.

Surrounding what seems to be the black ball of the moon is a corona of softened light, reminding one of the coronal of glory, seen in pictures of the old masters around the brow of Christ and the Madonna, but a light indescribable and different from anything the eye has ever beheld.

The soft and beautiful circle is unbroken, save at its lower edge, where streams even at this most critical moment a transcendent gleam of that rare splendor whose full glory has momentarily been eclipsed. It lingers but a moment, the beautiful corona of softened light!

We gaze awe-struck and see deep in the blue vault of the heavens; the stars of night show forth like magic. Close to the sun a most brilliant orb appears. What a rare transformation of nature! This effect of weird darkness is heightened and intensified by the near presence of the shadowy and somber mountains on the south and west, and the dark belt of pine and stately redwoods on the north.

Far away to the east a rosy and morning-like glow on the horizon greets the vision, as if heralding the approach of the god of day.

In the west also and far to the north and compassing the valley and the grandeur of the mountains, there shines that radiant glow on the horizon, rendered still more lovely by the thin and vapory clouds that linger like reluctant visitors loth to depart ere they have witnessed and played a part in this rare and impressive scene.

A few seconds only elapse, and it has passed the period of totality; like a beautiful vision the lovely corona disappears, and on the western side of the black opaque body of the moon a thin golden crescent emerges, which growing larger, dispels the darkness and gradually floods all nature with warmth and light.

At our point of observation, the darkest period, in which the eclipse was almost total, did not exceed more than 20 or 30 seconds, but short as it was, it was long enough to allow of a fine view of the unparalleled spectacle, and note the pulsation in the time-beat of Nature, as if the life forces of the universe had for the time being suspended respiration, and old Earth had ceased in her orbit and hung a motionless object in the darkness of immensity.

There was a noticeable effect on certain species of animated nature, particularly on the birds and domestic fowls. As the darkness increased, the chickens and barnyard fowls, with one accord, sought their homes, and naturally, as at night, went to roost.

A few moments later, when the god of day asserted his power and might and shone forth in splendor, they all hopped down, and with much talk and cackle in earnest speculation, strode forth into the light of day, in wonder, doubtless, at the most unaccountably short night.

Dressing Well With Small Expense.

[Written for the RURAL PRESS by M. W.]

"How are you? I knew you three blocks away and waited for you."

"How did you know it was I at that distance?"

"Why, by that light-blue veil and those light, tan-colored gloves."

"Is that a reflection on my toilet? You know I cannot afford a veil and gloves to suit every dress."

The above conversation was forced upon my ears as I stood at the corner of a street a few days since ready to take a car when it came along. I looked at the last speaker. Her veil was a pronounced blue, her gloves light tan, her dress a dark maroon, her parasol black, and her hat a brown straw! Yet she had the appearance of a lady of education and refinement. How often we see this bad taste in dress. If a lady can only afford one veil or one of any other article of dress at a time, why will she persist in getting it the most pronounced gay color? Why not in such a case decide at once to take black? It is well known that black goes with anything. With a black parasol, gloves, veil and wrap, any dress can be worn. I say if a lady can only afford one of any of these articles. But in fact it is no more expensive to have two or three veils, etc., than one—it all amounts to the same at the end of a year. It is simply expending a few dollars more and in the question of veils a few cents more, at one time, and surely any lady would do that to earn the reputation of being a lady of taste. You wear these articles no oftener, and it is really a satisfaction when, for instance, you put on your brown dress to select the veil, gloves, etc., to harmonize. You may say you cannot take the time to hunt them up, or you don't care. Then pay some attention to this subject for the sake of your friends who have taste for harmony in colors, and don't allow your own bad taste to grate upon their sight. If you are in a hurry to start on your shopping tour, business, work, or whatever may call you on the street, and you do not feel as though you could take time for these details, then consider the subject the night before and make the necessary preparation.

During the past few weeks I have noticed many hats and bonnets trimmed with white ribbon. It is not only out of season, but when the ribbon is cheap and soiled is positively disgusting. White is more appropriate for the early spring, and then for children, or for ladies who are in their carriages, but decidedly too conspicuous for street wear, and especially when put on felt or coarse straw hats or any material which represents the "rough and ready," and white is considered by those of genteel taste vulgar except for the house, or evening or any dressy occasion; also for a picnic when worn by young people, and then it should be in wash goods such as mull, lawn, linen, organdie, batiste, etc., but never in silk or satin as I have seen at picnics composed of real ladies and gentlemen. I have also noticed on the street ladies wearing black gloves with the inside gores of white and large coarse stitching on the back of white silk. Can anything be more conspicuous or more vulgar? They should only be worn with a harlequin dress, and then in a masquerade or on the stage.

I have heard people—and especially gentlemen—say that such or such a lady was beautifully dressed, and yet they could not tell what she wore. Such a dressed lady is a true artist—nothing conspicuous or loud, but showing a perfect sympathy, so to speak, in the entire toilet. Such a person would never mar her appearance by adding something noticeably loud, no more than she would put a blot on a beautiful picture; nor will she ever give her friends a chance to say, "I knew you three blocks off."

Lincoln on Jefferson.

George N. Stroat of Nebraska City has an autograph letter written by Abraham Lincoln in 1859. It is an answer to an invitation to attend a banquet in Boston on the anniversary of the birth of Thomas Jefferson. The letter concludes with the following tribute to the author of the immortal Declaration of Independence:

"All honor to Jefferson, to the man who, in the concrete pressure of a struggle for independence by a single people, had the coolness, forecast and capacity to introduce into a merely revolutionary document an abstract truth, applicable to all men and all times, and so to embalm it there that to-day and in all coming days it shall be a rebuke and a stumbling-block to the harbingers of reappearing tyranny and oppression."

YOUNG FOLKS' COLUMN.

Mollie's Success.

"I do declare, wife, those hens are more plague than profit. We don't get eggs enough from them to amount to a row of pins, and they are always getting out and doing some mischief. I have a good mind to kill every one of them."

"Oh, papa, don't! don't!" exclaimed little Mollie. "Let me take care of them. I know I can do it, and they shan't scratch up any more beds or do mischief anywhere."

Mr. Howard looked at his little daughter in surprise, and said: "I guess you wouldn't make out much in the hen business. No, the best thing to be done is to kill them all off."

Mrs. Howard said: "You might let Mollie try, James. I believe I would, really."

"Oh, yes, do, papa. I have heard you say there was nothing like trying. Now do let me."

"Well, Mollie, I will, and I'll tell you what I will do. You take care of the hens, and you may have your choice of any one out of the flock to pay for the trouble. You may have all her eggs, and chickens if she has any, to do what you please with. You can sell them, and who knows but you may get rich where I have failed." With this Mr. Howard went off laughing.

The first thing Mollie did was to put on her sunbonnet and go out and get the hens into the henhouse. She then fastened the door, which her father often neglected to do, so no wonder his hens got out and made trouble. To tell the truth, the reason Mr. Howard's hens did not lay their master many eggs was because he did not care for them as he ought; he was generally very busy with other matters, and so neglected them.

Mollie chose for hers a black and white one, which she called Speckey. She made up her mind to take good care of them all, and as there were only sixteen of them, it did not seem like a very burdensome task. It was not long after Mollie took charge of the hens before eggs began to be more plenty than they had been for a long time. Speckey laid her full share, and every penny her eggs brought in Mollie put away in a bank which she purchased for the purpose. Her brother Frank, who was a little older than Mollie, called it her "hen fund."

In due time there were seventy-five little chickens to be cared for. This made Mollie happy, but still she was not quite satisfied, for, strange to relate, Speckey seemed to have no ambition to raise up a family for her benefit.

"Oh, dear, mamma!" she said to her mother one day, "Speckey never will do anything. I wish I had taken Whitey for mine. She has got thirteen chickens already."

But "it is always darkest just before the dawn." Only a few days after this, Speckey seemed inclined to follow Whitey's example. When Mollie went out to feed the hens as usual, Speckey was on her nest. Mollie did not disturb her, but looked again two or three hours later and found her still there. Upon discovering this Mollie started for the house as fast as she could run, and was in so much of a hurry that she did not notice the cat which lay on the kitchen doorstep blinking at the sun, and stepped on her tail, stumbled over the dog standing near, and as she fell, caught hold of the table-cover, pulled it off, and with it a pitcher. The cat yelled, the dog barked, the pitcher went down with a crash, and Mollie screamed. This brought her mother and Frank to the scene of action. Frank said he thought a cyclone had struck the house. Mrs. Howard remarked that a cyclone couldn't have made much more racket, at any rate. Mollie picked herself up, and then said:

"Oh, mamma, Speckey is going to set. Please give me some eggs, and come out and help me put them under her."

Frank asked her why she didn't put the eggs under Speckey herself. To which Mollie replied:

"Of course I can't do it. I don't feel well enough acquainted with the hen!"

"You're afraid; that's what's the matter," retorted Frank.

Mrs. Howard righted things somewhat, reprimanded Mollie for her haste and carelessness, and then picked out thirteen nice eggs and went out with Mollie to help set Speckey.

Frank thought he would have a little fun at his sister's expense, so he told two of his mates about the "great contract," as he called it, which Mollie had made with her father, and how she had just put thirteen eggs under old Speckey.

The boys declared it would be fun to fool Mollie, so they robbed a wild goose's nest they had found that day and substituted one of the eggs for one of those in Speckey's nest.

In three weeks' time Speckey came off with what Mollie supposed were thirteen chickens, but you and I know that one of them was a little gosling. Mollie soon discovered that one of her chickens was a "homely thing." And when it grew to be a little older, it would run into every pool of water it could find, much to Mollie's and Speckey's alarm. Poor Speckey would screech and flutter around till the little goose took to dry land again. Mollie said that chicken didn't know anything, and one morning when she found it dead, she was glad of it, for

it had been no comfort to anybody. When the boys got around to tell her the trick they had played upon her, she was vexed enough and would not speak to any of them for two or three days, as she said they had imposed upon her.

The rest of the flock lived through all the ills that chickens are heir to, and were in fine condition for the market in the fall, so Mollie sold them, and when she came to add the money she received, with her egg money in the bank, found she had \$8 in all. With this her father bought her a sheep and two lambs. The next spring these grew to a flock of six, and in the fall she sold them to her father for \$25. This, with the "wool profit," as Frank called it, amounted to \$30. The boys declared she was nothing more nor less than a "bloated bondholder," and advised her to retire from business. She took their advice, invested her money in a sealskin muff and boa, of which she was very proud, and she had reason to be, for she had earned them all herself.—*Mary Morrison in Portland Transcript.*

GOOD HEALTH.

INJURIOUS EFFECTS OF NOISE.—A writer in the *Popular Science Monthly* asserts that noise is one of the most injurious influences of city life. It may not be sufficiently loud to attract the attention of those accustomed to it, but, if continuous, it acts as inevitably upon the nervous system as water in dropping upon a stone. Experiments made upon animals show that when they have been subjected for a number of hours to the vibration of a tuning-fork, their nerve centers become irritated, as certainly as muscular fibers would be affected by an acid or electric shock. The injurious effect of ordinary noises has been recognized by the authorities of European cities, and in some cases the nuisance has been suppressed. Heavily laden carts are not admitted to certain streets of Berlin, and in others they are only allowed to pass on condition that the horses walk. The street cars at Munich have no bells, and those of us who live in places where these bells are not used on Sunday can testify to the relief attendant on the consequent "peace and quiet." The amount of the matter seems to be that the city dweller must regard noise as one of the necessary evils of his condition—one to be borne philosophically, and requiring a large stock of grace and patience. Happy, indeed, are they who, through the long hot months, are only disturbed in their morning slumbers by the song of the birds or the crowing of cocks.

A BUG IN THE EAR.—If you get a bug in the ear, drown him out and be quick about it too. Writers say when a bug gets into the ear, do not be frightened, but drown him with oil or warm water. There is no philosopher, remarks Dr. J. Herbert Claiborne, Jr., in the *Medical Classics*, who could sit unmoved with a bug or fly stamping a tattoo upon his eardrum. Yes, be frightened, for it will facilitate your movements. Sweet oil is perhaps the best thing to keep him from moving—that is, the first desideratum. The oil, by its thick consistence, will so entangle and bedraggle its legs and wings that the intolerable noise will be stopped. If oil be not at hand, use any liquid that is not poisonous or corrosive. Water will probably be within the reach of every one. This is also more liable to float him out, too, than either sweet oil or glycerine. It has been suggested to blow tobacco smoke into the ear to stupefy the insect. We cannot indorse this advice; tobacco smoke blown into the ear of a child has been known to cause alarming symptoms. When the movements of the intruder have been arrested, syringe the ear gently with warm water. All manner of insects and bugs have been found in the ear, but you can never tell in a given case who the rude caller is that is knocking at the door of your brain till you have him out.

PREVENTION OF ALL INFECTIOUS DISEASES.—The science and practice of medicine and surgery are undergoing a revolution of such magnitude and importance that its limit can hardly be conceived, says Dr. Austin Flint in *Forum*. Looking into the future, in the light of recent discoveries, it does not seem impossible that a time may come when the cause of every infectious disease will be known; when all such diseases will be preventable or easily curable; when protection can be afforded against all diseases such as scarlet fever, measles, yellow fever, whooping-cough, etc., in which one attack secures immunity from subsequent contagion; when, in short, no constitutional disease will be incurable, and such scourges as epidemics will be unknown. These, indeed, may be but a part of what will follow discoveries in bacteriology. The higher the plane of actual knowledge, the more extended is the horizon. What has been accomplished within the past ten years as regards knowledge of the causes, prevention and treatment of diseases far transcends what would have been regarded a quarter of a century ago as the wildest and most impossible speculation.

DANGERS OF CLOSE SHAVING.—It is said on good authority that very close shaving is a dangerous thing to follow up for any considerable time. One who claims to know writes as follows: "Do you know what a close shave means? I never did until I looked at a face the other day through a microscope which had been

treated to this luxurious process. Why, the entire skin resembled a piece of raw beef. To make the face perfectly smooth requires not only the removal of the hair, but also a portion of the cuticle, and a close shave means the removal of a layer of skin all around. The blood-vessels thus exposed are not visible to the eye, but under the microscope each little quivering mouth holding a minute blood-drop protests against such cruel treatment. The nerve tips are also uncovered, and the pores are left unprotected, which makes the skin tender and unhealthy. This sudden exposure of the inner layer of the skin renders a person liable to have colds, hoarseness, and sore throat, and it is only that the face and neck are pachydermatous—"

RULES FOR FAT PEOPLE AND FOR LEAN.—To increase the weight: Eat, to the extent of satisfying a natural appetite, of fat meats, butter, cream, milk, cocoa, chocolate, bread, potatoes, peas, parsnips, carrots, beets; farinaceous foods, as Indian corn, rice, tapioca, sago, cornstarch, pastry, custards, oatmeal, sugar, sweet wines, and ale. Avoid acids. Exercise as little as possible; sleep all you can, and don't worry or fret. To reduce the weight: Eat, to the extent of satisfying a natural appetite, of lean meat, poultry, game, eggs, milk moderately, green vegetables, turnips, succulent fruits, tea or coffee. Drink limejuice, lemonade, and acid drinks. Avoid fat, butter, cream, sugar, pastry, rice, sago, tapioca, cornstarch, potatoes, carrots, beets, parsnips, and sweet wines. Exercise freely.

ONIONS AND BEEF.—What is the most strengthening food for a convalescent? Well, you know the beef-tea theory has been exploded. The most life-giving and digestible food that can be given to one just recovering from an illness is chopped beef. Just take a pound of raw beef, cut off all the fat, slice two onions, and add pepper and salt. Then chop the onions and meat together, turning them over and over until both are reduced almost to a pulp; then spread on rye bread and eat as sandwiches. People talk about celery being a nervine, but let me tell you that there is nothing which quiets the nerves without bad results like onions. The use of them induces sleep and much strength is obtained from them.—*Ex.*

EFFECTS OF LIGHTS ON THE EYES.—The practice of having night-lights in children's bedrooms is pronounced very injurious by well-known physicians. Instead of allowing the optic nerves the perfect rest afforded by darkness, the light keeps them in perpetual stimulation, with the result of causing the brain and the rest of the nervous system to suffer.

DOMESTIC ECONOMY.

Tested Recipes.

[Written for the RURAL PRESS by ADA E. TAYLOR.]

Cocoanut Pudding.—One-half pound butter, one small cup white sugar, whites of eight eggs whipped to a froth. The white portion of one cocoanut grated. Grease the pan with butter and bake. Desiccated cocoanut answers as well as fresh. To be eaten with cream and sugar.

Ice Cream Cake.—Take the whites of five eggs, 1½ cups of sugar, one-half cup of butter, one cup of milk, three cups of flour, and four teaspoonfuls of baking powder. Separate this mixture and color half with strawberry coloring; flavor this with vanilla, and the other part with lemon. Put in the white and then the pink. Bake slowly.

Delicious Apple Sauce.—Pare and slice thin as many apples as you wish. Put them in a tin pudding-dish, with enough sugar to make them sweet, and a little water. Bake slowly until soft. They will turn a rich red and have a flavor far exceeding stewed apples.

Bread Pudding.—Have the pudding-dish nearly full of fine bread-crumbs, pour over enough boiling milk to more than cover them. Warm one-half cup of butter, and mix thoroughly with one cup of sugar and three eggs well beaten; stir this gently in the pudding, and flavor with lemon. Bake until a delicate brown.

Pudding Sauce.—Dilute half a glass of currant jelly with a teaspoonful of hot water; stir in two tablespoonfuls of butter and the same of sugar. Set it over the fire, and when it boils add a teaspoonful of cornstarch wet with a little cold water; as soon as it thickens it is done. Flavor with lemon.

Plum Pudding.—Chop half a pound of fresh beef suet, mix with it a pint of stale bread-crumbs, a cup of flour, a cup of brown sugar, a cup each of raisins and currants, a pound of citron cut fine, the juice and grated rind of one lemon, a wine-glass of brandy, one cup of blanched almonds chopped fine. Dissolve a teaspoonful of soda in a little hot water, add to it half a cup of molasses and three beaten eggs. Mix with the other ingredients and put in a greased mold; boil steadily for eight hours. To be eaten with brandy sauce.

Cream Pie.—Half a pound of butter, a tea-cup of sugar, four eggs, two tablespoonfuls of flour, well mixed with a pint of sweet milk; stir. Flavor with vanilla. Bake in deep pans lined with puff paste.

Baking Puddings.—Puddings bake much nicer when the dish is set in the oven in a pan of hot water—custards especially.

The Week

Bright and cold has been the weather over the greater area of California during the week. We say it is cold, and shiver and shudder most gracefully, and yet after the most biting night we go out early in the morning to find the puddles innocent of ice, and the only sign of the severe winter weather the beautiful hoar frost which one has to fight with the rising sun to get a sight of. But such is the usual California winter. It is cold enough to answer the purpose; we had just as soon have a hoar frost as three feet of snow.

It is beautiful weather for winter work, and a vast amount of it is being done. Every tree of fashionable sort will be put out. The general report is that the nurseries are clear of such stock. There has also been a vast amount of

plowing done for late cereal crops. No one complains of the winter of 1889 so far, except that the crop of immigrants does not meet expectations. But that is not worth repining about; so long as the industries of the State are progressing so rapidly, there is no question about population. It is better to have it increase gradually.

Changes in the State Board of Horticulture.

The telegraph as we go to press brings the information that a joint session of the Senate and Assembly Committees on Viniculture and Viticulture was held Tuesday to consider Senate bill No. 36 and Assembly bill No. 4, which relate to the reorganization of the State Board of Horticulture and to increasing its efficiency. Both measures, with some slight changes, were favorably agreed upon and will be so reported. The bill as thus approved was given its first reading in the Assembly Wednesday morning, and according to all appearances will meet with no obstacle in its course.

This being the fact, it is of interest to state in a general way what we believe to be the changes proposed. We learn these from a report made by a committee of the Board appointed at the Ohio meeting to formulate a report upon the matter. The report contained the following points:

1st, that the appropriation be increased to the extent of \$20,000 per year, \$5000 to be paid to the Treasurer quarterly, in advance.

2d, that the horticultural year commence April 1, 1889.

3d, that the office or position of Inspector of Fruit Pests be abolished.

4th, that the sum of \$400 per month be allowed for competent office service.

5th, that a sum not exceeding \$1000 be allowed for traveling expenses.

6th, that the expenditures necessary to be made in experiments in the different districts, to be determined by the board, on application of one or more of the fruit-growers in such districts, the board to select such person or persons to make such experiments, and to pay the expenses thereof.

7th, that all County Horticultural Boards be required by law to report quarterly to the State Board in writing, of the condition of the fruit interests in their several districts; what is being done to eradicate insect pests; also, as to disinfecting, as to quarantine against new insects; as to carrying out of all laws relative to the greatest good of the fruit interests.

We understand that the bill which has made such rapid progress at Sacramento does not include the item on appropriations, as that belongs to the general appropriation bill, but the other propositions we suppose are incorporated in the measure.

The first item of general interest in the new measure is the abolition of the office of State Inspector of Fruit Pests. The unsatisfactory character of this office has been a matter of some discussion, the difficulty lying in discharging the prescribed duties of the office without adequate arrangements therefor. The old law provided for local inspection, quarantine, etc., but left the compensation for such local work to the county boards of supervisors, who acted either spasmodically or not at all. Thus the State Inspector, who had the appointment and supervision of these local officers, found himself constantly and continually balked by local negligence or obstinacy because the men he appointed to do the work required by the law could get no compensation. There were other respects in which the State Inspector, no matter how earnest or diligent he might be, could not carry out the provisions of the law governing his office. To no one have these facts been more painfully apparent than to State Inspector W. G. Klee, and he has long contemplated resignation, and in fact did place his resignation in the hands of the Board some time ago—the resignation to be acted upon by the Board when such action would be thought to facilitate the changes in the manner of the work which are outlined above. He would have resigned at a certain date, but was informed by the Attorney-General that the office could not remain vacant and that it was his duty to hold the place until the law is changed. On such advice Mr. Klee handed in the form of resignation noted.

Mr. Klee's work has been so universally sat-

isfactory both to the board and to the public at large that his retirement will be regretted. He has worked most zealously, energetically and faithfully, and has done a vast amount of good by his visitations and advice and by his numerous timely publications. It is, of course, not his fault that the defects in the public machinery prevented his carrying out all the duties placed upon him. He retires by his own volition so that his incumbency of the office may not stand in the way of the changes contemplated. Mr. Klee's last work, which is just out from the office of the State printer, is an exceedingly practical and valuable pamphlet describing and prescribing remedies for some of the most prominent fruit pests—a work to which we shall allude further at another time.

Concerning the other provisions of the new law in extending the office work of the board and in providing for local experimentation under its auspices, we have not space to remark at this time.

We write of this matter hastily as we go to press, and will probably recur to it. Meantime we would like to hear from readers of the RURAL concerning the propositions involved.

Another Improvement for Our Readers.

By reference to our new rates of subscription, it will be seen that we now offer subscribers 15 months for \$3, when paid strictly in advance, which is ten per cent better terms than ever before presented. We have also made our rates so that any who could not afford to pay a whole season in advance can get the benefit of our emphatic inducements for advance payments on shorter periods.

Combining the subscribers of the *California Patron* and the *RURAL PRESS* into one larger list makes it possible for us to announce better terms to all who will pay in advance even for a single quarter.

It also renders it more agreeable for correspondents to labor for a larger circle of readers, affording a stimulus for them to give more labor to perfect their contributions for a large circle of readers.

THE LOCAL LAND OFFICE.—During the quarter ending Dec. 31, 1888, there were sold in the S. F. land district 55,389 acres of Government land, the receipts for which were \$102,795. There were recorded 155 homestead entries, the fees on which amounted to \$1470. There were also received fees on 23 timber-culture entries, \$220; commission on 3312 acres thus located, \$92; fees on 111 timber-land entries, \$1110; on 226 pre-emption filings, \$678; on 1 home declaration, \$3; on 11 coal-land declarations, \$33; on 1 mineral-land application, \$104. Fees from testimony reduced to writing amounted to \$700. The greatest amount of land located was in Mendocino county, and the greatest amount of agricultural lands were taken up in Monterey and San Luis Obispo counties.

SUGAR BEETS AT ANAHEIM.—A meeting was held at Anaheim last Saturday to learn whether farmers would guarantee the planting of an acreage of beets, sufficient to insure the building of a sugar factory. The *Chronicle's* dispatch says that representatives were present from Fallerton, Fairview, Placentia, Santa Ana and the entire valley, and great enthusiasm was manifested. Late experiments with sugar beets in that neighborhood have given results highly satisfactory; and it is said that 10,000 acres can be sowed to that crop as soon as definite arrangements are concluded. The movement has aroused the liveliest interest, and residents thereabout seem sanguine that a sugarie will be established within the year.

CORN IN CALIFORNIA.—An Eastern paper, announcing the departure of one of their citizens for California, where he is to take up his residence, says: "He will never see such a corn crop in the Golden State." Whereupon the *Citrograph* remarks: "As the crop was 8000 bushels on 150 acres, we think he will see a much larger one if he goes to the right places. We have frequently seen over 90 bushels to the acre raised on damp land, in the river bottoms and along the first mesas. And, as he sold his crop at 31 cents a bushel while the price here is about 55 cents, the difference becomes still more apparent. It foots up \$16.53 per acre in Illinois and \$49.50 per acre in California."

The Meeting of the Fruit Union.

As we go to press on Wednesday, the Annual Meeting of the California Fruit Union is in progress. President P. E. Platt of Sacramento and Secretary H. A. Fairbank, assisted by B. C. Brown of Santa Cruz, are guiding and recording the proceedings. The meeting opened promptly in the office of the State Board of Horticulture, but the room was soon seen to be too small, and an adjournment was had to the new headquarters of the Viticultural Commission at Platt's hall, where there is a good, spacious auditorium.

The meeting is a grand success in point of numbers, and this we now conceive to be a surety of wise action, as we argued last week. The reading of the annual report of Secretary Fairbank was the feature of the first session. It is given in full upon another page of this issue of the RURAL. It is, as the reader will see, a very interesting document, and was received with marked approval by the meeting. After the reading of the report, short addresses on the outlook for California fruit at the East were made by Messrs. Snow of Boston, Thomas of Chicago and others, and an adjournment was then taken until evening—too late to follow the proceedings further in this issue. Next week we will give our usual outline of the transactions.

Never a Better Time.

The favorable offer contained in our new list of subscription rates should be sufficient to induce all who possibly can to pay up for their paper. Few will find as profitable an investment elsewhere. We call especial attention to the inducement offered for subscribers in arrears to settle up during the initial months of the year and favor the publishers as well as themselves by securing the benefit of cash in advance terms.

THRASHING MAIZE.—The Springfield (Ohio) *Democrat* says that a Mr. Wilson lately rigged up his thrashing machine for thrashing corn, and thrashed over 100 bushels for one of his neighbors. This corn was put in excellent condition for market by the machine—in fact it was sold to a grain-buyer at Plattsburg and pronounced in good order. Mr. Wilson thinks that in a few years all the corn sold by farmers to shippers will be shelled and cleaned in this way. Those who witnessed the operation say that every part of the plant is utilized; the tassel, stalk, chuck, blade and cob are all made into one homogeneous mass of feed, which stood of all kinds of grain as much as the best timothy and clover hay.

"CALIFORNIA ON WHEELS" continues its triumphant march eastward, attracting throngs of admirers and proving a brilliant success. The gentlemen in charge report the utmost kindness from railroads, journalists and everybody. Visitors at Minneapolis numbered 15,000; and the later dispatches say that Wisconsin folk have fairly "gone wild" over the exhibit. The train met its first climatic obstacle between Milwaukee and Chippewa Falls, being snowed in at a little town where the snow lay 22 inches on the level and there were drifts of greater depth all about. Although the weather was very cold, the products had not suffered materially.

SORGHUM-SUGAR PATENT.—It is telegraphed from Washington that in the suit brought by the Attorney-General against Magnus Swanson for the cancellation of the patent for a method for the manufacture of sugar from sorghum cane, the demurrer of Swanson has been overruled and the case set for trial. Commissioner Colman thinks this action of the court settled the point of law as to the right of the Government to bring suit for cancellation of patents in cases where employees make discoveries while employed by the Government.

QUARANTINE GUARDIAN.—The supervisors of Santa Clara county have appointed H. A. Brainard official Quarantine Guardian, with salary at the rate of \$900 a year, the board reserving the right to discontinue the office at any time. Mr. Brainard is well informed on the horticulture of his county, and will, no doubt, make a good officer.

The Supervisors of Yolo county have revoked the \$5 bounty on coyote scalps.

Gov. R. W. Waterman.

Pertinent to the session of the State Legislature, now in progress at the State capital, we present the following biographical sketch of the Chief Executive of California:

Robert Whitney Waterman, seventeenth Governor of California, was born in Fairfield, Herkimer county, New York, Dec. 15, 1826.

His father was a merchant and died while Robert was quite young. Two years later the son removed to the West and located at Sycamore, Ill. Up to his twentieth year he was a clerk in a country store. In 1846 he engaged in business for himself as a general merchant in Belvidere, Ill. In 1847 he married Miss Jane Gardner of that place. They have had seven children, six of whom are living—two sons and four daughters. In 1849 Mr. Waterman was postmaster at Genoa, Ill., under President Taylor. In 1850 he went to California with the early tide of the gold-seeking immigration, and engaged in mining on the Feather river. Two years later he returned to Illinois, locating at Wilmington, and engaging in an extensive general mercantile business, at the same time giving considerable attention to agricultural pursuits.

In 1853 he published the *Wilmington Independent*. He was a delegate to the convention held at Bloomington, Ill., in 1854, that gave name to the Republican party, and was an early friend and associate of Abraham Lincoln, Lyman Trumbull, Richard Yates, David Davis, Owen Lovejoy and Richard J. Oglesby.

While Governor Waterman has never been known as a politician, he has always taken a lively and clear-sighted interest in the affairs of the nation. He did effective work during the campaign of Henry Clay, for whose character he has always had an ardent admiration; also for Gen. Taylor in 1848, and for Gen. Scott in 1852. He took a very active part in Fremont's campaign, and also in the senatorial contest between Lincoln and Douglas. He held the office of postmaster at Wilmington, Ill., under President Lincoln, and, notwithstanding numerous and important duties and interests at home, at the outbreak of the war he enlisted over 1000 men and also rendered valuable service as bearer of dispatches for Governor Yates, making several trips to the front in 1861-2-3-4-5, and afterward actively taking part in the reorganization of the hospital service at Cairo, Bird's Point and Mount City, Ill., and Fort Holt and Paducah, Ky.

In 1873 he returned to California and established his home at San Bernardino the following year. He had already acquired a practical and valuable mining experience, and soon started out as a prospector. After undergoing many hardships and meeting obstacles that would have discouraged most men, he was finally successful in discovering a series of silver mines in a locality which has since come to be known as the Calico Mining District, in San Bernardino county. He had always retained his liking for agricultural pursuits, and with the increased means thus placed at his command, he soon made his Hot Springs ranch, on the mountain-side near the city of San Bernardino, one of the most charming and beautiful homes in the State. This place, with its picturesque surroundings, is the admiration of thousands of visitors every year. During the Presidential campaign of 1884, he was one of the principal projectors and builders of a large "wigwag" or pavilion in San Bernardino, for the use of political

meetings. At the Republican State Convention held at Los Angeles, Aug. 27, 1886, Mr. Waterman was nominated for Lieutenant-Governor, and in the following November he was elected by a plurality of 2500 votes, the Democratic State ticket being successful, with but two other exceptions.

He came to the Chair of the Senate without previous experience as a presiding officer, but acquitted himself in a manner that commanded the respect of that body and of the people, and succeeded in winning over his severest critics of opposite political faith.

Upon the death of Governor Washington Bartlett, September 12, 1887, Lieutenant-Governor Waterman was called to the duties of Chief Executive, being inaugurated the following day in San Francisco. The oath of office was administered by Justice McFarland of the Supreme Court.

During recent years Governor Waterman

Mixed Farming.

A RURAL reporter made a flying trip from Petaluma recently, through the western portion of Sonoma county to Bloomfield, a small country village, about 14 miles from Petaluma, and situated in the center of a very fertile valley. This section has been devoted to raising grain, potatoes, and dairying, from an early date, and of late years its adaptability for deciduous fruits has induced planting of large orchards, especially of the apple, pear, and cherry.

The advantages this section possesses in soil and climate for mixed farming has changed somewhat the policy of former years, and a practice of uniting dairying and farming has been adopted by a majority of the residents of

pounds of butter to the cow during the last year. A flock of 50 sheep, young cattle, work horses and brood mares, Berkshire hogs, and improved breeds of poultry constitute the balance of his live-stock. In this system of farming there is a chance of utilizing the waste incidental to the rancher and of making the business profitable.

The Labor Question.

There is just now considerable discussion on the labor supply and needs of the State, but it seems to be fostered and promoted rather as a daily newspaper sensation than as a serious economic question. So far as getting up excitement and angry wrangle by spreading reports that there are organized efforts among producers for the overthrow of the Chinese Exclusion Act and the like, the effort of the press is altogether reprehensible. Of course people are obliged to employ Chinese in some cases or allow their crops to go to ruin, and they will continue to do so because of the strong instinct of self-preservation, but that these parties are planning and working for the old-time unrestricted Chinese immigration is false. So far as our acquaintance with these agricultural producers goes, they favor the employment of people of their own race and do, in fact, practice it just as far as possible, and are pleased to find that the available labor supply other than Chinese is continually increasing. But, of course, they still say that they are still to a certain extent dependent upon Chinese, which is merely the fact, but it is seldom that the view is held by producers that there is need of much greater supply of Chinamen than is now available. This fact was fully shown in the experience of the fruit-growers, which was fully set forth in the RURAL during the last fruit harvest. By the employment of families who came to the fruit regions from all directions, the growers were saved from using Chinamen except in the more difficult labor of picking and packing heavy baskets. By far the most of the lighter and pleasanter work of cutting and peeling fruit, spreading on trays, etc., was done by white persons of both sexes and all ages. This fact is set forth in the remarks of A. T. Hatch at a recent meeting of the State Board of Trade, which are reported as follows:

Mr. Hatch said that when women and children had been employed to pick fruit it had answered admirably. There are thousands of families in this State who could take a camping outfit and go on to the ranches during the fruit-picking season, and not only make money, but be benefited by the change of scene and climate. In Solano county it requires about 5000 persons to pick the fruit. Much of this is Chinese labor through necessity. Chinese labor has not and does not enhance in value. Chinamen are paid \$1 a day, and they are employed simply in consequence of the inability to procure efficient white labor. With reference to the quality of laborers obtained at employment offices, Mr. Hatch said the poorest quality was got from those offices.

The last remark of Mr. Hatch is but the experience of many others who have had men sent indiscriminately to them from the city. There are good men to be found at the employment offices, of course, and the institutions are often very useful to employer and to employed. But to order a lot of so many men from city haunts and trust to them the most delicate and systematic work of the fruit harvest is a very dangerous proceeding. The percentage one is likely to get of drunken and irresponsible outcasts is so great that a fruit-grower is hard pressed when he orders a large lot of men from the city.

If this is the case, even where the employer has an agent to select men in the form of the manager of the intelligence office, who, in most cases, we do not doubt, does as well as he can in most cases from the applicants before him, how much more dangerous it would be to fill a vacancy by such a means as one of the city newspapers seems to consider as a sovereign one, which seems to publish the need and then run cut-rate trains from the city to the farms. We are quite sure that few employers would take the risk of harboring such men as come to them in that way.

The whole subject is one of importance, it is true, and should be discussed and inquired into, but not from the standpoint of the sensational newspaper, or of the demagogue. If any of our readers can make useful suggestions as to the demand and supply for the coming season, we should be glad to hear from them.

ROBERT W. WATERMAN, GOVERNOR OF CALIFORNIA.

has engaged in numerous business enterprises in various parts of the State. He is the owner of the famous Stonewall gold mine in San Diego county, and has extensive cattle, dairy, fruit and grain ranch properties in Southern California. He is president of the San Diego, Cuyamaca & Eastern railway, and is prominently connected with many other public enterprises tending to the development of the State.

"MOUNT PLEASANT," near Chinese Camp, Tuolumne county—long the home of our worthy and kindly correspondent, the late John Taylor—has been sold to Mr. Hiniker of San Jose. The children—so one of them writes us from Vallejo—left the old place with deep regret, averse to having it pass into the hands of strangers; but with the loved father and mother both gone, its charm was all departed.

GROW MORE BUGHACH—The Fresno Republican thinks that the culture and curing of bughach for insect powder could be carried on with profit much more widely in this State.

this prosperous neighborhood. Mr. Wm. P. Hall, an old resident, has gained a very high reputation as a successful farmer, and we herewith give some data connected therewith. His farm contains 770 acres suitably divided in fields of from 40 to 80 acres. Continued rotation of crops and systematic manuring has kept his land fertile and as capable of large production as it was 30 years ago, when it was a virgin soil and only used for pasturing cattle. His system of rotation is to have a crop of wheat or barley follow a crop of beans or potatoes, and then a crop of oats or hay, after which it is used for pasture for five years. Mesquit grass seed is sown on the stubble, which will grow well, but is gradually crowded out by the native wiregrass. During the year 1888 his crop of wheat averaged over 45 bushels, of barley over 75 bushels, of hay over three tons, and potatoes over 80 bags (100 pounds) to the acre.

Mr. Hall's dairy of 80 cows (graded Short-horns and Holsteins) made an average of over 180

FRUIT MARKETING.

The Year's Work of the Fruit Union.

Annual Report of Secretary Fairbank.

To the President and Members of the California Fruit Union:—One year ago we had the pleasure of presenting the second annual report of the organization now assembled.

At that time, we said we could, with pleasure, point to the many advances made by the Union during the year, and now, as we glance backward over the busy season but barely finished, and at this time review the work accomplished, we can see that still further progress has been made in the last eight months in the effort to place our luscious fruits in the hands of the many on the other side of the mountains, while at the same time keeping in mind the fact that there is no small cost attending the raising, packing and shipping of our products, which must be returned to the producer together with a small percentage to compensate him for his capital invested and the risk of actual loss he incurs on every pound of green deciduous fruit which he intrusts to the tender mercies of the transportation companies. The most important step forward taken during the year has been the establishing of the auction method of selling our fruits in Chicago. The plan had met with such success in Boston and New York the preceding year that many favored the method for Chicago, but there were those who argued that this fact was no criterion to go by, as the auctioning of fruits in either of these first-mentioned markets was no innovation, so that it was not without opposition that the trial was made.

The result has borne out the most sanguine expectations. While it is conceded by the warmest adherents of the plan that, at private sale, a few (and the number is very limited) boxes will sell at a figure slightly in advance of the highest price realized at auction, it is also claimed, and the assertion seems to be substantiated by the actual returns, that the total sales of a car at auction will be fully as large and often exceed the gross results realized by the old method of selling; while the method has the still further advantage of allowing the shipper to know immediately on the arrival of his consignment what it is sold for, which enables him to decide whether to continue shipping, to dry or to sell to the local buyers, while at the same time the returns reach him within 11 days from date of shipment, thus obviating to a great degree the necessity of securing advances on the crop. So marked has been the success of these sales that we notice our Florida friends are following in our footsteps and are putting their oranges on the Chicago market through the medium of the auction-room.

Stock in the Union.

The increase of stock issued during the year has been very small, only \$278.75 having been received from delinquents and from new issue, representing a total number of shares subscribed and added to our list for the year of 335, so that at present our organization is represented in 27 counties of the State by 12,658 shares held by 499 growers and shippers.

There is yet considerable due on the originally subscribed stock, the amount reaching nearly \$1600 and representing some 3200 shares.

This in all probability will never be taken up, and it would seem that some action should be taken to cut loose from this dead weight, as it does neither the organization nor the various delinquents any good and serves only as a stumbling-block in the way of getting together a quorum of the stock at any of our meetings.

At the outset it was deemed best to allow all dilatory subscribers ample time, but now that three years of active business operations have been concluded, it would appear that none would have cause to complain were their names in some way dropped from our list of membership.

It might not be out of place to mention in this connection that our attention has been called a number of times by various members to the advisability of some change being made in Subdivision 5 of Section 5 in our by-laws, a clause which reads that—

Subdivision 5—When any stockholder shall cease to be qualified as such, he may deliver up to the secretary his certificate of stock, which shall thereupon be canceled and he shall be repaid by the corporation the amount he shall have paid thereon.

The reasons given for the necessity of making some change in this particular are briefly stated as follows:

Suppose that one of our growers, who should take, say, ten shares of stock, and so entitle himself to all the privileges of the Union in the matter of reduced freight rates and systematic distribution, and should in many other ways receive benefits vastly out of proportion to the small amount of capital invested, upon which he has also received six per cent annual interest in the way of dividends, should, after two or three years of fellowship, sell his property, he can, under this section, surrender his stock, and receive in return the small amount he originally paid into the treasury, and for which he has already received an equivalent many times over.

From a legal standpoint it may be necessary to continue this clause in operation, otherwise

it would appear that some modifying action would be necessary.

Receipts and Expenditures.

The affairs of this Union have been conducted as economically as possible; in fact, in our humble opinion, a small amount expended during the busiest portion of the year, at least, for more skilled help, while not absolutely necessary, would doubtless have been appreciated by those who were, through the organization, consigning their products. The difficulty which was, and will continue to be experienced, being to secure at that particular period, and for so short an engagement, adequate assistance.

The following balance gives the exact status of the condition of the Union on the 10th of January, 1889:

TRIAL BALANCE.	
\$ 156 07	Expense, Incidental.....
208 93	Stationery and Printing.....
2,720 36	Telegraphing.....
5 50	Advertising.....
20 75	Coal.....
95 12	Stock..... \$14,264 26
	Telephone.....
758 61	Commission Account..... 18,956 25
9,439 78	Freight and Loading Due.....
	Profit and Loss.....
	Dividend Account No. 1..... 438 92
	Shippers' Rebate..... 306 42
6,532 65	Reserve Fund..... 142 96
266 00	Salary.....
129 66	Office Rent.....
11,523 09	Postage.....
17 60	Bank.....
1,305 20	Exchange.....
262 91	Traveling Expenses.....
616 60	Cash.....
	Office Fixtures.....
\$34,025 80	
	\$34,025 80

From the above balance it will be seen that with the single exception of the telegraphing account the expenses of the preceding year have been very materially reduced. The explanation of the heavy increase, amounting to nearly \$1500, in this account is that where the auction method of selling is pursued the entire invoice, even to the minutest detail, must necessarily be telegraphed, in order to allow the auctioneers an opportunity to issue catalogues in advance of the arrival of the car, a proceeding which, of course, greatly increases the cost over the old manner of advising.

It will be noticed that our total receipts from all sources have been \$19,189, and the total disbursements \$12,195 02, which, with the funds in the treasury at the beginning of the season, leaves on hand \$262 91 cash and \$11,523 09 deposited in the treasury at Sacramento.

There is still due to stockholders on dividend No. 1 \$438 92, and on the rebate allowed shippers \$306 42.

Shipments for the Year.

The shipping for the season has, in the aggregate, been quite successful. At the same time the fact has been very forcibly brought to the notice of all who have shipped, that when they have in the East a full crop, as was the case the past season, we cannot hope to compete with them and pay the rates of freight we are now charged by the transportation companies. For instance, they can raise and sell their domestic peaches and grapes at a profit of 1½ cents per pound, as was largely done this year, while we, at the lowest rate given us on this class of fruit, must needs pay one half a cent per pound more than this for freight alone; while to pay all necessary expenses incurred in growing and shipping to Eastern markets and make the business even fairly prosperous our fruit must sell for at least five cents per pound in a wholesale way.

The above, with other causes which are explained further on, served to limit the number of cars and the length of the shipping season as well. Our first car this year left Winters, May 18th, the same date as the first car of the preceding year, but our final car was forwarded from Wrights Nov. 14th, ten days earlier than last season.

The following table shows the districts furnishing shipments and the distribution of the same:

SHIPMENTS OF GREEN DECIDUOUS FRUITS FOR THE SEASON OF 1888 BY THE CALIFORNIA FRUIT UNION.

	Omaha	St. Paul	St. Louis	Chicago	Minneapolis	St. Paul	Winnipeg	Portland	Seattle	Totals
Wright's			1							10
Mayhew				12	2	3				17
Natoma				29						29
Colfax				8	2	12				22
Sau L renzo		1	4	1	4	16	1	5	33	61
Cordelia				6	1	2				11
Portia				6	1	1				8
Santa Rosa				6	1	1				8
Marysville		1	4							5
Fresno						15				15
Vacaville		2	1	2	7	11	1	125	1	133
San Jose		23	9	14	19			1	12	66
Sacramento		14	10	3	12	4		176	32	339
Winters						25				25
Woodland						1				1
Newcastle						20		2		22
Portland, Or.						3				3
Portland						5		4	1	10
Davisville						18		3	24	42
Totals	45	27	23	77	24	28	490	3	56	850

It might be well to say in explanation that the agents at St. Paul and Minneapolis are in hearty accord and work together, so that it matters little to which place a car may be billed, as on its arrival both cities are supplied from the same car. The railroad facilities being somewhat better for sending the car first to Minneapolis and then, after a portion has been removed, forwarding it to St. Paul, it

transpires, more cars were billed to the former place. As a matter of fact nearly the same amount of fruit has been sold in each city.

Comparing this table with the one prepared for the season of 1887, we see that the gain of 90 cars has been made chiefly in the shipments from new points, such as Colfax, Santa Rosa, Cordelia and Mayhew, with a heavy increase from Sacramento; while the older shipping places, such as Vacaville, San Jose, Natoma, Wrights and Davisville, fall way below their last year's record.

From a careful compilation of some 9000 duplicate account sales, as rendered the various shippers, we learn that the total number of boxes shipped was 282,040; crates, 253,323; pounds, 12,602,180.

Where the Money Goes.

The gross sales for these amounts to \$773,117 42, from which was deducted \$345,156 28 for freight, \$2430 02 for cartage and \$77,298 06 for commission, giving a total gross charge of \$24,884 36, which would leave \$348 233 06 to be returned the shippers, or about 2 92 cents per pound. These figures, of course, do not show the actual net returns to the shipper, as the cost of picking, packing, boxes, etc., does not enter into the account sales as rendered. The amount expended in defraying these expenses is variously estimated, but the one which seemingly comes nearest the medium figure is 85 cents per 100 pounds. With this as a basis, we find that from the figures given above we will have to deduct for the necessary expenses incident to shipping \$107,118 53, leaving \$241,114 53 as the actual money returns to the grower, which gives an average of 1 91 cents per pound on shipments of all varieties of fruits. Thus it will be readily seen that while the growers are receiving \$241,114 53, the commission men are the richer by \$77,298 06, while the transportation companies receive the lion's share and pocket \$345,156 28, or nearly one dollar and a half for every one which finds its way into the producer's purse.

Notes on Different Fruits.

The car-load cherry shipments were very few in numbers, a fact due largely to the late rains which rendered quite a portion of the Alameda county crop unfit for shipping and so reduced the supply.

Apriots were sent in large quantities and did much better than last year.

Bartlett pears, during a portion of the season, sold unusually low, a fact which was explained by our agents as being due to the fruit arriving extremely green, so that after the retail stores and stands were filled up with the pears which they had to hold to ripen before they could realize from them, prices necessarily dropped, as only the larger buyers felt inclined or could afford to effect further purchases of the fruit which daily continued to arrive.

The later shipments all paid remarkably well and netted the shippers fancy prices.

Peaches, during the early part of the season, or up to about the 10th of August, sold remarkably well, as they carried in first-class condition; but the later shipments of this variety of fruit coming into competition with the home-grown article, barely brought freight, proving conclusively that for Eastern shipment those varieties ripening before the date mentioned are vastly superior, being even preferable to the very late varieties, although these, to a limited extent, will command good prices.

In all markets even medium-sized freestones are very much preferred to even a very large, highly colored clingstone.

Prunes and plums for some reason did not sell as well as last season. Of the varieties shipped, the Tragedy and Japan clearly lead in prices obtained.

Grapes, until nearly the close of the season, sold remarkably low, a result brought about entirely by the poor condition of the fruit on arrival. On every car and from all quarters came back the report: "Car arrived, with grapes badly started," etc. In fact, the returns were so discouraging that many either dried their fruit or allowed it to remain on the vines. So poor a season for grape shipments has not been experienced for a dozen years—a fact largely attributable to the unusually severe hot weather which we had during the months of July and August, a heat which literally burned the grapes up as they hung on the vines.

The uncertainty of condition on arrival on the one hand, and the certainty of a high freight charge on the other, served to reduce our shipments very materially, as fully 100 more cars would have been forwarded had the returns justified the venture.

Fall and winter pears, notwithstanding the fact that our crop was a light one, have not brought their usual prices, and for a time some thought this was due to the method of selling, but as the season advanced the cause was very obvious, as those growing the product found the fruit was not keeping even here, although not subjected to the trying experience of a change of climate. The facts were, our two comparatively dry winters had rendered the worms unusually aggressive and caused the pears to melt right down, thus necessitating the immediate placing on the market of those varieties which are generally laid away for the late fall and winter trade.

A new departure was inaugurated during the last months of shipping, being that of sending late pears through to the extreme East. The results on the four or five cars so sent were, to a certain extent, gratifying, as showing the

possibilities of opening up a market there for this fall and winter stock.

Prices for Different Fruits.

A table giving the net prices realized per pound in the various cities has been prepared and is appended. It shows the net money per pound in cents and fractions of a cent returned to the grower by the firm shipped to in the East, but does not of course include the cost of cultivation, preparing for market or package.

	Omaha	St. Paul	St. Louis	Chicago	New Orleans	Boston	New York
Plums & prunes	2.5	2.3	2.0	2.6	2.6	3.5	3.3
Cherries	11.0	7.7	3.2	8.0	6.1	4.3	2.0
Peaches	2.4	2.5	0.5	2.2	2.6	2.8	1.0
Pears	2.8	2.3	2.6	2.8	3.0	2.7	2.2
Nectarines	1.9			2.0	1.9	3.0	
Grapes	1.8	1.4	2.0	1.6	2.2	2.1	1.9
Quinces	1.8	2.8	1.9	0.8	1.8	1.0	1.1
Apriots	3.3	2.7	3.9	2.0	3.8		1.9

Facilities for Shipping.

The time made by the special trains this season was very satisfactory, there being fewer late arrivals even than when sent by passenger train, but the time made by the cars receiving freight service was equally as unsatisfactory. Where in former years cars reached their destination in from eight to ten days, this season a run of ten days was the exception, and the time was more often from 15 to 23 days, a delay which proved ruinous in nearly every instance.

The question of suitable cars has also assumed very considerable proportions. During the entire shipping season the utmost difficulty was experienced in securing cars to load. While trains were being run, cars provided with any sort of a coupling could be sent without difficulty to either Omaha or Chicago, as the trains ran through solid to both cities; but, even during the dispatching of trains, the same difficulty was experienced in securing cars for points divergent from Omaha or for the cities east of Chicago, while in the passenger-train shipments of both the early and late season the most vexatious delays were of daily occurrence.

We are glad to say that finally, after repeated and continuous effort, the loading facilities at Sacramento, where the greater portion of the active work of the executives is done, have been in a measure improved, and another season (possibly at a slightly increased cost in the item of drayage) small shipments can be handled with much greater dispatch than in previous years.

Difficulties to get East of Chicago.

The unfavorable conditions surrounding the securing of the low rate of freight to New York and Boston, made it extremely difficult to supply those markets as we desired, and it was often only by the most determined effort that we were enabled to arrange for the five cars east of Chicago to arrive on the days when they desired them, and at the same time keep all the other agents supplied, as the great secret in securing remunerative returns from all markets lies in giving them a continuous supply, not overdoing them one day, then neglecting them the next three.

To the uninitiated this may seem perfectly easy to accomplish and a matter which can be readily arranged on paper by formulating a schedule, and possibly it might, were all the cars shipped the property of a single firm or individual.

But as it is, with many of the cars being loaded by from 1 to 25 parties, each having their various preferences and desires which cannot be entirely ignored, while at the same time there enters into the difficulty two other factors equally as important, being the well-established facts that certain markets will pay fancy prices for some varieties of fruits, while in some other way the same variety will barely bring freight and certain kinds will carry to some points and pay well, while if sent to farther markets the shipment might prove a total loss, and at the same time one must always bear in mind that the locality from which the fruit comes which fills the car has also a great deal to do in determining the destination, as a variety of a kind of fruit from one section of the State will carry well to Boston, while the same variety of the same kind of fruit from some other locality barely carries, in good condition, to Omaha, the matter is one which gives the one in charge no end of cause for worry and sleeplessness, and seems also prolific of cause for dissatisfaction among our consignors. There are doubtless many who consider the office of manager a sinecure. To all such we would say that we are confident we may, in the name of the manager for the coming year, whoever he may be, extend to you a hearty invitation to make a visit to the office of the Union in Sacramento any time during the busy season and there examine into the daily routine of work which occupies the time of the several officers. I am certain that then you would have a much better idea of the possibilities of the office in developing tact and patience and also of the amount of actual hard work done than you have now.

Points for the Future.

Finally we would say that the possibilities of good to the members, through co-operation with the plans of the Union, are but dimly realized by the many, and in fact they are as yet but partially developed.

In the simple matter of selection of agents, in the various cities, great care has been taken

to select the best houses, and being now in a position to be very exacting as to requirements, we are satisfied that in the various places where the Union has appointments, no better firms exist than those representing our interests. These agents are all under heavy bond, and there is no possibility of a loss to any of our consignors.

We can assure you the commission charged the coming year will be no higher than that charged by any reliable organization or party which essays to handle your product for you, and the advantage you gain while dealing with responsible parties is greatly increased by the fact that should the commission, whatever it may be that is charged, prove more than sufficient to defray economical running expenses, the surplus, instead of swelling the bank account of the party or organization handling your product, is returned to you, in the form of a rebate, our organization thus being pre-eminently a co-operative one.

Such being the facts, we fail to see the wisdom displayed by some in shipping indiscriminately, as to cities and consignees, on the advice of any one who may come along and solicit consignments.

As a matter of fact, carloads of fine fruit the past season were sent to small towns, which, at the best, could not dispose of any such quantity within a week, the limit of the life of the fruit being not over three days, while at other times carloads were consigned to parties with no trade and to markets already full, simply on the strength of a handful of telegrams, displayed, in many instances, from wholly irresponsible parties, quoting fancy prices for various fruits, but whose actual returns, made after perhaps a couple of shipments, had been entrusted to them on the strength of such representations, did not come within 75 per cent of the prices even at which they wired the first car was selling on arrival.

Taking all these things into consideration, we would strongly urge that whenever any may think they have cause for grievance, they state it openly, and whether the fault lies with themselves or some one else, have it thoroughly and satisfactorily settled, and, if possible, remedied, then, laying aside any ill-feeling, which, for any cause, may have been engendered, all with one accord work together for the advancement of our organization, which has already, from so small a beginning, despite strenuous antagonistic efforts, given promise of being productive of an indefinite amount of good to all fruit-producers, whether they may be working with us or otherwise, and by an earnest, untiring, combined effort, make the Union one of the strongest organizations of our well-favored State. Respectfully,

H. A. FAIRBANK, S. C'y.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, term of subscription, and give it their own patronage, and as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

IMPROVED SCREW PROPULSION.—The latest method of increasing the speed of vessels is a screw which is so designed that the center lines of two following blades from spirals run in opposite directions. The blades are so curved that one has its leading part near the machinery, the other has it near the center, so that each blade cuts into the water in advance of the following. It is claimed that greater speed results.

Cheap Money for Farmers!

\$550,000 TO LOAN ON RANCHES ON MORTGAGE; large sums below market rates. S. D. HOVEY, 318 Pine Street, San Francisco.

We take pleasure in calling the attention of our readers to the Seid advertisement of Z. De Forest Ely & Co., of Philadelphia. Ely's Garden Manual is a beautiful catalogue, full of valuable information to every one making either a vegetable or a flower garden, and all should send for a copy, as it will be mailed free to all our readers who apply for it.

BRIDGING THE MISSOURI.—The first bridge over the Missouri river was built at Kansas City 21 years ago and was regarded as a bold undertaking. Now 16 bridges for railways span that stream, namely, at St. Charles, Booneville, Glasgow, Sibley, Randolph, Kansas City, Leavenworth, Atchison, St. Joseph, Rulo, Nebraska City, Plattsmouth, Omaha, Blair, Sioux City and Bismarck, and eight or ten more are not unlikely to be built in the next ten years.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

LIVERMORE LOCALS.—*Herald*, Jan. 12: Many of our farmers were bothered last month to find good sowing weather—it rained just often enough to prevent good work. Now, however, the soil works wonderfully well, and seed sowers are running in every direction. Pruning is progressing rapidly in our vineyards. Tall columns of smoke from the burning brush rise high above the valley. James Concannon's carload of grape cuttings, for Mexico, will be shipped in a few days. They are being packed in mass in large boxes, at the planing-mill. The shade trees in the Northern and Southern Additions are being trimmed this week, and the missing places filled. The loss is very small—not to exceed three per cent of the locusts. Of the alanthus, the percentage is much larger. An alanthus tree on Chestnut street is sending forth its leaves and making a vigorous growth. It is somewhat out of season, but the weather seems to offer no obstacle. Dr. Forbes purchased a chicken from Geo. Lindy the other day, and while preparing the fowl for the oven, found lodged in its gizzard a ten-cent piece, a piece of a watch chain, a copper rivet, a gun cap, and sundry other articles.

Amador.

AMADOR ORANGES.—*Jackson Ledger*, Jan. 5: John Northup left at our office last Saturday a box of this season's oranges, the product of his orchard near Lancha Plana. They were fine-looking as well as fine-tasting. The tree from which they were gathered is 17 years old and has borne from 700 to 1000 oranges for several years past. This year it yielded about 1000, and most of these he brought to Jackson and sold to the dealers in a few minutes. The tree is a seedling, and decidedly the most thrifty of its kind in his orchard. He has three other orange trees in bearing, but this one has done better than the rest, probably from the fact that it is better located as regards soil and has received more attention. It has been liberally irrigated in the dry season. The degree of cold in that section does not affect it in the least.

FINE POTATOES.—We received last Saturday a sample of new potatoes from John Daveggio of Plymouth, large in size and excellent for cooking. The seed was planted Sept. 20th, so that in a trifle over three months the ripe product was gathered. There has been no frost of sufficient severity to arrest their growth, and the vegetable grew to maturity in an astonishingly short space of time, even in mid-winter.

MOUNTAIN APPLES.—We were presented this week with a box of mountain apples of the Rhode Island variety, by F. M. Whitmore, from his orchard in the mountains. They are among the finest apples we have seen, and in flavor they fully sustain the reputation of apples grown in the middle foothills of this county. The apple-growing business of that region would soon develop into a flourishing industry if the transportation difficulty could be overcome. As it is, the hauling them over the rough roads we have is a serious if not insurmountable obstacle to getting to the outside markets in prime condition.

Butte.

LARGE PLANTINGS.—*Oroville Mercury*, Jan. 11: John C. Gray's men at Mt. Ida Olive Farm, five miles southeast of Oroville, finished setting his 50 acres of White Adriatic figs today. This grove is adjoining his 65 acre olive grove. C. J. Nickerson's men, working under the direction of Mr. Jackson, are putting in a 30-acre grove of almonds on the Nickerson tract just east of town.

Contra Costa.

CANNING PROJECT.—*Item*, Jan. 9: The prospect of Martinez having a cannery in the near future seems bright just now. Steps for the establishment of such a business have already been taken. The prime movers in this enterprise are Dr. John Strentzel, Joseph Black and J. H. Borland, all gentlemen of intelligence and energy. The company is to be incorporated as the "Martinez Canning Co." with a stock of \$50,000, in 5000 shares of \$10 each. Fish, fruit and vegetables are to be canned in this establishment and its capacity to be 15,000 cans a day. The sum of \$10,000 will be required for the necessary machinery and a further sum of \$10,000 as a working capital. This amount, representing 2000 shares, is to be subscribed by the 15th day of February. It is designed to have the cannery ready for operation by the 1st day of April next.

Fresno.

FRESNO ORANGES.—*Expositor*, Jan. 7: There are in Dr. Leach's yard at least eight bearing seedling orange trees. The trees are very thrifty, the trunks and leaves being free from insect pest. They are all loaded with golden spheres. The fruit, both in size and flavor, is equal to that raised in San Bernardino county, while the skin of the oranges is thinner.

AUSTRALIAN FERNS.—Dr. Leach, president of the Fresno Fair Ground Association, is about to introduce the Australian fern. Of all the evergreens in Southern California this tree is the most beautiful. It has a leaf which resembles the fern, only it is much coarser. The

tree is a quick grower, while its symmetry is perfect. The trunk is very straight, while its boughs taper from the first branch to the last. As an ornamental tree it hasn't an equal. The doctor will set out 100 at the fair grounds.

Humboldt.

FROM THE RANGES.—*Eureka Times*, Jan. 10: L. O. Beckwith, of Mandala, arrived in this city yesterday, and reports the stock in his section of the country in excellent condition. He says there have been no frosts and that leaves are still to be seen on the raspberry bushes; that while the grass on the cattle-ranges is better than on the sheep-ranges, owing to the sheep eating it down very close, still sheep are improving in condition.

Inyo.

CLEVELAND BAYS.—*Bishop Creek Register*, Jan. 3: Wm. Rowan returns this week with two Cleveland Bay stallions, which he purchased in Los Angeles at \$2500 each. Mr. Rowan was practically the pioneer in the line of blooded horse raising in the valley, by systematically introducing the Norman stock. His late purchases are another style of horse-flesh, and we believe the first of their breed brought to Inyo. This completes the necessary quota; there is stock here now to fulfill almost every possible requirement—the Norfolk, Hambletonian, Cleveland Bay, Clydesdale and Norman. This list, and the increased showing annually made in the line of improved horse-flesh, shows the energy with which our stock-raisers have grasped the situation since the mustang days of only a few years ago.

RAISINS.—Lone Pine seems to be the leading locality when it comes to fine grapes. A few days since a sample box of raisins came up from Johnny Stewart of that place, which he calls "sun dried grapes," but which, just the same, are equal to any foreign raisin ever coming within our observation.

Lassen.

PROLIFIC PORKER.—*Susanville Advocate*, Jan. 10: John T. Mastin of this place has a profitable sow that has, within the last 13 months, given birth to 32 pigs. The value of the first litter (12) at this date is \$160; of the second (11), \$100; of the third (9), \$18; value of the mother, \$45; total present value of all, \$323. They are ready for sale at these figures.

Los Angeles.

POMONA POINTS.—*Progress*: The largest individual freight bill paid in Pomona in many a day is that of \$980 which Rev. C. F. Loop lately paid on 500 olive trees of the choicest varieties, that he bought in Southern France last summer. It is estimated that over 40,000 strawberry plants have been set out in Pomona thus far this season, and as many more will soon be set out here. There is always a good market for strawberries in this region. The largest tax-payer in this locality is Richard Gird, of the great Chino ranch. His taxes this year have amounted to over \$8700.

Modoc.

CATTLE.—*Altura Independent*, Jan. 10: The Dorris meadow south of town is literally covered with cattle which have been gathered in within the past two weeks. Almost daily one can see the vaqueros passing along and driving cattle to winter quarters. As a general thing the animals are in good condition. Mr. G. E. Williams of South Fork was in town the first of the week. He says his boys have been gathering up cattle for the past four weeks, and are feeding as fast as they can get them in. A great many of his cattle are still out on the range, and some of the old cows are getting quite thin.

Napa.

FROM TWENTY HENS.—*Calistogan*, Jan. 9: Last year Mrs. W. Ebeling kept 20 hens—Brown Leghorn and Plymouth Rock strain—from which she derived the following income, aside from the eggs required for use in the family: For broilers, \$20; for eggs sold, \$15; total \$35. There is money in keeping fowls if a person only understands how to keep and feed them. At the above rate, Mrs. Ebeling would derive a handsome income annually by keeping 500 fowls. But where so many are kept together the result generally is not correspondingly large.

Placer.

A ROYAL CLUSTER.—*Auburn Herald*, Jan. 12: While in Newcastle the other day we saw a cluster of oranges that was well worth a day's travel to see. The cluster consisted of 29 oranges and occupied about 15 inches of space along the branch. There were originally 31, but two of them had dropped off. They grew in the grove of J. W. Smyth, of Horseshoe Bar, and were large, of a uniform size, perfectly smooth, and free from spot or blemish. The golden fruit of Hesperides could not have excelled them! They can now be seen at the Placer exhibition in San Francisco.

San Diego.

A VAST BARLEY-FIELD.—*San Diego Sun*, Jan. 7: A rancher just in from the neighborhood of the great Warner ranch, which belongs to ex-Gov. Downey, said this morning that seed-barley was being hauled from Temecula to sow 5000 acres of the Governor's property. A big force of men with gang plows was to be set to work this week to push the work of sowing. This is a portion of the territory through which the new Cuyamaca road passes, and with the speedy completion of this much-needed outlet to a market, the rancher said, large ad-

ditional tracts would be planted to grain and set out in fruit trees by the farmers.

San Bernardino.

RETURNS FROM RAISINS.—*Courier*: The new Cook & Langley cannery on the Barton ranch has packed and shipped 45 carloads of raisins this season, and for every carload of raisins the growers received an average of \$1000, making \$45,000 paid out to the ranchers in the valley for the one item of raisins. This, too, is the company's first season. Besides this, there was a large crop of deciduous fruit, for which the ranchers received good prices.

San Luis Obispo.

BUSY WORKERS.—*Paso Cor. Tribune*: San Jose valley is flourishing. One can see Stockton "gangs" and large teams in every direction tilling the soil. Men are at work as if they meant business. Some are plowing, some are sowing, some are harrowing, some are making garden, some are building—all are alive and working with determination. The valley will all be put to crops this year. Feed is already several inches high all through the valley and over the mountains. Stock is looking finely, we have the best of soil, a splendid climate, and one of the healthiest places in the State. With plenty of good water and wood, it is a most desirable place to live in.

Santa Clara.

THE FEBRUARY FAIR.—*San Jose Mercury*, Jan. 12: A meeting of the Board of Directors of the Horticultural Hall Association was held Saturday, with Directors Cyrus Jones (chairman), Wm. L. Manly, A. B. Hunter, G. W. Tarleton, S. B. Saunders, M. S. Bowditch and Mrs. Newhall present. Mr. Hunter acted as secretary. The proposition to hold a winter fair was broached. Mr. Jones stated that many persons had spoken to him about the matter. The question was put and it was decided in favor of a fair by a vote of 4 to 3. On being shown that the moon was full Feb. 15th, it was decided the fair should be the week beginning Feb. 11th. Mrs. Newhall, A. B. Hunter and S. B. Saunders were appointed a Committee on Decoration. Messrs. Tarleton and Bowditch were appointed to visit the western side of the valley and secure a display of oranges. During a general conversation on the subject, it was brought out that the prospects are favorable for securing a showing of new potatoes, also of tomatoes and other vegetables. The main stress will be laid on citrus fruits, however, and it is desired to have as many oranges as can be secured within the valley. It was suggested by Mrs. Newhall that special attention should be paid to decorating the hall properly and completely, more so if possible than it has been before; also that the floral exhibit should be made complete, and Santa Cruz be invited to co-operate in this connection. The president was requested to report to the Board of Trade that they had decided to hold a fair and request the Board to co-operate. It was resolved to invite the people generally to co-operate in holding the fair.

A NEW YEAR'S FIRE.—*San Jose Herald*, Jan. 2: At 3 A. M. yesterday, at Mountain View, A. Trixon's barn was discovered to be on fire. The flames soon communicated with a new barn recently built by J. W. Laner, and in a short time both buildings were in ashes. There were several horses in Mr. Laner's barn and they were saved. L. Leibe, the harness-maker, had a valuable horse in Mr. Trixon's barn. When the fire was discovered the door was opened, but the horse was not there. Many believe that he was stolen. Both barns were partially insured. It is believed that the fire was of incendiary origin. Mr. Laner lost several tons of hay, a cart and agricultural implements and other valuables.

Sonoma.

BIG PIG.—*Sonoma Index Tribune*, Jan. 5: L. Modini of this place has a 13 months-old hog of the Berkshire breed that measures from tip of snout to end of tail 8 feet 4 inches. In height he is 3 feet 3 inches at the shoulders and in girth 6 feet 4 inches. The exact weight of his hogship is not known, as he has never been weighed.

THRIVING VINE.—*Santa Rosa Democrat*, Jan. 12: J. W. Treadwell, of the Falconhurst vineyard, calls attention to a yearling vine, of Crab's Black Burgundy variety, which has put forth a growth of 18 feet in one year. He says some of the older vines in his vineyard have attained to a growth of 12 and 14 feet in a year, but in vines so youthful a growth of 18 feet is remarkable.

A HIGH PRICED STALLION.—It is said that the recent offer made by a Kentucky gentleman for Anteeo was no less a sum than \$20,000. The association will not sell the famous horse at those figures. It wants \$25,000, on which amount the income from his services as a breeding stallion has paid good interest. The association has concluded to send him to Kentucky, where he will remain one season.

Tulare.

CHEESE FACTORY.—*Visalia Times*: J. C. Coho, lately of Gilroy, has commenced the manufacture of cheese on the ranch of D. C. Hayward, seven miles west of Traver. Several samples have been disposed of in this city, and those who have tasted the cheese pronounce it superior to anything found in this market for years. It is made from pure cream, without any dilution whatever of skimmed milk or

other ingredients. Mr. Coho expects to manufacture enough to supply the Tulare county market.

DISTRICT LAND OFFICE.—Register Miller of the U. S. Land Office in this city has kindly furnished the *Times* with the following statement relating to the business transacted in his office for the year 1888, viz.: Number of homesteads filed, 883; timber cultures, 324; pre-emptions, 1538; final homesteads lived out, 124. Entries—commuted homesteads and pre-emptions paid out and purchases at cash sales, 703. Proofs have been made during the year representing title to 132,320 acres of land. Total cash receipts during the year, \$294,972.62, which exceeds the amount of cash received in any previous year since the office was established. The receipts for the last quarter amounted to \$98,972.22.

HARROWING ALFALFA FIELDS.—Several progressive farmers of this county have tried the experiment of harrowing their alfalfa pastures, with the object of killing out the objectionable fox tail grass, and also improving the growth of the feed. The plan has been a successful one, and those who have tried it are earnest in their advocacy of this method of cultivating alfalfa, especially in old pastures. This is the season of the year for such experiments, as a harrow run through alfalfa grounds to-day will effectually eradicate all obnoxious weeds and can in no wise affect the alfalfa.

NEVADA.

WILD HORSES IN THE MOUNTAINS.—*Eureka Sentinel*, Jan. 5: Not many people know that there are wild horses in the mountains of Nevada. Such is nevertheless the case, and at least three bands have been seen in this county along the high range near the Lander line. There is one group of seven or eight animals that is seen every summer on the very top of Shicknasty mountain, southwest of Cortez. An old gray stallion seems to be the king pin of this herd; nothing but mares are ever seen in his company, and he is said to guard them with fatherly care. Last summer some of the cowboys gave chase to the band for two or three days. When hotly pursued, the old stallion was seen to drop to the rear and vigorously bite the others to make them accelerate their speed. He allows none to escape, and if a "tame" animal falls in his way, it is taken along also. In a remarkably short time a domestic animal becomes as wild as the rest. Several are known to have been lost in this way. These wild horses look large and fine when climbing the precipitous mountains. They go anywhere a mountain sheep will go. When caught they are found to be not much larger than Peter Breen's greyhound. They have interbred and bred down until there is nothing left of them either in size or endurance.

CORN.—*Reno Journal*, Jan. 12: The impression seems to prevail among those who are not familiar with the producing power of Nevada soil that corn will not do well here. This is a mistaken idea. On the Keyser & Elrod ranch on the head of the Carson river at an altitude of nearly 6000 feet above the sea level, some fine corn was raised last season as ever matured in the Mississippi valley. Last season they only planted three acres, but the yield was very heavy and the kernels plump and the ear large.

OREGON.

PRUNES IN SOUTHERN OREGON.—*Roseburg Review*: Myrtle Creek and the surrounding country is taking the lead of the county in prune culture and the amount produced per acre is marvelous. There have been shipped from this place this year about 80,000 pounds of dried prunes, and the proprietors of these orchards received a net income of from \$150 to \$300 per acre. The prune industry in Douglas county is yet in its infancy, and the people of Myrtle Creek have taken a step in advance of other sections in leading out in this line.

EXPERIMENTS IN GRASS GROWING.—*Fossil Cor. Oregonian*: I will report experiments in growing some perennial grasses on bunchgrass land. Alfalfa and Johnson grass did well on deep sandy land, and sainfoin on both sandy and ordinary bunchgrass land, all without irrigation. I tried English and Italian rye grass, fall meadow oat grass and fall fescue, all of which lived through our unusually dry summer, but did not go to seed. However, I wait anxiously to see what they will do next year when they will have roots to begin growth from. I think sainfoin will pay the Eastern Oregon farmer for summer and fall pasture, as it was green and growing when the bunchgrass was dry. One quality of our bunchgrass is too often overlooked; that is, it cures on the ground like hay and is not injured by frost.

RANGE NOTES.—Horses are looking well on the range, but cattle and sheep are rather poor. The last season was a poor one for the growth of bunchgrass, and we hear on all sides the old saying, "The range is gone," but it is not entirely. We must fence pastures and save grass for winter range. By so doing we can carry our horses and cattle through an ordinary winter without feed, but in case of a very severe winter they can be fed, though if they are scattered on the range they cannot be gotten to the feed. Under present conditions, we must run less stock and of a better quality and care for them better, and our profits will be just as large and investments much safer.

PATENTED.

THE VETERINARIAN.

Splenic Apoplexy, Splenic Fever, and Texas Fever in Cattle.

Several parties have written me recently concerning these diseases. Splenic apoplexy is undoubtedly one of the most frequent forms of anthrax in cattle. It is remarkable for its sudden appearance, its extreme fatality, and its rapid course. It will occur among all kinds of cattle, but especially those out at pasture, and supplied with contaminated water. It is also attributed to bad or too nutritious food, too sudden changes of diet, and other ordinary influences, but nearly every outbreak may be traced to contagion, direct or indirect. This used to be cited as an example of a disease of a specific character, originating spontaneously, but we know now that the apparent commencement of the attack is simply when the bacilli begin to manifest their effects. For some time they must have been increasing in the system. Until lately, then, investigators have not been accustomed to look for causes in the past, except the most recent, and until actual experiment proved conservation of the spores in all their power of development, we were right not to attribute cases of this kind to others which preceded them some time. Also, we have only lately learned the various forms which anthrax may assume.

Symptoms.—The appearance of the disorder among a number of cattle is denoted frequently by death of some of them in a very short time. Several may be found dead in the morning; others may be affected but withstand the disease longer, though death usually occurs within 24 hours. Fever and general symptoms are present, and in the early stages the animal is excited. The temperature is much increased. Abdominal pains appear, the patient is very uneasy; the pulse is rapid, small, and fluttering; breathing accelerated and labored. Pain is expressed upon pressure of the loins; there is a stiffness and staggering gait; also, a discharge of saliva from the mouth, and muscular twitchings over the body. Debility sets in rapidly. The feces and urine are bloody. The pulse is imperceptible, and paralysis supervenes, so that the animal is recumbent. Convulsions occur in the latter stage, and the animal dies generally by anæmia and coma. In all cases death is ushered in by rapid and extreme fall of the internal temperature.

Treatment.—Curative measures have not been found useful. Prophylactic means comprise those recommended for anthracoid cases in general. Dogs and pigs have been known to die from eating the evacuations, although some animals can withstand anthrax. The high temperature of birds, or their highly oxygenated blood, defends them in the majority of cases. On the other hand we have positive proofs of cases of anthracoid disease in fish. When bacilli are introduced into the subcutaneous areola tissue of an animal which will not become affected, an abscess forms and so the organisms are confined and then thrown off. M. Pasteur has announced that by a special method of culture he has so modified the bacterium of fowl cholera that inoculation with the altered fungus secures immunity from future attacks.

Prof. Toussaint, the distinguished physiologist at the Toulouse Veterinary school, France, has announced that anthrax blood, from which the bacilli have been removed by filtration, is effectual for what he terms "anthrax vaccination." He says that when employed according to certain rules the heating, for a very brief time, of blood infected with bacteria transforms that fluid into a vaccine as certain in effect as that of Pasteur. The mode of entry of the anthrax bacillus into the organism has been the object of comparatively recent research. MM. Pasteur and Toussaint simultaneously arrived at the result that in almost every case the food is the vehicle, and wounds are the points of entry.

Toussaint proved this by careful post-mortem examinations in which he found the lymphatic glands in connection with the mouth and pharynx in the large majority of cases earliest involved. Pasteur found that only animals with injured mouths, who fed on forage watered with culture fluid containing the bacillus, became affected, and that when harsh, irritating food was given, almost all the animals experimented upon succumbed.

Post Mortem Examination.—Post-mortem examination of cattle that have died from splenic apoplexy shows the spleen enormously distended by the dark blood, which gravitates freely, since the tissue of the organ is broken down. The blood, tissues in general, serous mucus, etc., present the characteristic anthrax lesions, which are especially marked in the bowels. The contents of the intestines and bladder are mixed with blood.

Texas Fever

Is an anthracoid enzootic of the region of the Gulf of Mexico, whence it is spread through the cattle districts of the United States by contagious influences. It closely resembles splenic apoplexy. I have seen numbers of cases of Texas fever when in Texas with the U. S. army, and have frequently been called in to treat and make post-mortem examinations of cattle which have died from this disease. I

found that it differs from splenic apoplexy in the following points: The urine is a reddish-black, sometimes coffee-colored, and frequently with a foul odor. If allowed to stand for a day it gives a brick-colored precipitate. Sometimes the urine is streaked with blood. Abdominal pains seldom present, mucous membranes grayish. The ticks are considered an important aid to diagnosis in doubtful cases. They tell whence the animal came, or the exposure it has encountered. "A sick creature covered with ticks and showing a high fever heat on thermometer" is almost sure to be suffering from Texas fever in the early stages (*Chicago National Live-Stock Journal*). Texan cattle do not suffer so much from the disease as those that are traveling through from other States and become infected by contagious influences. The disease is not so rapidly fatal as splenic fever, it generally lasting three or four days, and prevails during the hot summer months.

Prevention.—The prophylactic means are most important. All animals dying from anthracoid affections should be removed from the pasture before post-mortem examination. The carcasses should be burned in the hides, or, the skins having been thoroughly slashed with a knife, should be buried in quick-lime. Ordinary burial is not sufficient, for the spores of the bacilli pass to the surface of the ground (some say they are carried there by earth-worms); thus each grave becomes a fruitful center of contagion. All ejecta, blood, etc., from diseased animals should be collected and mixed with quick-lime. Pigs, dogs and poultry should not be allowed to feed on blood, flesh, etc., of anthracoid victims. It must also be remembered that the disease is communicable to man by inoculation, so it is very necessary to be extremely careful in making post-mortem examinations. The flesh ought never to be used for the food of any animal. It gives rise to malignant carbuncles in man. The milk of animals suffering from anthracoid diseases is a vehicle of contagion, its properties are altered, and its odor and color changed. The list of human disorders of an anthracoid nature obtained from animals is rapidly increasing—a happy indication that they will in future be prevented by removing their causes. Some day, doubtless, we shall see human and veterinary practitioners co-operating in this matter for the benefit of mankind. A. E. BUZARD, M. R. C. V. S. L. No. 11 Seventh St., S. F.

Diseases Among Horses in San Diego County.

EDITORS PRESS:—Many of the horses in this section of the county are affected with what some call nasal gleet; others think it is glanders.

There is no veterinary surgeon near. The disease has prevailed for about three years and the number of affected animals has gradually increased.

We are anxious to know its real nature. Is there a State veterinary surgeon? If so, does the law make it his duty to visit and examine diseased stock?

Does nasal gleet or any other disease "run into glanders"? Are the submaxillary glands adherent to the bone in all well-developed cases of the latter disease? Will you kindly give us through your paper some light on this subject?—J. A. PRUITT, M. D., Fall Brook, San Diego Co.

EDITORS PRESS:—From so many of the horses being affected, as described by Dr. Pruett, I am very much afraid they are suffering from glanders.

There is no State veterinary surgeon. Nasal gleet (ozena) never terminates in glanders.

Glanders and Farcy are employed to designate merely phases or manifestations of the same diseased condition. This condition is termed "glanders" when the specific or diagnostic symptoms and lesions are connected with the mucous membrane of the nose, upper air-passages and the lungs, together with lymph vessels and glands adjacent thereto; and "farcy" when the morbid agent seems to locate itself, and is inducing specific changes in the skin and subcutaneous connective tissue with the lymphatic vessels and lymph-glands belonging to these. Although glanders is peculiarly a disease of the equine species, it is undoubtedly capable of transmission to many other animals, and to none probably oftener than to man. (There are many authenticated cases on record in this State.)

There is no doubt that glanders is due to an introduction into the system of a micro-organism. Bacterial forms have been met with in this disease; in fact, they are always present, but they frequently are so minute that with the aid of the most powerful microscope, and under the most favorable circumstances, they have failed to be recognized; they must be developed by cultivation before being found by the microscopist in many cases.

The submaxillary lymphatic glands when first participating in the morbid processes going on in the course of the development of the disease, become full and enlarged, partly from infiltration in the true gland-structures, but chiefly from the same condition occurring to the surrounding connecting tissue among which they are placed. The feeling is at first of a soft and doughy character, attended sometimes with a trifling amount of pain. Gradually this soft swelling is replaced by a condition of greater firmness and less sensibility. The swelling, whether of one or both glands, is more marked as increasing the bulk of the gland antero-posteriorly than across the space. With the acquirement of the modulated condition we also

notice that the ability to be moved from place to place by pressure with the fingers is much impaired, gradually to be lost altogether, the gland becoming fixed both to the superadjacent connective tissue and to the jaw. Although this phenomena or condition of the submaxillary lymphatic gland or glands may usually be regarded as diagnostic of chronic glanders of the horse, it is yet certain that many cases occur where this peculiarity is absent. I met with one case in particular when recently on an official tour of inspection of the horses in Contra Costa county, where there was an entire absence of any enlargement of either of the glands, and yet I knew that the horse was deeply infected with the specific poison. There are also other cases where some of the abnormal conditions generally noticed in glanders are absent, sometimes being little or no noticeable discharge from the nostrils; and in some the ulcers on the Schneiderian membrane of the nose are not sufficiently near the exterior part to be noticeable.

I think it very necessary for horse-owners generally in your district to engage the services of a thoroughly qualified veterinary surgeon—one who is well experienced in this dreadful disease—to make a thorough investigation of the animals with suspicious symptoms. It is in the power of the county supervisors to appoint a veterinary surgeon to inspect horses for glanders.

A. E. BUZARD, M. R. C. V. S. L.
No. 11 Seventh St., S. F.

Percheron-Norman Stable.

Messrs. H. Wiley & Co., importers and breeders of horses, have erected a fine structure on Main street, Petaluma, and known as Petaluma stables. It is built of brick, 84 feet wide by 135 feet long, two stories and basement, on a lot running back to the creek 632 feet. The appointments and arrangements are complete with blacksmith-shop, ladies'-room, office and stable with 70 stalls, five feet four inches wide, besides box-stalls and sheds and compartments back of the main building.

The lower half of the basement, which is well lighted and has ventilators every six feet running to the top of the building, is used for the imported stock. The present stud consists of the following:

Imported Lord McDuff, two years old, a bay with dark points, weight 1632 pounds, who took first premium and gold medal at Sonoma County Fair in 1888.

Duran, two years old, dark bay with dark points, weighs 1615 pounds. Imported from France in 1887. Took first premium at Napa, Sonoma & Marin District Fair in 1888.

Victor, coal black, two years old, weight 1580 pounds.

Attila, three years old, weighs 1750 pounds. Took first premium and gold medal at Sonoma

Norman Stallion Attila.

County Fair in 1888, first premium at district fair of Napa, Sonoma and Marin in 1888, and first premium and diploma at State Fair in 1888.

Mr. Wiley has had a large experience in importing horses, and has taken in the Percheron, Norman, Shire and other leading breeds. Since 1880 he has personally attended to the selection and importation of over 100 notable animals, and gained an enviable reputation as a sagacious and successful importer and breeder of fine horses.

The engraving presented herewith is a portrait of Attila, the three-year old Norman, faultless in form; color, jet black, with small, pointed ears, large full eye, smooth, bony head well set on a high-crested neck; long and well-formed barrel; short back, heavy across kidneys, broad and full breast, and with well-muscled limbs and perfect feet. He is 16 hands high and weighs over 1700 pounds, and is a horse of fine action.

Petaluma Incubator Factory.

Mr. L. O. Byoe, proprietor of the Petaluma Incubator, has established his factory in Hopper's new brick building, Main street, Petaluma. It has a frontage of 40 feet and extends 68 feet in length, with two stories and basement. The basement will be used for storage and engine-room. The office and show-room will have a frontage of 30 feet and 12 feet wide. An elevator will be placed in the building to connect with the basement.

The hatching of eggs by artificial heat has grown each year, and the Petaluma Incubator has been gaining favor each year as a reliable and practicable egg-hatcher. During this year we shall give an extended description of this factory, with details of making this popular incubator.

"Noonday 10,000."

Mr. Samuel Gamble of Oakland has just arrived from Kentucky, where he secured the celebrated stallion Noonday. He is a very handsome, stylish brown horse and comes from the most noted strains of standard-bred trotters. His season will be made at the Oakland racetrack.

Noonday is five years old; his sire, Wedgewood, record 2:19, 4th heat; the sire of Farona, 2:15, 4th heat; first dam Noonday, 2:20, trial 2:15; sired by Herold the sire of Maud S, 2:08; second dam Midnight, the dam of Jay Eye See, 2:10; third dam by Lexington, sire of the dam of Ance, 2:20; fourth dam by imported Glencoe, sire of the granddam of Farona, 2:15.

Mr. Gamble has had a large experience and acquired an extensive knowledge as a breeder of horses. The complimentary notices his horse has received through the press from the best authority among horsemen warrants us in predicting a successful season for this high-bred stallion.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or of some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

Lands For Sale and To Let.

A RARE BARGAIN!

The undersigned offers for sale, on good terms, his CLOVERDALE DAIRY FARM of 500 acres, situated on Squirrel Creek, 2 miles west of Grays Valley. It is well watered by springs and has excellent irrigation facilities, commodious farm buildings, orchard of 160 trees and 6 acres of vineyard. A fine herd of Holstein, Ayrshire, Jersey, and Durham (thoroughbred and grade) cattle for sale with or without the ranch. Holstein and Ayrshire premium bulls on lowest terms, including "Tehama," which, on account of kinship to the herd, can no longer be used in breeding. A good dairy route is also included in this offer.

NATOMA

Grand Opportunity

—TO ACQUIRE—

A Small Tract

—OF THE—

Best Fruit & Vineyard Land

—IN—

Central California!

Reasonable Prices and Easy Terms.

BY ORDER OF THE

Natoma Water & Mining Co.

WE OFFER AT PRIVATE SALE

1000 ACRES!

—OF THEIR—

MOST PRODUCTIVE LANDS,

Suitable for Fruit, Vines and Vegetables, in subdivisions

5, 10 and 20-Acre Tracts.

The tract now offered in subdivisions is situated on the south side of the American river, 18 miles from the city of Sacramento, the Capital of the State, adjoining the town of Folsom, and on the Sacramento and Placer-ville Railroad.

Two hundred acres are now planted in fruit, in full bearing; the balance of the land, 800 acres, is now ready to plant either in fruit or vineyards.

The soil is of a very superior quality, being a deep rich loam, well drained, and capable of producing every variety of fruits or vegetables, including the peach, apple, apricot, cherry, pear, plum, prune, nectarine, quince, fig, almond and walnut. The topographical feature of this locality is the gentle slope of the land, insuring perfect drainage.

Facilities for Irrigation.

Water for irrigation and other purposes will be furnished to all who desire it at the Company's rates. The water is taken from the American river, near Salmon Falls, and the ditch has a capacity of 3000 miners' inches and a never-failing supply of water. All of the land now offered for sale lies below the ditch, and consequently can be irrigated therefrom. This is a very important item and greatly increases the value of the land, as by irrigation a sure crop can always be depended upon, even in the driest of seasons. The irrigating ditches run directly through the tract, and in addition to this, an unfailing supply of pure and soft water can be obtained from wells at a depth of from 40 to 100 feet.

Transportation Facilities.

The transportation facilities, a very important factor to all fruit-growers, are of the very best; the Sacramento and Placer-ville Railroad running through the orchard its entire length and having a receiving depot in the most central location on the tract, so that no fruit has to be hauled more than half a mile.

Why the Land Offered is a Profitable Investment.

The soil is of the best, being sandy loam and sediment, and adapted to the choicest quality of all varieties of fruits and vegetables. The property is located in that portion of the State where all fruits ripen early, and naturally command the highest prices.

The property is also situated in the central part of California, and in the center of a great fruit-producing section, and immediately adjoining the principal markets of the coast—by the quick transportation facilities which it enjoys.

The company will assist purchasers of their lands by giving them employment in preference to all others, furnish them water for irrigation at very low rates, assist them by their knowledge of the property in planting the different varieties of fruit and vines on the lands to which they are best adapted, furnish pasture for stock, and in fact they will at times be prepared to render such assistance to purchasers that will be of benefit to them in cultivating, selling and shipping their products.

The products of the lands of the NATOMA WATER AND MINING COMPANY have always commanded the highest market prices both on the Pacific Coast and in the Eastern market. The fruit is loaded in the cars on the property and is transported intact to its destination in the East and other markets, a facility of transportation that is of the greatest importance, and with these great advantages prosperity is assured, and to-day there is no better field for solid and profitable investment on the Pacific Coast, as these lands are offered at prices below those of other lands not so advantageously located, and not paying an immediate income.

The portion of the property set out in orchard is all in bearing; thus purchasers will at once receive an income, thereby enabling them to pay for the land from the products. Good soil, abundance of water, healthy climate, easy of access, close proximity to schools and churches, with low prices and easy terms combine to make the purchase of these lands the most profitable investment ever offered.

ELY'S SEED MANUAL Contains all the valuable NEW Seeds, Bulbs & Plants. FOR 1889—Tells how to grow them, and SPECIAL PRICES. ELY & CO. 1301 and 1303 Market St. PHILADELPHIA, PA.

Come, Fellow Farmers!

It is the good things and the new things you want. Here is a Catalogue full of them! Do you want tested seeds, raised from stock selected with extra care, grown from the best strains, got from the original sources? I aim to have mine just such. Do you want new varieties that are really good, and not hardy seedlings? I aim to have mine such. Do you want seed that the dealer himself has faith enough in to warrant? I warrant mine, as the Catalogue. Do you want an exceptionally large collection to select from? Mine is such. Do you want them directly from the grower? I grow a large portion of mine—few seed-men grow any! My Yearly Label and Flower Seed Catalogue for 1889 FREE to every body. JAMES J. H. GREGORY, Marblehead, Mass.

Legislative Committees.

Following are the standing committees of the California Legislature as announced Jan. 15th:

Senate.

Agriculture—Dixon, Roth, Heacock, Langford, Flint, Hinshaw, McComas, Mead, DeLong.
Apportionment and Representation—Roth, Welch, Hamill, Sprague, Bowers, Fraser, Byrnes, Spellacy, Hinshaw.
Attaches, Contingent Expenses and Mileage—Murphy, Fraser, Preston, Dixon, Welch.
Banks and Banking—Boggs, Langford, Preston, Hamill, Dargie.
Chinese and Chinese Immigration—Pinder, Banks, Mead, Meany, Greely, Britt, Campbell.
City, City and County, and Town Gov'ts—Moffitt, McComas, Bowers, Langford, Crandall, Roth, McDonald.
Commerce and Navigation—Spellacy, Murphy, Bowers, Langford, DeLong, Byrnes, Pinder.
Constitutional Amendments—Boggs, Heacock, Crandall, Yell, Wilson, Dixon.
Corporations—Goucher, McGowan, Campbell, Heacock, Dargie, Hinshaw, Wilson, Roth, Langford, Mead, Pinder.
Claims—Meany, Roth, Heacock, Hinshaw, Langford, Fraser, Wilson.
Counties and County Gov'ts and Township Organization—Hinshaw, Caminetti, Flint, Moffitt, Boggs, Conklin, Dray.
Educational—Caminetti, Conklin, Flint, Preston, Moffitt, Murphy, Jones.
Elections—Yell, Campbell, Crandall, DeLong, Meany, Pinder, Williams.
Engrossed Bills—Hamill, Greely, Sprague, Banks, Mead, Dixon, Welch.
Enrolled Bills—Mead, Williams, Jones, Bowers, McGowan, Fraser.
Federal Relations—Britt, Hinshaw, McDonald, Crandall, McCowan.
Finance—Moffitt, DeLong, Dray, Boggs, Langford, Caminetti, Crandall.
Fish and Game—Pinder, McGowan, Campbell, Williams, Briceland, Sprague.
Forestry, Yosemite Valley and Mariposa Big Tree Grove—Meany, Boggs, Byrnes, Wilson, Roth.
Harbors, Rivers and Coast Defenses—Langford, Bowers, Banks, Hamill, Spellacy.
Hospitals—Briceland, Byrnes, Bowers, Mead, Roth.
Immigration other than Chinese—Welch, Williams, Britt, Fraser, Conklin.
Irrigation and Water Rights—Caminetti, Bowers, McComas, Dargie, Roth, Meany, Heacock, Dixon, Mead.
Judiciary—Jones, Caminetti, Crandall, Goucher, Heacock, McGowan, Moffitt, Sprague, White, Wilson, Yell.
Labor and Capital—Britt, Byrnes, Banks, Welch, Boggs.
Mines, Drainage and Debris—Mead, Preston, Greely, Langford, Dray, Roth, Murphy.
Military—Yell, Wilson, Jones, Goucher, McGowan, Pinder, Bowers.
Public Buildings, other than Prison—Williams, McDonald, Meany, Dargie, Moffitt, Conklin, Dray.
Public Morals—Spellacy, Briceland, Fraser.
Public Printing—McDonald, Moffitt, Dargie.
Public Swamp and Overflowed Lands—Langford, Greely, Hinshaw, Dray, Boggs.
Roads and Highways—Roth, Boggs, Hinshaw, Dixon, McComas, Flint, Campbell.
Rules—Hamill, Welch, Flint.
State Library—Murphy, McComas, Caminetti.
State Prison and Prison Buildings—Goucher, Langford, Boggs, McComas, DeLong, Hinshaw, Caminetti, Wilson, Heacock.
Viticulture—Langford, Hinshaw, Sprague, McComas, Dixon.

Assembly.

Attaches and Employees—Long, Mulgrew, Tucker, Young, Maher.
Elections—Burwell, Long, McCarthy, Hall, Stander, Davis, Brown.
Judiciary—Seawell, Storke, Hall, Shanahan, Tully, Renison, Whitehurst, Tucker, Coombs, Salomon, Hyde, Young, Dibble, Lowe, Hart.
Constitutional Amendments—Storke, Whitehurst, Hall, Tully, Coombs, Damron, Young.
Federal Relations—Renison, Shanahan, Whitehurst, Hyde, Salomon, Culver, Mathews.
State Hospitals—Mathews, Mulgrew, Burwell, Searey, Atherton, Brierly, Murray.
Internal Improvements—Kiernan, Murray, Dixon, Lowe, Edwards.
Ways and Means—Shanahan, Whitehurst, Storke, Ostrom, Mathews, Coombs, Alexander, Atherton, Dibble.
State Prisons—Adams, Black, Brannan, Ostrom, Berry, Fawcett, Simpson, Atherton, Maher.
Election Laws and Apportionment—Hall, McVay, LaGrave, Rundell, Storke, Dibble, Hersey, Edwards, Ragsdale.
Labor and Capital—Dobbin, McCarthy, Reagan, Mullaney, Kiernan, Simpson, Johnson, Williams, Maher.
Swamp and Overflowed Lands—McMullin, Crawford, Mullaney, Burnett, LaGrave, Fassett, Campbell, Brickwedel, Hook.
Water Rights and Drainage—Whitehurst, Bangs, Wear, Brannan, Ostrom, Sykes, Petrie, Turner, Chapman.
Agriculture—Berry, Adams, McMullin, Rundell, Fassett, Porter, Campbell.
Chinese Immigration—McCarthy, Searey, Mullaney, Dobbin, Tully, Chapman, Porter, Brickwedel, Hersey.
Corporations—Ostrom, Mulgrew, Berry, Stander, Seawell, Dibble, Ewing, Turner, Alexander.
Agricultural, Mining and Mechanical Arts—Tulloch, Burwell, Reavis, Frank, Atherton, Hersey, Williams.
Commerce and Navigation—Reagan, Black, Burnett, Young, Ewing.
County and Township Gov'ts—Bangs, Murray (San Francisco), Tucker, Storke, Reynolds, Culver, Coleman, Brickwedel, Chapman.
Crimes and Penalties—Tully, Seawell, Bangs, Coombs, Dibble.
Viticulture—McMullin, James, Adams, Frank, Coombs, Edwards, Brown.
Claims—Mulgrew, Black, Shanahan, Reavy, Young, Salomon, McKeown.
Counties and County Boundaries—Mullaney,

McVay, Rundell, Shanahan, Renison, Ragsdale, Hart, Sims, Sykes.
Fish and Game—Frank, Reavis, Dobbin, Culver, Ewing, Murray, Mahler.
Education—Crawford, Black, Wear, Bangs, Petrie, Brierly, Turner.
Silk Culture—Dinan, James, Hall, Johnson, Coleman.
Homesteads and Lands—Reavis, Crawford, Dinan, Reagan, Fassett, Coleman, Simpson.
Irrigation—Tucker, Berry, Wear, Bangs, Mathews, James, McMullen, Adams, Holmes, Davis, Brierly, Hook, Edwards.
Military Affairs—Murray, Searey, McCarthy, Holmes, Johnson.
Mines and Mining Interests—Mahler, Tulloch, LaGrave, Reavis, Gardner, Davis, Coleman.
Municipal Corporations—Burwell, Burnett, McVay, Reynolds, Seawell, Berry, Salomon, Damron, Johnson, Simpson, Chapman.
Public Expenditures and Accounts—Wear, Ostrom, Burnett, Brown, Alexander.
Public Printing—LaGrave, Mulgrew, Mulvey, Wear, Ragsdale, Lowe, Holmes.
Public Buildings and Grounds—Stander, Black, Reagan, Mullaney, Mahler, Davis, Campbell, Porter, Hersey.
Yosemite Valley and Big Trees—Rundell, Tulloch, Crawford, Gardner, Hook.
Public Morals—Sims, Frank, Adams, Tulloch, Damron.
Indian Affairs—Tucker, Reavey, Mulvey, Williams, McKeown.
Retrenchment—Reynolds, Ostrom, Tulloch, Petrie, Sims.
Public Lands—Black, Tully, James, Kiernan, Brannan, Sykes, Hyde, Holmes, Murray of Humboldt.
Roads and Highways—McVay, Renison, Mahler, Kiernan, Ragsdale, Turner, McKeown.
Engrossment—Leary, Long, Mullaney, Maher, Gardner.
Enrollment—Reavy, Reynolds, McMullin, Atherton, Hook.
State Library—Burnett, Seawell, Stander, Brierly, Ewing.

Winter in South-rn Shasta.

EDITORS PRESS:—Weather fine, good view of eclipse. Up to the present has been an unusually warm winter. Feed is reported to be the best for years. Streams are low. The ground in the mountains did not get wet before the snows came. Not much snow in the Sierras so far.

For nearly two weeks we were treated to the daily spectacle of the fog lying in the Sacramento valley like an inland sea, sometimes tossed into huge white waves, at others smooth and glassy. On one day it presented the most magnificent spectacle that it has ever been my good fortune to behold. The sun shone through an upper layer of clouds upon this sea of fog in the valley at the proper angle to give it the appearance of deep red flames. Over a triangle of 50 miles on a side, about 1000 square miles seemed a rolling, waving ocean of fire.

From experiments made last year it is found that nearly all of the mountain land not so situated as to be capable of irrigation will raise good crops of wheat-hay without any irrigation. Let me give you, for the benefit of your Eastern readers, a sketch of a California winter away up in the mountains. 3200 feet high in the cold Sierras: On Nov. 6th and occasionally since we had frost, but the weather usually is like some spring days in the East, neither cold nor hot, but just right, and thoroughly delightful; children play outdoors all day barefooted, for they won't wear shoes if they can avoid it.

The California lilac and manzanita are budding and nearly ready to bloom. Radishes and lettuce are large enough to eat. A few weeks ago and perhaps yet, strawberries and string beans were gathered in the neighborhood.

If any one would take a little pains with a winter garden, almost all vegetables could be raised here in a reasonably mild winter. Potatoes, cabbage, carrots, parsnips, etc., frequently remain in the ground all winter, being dug only as required. Now, if you will remember that this is in the professedly cold part of the State, you can imagine what winter is like in the warm parts.

Shingletown, Jan. 1, 1889.

Muzzling Tree Roots Against Gophers.

EDITORS PRESS:—In searching for some means to circumvent the active gopher in his quest of the (to him) edible roots of our just-planted fruit trees, it has occurred to me that about the most effective thing that could be devised would be to place in the holes in which the young trees were about to be planted a cylinder two feet in depth and two feet in diameter, made of black iron wire netting of say three-fourths' inch mesh. This could be buried so that the upper edge would be covered from four to six inches, and as it is known that the gopher does his work at a depth of from 12 to 18 inches, I believe that this would be found to be a perfect defense against his ravages.

I advocate the use of black iron instead of galvanized netting, both on account of its cheapness and of its more rapid oxidation, as it is not advisable to use any material for such a purpose that would retain its integrity for more than three years, and by that time the trees would be strong enough to resist any attack the gophers might make.

Penns Grove.

WM. P. EDWARDS.

A BELIEF is growing that the relations between Germany and the United States are becoming strained owing to the difficulties in Samoa.

The National Farmers' Alliance

Held its annual session at Des Moines, Iowa, on the 10th and 11th instant, about 50 delegates being present from Dakota, Iowa, Nebraska, Wisconsin, Kansas and Minnesota.

Steps were taken toward consolidation with the Southern Farmers' Alliance. Resolutions were adopted in favor of the forfeiture of all unearned railway land grants and the repeal of all laws granting such, favoring Governmental telegraph, early construction of the Hennepin canal, and asking that the Interstate Commerce law be kept intact unless changed by more restrictive measures.

A memorial to Congress was adopted declaring that the Government should issue money direct to the people instead of through the National banks; also that U. S. Senators should be elected direct by the people.

J. Burrows Filley of Nebraska was elected president; H. L. Lucke of Clear Lake, D. T., vice-president; August Post of Moulton, Ia., secretary; J. J. Farlong of Austin, Minn., treasurer; and Alvin D. Chace of Watertown, D. T., lecturer.

California Products at Chicago.

CHICAGO, Jan. 16.—Easter Burre pears are the only California fruit on the market; they bring \$3.25 @ 3.50 in a small way.

For California dried fruit the demand is slack and trade is backward. Raisins, especially London layers, rule steady, but for all other descriptions there is an easy market. Prices range as follows:

Apricots—Evaporated, bleached, bxs, 13@14c; do, sun-dried, bleached, sks, 9@12c. Apricots, sun-dried, unbleached sks, 7@9c. Peaches—Evaporated, bleached, unpeeled, bxs, 8½@9½c; do, sun-dried, bleached, unpeeled, sks, 7@8c; do, unbleached, unpeeled, sks, 4½@6c. Nectarines—White, evaporated, bleached, bxs, 9@10c; do, sun-dried, sks, 8@9c; do, red, evaporated, bleached, bxs, 8@9c; do, sun-dried, bleached, sks, 7@8c. Plums—New, pitted, 9@10c; new, unpitted, 4@7c. Prunes, according to size, in sks, 5@9c; do, Silver, 8@10c.

Raisins—Loose Muscatels, new, ½ box, \$1.10 @ \$1.30; do London layers, new, \$1.75 @ \$2.25.

Beans are moving off moderately and the market presents the same features as have lately been seen. Stocks are only moderate. Prices are given below: Pea beans, \$1.95 @ 2; Lima beans, California, ½ lb. 4½c.

California Poultry Farm.

Messrs Cutting & Durland, proprietors of the California Poultry Farm at Fresno Camp, near Stockton, are keeping pace with the times and importing each year fresh stock of standard and new varieties of fancy fowl. They have made shipments to all parts of the Pacific Coast and to Mexico and Florida. Recently they made a shipment of 258 birds to Japan for and on account of the Japanese Government.

IN THE COW STABLE.—Where cows are milked in the stable, cleanliness is the most important essential. If the gutter is in the right place, the cow herself need not be soiled by excrement. All should be removed before milking begins. Many cows will void more after milking has begun, and it is better to stop work and cover the droppings with a handful of land plaster than to continue milking while every stream passes through air filled with foul odors. It is not merely for cleanliness that this should be done. The plaster helps to fix in the manure-pile ammonia that would otherwise be lost.—*American Cultivator*.

CHARMED WITH VENTURA.—Mr. M. J. Twining, whose delicious comb-honey, made by bees fed on alfalfa bloom, we had occasion twice to praise last summer, has moved from Hanford to San Buenaventura, and writes us enthusiastically of the lovely scenery and climate of his new abode. He is going into the bee-business with Mr. Chaffee, a mile from town, and, as bee-feed is plenty in the hills, hopes to have a large amount of superfine honey to market the coming season. If the product of his hives in Ventura rivals in quality what he sent us from Tulare, the output of the new firm should fall far short of the demand.

GEN. L. F. ROSS of Iowa City, Iowa, the well-known importer and breeder of Red Polled cattle, is spending the winter with his brother, H. L. Ross, in Oakland, and made us a friendly call one morning this week. RURAL readers remembering the likeness of his famous cow Floss 21 (1523), which we published in the fall of 1887, will be interested in learning that the general expects to order more Red Polls from England in March, and in June personally to visit the mother country and select a further importation, part of which he is likely to bring with him to this coast another season.

CITRUS FRUIT TREES.—We have received a copy of the catalogue for 1888-9 of Frost & Burges, proprietors of the Riverside Nurseries, Riverside, Cal. The establishment makes a specialty of choice budded orange and lemon varieties and sweet and sour seedlings. We find their collection of varieties quite full and desirable, and it includes a number of new sorts which will attract the attention of planters. The catalogue will no doubt be mailed on application.

ONE firm in Salt Lake City shipped 168,270 pounds of lucerne seed last fall.

WATSONVILLE is still hopeful of getting a flax-mill.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

From the official report of U. S. Patents in DEWEY & Co.'s Patent Office Library, 220 Market St., S. F.

FOR WEEK ENDING JAN. 1, 1889.

395,616.—CARBURETOR—H. J. Dykes, Berkeley, Cal.
395,618.—CORK EXTRACTOR—Geo. Edwards, Berkeley, Cal.
395,433.—BEVEL GAUGE—M. O. Godding, Monrovia, Cal.
395,621.—DRIED-FRUIT CLEANER—John Harrel, Plymouth, Cal.
395,443.—CONDUIT ELECTRIC RAILWAY—B. Jennings, San Jose, Cal.
395,448.—PILE—R. B. Markle, Westport, Cal.
395,449.—GAS APPARATUS—J. A. McCollum, Riverside, Cal.
395,401.—GREASE EXTRACTOR—W. D. Nelson, S. F.
395,344.—FURNACE—J. P. Oliver, Oakland, Cal.
395,346.—COUGH MIXTURE—A. M. Poe, Lakeport, Cal.

S. H. MARKET REPORT

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Jan. 16, 1889.

The weather the past week has been of the most favorable character for outdoor work, and which, so far as can be ascertained, has been taken advantage of by farmers. In farm products, trading has been only fair. Wheat fluctuated down at the East, with the European markets eased off.

LIVERPOOL, Jan. 16.—Wheat.—Rather more inquiry. 38s 6d@39s; just shipped 38s 6d; nearly due, 38s 9d; cargoes off coast, quiet; on passage, steady; Mark Lane wheat, quiet; French country markets, slow; wheat and flour in Paris, quiet.

Foreign Grain Trade.

LONDON, Jan. 14.—The *Mark Lane Express* says: The wheat market is slow for January, though the firmness is preserved. Retail inquiry has improved. An advance of 6d@7s has occasionally been quoted. Holders of Indian, Russian and South American wheats are firmer than holders of Californian. The finest grades of London makes flour have fallen and are now quoted at 36s. Arrived cargoes have advanced 6d on December's lowest prices. Rice is dearer. American prices for wheat are still too high for business, but a recent decline in New York looks as though the United States, instead of the United Kingdom, was about to give way. Ordinary sorts of flour were 6d cheaper, with less inquiry. Corn is steady; grinding barley 3d higher. At the close to-day flour and wheat regained their steadiness somewhat, but better sorts alone were stable.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt:

	Jan.	Feb.	Mar.	Apr.	May.	June.
Thursday...	78 1/2	78 1/2	78 1/2	78 1/2	78 1/2	78 1/2
Friday...	78 1/2	78 1/2	78 1/2	78 1/2	78 1/2	78 1/2
Saturday...	78 1/2	78 1/2	78 1/2	78 1/2	78 1/2	78 1/2
Monday...	78 1/2	78 1/2	78 1/2	78 1/2	78 1/2	78 1/2
Tuesday...	78 1/2	78 1/2	78 1/2	78 1/2	78 1/2	78 1/2

The following are the prices for California cargoes for off coast, nearly due and prompt shipments:

	O. C.	P. S.	N. D.	Market.
Thursday...	39-40	39 1/2	39-40	Quiet.
Friday...	39-40	39 1/2	39-40	Quiet.
Saturday...	39-40	39 1/2	39-40	Firm.
Monday...	39-40	39 1/2	39-40	Slow.
Tuesday...	39-40	39 1/2	39-40	Slow.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York:

Day.	Jan.	Feb.	May.
Thursday...	98 1/2	100 1/2	104 1/2
Friday...	98 1/2	100 1/2	104 1/2
Saturday...	98 1/2	100 1/2	104 1/2
Monday...	98 1/2	100 1/2	104 1/2
Tuesday...	98 1/2	100 1/2	104 1/2

The closing prices for wheat have been as follows, at Chicago:

Day.	Jan.	Feb.	May.
Thursday...	98 1/2	100 1/2	104 1/2
Friday...	98 1/2	100 1/2	104 1/2
Saturday...	98 1/2	100 1/2	104 1/2

Cause of the Collapse in Wheat.

NEW YORK, Jan. 15.—The failure at Antwerp to-day of Debrassine & Co., who were reported "long" anywhere from 500,000 to 1,000,000 bu. of wheat, has disturbed the Produce Exchange here. They had very few contracts here, but it was said that Chicago merchants held a number of them. May wheat opened at \$1.02 a bushel. On receipt of the news it fell to \$1.01, with a slight rally afterward which brought prices up a fraction. The closing quotations were \$1.01 1/2 asked, \$1.01 1/2 bid. The transactions for the day amounted to 6,300,000 bu., of which May wheat formed about half. There was a sale of three boat-loads No. 1 Dakota hard wheat made at \$1.29 1/2, the sale being to millers. The price attracted a good deal of notice.

The Grain Crop of 1888

WASHINGTON, Jan. 12.—The December report of the Department of Agriculture makes the product of corn 1,937,790,000 bushels, valued on the farm at 34.1c per bushel, against 44.4c for the crop of 1887. The product of 1887 was 27 per cent less in volume than that of 1888. The average yield of the seven great corn States was 33.2 bushels per acre. The wheat crop aggregates 414,868,000 bushels. Average yield 11.1 bushels per acre—winter wheat 11.6 bushels, spring wheat 10.3 bushels—average farm value, 92.6c, against 68.1c for the previous crop. The difference is due more to foreign than to domestic scarcity. The aggregate for oats is 807,737,000 bushels, at 27.8c, against 30c for the crop of 1887. A comparison of aggregate values of shucks presents the corn crop worth \$31,000,000 more than the previous one; wheat, \$74,000,000 more; oats, \$5,000,000 less.

Eastern Wool Market.

BOSTON, Jan. 11.—The figures for the total transactions in wool during the past week will be something of a surprise to the trade generally, for the surface market has presented a rather quiet appearance on most days of the week. The bulk of the transactions has been in foreign wool, principally new Australian to arrive and old on the spot, while in carpet wool there has been a good trade reported. It was noticeable, also, that sales were largely confined to a few houses that are in a position to make sales, but a majority of the dealers reported a very quiet state of affairs. Many have not wool to sell, believing it good policy to hold on to what stock they have. Supplies held by commission houses are also to some extent held off. Sales were 4,247,000 lbs of all kinds.

NEW YORK, Jan. 11.—*Bradstreet's* says: While no marked activity in the wool market is looked for at the beginning of the year, the past two weeks compare favorably with the first fortnight of any recent year. Trade has reached only moderate proportions, but the market continues very firm. Holders of desirable lines are not at all inclined to sell at anything less than present quotations. Buyers, in turn, are still somewhat uncertain as to the course

of values in heavy-weight fabrics, and on that account are keeping out of the market in some measure. Manufacturers, as a rule, are asking five per cent more for their goods than last season, but whether they will be able to force the advance is a question. The stock of wool in various markets is small. This naturally encourages holders, and from all appearances present values will rule for some time to come. The next series of sales at London is likely to be an important factor in determining quotations on this side. At Philadelphia the market has continued quiet; manufacturers are buying moderately for actual requirements, but stocks in first hands are small, and holders insist upon full prices for all offerings. There is no evidence of weakness in any line.

Miscellaneous.

NEW YORK, Jan. 14.—Canned California fruit has been neglected, though prunes have made a decided success.

Lima beans are steady at \$2.75.

Hops are quiet, without any favorable foreign advices. The exports for the week were 3316 bales, mainly back sales. The stock of California is rather crowded by steady receipts. All prices are as before. The extreme price for State best was 21c, and Pacific 20c.

Local Markets.

The following tables give the highest and lowest prices paid on Call during the past week:

	S. S.	B. S.	B. '89.	S. '89.	Jan.
Thursday...	140 1/2	140 1/2	140 1/2	140 1/2	140 1/2
Friday...	140 1/2	140 1/2	140 1/2	140 1/2	140 1/2
Saturday...	140 1/2	140 1/2	140 1/2	140 1/2	140 1/2

BARLEY.

	Buyer Season.	Seller 1889.	Buyer 1889.
Thursday...	87 1/2	87 1/2	94
Friday...	87 1/2	87 1/2	94
Saturday...	87 1/2	87 1/2	94
Monday...	87 1/2	87 1/2	94
Tuesday...	87 1/2	87 1/2	94

BAGS.—The market is duller, but holders express confidence and do not name below 4 1/2 to 4 3/4, according to quantity, for June-July delivery.

BARLEY.—The market for spot parcels has shown considerable strength for choice parcels, but poorer grades have been in buyers' favor. In futures, trading has been very light, with only slight fluctuations, and confined to two options. At today's Call the following sales are reported to have been made:

Morning Session: Buyer 1889—100 tons, 94 1/2c; 300, 95c; 1200, 95 1/2c. Buyer season: 100 tons, 88 1/2c; 100, 88 1/2c @ cwt.

BUTTER.—The market has ruled weak and unsatisfactorily to the selling interest throughout the week. The receipts have been quite free in excess of the demand, which is confined to immediate wants. At the low prices the consumption of California is increasing.

CHEESE.—The market for old is heavy, but for new mild there is a fair demand. It is claimed that there will be a large output this year.

EGGS.—The market has, under free receipts, ruled weak at low prices. The consumption is very heavy.

FLOUR.—The market is without essential change, although a much weaker tone is reported, with, in some instances, a shading in prices.

WHEAT.—The market for sample parcels has, in sympathy with options, moved down. At the lower bids holders are indifferent sellers, only letting go when compelled by pressing demands. On Call, options have only been fairly dealt in until a decided break in prices brought more buyers into the arena, who took all at the lower prices. The following are the sales reported to have been made today on Call:

Morning Session: Buyer 1889—1800 tons, \$1.51 1/2; 200, \$1.51 1/2; 600, \$1.51. Buyer season—800 tons, \$1.47 1/2; 500, \$1.47 1/2; 300, \$1.47 1/2; 100, \$1.47 1/2 @ cwt. Afternoon Session: Buyer 1889—100 tons, \$1.50 1/2; 300, \$1.50 1/2; 100, \$1.50 1/2; 2200, \$1.50 1/2. Buyer season—1600 tons, \$1.47; 100, \$1.46 1/2; 1800, \$1.46 1/2; 400, \$1.46 1/2. Seller 1889—100 tons, \$1.36 1/2 @ cwt.

[COMMUNICATED.]

Market Information.

Cereals.

The *Mark Lane Express*, Dec. 24th, says: The seasons appear to be getting later all round, and the weather of the first three weeks of December has been far more autumnal than wintery. After a few days, during which the air was cold, with rather severe night frosts, there has been a return of mild and open weather, accompanied by southwesterly gales, bringing a large number of grain-laden vessels into port. The aspect of the country is now very favorable, and the extensive acreage of autumn-sown wheat is exceedingly encouraging; in fact, a more level and healthy growth has seldom gladdened the farmer at Christmas. Threshings of corn are not favored, however, by the prevalent dampness of the air, and the same weather characteristics also reducing demand, it is much to be wished that growers would restrain their energies a little and employ them otherwise than in the direction of market sales. The imperial average is difficult to keep up when there is but a dragging inquiry, and where the bulk of offerings is more or less out of condition, so low a price comes to be quoted that general discouragement is the result. English wheat is fairly underselling most foreign sorts, except the best, and of really good wheat this season there is no superabundance anywhere, so that firm holders can keep up at least a fair price all round. The course of the week's trade in English wheat must be recorded as in buyers' favor, but no important price changes have been effected, and few possessors of samples in a dry state, or weighing over 61 lbs. to the bu., have parted with them at any decline, however small. The inquiry for flour in London and the big cities has been satisfactory, considering the weather and the restricted character of retail inquiry. In the country, however, the sellers have had much apathy to complain of, and an occasional fall of 6d per sack has to be quoted.

In wheat the local market showed continued activity

the past week, with decided fluctuations on Call. It looks as if there has been a strong buying movement on the part of quite a large number of independent operators on Call, and that they have been given all the wheat wanted by an inside bear clique, and with the buying stopped a determined raid was made and the market hammered down several cents a cental. At the decline the bears took in all they could. There is a very general opinion that the lower prices cannot be maintained long. This impression is based on the crops last year in the United States being officially announced at not quite 415,000,000 bushels against over 455,000,000 bushels in 1887—a shortage of over 40,000,000 bushels. It is very generally conceded that the stock in the United States was considerably less on January 1st, 1889, than at the like date in 1888, which if correct must result in better prices later on or before the next season opens.

In this State plowing is very general. The prospects now are of the most flattering character for a large crop, but then no one can form a correct opinion as to what will probably be the outcome, for all depends on the spring rains.

In barley the movements the past week were very light, due to buyers still confining their purchases as much as possible. The supply is not as large as at this time last year, with the grades poorer. From all that can be ascertained the acreage that will be seeded this year will be below an average. This no doubt is due to the low prices that have ruled the past two seasons. Many farmers claim to have lost money by growing barley. It is very generally claimed that an improved demand will obtain in next month for both feed and brewing.

Oats have moved off slowly. The call has come chiefly from large dealers and feeders. The low prices have curtailed the receipts, which have, in turn, created a steadier tone, but then not of sufficient strength to induce holders or consignees to advance their views except on such grades as appear to be in lighter supply.

Corn is without change. Any movements on the part of the bulls are met with free selling offers. The very large crop last year in the United States causes a decided bearish feeling.

Both buckwheat and rye are weak. The demand appears to be chiefly for seed, and that only in a small way.

Fruit.

The market is overstocked with all kinds of oranges. The demand at the low prices is quite free. Shipments out of the State are on a liberal scale. Points up North are reported to be taking more than at this time last year. Foreign oranges are in good supply, but the low prices will check importations.

In lemons and lemons trade is only fair. Receipts are free, with a decided selling pressure reported by dealers.

Heavy receipts of Eastern apples are against the selling interest. Only the more choice, good keepers find quick sale. Oregon continues to send us fair supplies, with some of the more choice fetching over \$1.50 a box.

In dried fruits there is nothing new to report. The demand is slow, but as there is no selling pressure, quotations are virtually unchanged. Although to place a consignment parcel, lower prices than quoted must be accepted, but to buy, full prices would have to be paid. Choice, selected grades, neatly packed of all kinds, are in light supply, but indifferent grades of all kinds, except perhaps apricots, are in heavy stock.

Raisins are without essential change. There is nothing doing, with no improvement looked for until spring trade opens.

Feedstuff.

Hay is weak, under light buying. The available supply of choice to extra choice is reported by those in position to know to be light, but that of poorer grades is said to be heavy, considering the abundance of natural feed. The consumption continues quite free.

In ground feed, there is nothing new to report. The consumption holds up well, considering that the pastures are in the very best possible condition. Considerable ground feed is being sent out of the State—both by water and land.

Live-Stock.

Choice bullocks are fairly steady, but indifferent continue to be in free supply, with prices favoring buyers. Mutton sheep are reported to be firm under moderate selling efforts. Hogs continue firm with the supply barely sufficient to meet the requirements for the block. Heavy importations of green pork, for smoking, are still in order. Small calves are wanted. Milch cows continue scarce and command good prices, ranging from \$25 to \$50 each, according to the age, etc. In horses there is nothing new to report. The demand is said to be of an offish character, but the outlook is favorable for a free call later on in the season.

The market for dressed meat is quoted as follows by slaughterers to butchers (to get the price of stock on foot, take off one-third of the price for stall and grain fed and one-half from the price of grass fed, that is animals running at large).

HOGS.—On foot, grain fed, 6 1/2 @ 6 3/4 @ lb.; dressed, 9 @ 9 1/2 @ lb.; soft, 5 1/2 @ 6 1/4 @ lb.; dressed, 8 @ 8 1/2 @ lb. Stock hogs, 4 @ 5 @ lb.

BEEF.—Stall fed, 8 @ — c @ lb.; grass fed, extra, 7 @ 7 1/2 @ lb.; first quality, 6 @ 7 c @ lb.; second quality 4 1/2 @ 6 @ lb.; third quality, 4 @ 5 c @ lb.; fourth, 3 @ 4 c @ lb.

VEAL.—Small, 8 @ 10 c @ lb.; large, 6 @ 8 c @ lb. MUTTON.—Wethers, 7 @ 7 1/2 c @ lb.; ewes, 6 1/2 @ 7 c @ lb.; lamb, spring, 7 @ 9 c @ lb.

Vegetables.

Receipts of spring vegetables from the southern part of the State are increasing, causing a lower range of values. The frosts of the past few days have injured the more mature garden truck in the bay counties.

Potatoes continue irregular, with prices changing from day to day, being governed more by receipts than they were a few months ago. New potatoes are increasing in quantity and also in quality. The crop this year, unless we have high water in the spring, promises to be light. A large quantity of the potatoes received are said to be more or less defective, which causes the best conditioned to have a fair demand.

Onions are moving fairly free, that is, those in good condition and suitable for filling distant orders.

Poor onions are in oversupply, and hard to place, except at low and unsatisfactory prices.

Miscellaneous.

California poultry has ruled fairly steady throughout the week, notwithstanding a strong selling pressure at Eastern.

In hops there is nothing new to report. The supply on the coast is very light.

In wools the market is about bare. It is claimed that the spring clip will come on a hungry market, which causes dealers to look for good prices. It is claimed that the clip this year will be better than that of 1888.

Nuts are heavy under fair supplies and a light demand. Honey is scarce and high, with the market dull but an improved inquiry looked for.

From the *Commercial News* of Jan. 15th, the following summary of tonnage movement is compiled:

	1889.	1888.
On the way to this port	190,018	251,761
On the way to neighboring ports	36,457	58,591
In port, disengaged	25,007	90,489
In port, engaged for wheat	37,877	42,57

Totals

To get the carrying capacity, add 60 per cent to the registered tons as given above.

From July 1st to Jan. 8th, the following are the exports from this port:

	1889.	1888.
Wheat, cts.	8,221,684	4,876,047
Flour, bbls.	391,603	371,621
Barley, cts.	1,74,031	378,96

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations while very poor grades sell less than the lower quotations.

BARREN HILL NURSERIES,
NEVADA CITY, CAL.

SPECIALTIES:

Nuts, Prunes and Grapes.

The Largest and Finest Collection of "Nut-Bearing" Trees to be found in the United States.

21 Varieties of Walnuts.

9 Varieties of "Marrons,"
Or French Chestnuts (solely propagated by grafting).10 Varieties of Filberts
(pro. agated by layering).

4 Varieties of Almonds.

HEADQUARTERS OF THE

PRÆPARTURIENS

Or Fertile Walnut.

Introduced into California in 1871 by FELIX GILLET.

"Second" Generation Præparturiens
(California Grown).

GRAFTED WALNUTS.

"Barren Hill Nurseries" is the only establishment in the United States where grafted Walnuts may be found. The finest French varieties, highly recommended for the size, beauty and quality of the nuts; fertility and hardiness of the trees. Foremost among them: Mayette, Parisienne, Franquette, Chaberte, Meylan and Vourey.

PRUNES!

The purest types of the French Prune or Prune D'Ente, from the Valley of the Lot, France, viz.:

Lot D'Ente,
Mont Barbat D'Ente,
Faymirol D'Ente,
Also Saint Catherine Prune,
"True from the root."

231 Varieties of Grapes, from all parts of the world, including the earliest Table Varieties known, some of them 25 days earlier than Sweet Water.

61 Varieties of English Gooseberries, all shapes, colors and sizes.

April Cherries, Apricots, Pears, Figs, etc.
French, English, German and American Strawberries.

ORANGES and LEMONS.

Portugal Orange,
Blidah (Algeria) Mandarin Orange,
Corsica Lemon.
Large-Fruited Lemon,
Imported from the south of France and expressly grafted for the California trade.

GRAFTING THE WALNUT,

By FELIX GILLET, of Nevada City, Cal., an essay on the different modes of Budding and Grafting the Walnut, so difficult to graft; illustrated with eight cuts made after nature and of natural size. Will be sent with Descriptive Catalogue, under the same cover, to any address on the receipt of 25 cents in postage stamps.

Send for General Descriptive Catalogue, illustrated with 37 cuts, representing Walnuts, Chestnuts, Almonds, Filberts, prunes, etc.

CAUTION!

I do hereby caution Nurserymen all over the United States, that have been in the habit of stealing my Walnut and Chestnut cuts, and appropriating them to kinds that they do not represent, that I have had all the cuts of my General Descriptive Catalogue and those of my Essay on Grafting the Walnut duly "copyrighted," and that hereafter I will prosecute any one guilty of such contemptible piracy.

The Aspinwall Potato Planter.

SPECIAL ADVANTAGES:

No farming tool has ever done more accurate and rapid work, and we strongly question whether any implement (character of work and quantity being taken into consideration) has proven itself to be of such financial advantage to the farmer. We make strong claims for our Potato Planter, knowing that we can fulfill every one of them.

The cost of raising potatoes becomes greatly reduced by the use of our Planter, and to a potato grower who raises much of an area the machine will pay for itself in a single season.

The Planter is capable of being adjusted to plant either cut or whole seed 10, 13, 15, 17, 21 and 26 inches apart; also, different depths, and shallow or deep covering can be practiced, as desired.

The distance of planting is exactly the same in each row.

The work is far superior to hand planting. The rows are straight, and, the furrows being V-shaped, the seed must necessarily be deposited in a perfect line; this enables CLOSE and EARLY cultivation.

Please note the fact that dry or TOP earth is not drawn over the seed by the covers of our Planter, but, on the contrary, the moist or UNDER earth is drawn upon the seed, a feature that every experienced potato grower will appreciate, as nothing is more fatal than to cover cut seed in a dry time with dry earth.

The planting can be done from 3 to 9 inches in depth and the covering is uniform.

From 5 to 8 acres per day can be planted, and THE ENTIRE WORK of marking, furrowing, dropping and covering is done in a single operation.

The Planter is well made and very durable, and with proper care will last many years.

There is no great strain on any of its parts, being entirely free from any cog gear and fast motion. The speed of the mechanism of the Planter is no faster than the movement of the ground wheel.

We give an absolute guarantee that our Planter will do all we claim for it.

A Percheron Victory.

It will please many readers of the RURAL who are breeding Percherons and their grades to see the portrait of a horse which won a notable victory for his breed at the great display of the American Horse Show in Chicago in November last.

La Ferte is the property of the well-known breeder and importer, M. W. Dunham of Wayne, Illinois. He is described by the *Breeders' Gazette* as "certainly one of the very grandest of living show horses," and that leading journal gives other interesting information concerning the animal which we shall make use of in this connection. It seems that the uniformly excellent quality of La Ferte's colts has demonstrated his value as a sire to such an extent that Mr. Dunham has used him for the past two seasons to breed upon his valuable Brilliant mares, and this coupling has proved a remarkably successful combination, the produce being marvels of excellence, inheriting from their sire that long, graceful neck, high carriage and superb action that has won for him the title, bestowed by many good judges, of "the handsomest draft horse in the world."

"La Ferte" was shown at the great Live-Stock Show held at Chicago, November 13-24, 1888, and awarded first prize in the strongest ring of Percherons seen in this country since 1886; but a far higher honor awaited him in the subsequent "Battle of the Breeds." It was when arrayed against the pick of the Clydesdale and English Shire studs of both continents that this grand representative of the great Percheron race vindicated the honor and glory of his breed by winning the Grand Championship prize as best draft stallion of any breed.

This was certainly a substantial victory for the Percherons, and is naturally enough quoted as emphasizing the verdict given at the World's Fair at New Orleans in 1885, when the same honors were awarded to "Brilliant" 1271 (755), as well as that of 1881, when a similar contest was fought at Chicago and the prize awarded to that famous show horse "Vidocq" 483 (732), also of the Oaklawn stud.

It is also a noticeable fact that the winner in the three-year-old-mare class at the late Chicago show was a daughter of "La Ferte" out of a mare by "Brilliant," and it is with very pardonable pride that Mr. Dunham may point to the fact that, at this last great show, horses

from the Oaklawn stable, both Percherons and French Coach, gained first prize in every class in which they were entered.

As La Ferte has won such honors both as a show horse and a sire, it will be of interest to note that his sire Philibert (760) of famous reputation traces his descent from the celebrated Arab Gallipoli, through a long line of illustrious sires. On the maternal side, La Ferte's pedigree runs into the Brilliant strain, he being a nephew of the great Brilliant 1271 (755).

WINNER OF SWEEPSTAKES FOR AGED STALLIONS OF ANY DRAFT BREED AT CHICAGO, 1888.

La Ferte stands 16½ hands high, weighs 2040 pounds, was foaled in France in 1881, and is, as the engraving shows, a beautiful dapple gray. He is described as a showy horse and a gallant mover.

The spoilsmen may rant and bluster against civil-service reform, and may curse the law, but one thing is sure, they don't dare to vote against it in Congress. When the legislative appropriation bill was under discussion in the House the other day, a motion was made to strike out the paragraph for the enforcement of the civil-service law. That motion was defeated by 25 yeas to 138 nays. This is a significant vote. It shows that the average politician is afraid to go in the face of public opinion. This law so far has been executed in a very lukewarm manner; it should be vigorously enforced. There is no one single thing that will do as much to give us clean elections as to take the offices out of politics. When a man finds that his chances for office depend upon his fitness and capacity rather than doubtful political work, he will begin to lose interest in wire-pulling and running with the machine.

California and the Irrigation Surveys.

That Governor Waterman keeps a good lookout on matters affecting the industrial interests of the State is shown by a telegraphed note from Sacramento to one of the city dailies. It seems that important correspondence has been in progress between the Governor's office and the Interior Department at Washington relative to irrigating the arid lands of California. On Dec. 10th Gov. Waterman wrote

A Bad Outlook for Labor.

During the recent investigation of "Trusts" by a committee of the New York Senate, some curious facts were elicited. The secretary of the Sugar Trust testified that this organization is now running half a dozen refineries, and has ten dead ones. The representative of the Cotton Bagging Trust declared that a trust was merely "a sympathetic movement," and stated that there was machinery enough in this country to turn out bagging sufficient to cover a crop and a half of cotton. When asked if the monopoly pensioned the laborers when it closed a mill, he answered that the "sympathetic movement did not extend to laborers." When asked as to the average wages, he replied, 30 to 90 cents a day. That before the monopoly was established the price of bagging ranged from six to seven cents per yard. It is now 21 cents. That, in short, wages were reduced, and the price of the article nearly doubled in value. Now here is something for laborers and consumers to think about. What is true of these trusts is true of all. They are all off the same piece and tend to the same results.

The New York *Post*, commenting on the revelations of this committee, said the profit to which any industry is rightfully en-

to Vilas asking that California might have the benefit of the Congressional appropriation for the surveys relative to the storage of water for irrigation. He described the scarcity of rain over a large area of California and showed how 9,000,000 acres of arid lands might be made prolific and immensely valuable.

A letter was received from the United States Geological Survey this week informing Gov. Waterman that California need have no fear that she would be neglected. The necessary topographical surveys will be made as quickly as possible, and with proper Congressional aid the Governor's idea of the irrigation of the arid lands of California will be made practicable.

This will be important information to many who have been recently filing on Government lands in anticipation of the Government irrigation work, and to the public generally.

Now, if the Geological Survey will take hold energetically of its legal duty to classify public lands according to agricultural adaptations, we shall have some public scientific work of direct and immediate practical value, not that its work has not been valuable but it needs rounding out as is contemplated by law.

titled is "the return that would be yielded under the influence of absolutely free competition, under which nine-tenths of mankind must always earn a living." This is a great deal for the *Post* to say, for it has always fought the anti-monopoly movement. Now that the mass of the people are no longer protected by absolutely free competition, the outlook is very serious if not portentous of some sort of social revolution.

The last right-of-way case having been disposed of in the courts at San Diego, the graders for the Cuyamaca road have been transferred from the canyon to the city, to close the gap in the road-bed, which will take them about one week. There will then be 15 miles of road graded to Lakeside, and by another six weeks it is reported that the rails and ties will be laid to that point.

SOME of the large land-holders of Southern Humboldt county are considering the advisability of dividing their large holdings into smaller tracts, to be leased for dairy purposes.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

A Trip North and South.

EDITORS PRESS:—It was one of my recent pleasures to spend two weeks in the State of Rhode Island, and nothing in that delightful visit impressed me so strongly as the material prosperity of the people.

To the eye of a Californian, Nature, in that locality, appears very niggardly of her bounty. The soil is sterility itself; the climate anything but encouraging to those who must provide against its rigors and its changes, none of which seem to be favorable to the inhabitants; and yet those people look so prosperous and their homes are so comfortable. There stand the old houses in which generation after generation have been born and reared, in outward appearance exactly as they were forty years ago, and within, a queer but harmonious admixture of antique styles and modern convenience—a fair type of a people who have crossed the sterling characteristics of their Puritan ancestry with the progressive spirit of this age.

A daily excursion for two weeks extends one's observation over a great part of the State. As I went about in factories and shops, schools, churches, libraries and general society, inspecting industrial, moral and social institutions, from the trim and orderly streets of its picturesque chief city, Providence—which, by the way, well merits its claim to be the cleanest city on this continent—to the smaller towns whose varied manufactures supply the diversity of interests so essential to the intelligence of a community, as well as their means of sustenance, and to the old farm-houses where successive generations have lived and died in peaceful thrift, everywhere, it was a pleasure to see universal prosperity.

The tireless industry of the people must account for it; for everybody is busy, but everybody has more or less leisure. There is nowhere that grinding poverty that precludes rest or diversion, but that systematic habit of industry which utilizes every hour to some purpose and counts the hours as resources not to be wasted, any more than other means which have a more definite market value. There is a general intellectual activity very gratifying to see; for while there are no loafers, there is leisure for mental improvement and an appreciation of such opportunities. There the Chautauqua methods are bearing full fruitage, and it is not uncommon to find mistress and maid of the same household members of the same C. L. S. C., or even a grandmother of eighty reading the prescribed course in her quiet home, in order to keep up intelligently with the younger branches of her family.

The rapid growth and consequent business opportunities of the West and South have been more attractive to the young men than the more certain but tardy success of New England life, and so it follows that a large proportion of single women are left to work out their own devices and their own development. It must be admitted, in common parlance, that they make a good job of it. I casually made a remark about the number of single women with good bank accounts in the presence of a banker. He responded promptly: "You would think so if you could see our bank-books."

With our Western wholesale ideas I had supposed that the profit of farming in these days depended largely on the use of agricultural machinery. While the Yankee mind seizes with avidity all contrivances to save labor, Nature has placed her own limitations on their use. In those little rock-strewn fields the Western farmers' machinery would be sadly out of place. When I asked, "How do these people extract a living from this scanty soil by the slow processes of hand labor, when with our greater facilities in the West we can only do it by the use of mechanical help?" the sensible old farmer whom I addressed replied: "Well, there was a time when it looked as if farming in Rhode Island must be given up; but as the Granges began to educate the people, they began to put their heads together and study markets, know what was wanted and produce what the market demanded instead of what their grandfathers raised. Then farming began to look up, and now the farmer does as well as other folks."

So I perceived that the Eastern farmers' machinery was not entirely a combination of rods and wheels and horse-power, but a combination of brains and man-power.

At the South.

From Rhode Island I went south and spent the next two weeks in a State whose natural conditions were so like our own that I felt myself almost at home. Its bright, sunny skies and balmy atmosphere, its prolific soil and genial climate, were all suggestive of California. The late cotton-fields were still white with the fleecy crop, and there I saw the festive daisy "mid de cotton and de corn," but I saw few combinations there of either brains or mechanical forces. The fields were lightly scratched with a half grown plow and everything was done with the air of a "lick and a promise" that some day it might be better done; the crops were poor and the people poorer. The prevalent discontent that always accompanies poverty was generally apparent.

My duties kept me flitting about on railroad trains, where men talk politics if they talk anything, and then, to my surprise, I heard the

name of Rhode Island spoken with most unaccountable animosity, and its prosperity, which to my unsophisticated understanding had appeared its legitimate reward of merit, was quoted as indubitable evidence of unpardonable sins. I lent my ears to instruction; if Rhode Island has been so wicked, I must know all about it, and I heard the oft-told tales of the campaign, how its great manufacturing interests, its accumulated wealth, its dense population, bloated bondholders, bursting banks and all that sort of thing, were outrages on the devoted and suffering South, as it was often said, "gouged out of the poor South." How I longed to tell them to gouge their own rich soil awhile, to utilize their own abundant and neglected resources, to practice half the economy and thrift of much-envied Rhode Island, and their own State might in a short time as far outstrip her prosperity as it now outmeasures her area.

D. J. SPENCER

The Rabbit Plague.

EDITORS PRESS:—What typhoons and blizzards have been to Kansas the rabbit plague is ripening to in California.

It will finally dawn on the people of this State that the rabbit pest is not to be subdued by bounties on the head or drives conducted hip-skip over the country. We feel certain that we speak within bounds in saying that, in spite of the extortionate taxes paid in this county, the amount of loss by jack-rabbits exceeds the taxes by a considerable sum. And the loss falls wholly on one class of citizens—those who now pay nearly all the taxes.

So great will be the loss if the pest increases as rapidly as it has during the past two or three years that real estate values will be seriously affected, and the farmer, on whom all classes depend for their incomes, will be ruined. It is a fact that many who have orchards and alfalfa lose every year on those alone four to ten times the amount of their taxes, not to mention the loss in grain-fields and in wild feed.

Fencing is the remedy in our opinion; fencing by sections and townships, opening the inclosed fields to dogs and drives. This remedy would be effectual. To do it, a combination of landholders is as necessary as in obtaining water for irrigation, and it may be the difficulties that lie in the way can be overcome by legislation.

Here again the interests of the speculator and cultivator are at opposite poles. It is held that property is not a representative factor in elections and legislation in this country; yet it is as apparent as the other fact that majorities do not rule. Tulare is almost wholly a farming community. At present it happens to be represented by a full delegation in the Legislature, and it remains to be seen whether the industry or the wealth invested in speculation and in property that shirks its taxes is the controlling element.

It is a short-sighted policy in the land-speculator to contend against the farmer, on whose success the development of the country depends, but the record of water legislation over a long period of years confirms the belief that the class who have most to gain by the prosperity of the State are unwilling to contribute anything in the way of taxes toward removing the obstacles to successful farming.

In the Australian provinces the rabbit-pest, after a loss of many million dollars, is receiving legislative action, and hundreds of miles of rabbit-proof fences are being built by the State, and a standing reward of \$100,000 is offered for a destructive invention that will destroy them effectually.

Fencing is resorted to as a final remedy, and to this we must come at last in California.

Few people outside the farming districts have any conception of the rapid increase of rabbits, and the great loss inflicted on farmers. I have seen hundreds of them running all over the open field by dogs scattering them out of the patches of weeds. What I would suggest in the way of legislation would be that the State should authorize the formation of fence districts to be formed by, say a two-thirds vote from settlers in a township; that the State extend its credit to furnish the fencing, the land-owners having ten years in which to pay for it, including a low rate of interest, the lands being made security.

E. M. D.

Tulare, Jan. 13th.

HORTICULTURE.

Growing Cuthbert Raspberries.

EDITORS PRESS:—It would be interesting to some, at least, of your readers to learn definitely of Mr. McCann's method of handling his Cuthbert raspberries. While they do fairly well for us, we can not speak so highly of them as he does, owing probably to our lack of knowledge of the best way to handle them.—D., Carpinteria.

EDITORS PRESS:—I have received so many letters from amateur fruit-growers upon this and kindred topics, that I am glad to be enabled to respond to them collectively, through your columns, at least upon the subject of raspberry-growing in general and the Cuthbert in particular. And pardon me if I state in the beginning that upon this subj. "I think I am scriptural," as an old theological debater used to say, since for many years I have given to the culture of small fruits especial and undivided attention, studying their natures and their needs, with all the light the experience of other grow-

ers could give, added to that knowledge which practical and daily study and work among the plants themselves could only make me master of, while a genuine love and I might almost say fascination for this branch of agriculture has made my work a pleasure instead of a burden.

To successfully cultivate the raspberry (of any variety) it is necessary to know in the first place that the plant is a biennial—that is, one which produces its plants one season and bears its fruits in the following one, after which time these plants die off, to give place to others newly sprung from "suckers," as in all the family of red raspberries, or from tip growing roots as the "Gregg," "Souhegan," and all members of the "black cap" raspberries perpetuate themselves.

It will be readily understood that these old plants, having had their day, did their work and died—became henceforth only dead, useless, cumbering brush which must be cut away and cleared off, to give the new plants the necessary room to thrive, and to permit their proper cultivation. And in many cases, especially from strong and thrifty varieties like the Cuthbert, these suckers or new plants that have sprung up on all sides, to replace the old, must be thinned out and transplanted if more berries are needed, or treated as weeds and dug under if the remaining plants are expected to do their best. "Too thick to thrive" is an adage that finds its best application to growing plants, and first-class results can never be obtained from small fruits under any such conditions. They need room to grow to perfection, with spaces for circulation of light and air between them.

Planting and Cultivation.

In my plantation the Cuthberts are planted in rows five feet apart, with four or five strong plants to the stool, and these three feet apart in the rows. This way of planting them allows nearly all the necessary cultivation to be done by horse-power—a very essential requisite to success in a business like this, where the expenses for labor are necessarily so constant, and the prices so high as they are in California.

The plants are set out in long regular rows, with a "turn-road" or place for turning the horse and plow around at both ends of the row.

The first cultivation is a thorough plowing between the rows so as to break up the beaten track made there by the tread of the pickers all summer. This allows the ground to absorb all the rain that falls, instead of having it run off along the little irrigation ditches used if necessary in summer-time to water the berries.

However, if there is a heavy winter crop of fruit upon the vines at that time, as is generally the case with us, we have to wait till that crop is over before beginning our plowing, as the horse in passing through would break and injure the vines.

Meanwhile there is enough to do to keep one busy till this can be done. The mulching of coarse, strawy manure (which is the finishing of our last spring's work upon the vines) can now be forked in along the rows where neither plow nor cultivator can reach; the vines trimmed back to three or four feet in height, thinned out where necessary, and all old dead plants not already removed taken out; the new plants tied to stakes or grown between double trellises, as preferred, and all made ready for the plowing.

We use for our work among the berries one strong, steady horse, which seems to understand the business as well as his driver does, and injures no plants by capering from side to side between the rows. Besides this, the whiffletree attached to the plow is as short as possible, with patent guards over the ends where the traces hook in, so as to prevent their catching and breaking the vines as they pass by them.

The plow is followed by a harrow and drag, made especially for our work, long and narrow; and after this work is done the rest of our cultivation throughout the season is done by a Planet Jr. cultivator, which is kept going whenever the weeds show their heads.

This preparation leaves the soil in a fine spongy condition that retains all the moisture it gets, and in some seasons does away entirely with the need of any irrigation.

Mulching.

The last finishing touch to our spring work is the heavy mulching put around the roots of the vines, for the raspberries as a race have their roots very near the surface and are easily injured by the hot sun playing upon them. This top dressing has also the great advantage of keeping down the weeds throughout the season, if applied at the proper time.

The above remarks may be of service to those growing all sorts of small fruits, as in the main, the treatment is about the same for all, and the same rule holds good also that proper care and cultivation given to the vines in the spring will surely be rewarded by bounteous returns when fruiting-time comes round—always provided that time and care have been bestowed upon a plant worthy of such cultivation.

We are often asked, as visitors walk through our grounds, "How do you accomplish the feat of having ripe berries upon your vines at this season of the year (January), when everybody else's vines are bare of berries?"

We invariably reply: "It is not we who do it. If you wish to learn the secret, ask the Cuthberts themselves! It is the variety we grow that makes all the difference in the world. Look there at those Hansels! They have received the very same care and cultivation, but they are leafless and berryless, too, while the

Cuthbert is full of blossoms and ripe berries in sufficient quantities for us to have shipped them to San Francisco every day since the first day of November, and we are shipping still."

"Can it be something in your location, or your nearness to the sea?"

"A little, perhaps, in both, and in that we have purposely chosen a southeastern slope, where the sun lies warm all day, for our raspberries to grow in; but with all that, the old Antwerps, the Hansels and other varieties are leafless; and only the Cuthbert is green and fresh and full of blossoms, as if it were a June morning instead of a midwinter day in January, thereby proving the truth of the claim of its Eastern originator from whom we have our stock, that this truly 'Queen of the Market' berry stands not only summer's drouth and heat, but winter's cold, better than any other known variety."

"I see you have a regular little orchard growing among your berries," observes also our critical visitor. "Yes. Tell it not in Gath, however, or I shall have all the orchardists in the State down on me as a disgrace to their order! But there is method in even this seeming madness of mine, since I am a small fruit-grower, not an orchardist, and my raspberries like a little shade, and do much better among the trees than out of them; and I am experimenting now upon tree washes that will kill the 'varmints' on the trees and not hurt the berry bushes under them. Any advice upon this subject from any quarter will be thankfully received, yet I can truly say my fruit grown upon these trees seems to be no worse than my neighbor's, whose ground is bare."

"Well, you seem to make a success of it, anyway," returns my friend. "What's the secret of it all?"

"Simply this and nothing more," I answer. "I give my business my undivided thought and care. I love my plants, and I almost believe my plants love me, and we do our best for each other!"

Santa Cruz, Cal.

A Question About Apples.

EDITORS PRESS:—I would like to ask those readers of the PRESS who live in the Sierras, at an altitude of 3000 to 4000 feet, in that belt where they have a little snow every winter, and the mercury goes sometimes to eight degrees Fahr. or say to zero, what they have observed to be the best winter apples for said situation—the best for flavor first, and after that for size, beauty, keeping qualities, hardness, etc.?

W.

THE GARDEN.

Raising Vegetables.

EDITORS PRESS:—The experience of one person in one part of California is of very little value to any one in another part of the State, so far as raising vegetables is concerned. The difference in climate and soil is great, and unless one is familiar with both in the places written from, any article may be misleading. But if experience is wanted and will do even a little good, let it be given.

Potatoes.—In this vicinity potatoes are planted on the hills where there is little danger from frosts all the way from November to January, and in the valley from December to March or even April. It greatly depends on location. We ourselves plant in February when most danger from frost is past, but some close by us plant during the last of November and take the risk. Plants are of course cut down once or twice, or more, by frosts, and I do not think anything is gained. Plant as is done in the East; there are several "best methods." The "red" potatoes do not bear well on heavy upland soil; they all go to tops.

Lettuce may be sown any time after the first rains, light sandy soil giving best results. If you allow it to self-sow, good, except for weeds!

Turnips.—Always plant a bed of the small, round, white turnips and plant early, like lettuce. Both of these two are treated in just the same way as they are in the East. If that is not known, the best way is to buy some of the various books written to enlighten amateurs.

Carrots give best results when planted rather late, say, for this vicinity, in April. Planted in February, as some do, they run greatly to seed, which is to a considerable extent avoided by planting as late as possible, some persons even not putting in the seed till the very last of April. A word as to seed: The carrots from which you expect to take seed should be left in the ground two years and the seed then be gathered. Carrots from first year seed run greatly to seed, and consequently a large proportion of them are useless. We have raised very large carrots here, one grown on this place measuring 12 inches in diameter.

Peas.—Sow thickly in drills two or three inches deep, in December to February. Not so much need of bushing here as in the East. In protected localities they are planted in December, but for most ground January 15th is early enough. Two days ago I saw some peas a foot or more high, uninjured by the frost, and for a few nights it has been down to 28° and 27°; but they were in the small back yard of a Chinaman's hut and not much exposed. Onions close by were about four inches high.

If people want to get rid of the Chinese, why do they not assist a little in that work by plant-

ing gardens of their own and not relying on Chinese vegetable peddlers? Plant a garden of your own and rejoice that you have permission to reap direct from Mother Nature. Most of us want to be rich; then why do not most of us try to appreciate our privileges? Not one in a hundred lives within sight of the innumerable blessings and feastings to be got out of a few square yards of earth, especially here in California. Go to work and bless yourself!

Haywards, Cal.

A SON OF THE SOIL.

THE FIELD.

Rabbit-Driving in Fresno County.

From a graphic and entertaining article in last week's *Expositor* we condense the following account of a rabbit-drive:

On the train between Fresno and Madera the reporter asked a fellow-traveler:

"Many jackrabbits in the country?"

"Thousands and thousands of them. They're the worst pests we have; but the drivers are doing much toward thinning them out. You can talk about phylloxera, but turn loose a family of six jackrabbits with merely normal digestive apparatus in a 120-acre vineyard, and they will never let up until the vineyard is destroyed. The jackrabbit is a communist. He is also a polygamist. He believes in propagation, and, let me tell you, he makes a success of his belief. The jackrabbit is a prolific breeder. There is only about two months in the year when mother jackrabbit is exempt from the cares of maternity. The jackrabbit increased rapidly in numbers in the lower San Joaquin valley after the vigorous warfare was made on the coyote. The destruction of the coyote meant prosperity to the rabbit, and he thrived and grew in great numbers. Having got rid of the coyotes only to multiply the rabbit crop, the vineyardists, fruitmen and ranchers invented—for I claim that it is an invention—the drive to depopulate the country of rabbits. Thousands of rabbits are killed annually, and still thousands and thousands, as I have said, remain to propagate the species."

Alighting from the early morning train at Madera, and entering the office of the Yosemite hotel, the *Expositor* man was astonished at the number of clubs which rested against the walls. There were clubs of all sizes and lengths, crooked clubs and straight clubs, rough clubs and smooth clubs, light clubs and heavy clubs; in fact, it was as varied and complete a collection of clubs as was ever seen outside the habitation of a missionary-fed chief of the Fiji islands.

"What are all these clubs for?" he asked of the night clerk.

"Rabbit drive to-morrow. We keep them in stock for our customers. There are two exhibitions which attract large audiences in Fresno county—the circus and a rabbit-drive. I think of the two shows the drive draws the biggest crowd. Men, women, children and dogs come from all parts of the county. The day could not be more rigorously observed if declared a holiday by President or Governor."

The morning was cold, raw and disagreeable, but it did not dampen the enthusiasm. By 9 o'clock the streets were astir with people. All classes and conditions were represented. Horsemen with jingling spurs rode furiously up and down the street. Ladies and gentlemen in carriages; Mexicans in heavy lumbering wagons, drawn by diminutive mustangs; boys on horseback, many of the animals carrying a triple load, babies in mothers' arms, and youths and lunch-baskets in the bottom of vehicles, added to the novelty of the scene.

It was 10 o'clock when the cavalcade started, crossed the railroad and wended its way across a lovely section of country carpeted with a rich growth of young grain.

One two-horse vehicle contained 12 persons, the majority being women and children, all carrying clubs. Several ladies on horseback were passed. One of the most unique parties was a header-bed filled to overflowing with men, boys and girls. The conveyance had come all the way from Fresno Flats, a distance of 45 miles, to join in the fun and be in at the killing.

After Chapman's ranch was passed, many small, moving objects were discerned on the southern horizon. "That's the Borden contingent," remarked one.

About 11 o'clock the corral was reached. Here Ed McCardle, the marshal of the drive, and 20 assistants, apportioned the forces for

The Drive.

The larger part of the cavalcade deployed to the right, and a small contingent was sent to the left. These forces were to guard the wings. At least 250 boys and men, armed with clubs, were stationed in a field containing 640 acres. The field was rough and irregular, with bunches of dead salt-grass, which were alive with rabbits. The reporter, armed with a hoe handle, was one of the army. The men and boys having been placed at regular intervals, the order was given to advance, and the line moved forward. From every bunch of salt-grass a rabbit jumped up. Often a rabbit would start at one end of the line and run nearly its entire length, a shower of clubs greeting it at every jump. Frequently one would run a few yards straight ahead, then suddenly turn and double back, passing through the line on a keen jump. The field was thoroughly beaten and a wire

division-fence reached. In this large tract of land not a rabbit had been killed.

What had seemed, three quarters of an hour before, to be moving specks on the distant horizon now appeared to be horsemen, wagons, and people on foot, formed in two wings, and the plan of the drive was evident to the observant spectator.

Let us leave these two lines gradually coming closer together and visit the corral, where the final slaughter is to take place.

The corral proper was made of wire netting about five feet high. The dimensions of the inclosure were 50x80 feet. A chute, also made of wire netting, of the same height as the corral, and four feet wide, extended out into the field 100 feet. On either side of the entrance to the chute was a wire netting five feet high, stretching out in the form of a V for full a quarter of a mile, the corral being at the point. Once in this V-shaped pen, and pressed by men, boys, horsemen and teams, the rabbits had no other recourse than to enter the chute and thence the corral.

The First Rabbit Killed.

The army of men, when they reached the division fence of the section, halted to permit the two wings, each a mile long, to close up. As they waited for this result, rabbits were as thick as insects in a Ute buffalo robe during the summer. Down the line came scurrying a big buck. He bounded over the bunches of salt-grass with the ease and grace of a deer, his ears laid well back on his shoulders. Clubs flew thick and fast. But the faster the missiles came the greater was the speed of the rabbit. He was bent on getting away. He was to receive the attention of but one more club. If he escaped this, liberty was his. W. A. Harris wielded the club. It went forth like lightning. True to its aim, it took the buck just behind the ear.

"He curled up on the floor, and subsequent proceedings interested him no more."

The rabbit weighed 14 pounds and was the biggest one killed during the day.

By this time the wings were close together. The ground seemed to be moving, so thick were the rabbits. Like waves of the ocean, they beat against the nettings. Hundreds escaped through the lines, and hundreds more met death in their struggles for liberty. Slowly the immense gathering of people and vehicles closed in upon the frightened animals. The chute was crowded with their scampering forms. Finally the wire gate was shut. In the four corners of the corral there were piles of rabbits three and four feet deep. Many of them scampered over their frightened companions and jumped the wire netting, but the crowd, which gathered about the corral, made their efforts to escape futile. Frequently one would jump into the air and fall dead on his companions, death resulting from fright. Their cries resembled those made by children in distress, and were piteous to hear. From each of the corners came clouds of fur which covered the lady spectators.

Before the slaughter took place, somebody threw a collie dog into the corral. It was difficult to tell which was the most frightened, the dog or the rabbits. He seemed lost, and finally lay down on a pile of rabbits, gasping for breath.

Finally Marshal McCardle threw an armful of pick handles into the inclosure. Immediately a score of boys scaled the netting, and the slaughter began. The rabbits made no effort to defend themselves. In 20 minutes the massacre was over; 1657 rabbits were killed in the corral, and over 700 on the outside, making in all nearly 2500.

Eight sections of land were worked over.

Two hundred teams, 70 horsemen and 2000 people participated in the drive.

Mr. Hughes, at the conclusion of the killing, furnished the party with a lunch.

The rabbits were shipped to San Francisco, where they will be served at fashionable restaurants and made into tomatoes.

THE VINEYARD.

The Mysterious Vine Disease.

Hon. J. de Barth Shorb has sent the following letter, which contains some interesting information, to the Los Angeles County Board of Supervisors, which has not as yet taken any action in the matter:

As you are aware, for several years past a disease has made its appearance among the vineyards of this section, which has in many instances proved very destructive and in some cases has entirely destroyed them. Many theories were advanced as to the cause of this disease. The Viticultural Commission sent some men to examine into it. The opinion of those consulted was to the effect that it was due to climatic influences, abnormal degrees of temperature in summer and winter months, excess of moisture, etc., and when these causes changed the results would change with them. The climatic theory most generally entertained was possibly based on the opinion of French scientists, who have tried to explain the cause of a disease existing in France known there as "apoplexy," and which seems to be aggravated by certain climatic causes. The disease in some respects only resembles the one here, but not enough to confound the judgment of any close observer. The climatic theory is entirely

disproved by our examinations, and we now think it is directly due to some form of fungi which like some deadly mildew settles on the leaves and by destroying their functions, which are to the economy of a plant the same as the heart, lungs and stomach are to our organisms, starves the vines to death. Many spores of fungi have been observed and recorded, but which form is doing the deadly work cannot at this stage of the examination be accurately or scientifically determined. In order to proceed with this examination with the hope of arriving at the correct solution before the vines are again in leaf, we have built a small conservatory where by the application of artificial heat the vines will remain in leaf all winter, giving us the opportunity of transplanting the different forms of fungi already observed and carefully note their development and effect on the vines. Where temperature and moisture can be given at will, the study will be rendered easier and the deductions more accurate. The Viticultural Commission, at its last semi-annual meeting, by resolution appointed me a committee of one to proceed with the examination as commenced, and will defray expenses of the small conservatory and also the salary of Mr. Dowlen, the botanical expert. The fact that this work is going on under my supervision has called forth a heavy correspondence, so much so as to necessitate engaging a correspondent who from present appearance will have his time entirely occupied. While the conservatory already finished will be of great service, yet we cannot find room enough for the different varieties of vines that are to be found especially subject to the influence of the disease, and those which so far have almost entirely escaped it or shown so stubborn a resistance as to be considered almost exempt. We should have double the capacity for growing the vines, and, if we found it advisable, to engage temporarily the services of other scientific experts to have the means of paying them. The Viticultural Commission, while anxious to do all they can in the discovery of the disease, is limited in its appropriation, and I feel they have done all they should do in the premises. It is only by thorough scientific work that accurate or reliable conclusions can be reached in such cases as we have now in hand. It was only by exhaustive investigation that Pasteur found the cause and remedy for the ravages of the disease among the silkworms of France. Millions were destroyed before the cause was known, but millions were saved afterward by accurate knowledge. I feel confident that with what we now know and with what we may discover during the winter's work as above indicated, we will know the character of the common enemy. It matters not how veiled in mystery this disease is, it must give up its secret to the powerful lens of the microscope which we have now in use, and this discovered, the chemist will soon supply the needed remedy and save the vineyards of our country. Whatever appropriation you in your judgment may think proper to make will be satisfactory to me. I want no compensation for my own time and services, for as one of the Horticultural Commissioners my time belongs to that office, unpaid as it is.

The New Viticultural Headquarters.

The new establishment of the State Viticultural Commission at Platt's hall, on Montgomery street, was formally opened on Tuesday, Jan. 15th. As has already been described in the *RURAL*, the headquarters include spacious offices and a large exhibition and audience room; also apartments for a wine exchange and a cafe, where certain brands of California wine can be purchased by the bottle. The following account of the opening is condensed from the *Call*:

Among those present on the platform were: Vice-President de Turk of Santa Rosa, who occupied the chair in the absence of the president, Charles A. Wetmore; besides Mayor E. B. Pond, Arpad Haraszthy; L. J. Rose, the commissioner from Los Angeles; George Humann of Napa, Charles Bandtschu, Professor Denman, and Commissioner Krug from Napa.

In appropriate remarks the chairman welcomed all, and then briefly dwelt upon the object of the Board of Viticulture in establishing the wine exchange. He explained how it would prove of incalculable benefit as an advertising medium to the wine industry of California.

At the exchange now opened can be sampled, at a nominal cost, the different wines made in this State, thus benefiting us abroad in many ways. Mr. de Turk announced that the committee under whose supervision the exchange would be managed is Arpad Haraszthy, on behalf of the merchants; I. Landseberger, for the brokers; and H. W. Crabb of Oakville, Napa, on behalf of the producers.

Mayor Pond addressed the meeting, and expressed the hope that the exhibit would prove a great success. He eulogized the movement as one that would tend toward the encouragement of one of the greatest of California's industries.

A School for Wine-Makers.

Arpad Haraszthy, L. J. Rose, Charles Bandtschu, Commissioner Krug, Prof. Denman and Chief Viticultural Officer Wheeler also addressed the meeting, speaking in glowing terms of the undertaking.

Mr. Wheeler, in concluding his address, stated that there was much prejudice against California wines which would have to be overcome, and there was much to be learned by the

wine-makers of this State before they were perfect. He declared that the object of the exchange would be to enable the wine-makers to see their faults, and thus it will be a matter with themselves as to the improvement in the quality of their wines.

THE DAIRY.

Danish Co-operative Dairying.

As the Danish butter factories are famous for their butter product, which is sent in cans to all parts of the world, especially to the tropical countries where local dairying is not practiced, the following information will be interesting:

The population of Denmark is 2,000,000, and the number of cows is 900,000—a proportion of cows to population unimaginable in England, amounting to nearly one to every other person. The cows are, however, divided among 150,000 owners, which is an average of six cows to each.

Denmark is distinguished by the production of butter. In 1882 it produced 19,000,000 pounds, which by 1886 had risen to 32,000,000. Last year (1887) the butter production had risen to 45,000,000 pounds. This singular prosperity in the manufacture is attributed to the invention of cream separators and to co-operation.

In 1880 many of the dairies were organized on the co-operative principle. There are at present said to be about 200 dairies of this kind in Denmark, using on the average the milk of 5000 to 6000 cows a day. Consul Inglis, in his very practical report, gives the co-operative rules of the Ousted dairy as an example of the arrangement.

1. A loan is established, for which all are security—one for all and all for each, in proportion to the number of cows each has signed for. Such loans amount to 21,000 kroner (about 26 cents) to be paid back in 12 years. When the loan is paid each member owns a proportionate share in the dairy.

2. Should a supplier of milk die, his account is settled, or a successor can enter on the same terms as his predecessor.

If a member wishes to withdraw before the expiration of five years, he pays 10 kroner per cow and sacrifices any further share in the dairy. If he withdraws after five years, his portion is paid him, less one-half.

Each member pays an entrance fee of 10 kroner (10s 10d) per cow whose milk he undertakes to supply.

3. The milk is collected at the cost of the dairy. The carts drive only along the high-roads, and the milk must be brought from by-roads to meet the carts.

4. The milk must be delivered in a pure, unadulterated state, without any disagreeable taste. The standard of payment is that 28 pounds of milk shall make one pound of salable butter.

5. The skimmed and churned milk is returned to the suppliers at a small charge.

6. Each supplier must keep his milk cool when not fetched immediately after milking. Two measures of milk must not be mixed together before both are properly cooled. The milking must be done with dry hands. The cow's udder must be carefully wiped, and the milk at once strained and not left standing in the cow-sheds. Milking-pails must be kept quite clean. No mustiness must be found during milking-time.

7. Winter feeding must consist of one to two pounds of linseed cake and at least three pounds of bran and oats to each cow daily. Should a change of feeding be necessary, the directors of the dairy have power to order it. No turnip or carrot stalks must be used, neither seeds from rye, peas or vetches.

8. Four times a year the directors shall witness a feeding and milking of the cows. Bleatings must not be delivered the first four days after calving. Milk from sick cows must not be delivered. In doubtful cases the veterinary surgeon must be called in.

9. In the event of inspection the veterinary surgeon must be consulted.

10. Milk that is sour or has a bad taste, or which is received in cans not properly cleaned, the dairyman has power to reject.

11. The general meeting governs. Each shareholder has one vote without regard to the number of his cows. Women are allowed to vote when responsible shareholders.

UTILIZING DEAD ANIMALS.—The best thing to do with dead animals, large or small, is to bury them beneath a big pile of sod or mold, and thus convert them into a valuable fertilizer. If the animal is large, it may be best to cut it into pieces, but this is not necessary. After selecting the place for the compost bed, which should be far away from the dwelling, cattle-pen, stable, or any spring or well of water that is used, the carcass should be covered all over with a good layer of lime to help the decomposition and prevent smell. The refuse charcoal and dust from a coal kiln is much better than lime. The carcass must be covered so deeply as to prevent the escape of any smell, and so prevent the dogs from pulling it out or burrowing to it. In a few months there will be some rich compost that will fairly make the corn laugh and revel in greenness.—*Rural Messenger*.

DEWEY & CO., Publishers.
No. 220 Market St., S. F.

Jan. 15, 1889.

Official Endorsement.

In consideration of a certain contract entered into this day between Dewey & Co., publishers, and the California Patron Publishing Company of San Francisco for the publication of a weekly Grange edition of the PACIFIC RURAL PRESS and the California Patron, as a monthly, resolved that the Executive Committee of the State Grange of California hereby designate and endorse the PACIFIC RURAL PRESS as the weekly organ and the California Patron as the monthly organ of the State Grange of California.

W. L. OVERHISER,
Master of State Grange of Cal.

A. T. DEWEY, Sec'y S. G. of Cal.

San Francisco, Cal., Jan. 11, 1889.

Triple Installation—Lodi, Woodbridge and Stockton.

EDITORS PRESS:—Everybody and their friends were invited to be at Lodi on the 16th at the joint installation of the above Granges. A Granger has some of the habits of an old toper; when he gets a taste of the good things, it is hard to choke him off.

Be it known, there is no county in the State that surpasses San Joaquin in several respects. Her lands are level, soil rich and deep, and plenty of timber for ordinary purposes. She is one of the leading wheat-growing counties, and for proof of this, one has only to be at her mills, warehouses or docks in the early part of the day when the long files of four, six and eight-animal teams are bringing in the golden grain. There is quite a strife among the teamsters to see who shall get in first, on account of delays in unloading.

Stockton is very fortunate in having shipping facilities independent of the railroad. A slough from the San Joaquin river makes up to the city, with water of sufficient depth for barges and steamboats. Large warehouses are on the banks, and wheat can be shipped at any state of the weather or stage of the water.

Lodi is the famous watermelon section where they are planted in hundred-acre tracts. The growers have one of their own number in the market below to dispose of their crop. No more are sent to market than can be disposed of each day, and thereby a glut is prevented. Lodi has a peculiar sandy soil well adapted for tree and vine growing. I believe that at no distant day it will be the home of the lemon and the orange. Its soil and conditions appear to be similar to those of Pomona, where the orange is so successfully grown.

The Worthy Master of the State Grange was there in all his glory, driving his high-stepping mares, bringing three sisters from his household, two of whom were installed officers of Stockton Grange.

The attendance was large. All left their cares and troubles at home, so there was nothing but sunshine present. After some preliminary work, a class of three young ladies was instructed in the Third and Fourth Degrees by the writer. A recess was declared for greeting and interchange of thought while the sisters spread one of their characteristic feasts.

If any one is looking for a good cook, I would advise him to send in his application to one of these gatherings. And I believe he could be accommodated still further by getting some one to stay by them on a rainy day.

It took three long tables to accommodate those present. All were well supplied, and an abundance of good things left. The nimble hands of the sisters soon cleared the tables of their dishes and contents, while the brothers folded the tables and laid them away to await another Harvest Feast.

The Master called to order and introduced Bro. Overhiser as the installing officer. The writer and two other brothers whose names

he cannot just now recall were selected as assistants. The writer introduced the officers of Stockton Grange, while the other two brothers introduced the officers of their respective Granges. Bro. Overhiser installed the officers in a dignified and impressive manner, and all seemed to appreciate the responsibility they were about to assume.

Installation being over, speeches were called for from some of the older members. The two telling speeches were from Bro. Thos. McConnell and his gifted daughter Annie.

It may perhaps be said that some brothers join the Grange for personal aggrandizement. Can this be said of such men as McConnell, Webster, Coulter, Steele, Blackwood, Logan and scores of others? Most of those named have ample means and could afford to be independent of the Grange. They spend dollars for the Grange where they get back cents. The Grange owes a debt of gratitude to Webster and Steele which it can never repay. While the former was wearing out his brains and body to make the Patron an acceptable Grange paper, the latter was throwing in the \$20 pieces to lubricate the frictional parts with a recklessness that knew no bounds.

Several were called on and spoke words of encouragement. Sister Ashley gave us a kind talk, which seemed to come from the very fountain of goodness. This triple installation will long be remembered by me as one of the sunny days of my Grange life.

Father Gurnsey, with over 80 years resting on him, was again elected Chaplain. I hope they will continue to elect the venerable brother as long as he can raise his eyes and hands toward heaven, looking for that blessing which we so much need.

I vote joint installations a success. Let us have more of them. I am willing to contribute my one talent, and will polish it to its highest capacity.

D. F.

Temescal Grange.

Annual Program for Exercises in 1889 on the First Saturday Evening of Each Month.

At Temescal Grange last Saturday afternoon, the question of the Australian system of voting was debated favorably, but no vote or recommendation adopted.

Following the plan adopted successfully by subordinate Granges in Massachusetts, Sister Dewey, Worthy Lecturer, reported the following program of exercises for the coming year:

JANUARY—The Australian system of voting.
FEBRUARY—Pruning, grafting and seed-sowing.

MARCH—Hired help on the farm, indoors and out.

APRIL—Gardening, including both vegetables and flowers.

MAY—Picnics—illustrated.

JUNE—Camping and recreation.

JULY—Harvesting grains, etc.

AUGUST—Horticulture, fruits.

SEPTEMBER—Agricultural fairs.

OCTOBER—Convicts; their treatment while in prison and the needed education to enable them to earn an honest living after they are released.

NOVEMBER—Practical education, including hints on cooking, etc.

DECEMBER—Literary exercises appropriate for the Grange birthday anniversary.

No discussion was had on the matter, and it will come up for further action and probably different Patrons appointed to lead each month's discussion. We think it is a plan that can be adopted to much advantage by many Granges.

Sister Newkom (sister of Worthy Flora) with another sister was present from Yuba City Grange, and participated in the proceedings, to the pleasure of the members of the Grange.

The Railroad Taxes.

At the last meeting of the State Grange, Bro. J. V. Webster offered resolutions concerning the enactment of a law by which the back taxes could be collected from the railway company, though the first assessment has been declared illegal by the courts. Mr. Webster's resolutions prevailed, and he was requested by the Executive Committee of the State Grange to draft a bill which would cover the required ground. This he has done in the form of a general Act which is now before the Legislature, a copy of which will be found in another column. Its object is to legalize a reassessment of property where an assessment has been declared invalid, and providing that where a partial payment has been made on the tax first levied, it may be credited. This applies specially to the railroad taxes which have been in dispute since 1880. The Southern Pacific Railroad Company has protested against former assessments, but expressed its willingness to pay what it claims to be a just proportion. No compromise could be effected, the Board of Equalization being in doubt as to its power to make a new assessment.

THANKS to the goodly number of Grange correspondents who have favored us this week.

Our Visiting Master.

We have not heard from Worthy Master Carr of Wisconsin since our last issue, but presume he is enjoying himself with Bro. and Sister Carr at Santa Rosa. We are glad to note that Worthy Master Overhiser has invited our State's guest to visit at "Oak Home Farm," near Stockton, during his tarrying in California, and we hope Bro. Carr will be able to avail himself of the invitation. He will find much of interest at Oak Home and other hospitable homes of the good Patrons of San Joaquin valley.

We would consider it a fortunate thing if his visit to San Joaquin valley could be made the occasion of an open Grange meeting at Stockton for exchanging views on subjects relating to the Grange, the farm and farm life in Wisconsin and other Eastern States and on our own coast; also for conference and the discussion of important measures already introduced before our Legislature regarding the interests of farmers and people generally in our State.

All Patrons and farmers should be wide awake to help whatever good and true men there are in our Legislature to accomplish such enactments as will be for the permanent welfare and advantage of the people, and to denounce and show up any attempts to curse our State with bad legislation, as has occurred too often at our past sessions.

The Legislature meets, fortunately, we think, but once in two years. The session during which legislative members draw pay is also judiciously confined to the short term of 60 days, so that the action of farmers should be immediate relating to proposed legislation.

We hope to hear from Bro. Carr and his friends, and be able to state that he will favor our Patrons in different parts of the State by speaking at district or county meetings.

LATER.—Since the above was put in type we have received a personal letter from W. M., Carr, dated Santa Rosa, January 20th, promising to visit our office this week with his brother, J. G. Carr (who started with him from Wisconsin to visit Prof. Ezra S. Carr, who is in frail health at Pasadena), and Bro. Nelson and Hannah Carr from Santa Rosa. They all intend visiting E. M. Carr, near San Luis Obispo, and then proceed to visit Prof. E. S. and Jeannie C. Carr at Pasadena. The letter closes with the following, which we take the liberty of publishing for the many friends of our brothers and sisters:

Now, my dear brother, nothing would give me more pleasure than to comply with your request and visit some of your Granges; but my time is limited to two months from home, and my object in coming is to see my brothers once more and that we may all assemble together at Pasadena (five of us) and have, probably, a farewell visit. * * * If any meetings could be arranged at or near Tempton, in San Luis Obispo county, for the last of this week, or anywhere within 50 miles of Los Angeles, next week or week after, I would meet the appointments without any expense to the State Grange of California, and do all I could to build up our Order. My dear brother, if you could have been with us at Pomona Grange meeting, Santa Rosa, January 16th, and witnessed the scene of three brothers meeting after 35 years of separation, you could have seen tear-drops brushed from cheeks seldom used to tears. I had to ask the W. M. to introduce us. The G. K. had informed us that Nelson Carr and wife were in the hall, but we could not distinguish them. It was a grandly rare and fraternal meeting in which all the Grange members participated, coming forward and giving us the Patron's grip and words of cheer.

This grand Order has helped many a weary traveler on his way, and is worth a hundred times more than its cost.

We are delighted with California, especially Santa Rosa and Bennett valley; also, the warm-hearted brothers and sisters that we have met in your State. Yours fraternally,
S. C. CARR, M. Wis. S. Grange.

Improving Election Laws.

MESSRS. EDITORS:—I, for one, approve the proposed Australian plan for voting, as at least worthy of trial. In addition, I propose that there be incorporated in said plan the following provisions which I have had in mind for a long time:

1st. That county officers, State officers, and national officers shall be voted for at separate and distinct elections.

2d. That the State elections shall occur in October, say first Tuesday of every even-numbered year, and the county elections on the same day of October in every odd-numbered year.

3d. That for every general or special election the judges, inspectors, and clerks shall serve without pay, except necessary expenses for meals only, while so employed.

4th. That these officers and clerks of election shall be chosen by the people of each precinct out of the voters of such precinct, under such regulations as will secure to each political party a due share of said offices.

5th. That the "minority plan" of voting for representatives as in use in Illinois, be adopted.

As to the first and second of the above paragraphs, it is sufficient to say that any plan

which will tend to make the choice of State and county officers less a matter of national politics is a step in the right direction. Separating State and county elections is advised for two reasons, viz., to remove county elections from the influence of State politics and rings, which are frequently overwhelming, and because it is exceedingly difficult for a voter to inform himself properly of the characters of the candidates where there is a large number to be voted for at any one time.

The principal objection to this plan, to many persons, is the cost of election. This is obviated to the extent of about nine-tenths by causing the election board to serve without pay, but this is not the only reason for this proposal. In every precinct are persons who make it their business to intrigue for these positions for the sake of \$3 or \$4 to be gained (of course some worthy citizens are occasionally appointed). Moreover, that these dollars are being scrambled for has a direct tendency to prevent gentlemen from seeking such positions.

Now, as to the proposal to make election boards elective, it is directly in the line of republicanism to bring the power closer and closer to the people, and tends to lessen fraud directly by making it almost certain that a better class of men will be selected. It is surely a curious spectacle that while we are so exceedingly punctilious as to the kind of paper and the way of writing and folding the ballot, and all that, we, for the space of a few hours, give abundant opportunities for all kinds of fraud; and then, after the frauds are consummated, we very carefully look and bar all doors and put big seals upon them, as though afraid that the frauds might be found out. Surely, surely there is wide room for improvement.

As to the election board serving without pay, I need only point to the fact that it is an everyday occurrence to see a dozen men forced to leave their work, without pay, to attend a criminal suit in the justice's court, often on the most frivolous pretexts.

Have we a Legislature with vim enough to put through an actual reform such as this?
W. S. PROSSER.

Shingletown, Cal., Jan. 22, 1889.

A proposed election law, submitted by the Federated Trades, will be found on page 84 of this issue. Patrons, read it, discuss in the Grange, and urge its merits upon the members of the Legislature.

Questions for Discussion.

In our columns to-day will be found several subjects of live interest for discussion in Grange meetings, including the bill for re-assessment of taxes declared invalid, the bill for an improved system for voting, which embraces the essential features of the so-called Australian system, now working also favorably in Massachusetts and one or two more States. The bill for dividing the State appropriation to agricultural fairs equally between live-stock and other exhibitors will be published later. By referring to the daily press from day to day, other proposed legislation will be observed.

Taken altogether, we think there would be much to be gained and nothing to lose if every Grange in the State would call an open conference meeting for all the farmers in the community to join in exchanging views and sending recommendations to their members in the Legislature.

Any recommendations adopted should also be sent to Judge S. T. Coulter, chairman of the Legislative Committee of the State Grange. Also, to the PRESS for publication.

Individuals as well as Granges can also give aid and support by corresponding with our Legislative Committee, and members of the Senate and Assembly at Sacramento.

Grange Elections.

AMERICAN RIVER.—Carl Halverson, M.; Jas. Cornell, Jr., O.; N. H. Lauridsen, L.; Harry Williamson, S.; A. A. Harris, A. S.; J. E. Beach, O.; C. Cornell, T.; Mary Cox, Sec.; J. C. Brewster, G. K.; Mrs. D. Taylor, P.; Mrs. A. Bryan, F.; Mrs. F. Kane, Ceres; Martha Oriswell, L. A. S.; N. H. Lauridsen, Trustee; Ettie Cornell, Organist.

Installations.

Watsonville.....February 16

San Joaquin County Pomona.....February 28

NOTE.—The Secretaries of Granges are requested to forward reports of all election and other matters of interest relating to their Granges and the Order.

To Correspondents and Agents,

All correspondents of the California Patron are invited to continue their efforts for the weekly Grange edition of the RURAL PRESS and the monthly of the California Patron. We hope that all will with new zeal help us make the two issues the best representatives of Grange periodicals in the United States.

All agents are invited to continue their efforts in behalf of the official weekly and monthly organs of the Grange.

From Bro. D. Woodman.

MESSRS. EDITORS:—We had a very fine view of the recent eclipse from this place, though the sun was obscured by fog or clouds through the day, except during that interesting phenomenon. The weather is pleasant, with occasionally a light frost.

The fields are green, feed is good and all kinds of stock are doing well. This is a great stock region, and immense quantities of alfalfa are raised here, and land is from \$100 to \$300 per acre. Bakersfield is "booming." A \$100,000 hotel is nearly completed. It is said to be one of the finest in the State outside of San Francisco.

We went over to Tulare on the 5th, and were present at the installation of the officers of that Grange. Although a stranger in a strange land, we found friends and a home among Patrons there, as we always do whenever we meet them. Tulare is a strong Grange possessing much talent. Some of its members reside 25 miles away, and yet they find their way to the Grange. They believe in and practice that grand principle, that "whatever we attempt to do we should strive to do well." As others have very likely written about that interesting session, we will not enter into details, but only say we were very much pleased with our visit there and the acquaintances there formed.

We stopped over night at the pleasant home of Bro. Talbot, and the next at Bro. Merritt's. On the morning of the 7th, Bro. Merritt took us out some 12 miles east of his residence through great fields of wheat, some of which have a vigorous growth, while others are being sown. Here at the foothills is located the Berry wheat ranch, of 4000 acres, and the object of our visit here was to see the working of his wonderful steam plow and seeder. But we were too late. It had done its work and was reposing upon its laurels. Here was a machine that had been doing the work of 50 men and 100 horses for weeks together. It is a 30-horse power traction engine, so arranged as to plow, sow and finish up a strip 20 feet wide as it passes along. Its capacity is 30 to 100 acres every 24 hours. It runs night and day, and is fed on straw and water. When the harvest is ready, a harvester and thresher is attached in front of this iron horse, and away through the wheat it goes, cutting a swath 40 feet wide, delivering the grain in sacks, and what straw it needs for fuel near the furnace. The capacity of the machine is 110 acres per day, yielding about 2000 bushels. In harvest it is not run in the night-time. It will run over quite soft places, as the tires of its driving wheels are four feet wide. Strong headlights in the front and rear furnish light in the night-time, and a canvas top protects the workmen from sun or rain. It is claimed that with this machine wheat can be raised and put on the cars for half a cent per pound. The owner says he can do anything with this machine a horse team can except swim.

Now Dakota claims to have "the largest wheat farm," of 11,000 acres. On it are used 45 gang-plows of two plows each, 45 gang-harrows, 44 broadcast sowers, 65 self-binding harvesters, 6 threshers requiring 30 men each. In putting in this 11,000 acres, 600 horses or mules are required, besides a small army of men and an immense amount of machinery, to say nothing about board of man and beast, wear of machinery, etc.; while up here in quiet Tulare five men with their iron horse and a few teams will put in harvest and thresh 4000 acres. Now where is cold Dakota with her horses and their riders, with her blizzards thrown in, as compared with California? For the "bigness" of things and its "possibilities," we believe California is unrivaled by any other State in the Union or the world at large. Can any other State boast of such a wonderful agricultural implement? Can its equal be found in this wide world of ours? We do not believe it can. We would like to know where the largest wheat farm in California is located, its area, manner of cultivation, etc. Who can tell us? D. WOODMAN.

Bakersfield, Jan. 10.

The San Joaquin Joint Installation.

MESSRS. EDITORS:—The joint installation of Stockton, Woodbridge and Lodi Granges held in Lodi hall on the 16th inst. was a complete success. It was a fine day, and there was a large attendance from all the Granges in the county. The Worthy Master of the State Grange, Bro. Overhiser; the Worthy Lecturer of the State Grange, Bro. Flint; the Hon. Thos. McConnell, a member of the Executive Committee; and Sister Annie McConnell of Elk Grove Grange, were present, and all acquiesced in having a very pleasant and enjoyable meeting.

Lodi, Jan. 17.

J. D. HUFFMAN.

One of Oregon's Past Masters.

Adam Randolph Shipley, Past Master of the Oregon State Grange, was born in Fayette county, Pa., in 1826. He is a descendant of a Shipley who came from England with Lord Baltimore to survey the province of Maryland. His mother was a Randolph of New Jersey, also English. When he was nine years old his parents moved to Central Ohio, near Mt. Vernon, where he grew up, working on the farm summers and attending the academy winters. For a time he was a teacher in that institution, and subsequently studied law in the office of Judge Hurd, having for fellow-students Wm. Windham and Dan Narton, since Senators from Minnesota. He continued his law studies in Cincinnati under Alphonso Taft, since Attorney-General of the United States. In 1852 he crossed the plains to Portland, Or., experiencing a full share of the hardships and trials of a pioneer. In 1854 he became

fully be said of him: "He has always lived a pure and honorable life."

Mr. Shipley has always been an ardent lover of the Grange, and has probably done as much gratuitous work in it as any other member in Oregon. He was a charter member of Oswego Grange and its first Master, and was once Master of this subordinate Grange, the Pomona Grange and the State Grange all at the same time. He became Master of the State Grange in its time of deepest trouble, when, by injudicious transactions, it was overwhelmed with debts for which it was supposed the Master could be held responsible. Worthy Past Master Cyrus had passed many weary days and sleepless nights working and planning, but the task was herculean. The night of Mr. Shipley's installation will never be forgotten by those present. Hope had well-nigh fled, and tears were in the eyes of many unused to weep. A hush was over all, for the Grange, for which so much had been sacrificed, seemed about to die. One more effort was made, and every brother there pledged his

BRO. A. R. SHIPLEY, PAST MASTER OREGON STATE GRANGE.

postmaster of Portland, a position he held for over seven years. He was also engaged in the wholesale and retail book and stationery business, and was a member of the first City Council of Portland. In that year he married Miss Celinda E. Hines, preceptress of Portland Academy. In 1862 his health failed from close attention to business, and, thinking farm life would be more healthful, he purchased a tract of land nine miles south of Portland and two miles from Oswego and began the laborious task of making a home in the country. Here he still resides, and is dividing the farm among his children as they wish to settle for themselves. He has made great efforts and sacrifices to make farm life pleasant, preferring that his sons should be farmers if they would be happy in that occupation. He has long been a member of the M. E. Church, and in politics he had always been a Democrat until the organization of the Prohibition party. Since then he has worked and voted with that party. He has always taken an active part in everything which he thought calculated to promote the welfare of society, and what was so truthfully said of his successor, Judge Boise, may as truth-

fully be said of him: "He has always lived a pure and honorable life."

Grange for a certain sum of money, and agreed himself to be responsible for its payment. Many of them paid it out of their own pockets and said nothing to their Granges about it.

The Grange was saved, but it was bankrupt. Nothing but the greatest tact, business ability and unceasing labor could bring order out of the chaos in which it was involved, and the Oregon State Grange owes its existence to-day to Past Master Cyrus, Past Master Shipley and others of the tried and true, who have for their reward a consciousness of duty well performed.

SISTER C. E. KINNEY, now at San Diego, does not write hopefully of the Grange cause in that district, but alludes to the work of Sister Flora Kimball and other friends in terms of praise for sustaining National Grange so well for 11 years of its active life.

MAGNOLIA GRANGE installs its officers to day.

GRASS VALLEY GRANGE installed its officers on the 14th inst.

Reassessment of Property.

An Act to amend the Political Code by adding a new section thereto in relation to reassessment of property in cases where a former assessment is invalid—

The People of the State of California, represented in Senate and Assembly, do enact as follows:

Sec. 1. There is hereby added to the Political Code a new section, to be numbered three thousand six hundred and seventy-two and a half, as follows:

3672½. Every tax except poll tax levied after the year 1879, which is invalid by reason of any error or irregularity in the assessment and which has not been fully paid, shall be *releaved* and the property affected reassessed by the proper officers or Board of Equalization to the amount to which and upon the estate or to the person or corporation to whom or to which such tax ought first to have been levied and assessed; such reassessment to be made by the proper officers at the time and in the manner by law provided for making assessments on like property, the collectors of such tax to allow as credits thereon any partial payments made on the tax as at first levied. In any action brought for the collection of such taxes and reassessments, the court shall allow an attorney's fee of 15 per cent on the amount of any judgment rendered, which shall be less such partial payments.

Sec. 2. This Act shall take effect from and after its passage.

The following we believe to be the law in the case of *reassessments*:

When an assessment has been declared invalid, illegal or void by reason of any defect in the proceedings had in an attempt to levy, assess or collect a tax or assessment, and not because of the illegality of the tax itself, the liability both as to the person and property sought to be charged continues, and the tax may be enforced through another assessment.

It is within the power of the Legislature to require a reassessment in all cases where the authority conferred in making the original assessment has been defectively or irregularly executed.

The reassessment, whenever made, must have reference to the value of the property at the time the original assessment was made, as well as the law which authorized it.

Letter-Notes, Etc.

A. T. Dewey, Sec. S. G.—Dear Sir and Brother:—I have just received a telegram from Bro. F. B. Logan to go to Salinas City and reorganize the Grange there immediately. I am suffering from the cold contracted on my last trip to the city, and it pains me not to respond; but I am not able to take the journey at this time. Perhaps you can find some one to go in my place. Yours fraternally, I. C. STEELE.

Pescadero, Jan. 20, 1889.

We sincerely regret the indisposition of a brother so generously disposed to labor and contribute for the success of our Order. With the consciousness of many good deeds and sacrifices for his brothers and the welfare of our cause, we hope his health and strength will soon be recuperated for further deeds of honor to himself and benefit to the P. of H. and humanity in general.

Bennett Valley Grange.

MESSRS. EDITORS:—Bennett Valley Grange installed its newly elected officers January 5th, with the exception of Ceres and the Assistant Steward. Bro. Jonathan Roberts, Worthy Master of the Sonoma County Pomona Grange, acted as installing officer, assisted by Bro. George Rogers of Santa Rosa Grange.

Owing to bad roads, the attendance was not very large. A bounteous repast was spread by the sisters, and with song and social conversation, a very pleasant day was passed.

RHODA WHITAKER, Sec.

Bennett Valley, Jan. 21.

THE W. M. AT PACHECO.—By invitation of General Deputy G. P. Loucks, Worthy Master Overhiser has consented to visit and install the officers of Valley Grange, Pacheco, Contra Costa county, on Saturday of this week, and we hope there will be a large attendance not only of members of that Grange, but many visiting Patrons of Contra Costa county.

We learn that Bro. C. J. Cressey had a sudden indisposition Thursday of last week, but was sufficiently relieved to attend Grange on Saturday, to the pleasure of all.

Behind the Times.

Give me the good old times again
When poetry was writ
To stir the hearts of manly men,
With tales for heroes fit;
When love songs were not faint nor few,
But rang a lusty lilt,
Such as became a lover true
Of bone and sinew built.

I fancy not this dainty verse,
Spun out as fine as wire,
Some hopeless passion to rehearse,
All ashes, and no fire.
These labored lines of perfect rhyme—
Poetic cameos—
Are cold as icicles; the time
Were better spent on prose.

Those little bits of light and shade,
Where some smart repartee
The reason and excuse is made
For stanzas two or three,
Amuse, 'tis true; but, save the mark!
If poetry has come
To such a pass, let Byrons hark,
And Walter Scotts be dumb!

Nay, give me the old days again
When poets' blood was red;
When love was warm, and men were men,
And felt the things they said;
When woman chose to please her heart,
And not for others' praise—
Nay, smile; I know my sing-song art
Is that of other days.

—Walter Clarke, in *Table Talk*.

Learning Lessons.

[Written for the RURAL PRESS by M. E. T.]

Learning lessons every day
Like the baby at my feet,
Though my hair is silver-gray
And my steps no longer fleet.
Baby, you must quiet be,
For your mother needs to sleep;
Learn this lesson, baby, see
How still my little one can keep.

Grandma, learn this lesson, too,
Guard full, will your tongue and face;
Crowd with actions good and true
All the small remaining space.
Stop, my child, thy loud complain,
Here upon my bosom rest;
Neither am I quite a saint
When my patience has a test.

Thy tottering feet, my little one,
To mischief guides thy restless hands;
So my devious paths are run
Through prickling thorns or sinking sands.
Thus as baby learns her task,
I, less willing, do my own,
Still imperfect, till I must ask
Indulgence for impudence shown.

Watsonville.

Women, Etcetera.

[Written for the RURAL PRESS by DAGMAR MARIAGER.]

After all, it may be that neither man, woman, gold nor rum is the root of all evil. I sometimes wonder if the greatest curse of earth doesn't exist in the fact that but few of us can reason on any subject independent of public favor or prejudice, or free from a personal standpoint. A question may, undoubtedly, safest to a just judgment, be reasoned on wholly for the welfare of those whose interests are involved, provided that all are considered, and none left out, because of minority or want of sufficient power or opportunity to plead their cause with proper ability. When I want to know whether or not a horse is driven too hard, his blinders drawn too close, causing temporary discomfort and ruining his sight, tortured by the gag-rein, or neck cramped but to flatter his master's dudish vanity; whether or not he is fed, housed, watered and generally treated with a due consideration, I, in order to do the case justice, am compelled to change hide and harness with the animal, in my imagination, and go through it all in his place, and what I then honestly think the horse in my clothing ought to pronounce as his verdict in my case, I, being acknowledged a four-footed slave, that I pronounce as my verdict in his. And when, the horse aside, the woman's general treatment becomes the question, it may be better, for a just judgment of her case, that her judges change positions and opportunities with her, or rather, the want of opportunities.

A good many of us see daily our own women insulted, slandered and wronged in the hundreds of ways that woman's subjugation to man solicits, while it denies her the redress entirely in the hands of the enemy, and even defies complaint by adding more insult to the injury, when occasionally one rebels against the time-honored womanly virtue (?) of putting a premium on wrongs against herself, by her silence, and she dares speak the truth in the face of her persecutors. A good many of us meet daily these cases, with our sympathies untouched, and the hand that could help to right the wrongs against these women, but raised

against them in a threatening menace. This is what we do, the while breaking our hearts over the slavish condition of "the poor foreign woman," who has, we are told, so far ceased to be a necessary evil as wife that she has to have a "dot" to hold out as a bait for spendthrifts to nibble at until one is caught, and the "dot" paid him for his goodness on their arrival at port nuptial.

The fact is, the foreign woman's "dot" is seldom coupled with a "dottess," or a dissipated wreck of manhood; nor is it to be looked upon as the husband's, to save or squander it as may suit his pleasure. The bride understands that it is as much hers yet as his is his, and by it she is spared the humiliation of dependence, and also becomes more or less his equal in business and all matters pertaining to their joint welfare.

There are thousands of American wives who have furnished the dots for both, and from the day lost all control of their use or abuse who would gladly hold the foreign wife's position in her husband's confidence, for the mutual good, and, in many cases, for the better training and education of their children.

As a rule, the foreign wife neither forfeits entirely her individuality nor attempts to ignore her responsibility, particularly in the rearing of her family. The woman who gives herself bodily together with her financial all to her husband for weal or woe, as he may direct—a practice far less common there than here—unfits herself for the responsibilities of motherhood, whether or not she boasts the excuse that she has done so in the much-lauded "wisely trust;" she unfits herself for acting the part of companion and helpmate to him, and if his strength of character is not that of steel, she must necessarily debase his nature in the degree she demeans her own.

Any thoroughly loved wife will cultivate what ought to be earnestly condemned, namely, "a yielding nature and a clinging confidence." This method of reaching for happiness has been thoroughly tested, and it has shed nothing but ignorance, deception and cruelty in the home circle. If a wife is a human being, then her integrity should be worth something; and if worth anything at all, it should be as much worth protection from abuse by her husband as from an attack by any other man, if not more.

But the fact remains that women are compelled to seek husbands among men who are morally their inferiors, without thought of love, for the bare protection that savage tribes insure their women without their sacrifice to one enemy; and then often the one demon inside the locked door becomes more terrible than were the thousands without, and but tolerance and suicide remain, between which the wife may choose, as husbands don't call witnesses to the private chamber where they exercise their "lordly rights," while they readily put on a fine showing for outside observance.

The wife who has been badgered into the belief that she was created expressly to "spread roses all around," and particularly to spread herself as the favorite doormat for her husband to wipe his feet on, has lost her self-respect, becomes contaminating as an associate, and she suffers abuses to the shame of the woman whose spirit is not wholly crushed, while she is a co-rupter, too, of weak-minded and mimicking men.

When women become self-supporting and a due public respect is shown them, so they may do bridge-building, lay brick, carry the hod, or work out their taxes on the public streets with no fear of attack because of being members of the reproducing sex, I'll vouch for it that there will be more happy homes than there are to-day, fewer people living in singleness, and that nine-tenths of the wives will have the motto, "I'll trust him so long as he's true," pasted in their hats. Then many of the men who now get wives without difficulty will be shunned as the moral lepers they are. Noble men will be in general demand, and where there is an earnest demand for anything a supply follows.

The man is not worth saving who wants to be kept true to his marriage vows by flowers at the kitchen window and worsted cats, dogs, pigs and other unclean and nondescript specimens of the real and imaginary world scattered profusely over the furniture of every room in the house, while flutes and laces dangle from the mop-cloth and pot-rag. Indeed, many are beginning to think that the craze for "making the home attractive" has done more than anything else in sending husbands and boys from home. What are these poor infants to do when the wife and mother is ever stitching her sight and brains into some fancy trinket, her ambition and moods ever unfitted for intelligent companionship, while the home is but a museum, none of them being free to sit, stand or lie with any degree of comfort anywhere between the cellar floor and the attic roof, in trembling fear of soiling or disarranging a spider-web of some kind or carrying something away on a rear button. I believe as much in protecting men's rights as in helping women to get theirs, and I think it not only men's right to protest against these abuses of the home that should ever promise peace and comfort, but their duty as equal partners to do so, lest their silence be accepted as consent to them and equal guilt.

Neither husbands nor boys can be expected to find home comforts in a museum nor wisely sympathy and motherly guidance in a mother who has given her mind and heart to the improvement of the museum business. What then are the poor pantalooned babes to do but go forth to the dram-shop for wisdom and moral teachings?

Not alone the wife but any servant will

consider the taste and fancy of her landlord in preparing the evening meal, and this all seems too prosaic for me to find any spiritual sentiment in it, when the flask isn't added to the dining table sweets. If a wife has to don her finery when she sees her husband coming, it would seem that the finery and not the wife becomes the center of attraction. Would any husband do such a stupid thing on his wife's coming? No. And why not he as well as she? He considers himself acceptable as he is, no matter if his work has left him kissable or not. If she isn't worth as much, then she has married above her station, and both are thereby wronged. And why should she strew his pathway with roses, or he hers? But if they must, then let them be cabbage roses, or a kind more useful than ornamental, for life is real and life is earnest, and the duties of wedded life are not to be trifled with by holow and romantic trivialities, especially where they hold an underlying evil current. The sentiment nature intended should go with matehood is too sacred for such trifling. Let the wife and husband themselves adorn the home by such intellectual beauty and justice as they may possess, and leave the roses to adorn the unsightly garden-wall.

Let women redeem their lost personalities and go forth into the world to cultivate what they are best fitted for; let them feel the dignity of self support and equality in all the pursuits of life, and they will cease to commit the crime now constantly forced upon them, that of marrying men they dislike as companions and fathers for their children, and for whom, in many cases, they have neither a feeling of love nor respect, except to outward appearance. When the true woman may find and wed her equal and her choice, his love and respect will never grow less because of a business partnership between the two.

Many of us are shedding tears enough to drown out the sins of our own country, if they were drownable things, over the fact that foreign women work in the harvest fields, on the banks of canals, and even in harness. Now are these things really so shocking? When I saw the rosy cheeked, well-formed, clear-complexioned and merry-eyed women binding the rye behind the reapers, my heart bounded with joy, and I sorely regretted I were not artist enough to convey the scene to paper as a picture of wholesome and harmonious co-operative industry.

When I saw women working on the banks of canals, my regret that they were compelled to do such heavy labor was blended with a greater regret that thousands of poor women of America, with children to support, and starvation staring them in the face, were forced to sit in some garret and ruin their eyes and nerves over needle-work, which only serves to lengthen their misery—forced to sit between four walls night and day, month after month (or years, when they are hard to kill), to weep and moan between stitches, unseen and unheard, while they would gladly do menial labor in the open air to insure the bare necessities of life, were only American men (joined by many of the pampered and the thoughtless classes of women) but less sensitive on the subject of womanhood propriety. Indeed, I wondered if our "tender-heartedness" were not sheltering the foulest wrongs, and tending not only to foster an unscalable wall of contempt between the sexes, but threatening the destruction of the humane spirit within us, which is already sadly feeble.

If women may not test their faith in their own strength and virtue, of what use are these qualities? Surely a woman's honor is safer in her own keeping than in that of another, male or female, and the only support she requires is the opportunity to acquire knowledge to take the place of a persistently taught ignorance that has almost left her case a hopeless one. This, together with the respect and protection given to her brother, will make her her brother's equal, and safe as he to walk, if she chooses, from San Francisco to New York, without comrades or body-guard, as I expect in the future to walk alone over the counties of Denmark, if I fail (as I expect to do) in finding a lady of the same mind to join company with, and I expect to do so fearlessly of any salute more offensive than that of bare curiosity.

What if I, a woman, were to attempt to "do" the settled parts of America on foot? I should probably not cover 20 miles before I would find myself handcuffed and shackled, and accused of every fiendish crime imaginable by every man, woman and child within reach, and found guilty of them all, without trial, and be branded, hung, and at last buried in a madhouse. But why should I not "do" the "civilized" parts of America on foot and unmolested, as I have "done" thousands of miles of its unsettled parts in safety, with but a woman and child and five animals as my companions, and far out from the crime-sheltering wing of American government?

Some may ask me, as the cannibals do the missionary before they fry him, why don't I live in a more favorable country for such as I? Because I want to remain here to speak of things as I find them.

When in Europe, I saw women and dogs on the streets co-operating in the labors of drawing carts and selling fish, or some other salable thing, I said, more or less under my breath: "Bravo! Don't go to America, my dear woman, for there the maselines are not only selfish monopolists in the remunerative indoor as well as the outdoor bread-winning lines of business, but there they would en masse wickedly hold

the fort against your heroism by hurling sneers and scoffs at your womanhood, until you, with your bravery overpowered by cowardly attack, and with your babes clinging to your skirts, would be glad to seek refuge in some cold, dark and comfortless garret, to be cast out by the landlord, perhaps, before you were all quite dead."

—Santa Barbara.

"Reform in Funerals"

Was the subject of a paper, lately read by Rev. G. E. Walk before the Pastors' Union of San Jose, of which the following are extracts:

It seems to me that in any work of reform in this particular line, where our duties are commingled, there should be concert of action between the ministers and the directors of funerals. . . . How necessary the skillful and intelligent director has become! How much he can do to relieve aching and anxious hearts in the most trying hours of mortal experience. It is some mitigation of the overwhelming sorrow which sooner or later comes to all homes to be able to hand over the bodies of our precious dead to those who know how to prepare them for the final rest of the grave. I have often thought that the quiet, orderly, sympathetic services of the true undertaker are seldom appreciated as they deserve. Half the ghastly horrors of death are overcome in the hands of a funeral director who has a true appreciation of his delicate and responsible calling.

But there are some abuses connected with the modern funeral concerning which I wish to particularly address myself—abuses growing out of false ideas of propriety and long established custom.

Of course, as ministers we expect to bury members of our churches, and those who have any righteous claim upon our time, without fee or reward; and as to the poor, the friendless, the stranger, we expect nothing and would accept nothing. But when it comes to those who do nothing toward our support—who call upon us simply because it is convenient—who often subject us to actual cash expense, to say nothing of the serious and grievous inroads upon our time, and who very often do not so much as thank us for our services, I insist that the case is very different, and for one I protest against it. I have often spent a whole day to officiate at the funeral of some person whom I never saw, who left a large estate, and yet from whose family I did not get so much as a nod of recognition.

There was money to buy an expensive case or coffin—to buy flowers—to buy all the trappings of woe—to pay the merchant—to buy the grave—to pay the gravedigger; in short, there was money for everybody and everything except for the man upon whom devolved the gravest and most delicate responsibility of all. For him there was not even thanks. Perhaps they didn't think of it. Very true. Then some one should have reminded them of it—and who could more appropriately do this than the funeral director? Here, then, we see the necessity for concert of action.

(2) The great expense attending the regulation funeral is an abuse that loudly calls for correction. I have known poor families who were pinched and starved for a whole year on account of the unnecessary expense incurred in a single funeral.

(3) Public funerals are objectionable. Let the religious exercises be held at the residence or church—the former, if possible—without reference to the burial. Let that take place subsequently and privately. Let there be no public exposure of the dead. For friends who wish to take a last look at the departed, an hour or two can be indicated when it will be in order for them to call at the residence for the purpose. Some intimate friend can be present and in attendance at the door, so that it will not be necessary for the family to see any except those whom they desire to admit to the privacy of the inner circle.

(4) As far as possible, funeral services should not be held on the Lord's Day, as it not only interferes with the established order of things in our various churches, but also devolves too much work on the minister and the funeral directors.

(5) The long-winded funeral sermon is among the things that should "go." It is an abomination that cries for total and eternal extinction! In the first place, it is unnecessary. Religious services are held for the living, not the dead. Allusions to the dead—except in extraordinary cases—are in bad taste. If the subject died an unrepentant sinner, the preacher cannot tell the truth concerning him without giving offense; and if he was a Christian, then the example of his life will speak in words more eloquent than any living preacher can command. An appropriate hymn or two, a few verses of aptly chosen Scripture, a simple prayer, and all is ended. I believe that such services would command the respect of all classes of people; whereas fulsome eulogiums do but provoke derision and contempt.

DOG-CATCHERS seem to be much the same the world over. In St. Louis, a brace of the genus lassoed a little boy, threw him into the pound-wagon with a lot of dogs crazed by fear, and carried him to the pound "for fun." The poor little fellow was taken out nearly exhausted, and is now suffering every symptom of hydrophobia. The dog-catchers have been arrested, and both of them were shown to be ex-convicts.

Our Boys.

From the above text the Eureka Standard preaches a little sermon, which may find heedful hearers in other counties besides Humboldt. Here it is:

The most vital question for any generation to solve aright is how best to preserve in their successors that which is good, praiseworthy and noble, and, at the same time, remove some of the evils and vices that have been found in every clime and with every generation of man since the beginning of civilization. Each succeeding generation, profiting by the experience and the discoveries of its predecessor, must be wiser than the last. No matter what the grumblers may say, the earth moves—science, art, literature—all move forward. The present generation has far greater facilities for securing an education than the last; and science has worked miracles, even in our own day. The question, then, which is of the greatest moment to us, is how to make the succeeding generation better; for wiser they will surely become.

The farmer studies how to improve the grade of his stock; the sheep-rancher, how to improve the quality of his sheep and the texture of the wool they produce; and the orchardist or vinticulturist, how to improve the quality, quantity, and flavor of his fruit. In every instance they do this by going back to the fountain-head or germ of animal or vegetable life, to improve the young, and then, by constant pruning, care, and culture, to assist nature to improve upon itself.

No man would take a crooked, gnarled, diseased, fullgrown tree and try to straighten and improve it, unless by grafting young and healthy scions into its branches; yet the very thing about which people manifest so much solicitude and wisdom in dealing with their livestock and orchards, they frequently neglect in the care and culture of their own children.

It is common to see a good farmer, or a good business-man, expending large amounts of money to improve his farm, stock, or business, who gives less thought and less means to the proper care of his own children than to the improvement of his cattle or the increase of his goods. The desire to get rich seems to be the curse of this age, and outweighs, with many, every other consideration. Children can bring themselves up by hand, and go to the devil by scores, for the want of that parental restraint and culture which every man owes his offspring, and through them, owes the world.

These remarks are not caused by any desire to find fault with the world, but from a firm conviction of the truth of that old maxim: "Just as the twig is bent the tree is inclined." There are many twigs in the city of Eureka to-day that are being warped in the wrong direction. It is not uncommon to see a drove of ill bred, noisy, quarrelsome and profane urchins, from 5 to 15 years of age, most of them smoking cigarettes, or chewing tobacco, going up and down our streets at all hours of the day and far into the night, making the air foul by their smoke and their profanity. We have often stopped to look at these boys, to feel sorry for them, and to wonder what the future has in store for them. Some of them may possibly break through their environments in the future and become good men—just as a few people will pass through an attack of the yellow fever and come out sound and healthy—but the great mass of these boys, unless taken in hand by some authority, are bound to graduate from this street school into miserable victims of debauchery and crime.

Where and who are the parents of these children, who are thus allowed to roam the streets at pleasure? Have they any idea of their responsibility for the training and education of these boys? If they were kept off the street—at school or at work—anywhere but where they now daily resort, they might be saved to become good citizens, honoring themselves and comforting their parents in their declining years. Here, where we have free schools, for which the property of every man is taxed, there is no excuse for children growing up in the street to be a nuisance to the public, and finally to graduate into our jails and penitentiaries. Parents, what do you think of this? One good-hearted, noble boy, reared to respect himself and honor his parents, is of more value to you and to the world than all the blooded horses, cattle and sheep you can raise on the best ranch in Humboldt county. Fathers and mothers, who strive early and late to amass wealth, think of your boys and girls more, and of your wealth less. Proper training and culture of the youth of to-day will give to us not only a wiser, but a truer, purer, nobler manhood in the future; will give us a generation which will perpetuate the liberties we have inherited, and make us great among the nations of the earth. The vulgar, profane, cigarette-smoking street gamins, God pity them, will grow up mental, moral and physical wrecks unless nature's laws are abrogated, and nature doesn't do business that way.

Fathers and mothers, we are talking to you! Look well to your boys.

TO REMOVE TARTAR FROM THE TEETH.—Should any little incrustation (tartar) appear on the sides or at the back of the teeth, which illness and very often the constant eating of sweetmeats, fruit, and dishes containing acids, will cause, put a little magnesia on your brush, and after a few applications it will remove it.

YOUNG FOLKS' COLUMN.

Tim Hooley's Responsibility.

[Written for the RURAL PRESS by ADAH FAIRBANKS BATELLE.]

When Mike Hooley ran away from his family he left his wife unprovided for, and with eight children to support.

People wondered how they would get along—such a family of them, from the baby up to fifteen-year-old Tim.

"I don't know whether to call it fortune or misfortune," said a neighbor, Mrs. Martin, to her husband. "Of course she won't be beaten or turned out of doors any more, so she is better off in that way."

"The only trouble is, he won't stay away," agreed Mr. Martin.

If things looked blue for the Hooleys, Mrs. Martin was well aware that it was not the first time.

"People have helped them and they can again," she said, thinking of the many garments bestowed upon the children, who generally appeared a day or two later minus the acquisitions.

People thought Tim ought to support his mother, but no one knew what he could do.

He was one of the worst boys in a town that boasted few good ones. Even his teacher learned that his word could not be relied upon, and the disappearance of sundry pocket-knives, pencils and lunches was a trial to pupils as well as teacher. Hens in that vicinity laid few eggs, and apple trees bore little fruit, so thought the owners when they went to gather one or the other.

For a boy with such a reputation, places to work were not plenty.

Poor Tim! few knew what he had suffered. The beatings Hooley gave him would have killed a less hardy child; he was like one of those stunted trees that a storm cannot fell. His mother had slapped or shielded him as her mood might be. Home meant nothing to him, yet deep in his heart lurked love for his mother, seldom shown.

The flour-barrel was fast being emptied; matters were becoming desperate when one day the priest called at the Hooley domicile. Mrs. Hooley looked upon him with reverence, but mother-love was the stronger, and she did not take his advice though she listened respectfully to what he had to say.

"Sure an' it's Johanna Hooley niver will do it, niver," she exclaimed in a passion of tears when he had gone. "He'd be for sending the children to the orphan asylum and me out to service. The service I'd not mind, but the poor babies would die widout me."

Her wailing Tim did not care to hear, and started out of the house. She cried after him, "Oh, Tim, Tim, Tim, can't ye help me keep the children to home?"

Until now Tim had asserted that he did not want to go to work, but his mother's words had such an effect upon him that he muttered, as he pulled his slouched hat over his eyes, "Mebbe I'll go to work, I dono;" (the last word being a corruption of *do not know*.)

The half promise was enough to raise his mother's spirits, and she went about singing as she made bread from the fast-diminishing flour.

That evening for supper there was only bread and cornmeal mush without milk or sugar. Mr. Hooley had sold the cow before he left, so milk and butter were out of the question. It set Tim to thinking, not that the cupboard was never before bare, but his father, in providing for his own wants, had provided after a fashion for the family. They had always lived somewhat in Indian style, eating when hungry or when there was anything cooked.

The thought that there was no likelihood of food coming in made Tim for the first time in his wild, irresponsible life think for himself. He went over the whole question in mental debate as he lay awake that night. What would it be to go to work—to work in the mines? He well knew that of the few farmers none would hire him because of his reputation. Mining was the only alternative, and he was not sorry. He tried to imagine himself trudging to work at five o'clock in the morning instead of crawling out about nine o'clock and playing "hookey" because too late for school. His present life was certainly the easiest, and easy places are what a large part of humanity is searching for.

Tim lay awake till past midnight turning over the proposition in his mind. His very being cried out against work. It was contrary to his nature. He had never worked; he had hoped he would never have to; had hoped it in an indefinite way, for his future lay very vaguely before him.

He would not work! then came the picture of the brothers given to different people, the little sisters in an asylum or perhaps dead. And he was the oldest; he saw that all depended upon him, and wished that he were the baby, with an oldest brother who liked to work. The world looked so dark. He turned and tossed as much as the presence of Dan and Joe and Pattie in the bed would allow.

It was the struggle of his life, and may we not feel sure his good angel rejoiced when he resolved "I'll go to work!"

That resolve was a turning-point in his existence, but the first realization of what it meant came to him the next day.

Boys were not in demand in the mines, and

Tim applied without success for work. He stalked off sullenly after his request had been denied, and resolved to give up. However, the perseverance that made his mischief so serious a matter came to his aid and he went on trying. The third foreman to whom he applied promised him a place, with work to begin on the following Monday. The promise was gruffly given (that was Mr. Carroll's way), but Tim knew this as a gruff world, and did not mind the tone since the words were what he wished.

If Tim had been in the habit of describing his sensations, he might have found it difficult to tell just how he felt as he walked out of the sand-house. There was no retreating; he was to go to work to support the family. He was responsible for their welfare because he was the oldest, he told himself again.

When he told his mother she praised him until he felt he had really done something heroic. The poor woman really dared to give her opinion when her husband was away.

"It's thirty-six dollars and forty cents a month will kape us illegantly," she said, and Tim felt sure she was correct.

Provided with a new dinner-bucket, Tim started out Monday morning and was one of the first in the mine. Mr. Carroll nodded approvingly and put him to work. He looked too small, but his wiry little body was animated by a desire to do as well as the rest, and he did, gaining muscle every day.

How many times he fell into the Slough of Despond! How many times he was ready to throw down his pick and leave.

It was discouraging to go home tired and hungry, and find his mother at a neighbor's, with nothing prepared for supper.

Mrs. Martin, finding this out, sent things from her own table, and also gave his mother a severe talking to on the subject.

When Tim's first month was past and he brought home a check in payment for his work, the world looked brighter to him than it ever had before.

He capered around the bare little sitting-room; he stood on his head for joy.

All his sulky silence had vanished, and he talked gaily to his mother and the children, who were as pleased as he.

He brought home the next month's wages with equal pleasure but less demonstration.

Tim needed the schoolwork the other children had, but the school of experience was doing more for him than could any university.

A year later Dan went to work for a farmer. That brought in a little money, for he imitated Tim and put his earnings into the common treasury.

Mrs. Hooley added her share, washing shirts for men in the neighborhood who were glad to help her by giving her the work.

And so the family got on well—better than any one had imagined they could.

No one quite understood the change in Tim. He looked people in the eye nowadays, and no longer acted as if he expected a blow when he made a request.

"I should have been a jail-bird," he once said, "if it hadn't been for that responsibility taming me down as it did. I knew the family depended on me and I went to work to take care of them."

In taking care of the family he had done something else.

Some one has said that any one can run away leaving a bad reputation behind, but that it takes a hero to come back and live down a bad name.

And Tim had lived his bad name down, replacing it with a good one.

San Jose.

A Talk to the Children.

[Written for the RURAL PRESS by M. E. T.]

Did you ever know boys and girls whose hands and feet did not belong to them? I have, and they were well-meaning children. They wanted to do right, and felt very badly after their meddlesome little fingers had taken things which did not belong to them, or spoiled other people's things by handling them. And I have known a little boy who was frightened and grieved when he stopped to think, and found that his truant feet had carried him beyond where his mamma had told him to go.

And I have known some who did not seem to own their eyes, ears, or tongues, and were so ashamed, and their cheeks so red, when their wretched little tongue said what was naughty and bad. And I have seen boys and girls eager to hear quarrels and bad words, with their bright eyes wide open to see fighting and cruelty to animals, and other ugly sights, when there is always something beautiful to see, if it is nothing but the little flower by the wayside, and something sweet to hear, if it is but the song of a bird, and so many nice things to say, if you only repeat a verse of your last school song. But the worst of all is when boys or girls seem to lose their whole heads, and they not only see, hear, and say bad things, but think them. Yes! they even give up the pretty home of their life to ugly thoughts. And then it is not long until their face shows who it belongs to. Just look at all the girls and boys you meet in one day, and what a great difference there is in their faces. Do you want to look like the worst boy or girl in school—so scowling and sly? If you do, just give up to your temper and think ill-natured things, and soon your face will show the marks of its owner; think good thoughts, and they will be reflected in your pleasant faces.

I knew a lady once who held a looking-glass

before her screaming children, and it was funny to see them straighten up their faces and smooth out the ugly wrinkles. I like to see children look into the glass and be met by a smiling, honest face.

Then try, my children, to keep possession of your busy little hands and make them do what is right. Guide your feet that they may not lead you astray. Remember your eyes and ears and tongues that they do not pass into the possession of evil thoughts, which will direct them as they wish. An Indian once said, "There is a bad man in me and a good man, and they are always fighting for the mastery;" so in every human being good and bad are always striving for victory. But with all the helps children have in these days of good books and good teachers and happy homes, there seems to be no reason for one to be bad, if his Good Genius fights the good fight.

Watsonville, Cal.

DOMESTIC ECONOMY.

SHORT CAKE.—One cup of sour milk, two-thirds of a cup of sour cream, one teaspoon of soda, a little salt, flour enough to make a soft dough; roll out a half-inch thick and bake on pie tins.

COCOANUT JUMBLES.—One cup of butter, two cups of sugar, two eggs, one large cup grated cocoanut. Use flour enough to make a dough that can be rolled. Bake the cakes in a quick oven.

SOFT GINGERBREAD.—One cup of molasses, one mixing spoon of lard or butter, one-half teaspoonful of ginger, three cups of flour, one cup cold water, one teaspoonful of soda. Mix all together free from lumps and bake.

WASHINGTON CAKE.—Two cups of sugar, one-quarter cup of butter, three cups of flour, four eggs, one-half cup of milk, two teaspoonfuls of baking powder; bake in layers. Cream for filling: One pint of milk flavored, one egg, two tablespoonfuls of cornstarch; boil till thick. Spread between layers when cold.

MOCK MINCE PIES.—One large cup powdered cracker, two cups of sugar, one cup molasses, one cup vinegar, one cup chopped raisins, one cup warm water, one-half cup butter, one teaspoon each of cinnamon, cloves, allspice, nutmeg, a little salt, a few drops of essence of lemon, two eggs. This will make two pies.

CREAMED FISH.—Pick to pieces any scraps of cold fish, mix in one quart of cream, two tablespoonfuls of flour, one onion and half a pound of butter. Set on the fire and stir until thick. Then put a layer of the mixture in a deep pan, over it spread crackers and butter, alternately with the fish, until the dish is full. Bake brown.

RIBBON CAKE.—One cup butter, 2½ cups sugar, four eggs, one cup sweet milk, three cups of flour, two heaping teaspoons of baking powder. Divide into three parts. To one part add one cup of raisins and one cup of currants, spice to taste. Bake the three parts in three separate tins. Put the part with the fruit between the other two, spreading a thin layer of frosting between, and cover the top with frosting.

VANILLA CUSTARD.—Boil one pint of cream with four ounces of sugar for one-fourth of an hour; then strain through muslin. Beat well yolks of six eggs and pour milk over them into a bowl, placing bowl over pan of boiling water, and stirring rapidly till it thickens. Let it cool gradually; add one teaspoonful of vanilla to suit taste, and stir continually. When cold, serve in dish covered with whipped whites of eggs sifted over with sugar.

PUMPKIN MARMALADE.—Pare, core and cut into small pieces a medium-sized ripe pumpkin of rich color; take six pounds of sugar, one pint of good cider vinegar, a dozen cloves and one ounce of best root ginger; bruise the ginger, and tie it with the cloves in a spice bag, put it with the sugar and vinegar in an earthen jar or porcelain-lined kettle that will hold two gallons; when it gets warm, put in as much pumpkin as the jar will hold, pressing it down, and boil it until it is well cooked (it will be quite transparent and soft); take it out with a strainer and set it near the fire while the liquid boils to a thin syrup, put the pumpkin back into the jar, and let it boil for half an hour, crushing it as much as possible the while with a wooden spoon.

CURIOUS MODES OF DEATH.—A Baltimorean recently dropped asleep on a park bench, when his head falling forward, he unconsciously choked to death over the stiff edge of his celluloid collar. A dog died in Illinois the other day from drinking the water in which a flannel shirt had been rinsed. A St. Louis man has died of erysipelas contracted from a verdigris brass collar-button eating into his neck; and a man in Chicago was roasted to death by the firing of his cotton underclothing as it dried before an open grate.

THE SOURCES OF TYPHOID FEVER.—The prevalence of typhoid fever in New York and Brooklyn during the present season has led Dr. Cyrus Edson of the local Board of Health to make an exhaustive examination as to the origin of the disease in as many cases as possible. He found that the disease, in nearly one-half the cases inquired into, was contracted in country resorts to which the victims had gone to find health.

The Week.

There is nothing especially the matter with the weather or the world this week, so we will give stated topics a holiday and rise modestly to speak of ourselves.

Readers have doubtless noticed that by a recent arrangement the subscribers of the RURAL PRESS and of the California Patron have been joined in fact as they have always been in sentiment, and in industrial belief and purpose. This enlarges the parish and clientage of the RURAL somewhat and will enable us to make the journal better and more valuable to every reader because of the greater resources of experience and co-operative interest and zeal which we have always been fortunate in securing from our readers.

We celebrate the event by announcing that those who pay in advance will find the subscription price of \$3 covering a longer period than ever before, thus practically reducing the price considerably to those who aid us by prompt advance payments without changing the

rate to those who do not find it convenient to do so. Of course such advance payment gives us advantage of working capital and saves trouble of collecting, which we recognize by extending the term as an equivalent for the favor on our part.

We shall be glad to have our new arrangement mentioned to all who can be interested or benefited by the work of the RURAL. We want to retain all old friends and patrons on the terms which suit best their convenience and to win many more.

With this cordial assurance we propose to advance with the work of making the RURAL PRESS the worthy exponent of the grand agriculture of California, as in the past its friends have kindly called it.

Animal Interests at Sacramento.

The Legislature is to consider several propositions relating to our animal industry, and we are glad of it. Senator Boggs has introduced a bill providing for the appointment of a State Veterinary Surgeon, and fixing his compensation. As we have frequently stated in the RURAL, this is a proposition to provide an officer whose services are in crying demand in this State. We have almost weekly appeals from different parts of the State calling for a visit from a State officer who can tell the people authoritatively what disease is affecting their stock.

As we have shown, there is now no way to meet such a case except through action of County Supervisors, which is a slow way at best. A dangerous disease might spread through a community while such action was pending. Then the supervisors are always at a loss to know whom to employ and run the risk of getting a low quack at a high price. We believe almost every State in the Union and many of the Territories have State Veterinarians, while California has done nothing hitherto for the health of its live-stock and to save the immense annual losses to stock-growers.

The bill introduced by Senator Boggs provides for the appointment of a competent veterinary graduate, who shall act in conjunction with the State Board of Agriculture and the Agricultural Experiment Station in investigating and advice on veterinary subjects, shall proceed at once to regions of suspected contagious disease, shall make continuous studies and investigations on such matters and shall publish an annual report for the information of the public. He shall also give instruction in the College of Agriculture of the State University. Senator Boggs, both as a leading agriculturist and director of the State Board of Agriculture, knows well the importance of the measure proposed, and will, we trust, receive the aid of all legislators toward its speedy enactment.

Another measure of which we learn by telegraph to the city dailies, and to which we shall give further investigation and comment, is one by Assemblyman Black of San Francisco. It authorizes the Governor to appoint a State Dairy Commissioner at \$3000 a year, with a clerk at \$1200. He is to have free access to all milk factories and dairies, and may appoint chemists and others to assist him in his duties. It will be his business to enforce the Act which makes it a misdemeanor to sell unwholesome milk or anything made from it; to crowd cows into unhealthy places; to water milk or mix with it any deleterious substance, or to sell such milk to cheese-factories. All dealers in milk are required to label the cans in which it is sold, and making condensed milk from any but pure milk is made a misdemeanor. Milk dealers are required to register with the Commissioner and carry on their business according to the law. The standard test which must be used by the Commissioner in determining the quality of milk is as follows:

Specific gravity.....	1.03
Ash.....	0.70
Solids, not fat.....	9.00
Fat.....	2.50
Total solids.....	11.50
Water.....	88.50

All milk below this test is declared by the Act adulterated, and all milk produced by feeding cattle on distillery slops is also declared impure. The bill was referred to the Committee on Agriculture.

THE Abbott peach orchard, nine miles from Marysville, contains 425 acres.

A Cause of Regret.

Every good citizen must sincerely regret that all around the horizon there is not a visible indication on the part of the leading politicians in both parties to prosecute an inquiry into the alleged bribery and corruption of the last Presidential election. An investigation was commenced by the Grand Jury in Indiana, but it had hardly got under way when it announced an adjournment to enable the judge to hold court elsewhere. Then came the news that the United States District Attorney, after having commenced the prosecution, had suddenly resigned. So far there is no prospect of an investigation in Congress. It is claimed that the session will not be long enough. It is true a bill has been introduced providing for the disfranchisement of both bribe-takers and bribe-givers, but making no effort to detect and punish recent corruption and bribery. And it is really a serious question, whether the bill for disfranchising both the giver and taker of bribes does not defeat itself by making it impossible to get good legal evidence on which to base a conviction. It has always been difficult to prove bribery as the law now stands, and when both the giver and taker are incriminated, it would seem that the only avenue for obtaining information was closed. At least this is the way this measure appears to us. We leave it to the lawyers to decide.

But another cause of sad regret, growing out of the recent Presidential election, is that the eminent men who have been charged with being directly responsible for the making and using of a corruption fund seem to be in no haste to demand an investigation. Mr. Dudley, whose letter directed the division of "floaters in blocks of five," has shown no inclination to visit Indiana and demand a trial. Mr. John Wanamaker, who is charged with having made a large contribution for the express purpose of buying votes, has called for no inquiry into the facts. And yet Mr. Wanamaker is said to be a prominent aspirant for a Cabinet position. Neither have Senator Quay of the Republican National Committee, nor Mr. Brice or any of his associates on the Democratic National Committee, made any move toward an investigation, and yet both of these committees are under grave suspicion of having used funds intrusted to them for other than legitimate expenses.

Another matter of serious regret is the almost absolute silence of the political press regarding these charges. So far as our observation goes, it is only the Grange papers and the religious press that has agitated for an investigation. This looks bad. It has long become a presumption of law that silence under serious charges was presumptive of guilt. We refer to this matter in the interest of good government, and take occasion here to say that we desire to believe that all these circumstances are capable of an innocent interpretation, but in the absence of such interpretation they certainly have a suspicious look.

If JUDGE COOLEY and Mr. Morrison are at all worthy of credence, and what they say of the violations of the Interstate Law at Chicago is true, the failure of the law to accomplish what it was created for is proved. The commissioners confess that they have been employing their valuable time hitherto in setting aside issues and trifling questions, while the railway managers have been settling the important questions in their own way by mutual agreement, and without any regard for the law at all. The law should be promptly amended at the points where experience shows that it lacks power, and means found to enforce its provisions strictly. Vigilance is the price of liberty, and the farmers, Grangers and producers who have accomplished so much legislation after 15 years of hard work, should see to it that their work is not undone by these proud and arrogant railway kings.

FRUIT-UNION ELECTION.—Since the meeting of the stockholders of the Fruit Union, which is reported on another page, the new Board of Directors have held a meeting in Sacramento. There were present Directors Platt, Gregory, Treat, Weinstock, Blowers, Buok, Backingham, Anderson and Runyon. P. E. Platt was chosen president; L. W. Buok, vice-president; H. A. Fairbank, secretary; D. O. Mills bank, treasurer. These are all re-elections. L. W. Buok was also re-elected manager of the Union for the coming year.

The Mysterious Vine Disease.

We print on another page of this issue a letter by Hon. J. de Barth Shorb to the supervisors of Los Angeles county, inviting their co-operation in promoting studies of the vine trouble which is working such havoc in that county. Mr. Shorb's statements will be read with interest.

There is some question as to how far this trouble extends throughout the State, and some have risen in wrath to repel what they thought to be charges against their regions. This is natural enough, and the only way to ascertain the real extent of the trouble is to make close and systematic inquiry. This will bring to light notes on the occurrence of the most obvious symptoms, though, of course, it will require expert examination afterward to determine whether these symptoms are all indications of the same disease.

Executive Officer Wheeler of the Viticultural Commission is now sending out circulars of inquiry to all vine-growers of the State, the object being to ascertain as far as possible all localities and counties in which the mysterious vine disease of Southern California has made its appearance. The presence of the evil is most commonly characterized by a general turning yellow and dropping off of the leaves of the vines in the spring after they have acquired a growth of from one to three feet. In this manner groups of vines, or vines in spots, throughout the vineyard succumb without apparent cause, the root continuing fresh and sappy after the upper part is dead. Other vines dying from the same cause may appear healthy and vigorous until the berries are well formed or half grown, and the canes then gradually wither back and die from the tops or ends. The roots may continue living until the following spring, and even longer, but they finally die and rot. Many have likened the vines dying from this cause to those suffering from the attacks of phylloxera. In fact the stunted growth of the vines is in both cases strikingly similar at some stages of their development. And to those familiar with the attacks of the phylloxera this knowledge may be of assistance in finding the new disease. Growers are asked to carefully examine their vines, and if any suspicious appearing ones are found, to forward specimen canes to viticultural headquarters for microscopical examination.

Improved Fruit Cans.

Fruit-shippers will bear with interest that the railways have decided to do something to prepare their cars for the fruit traffic. Certainly with the lion's share of the receipts from the business which the transportation companies get, according to the report of the Fruit Union in last week's RURAL, they can afford to do something in the way of better cars and more of them. The Los Angeles Herald says:

Car-Repairer Donnat, of the Southern Pacific's establishment here, has a big job on his hands, as all of the fruit cars are to be arranged after the latest style. When the cars were first constructed they were made with a ventilating shutter inside, and this was opened or shut, according to the temperature of the country through which the car was to pass. A later model, however, had the shutters on the outside, so that they could be arranged by the trainmen during transit, and by this means the different temperatures through which a car from the coast to the East passes were regulated. The device has proved so good that it has been decided to fix all the cars in that manner, and a first installment of 50 has been sent in to Mr. Donnat.

This is one step toward greater success in fruit-shipping and therefore toward vastly increased shipments. Other necessary steps are lower rates of freight, better time and no delays, less commission to agents, more direct trade between producer and consumer and wider distribution to Eastern points. Fixing over the cars may seem a small move toward these ends, but it is a move nevertheless. Nothing is so hopeless as doing nothing.

GRAPE-GROWERS' CONVENTION.—The annual convention under the auspices of the State Board of Viticulture will be held in March in the present Viticultural hall.

THE new horticultural bill to which we alluded last week is rushing at Sacramento. It has already passed the Assembly.

THERE are now 57 feet of water in the Sweetwater dam at San Diego.

Mental Company.

It has become an adage that a man is known by the company he keeps. Why may not the character of men and women be equally well indicated by the kind of books, papers and magazines they prefer to read? Surely their habitual selections mark the quality of their taste and the shape and color of their moral nature. Few people seem aware how much bad company is kept in this way. Drunken tramps are driven from the door for fear they may soil the carpets and furniture, but brutal thoughts and lascivious sentiments in the garb of polite literature are invited in to spend the evening.

Now, if the good people who denounce impure books in the Sunday-school would never buy nor read them, it is almost certain that the most of them would soon die. The average publisher prints that which sells the best, and that there is a great demand for bawdy literature is evidenced by the amount thrown upon the market. Is it safe to conclude that there is something wrong in the moral make-up of people who keep impure books in their libraries? This is keeping bad company, and can one handle soot and not be defiled? It would seem that a clean mind would shun a dirty book as quickly as a dirty loafer in the street.

Then such books are often the finger-boards that point the way to ruin. The men of the world understand this. When they see a woman, for example, devouring impure books, they know where to place her. She is known by the company she loves to keep. Bad men often seek to lead an unsuspecting woman astray by loaning her bad books dressed and perfumed in the richest diction and brilliant imagery. And surely parents who allow vicious, obscene and ribald books to come into the family need not feel strange at the low and vulgar tastes and habits of their children. In short let us remember the text, that "Evil communications corrupt good manners."

Literary Congressmen.

A Washington correspondent says that Senator Thomas M. Norwood has taken out a copyright for his coming novel entitled "Plutocracy or American White Slavery," that will make a sensation. It gives a vivid picture of Washington life, its dreary acres of politics and the fenced-in fields of barbed wire, called society. One is enabled to catch a glimpse of the way great syndicates meet and form corporations and trusts, or in short forge the manacles of slavery upon the people. It is written in the interest of the toilers and wage-workers of America. Uncle Tom's Cabin did more good for the freedom of the black slave than all the sermons, essays and orations of the day, and we hope this or some other work will soon be produced that will do as much for the white slaves of this land—a work popularized by weaving into a warp of romance a startling lesson of warning against the most dangerous shape of anarchism that is gaining ascendancy in this land in the shape of a despotic plutocracy.

Norwood's venture reminds us that the roll of litterateurs in Congress is not very imposing. Senator Ingalls was at one time editor of the *Kansas Magazine* and a fertile contributor to the periodical press. Senator Blair wrote a history of the temperance movement and Senator Daniel of Virginia has enriched forensic literature by his works entitled "Daniel on Attachments" and "Daniel on Negotiable Instruments." In the House, the first on the list is Henry Cabot Lodge, who wrote in a very felicitous style his lives of "Alexander Hamilton," "Daniel Webster" and "George Washington." Sunset Cox with his "Buckeye Abroad," "Search for Winter Sunbeams," "Why We Laugh," and "Divisions of a Diplomat." And then comes Lloyd Bryce, of New York, the author of a novel, "In Paradise," Martin Foran of Ohio with a novel entitled "The Toilers," Alvin P. Hovey of Indiana with his boosier rhymes; John D. Long, with his translation of Virgil, and Edward Burnett of Massachusetts, whose claim to literary fame lies in the fact that he married the only child of James Russell Lowell.

Survival of the Best.

We had a long talk the other day with a very intelligent friend who thinks the world is rapidly going to the bad. He said if he had the management of affairs he would throw it into liquidation. The sooner it was knocked to pieces by a comet or drowned by upsetting the ocean, the better. Civilization is a failure and the best thing we can do is to burn the patent office and courthouse and take to the woods.

We can have no sympathy for this sort of pessimism, and are inclined to look upon it as owing to bad digestion, or that morbid feeling that comes from always having drawn blank prizes in the lottery of life. Those who think these are the worst days that have ever been deceive themselves from

A Sandwich Island Sugar-Cane Borer.

[By DR. C. V. RILEY, U. S. Entomologist.]

In August last we received from Mr. E. J. Wickson of Berkeley, Cal., a piece of sugar-cane, brought from the Sandwich islands, infested by borers, which were reported to do considerable damage. The specimens were sent to Prof. Wickson by Prof. LeRoy D. Brown, president of the State University of Nevada, who collected them in June, while visiting the Sandwich islands. Prof. Brown's attention was called to the subject by his Majesty, King Kalakaua, who requested him to bring the specimens to this country for study. The cane received at the Department proved to be infested by the larvæ of a large snout-beetle of the genus *Sphenophorus*, several species of which are known to bore into the stalks and roots of corn in this country. Our Annual Report for 1881-2, page 138 ff, con-

FIG. 1.—*SPHENOPHORUS OBSCURUS*. a, adult, enlarged; b, head of adult, from side, still more enlarged; c, full-grown larva, from side; d, pupa, ventral view, both enlarged (original).

FIG. 2.—Sections of sugar-cane showing work of *Sphenophorus obscurus*: a, larva; b, pupa, in situ; c, probably points of oviposition, somewhat reduced (original).

THE SANDWICH ISLAND CANE-BORER AND ITS WORK.

taking too narrow a view of things. They are like travelers who come home from the Old World, after visiting for a season grand galleries of art, historic cathedrals, triumphal arches, parliaments and courts, not caring to see the poor and hungry, the diseased and wretched, jails crowded with the battered and low-browed victims of vice and crime. And what is the consequence? Why, the history of the past comes to us clad in the most showy drapery of art, science, music and literature, instead of rags, ignorance, superstition and bestiality. Now it will cure such people to take a journey into ancient history. If that fails to remove their sour pessimism they had better call in the doctor, a real heroic one, or at least fast a few days. In the dawn of the new year, it would be well for us all more particularly to study the working of that beautiful law that moves along the lines of Infinite Thought, that tends to the survival of the fittest and best.

tains an account of the habits and transformations of the species which more particularly affect corn in the United States, and which are known as Corn Bill-bugs.

The only previous notice of sugar-cane borers in the Hawaiian islands with which we are familiar is from the *Hawaiian Planter's Monthly* for July, 1883, but this refers to the Lepidopterous borer *Chilo saccharalis*, a species which is widely distributed wherever sugar-cane is grown. Another species of *Sphenophorus* affects sugar-cane in the West Indies and South America, and was described by the Rev. Lansdown Guilding in his prize essay on "Insects Affecting Sugar-cane" (*Trans. Soc. of Arts*, Vol. XLVI, 1828) as *S. sacchari*, while the well-known *Rynchophorus palmarum* is also mentioned as injuring the cane in the same locality.

We succeeded later in rearing the adult beetle, but failing, with the literature at our command, to recognize it among the vast number of described species, we sent a specimen to Dr. David Sharp of England, who kindly gave us the following references quoted from the "Memoirs on the Coleoptera of the Hawaiian

Islands," by T. Blackburn and D. Sharp, a work which we could not consult:

Genus CXXVI. *Sphenophorus* Mun. Cat. VIII, p. 2646, 360. *Calandra obscura*, Boisd. Voy. Astr. II, p. 448. Fairm. Rev. Zool., 1849, p. 474.

Ins. Oahu. Introduced. Tahiti. New Ireland. In the stems of banana, on the mountains. This insect is apparently omitted in the Munich Catalogue of Coleoptera.

Dr. Sharp further wrote that his original identification of the species was made from Boisdual's deficient description and from Fairmaire's paper, and from a specimen so named by Jekel, in the British Museum collection. After receiving our specimen (which was a male, while the Jekel specimen was a female), Dr. Sharp found both sexes of the same species among some specimens recently sent him from Tahiti by Mr. J. J. Walker, who found them under the bark of a species of *Musa* (banana).

The species belongs to Schoenherr's and Lacordaire's genus *Sphenophorus*, and should be included in the group having the third tarsal joint large and pubescent beneath. The disintegration of this large genus, already indicated by Schoenherr and more strongly advocated by Lacordaire, has been accomplished in more recent times by Dr. Horn, Dr. Le Conte, Mr. Pascoe, and especially by Mr. Chevrolat. The work of the latter author (published in the *Ann. de la Soc. Ent. de France*, 1882 and 1885, partly after Chevrolat's death, the whole being evidently incomplete and unfinished) is of such unsatisfactory and unsystematic character that the generic determination of a single species is next to impossible without having access to the types.

Although we cannot place our species in any of the numerous genera erected by Chevrolat at the expense of the old genus *Sphenophorus*, it seems best to leave the generic determination to a future monograph of this group, and we prefer to leave the species in that genus under which it was originally described. [In order to facilitate the recognition of this species, which has been described in publications not readily accessible, Prof. Riley appends a description of the imago by Mr. Schwarz, which is only intelligible to entomologists.]

The structure of the head, mouth parts, and the transverse folds of the segments of the larva (Fig. 1c) agrees with that of *Sphenophorus robustus*, described and figured by us in our Annual Report for 1881-82 (p. 141-142, pl. VIII, Fig. 2a), but is distinguished at once by the rather sudden enlargement of abdominal segments 4, 5, and 6, the fifth being especially large and bulging. In this respect it resembles the larva of *Sphenophorus litatus* as described and figured by Ch. Coquerel (*Ann. Soc. Ent. France*, 1849, p. 455-456, Plate VIII, Fig. 1112), but in the latter species the enlargement of the abdominal segments is said to be gradual. The thoracic and anterior abdominal spiracles are as in *S. robustus*; the sixth and seventh pairs are, however, more dorsally placed, and the eighth pair is entirely dorsal, somewhat obliquely placed and as large as the prothoracic spiracles. The last segment is broadly truncate at middle of apex, the truncature being accompanied each side by a shorter oblique truncature. The four angles thus formed are marked each by two long setæ, one placed above the other.

The pupa (Fig. 1d), while resembling in general shape that of *S. robustus*, is distinguished by the stronger armature of the head. The two setigerous frontal tubercles are very prominent and surrounded anteriorly by a crescent-shaped ridge, in front of which is a small setigerous tubercle. The tubercles near the base of the beak are also more prominent. Near the hind angles of the thorax are each side two rather large blunt tubercles, and another obliquely placed pair of smaller tubercles on each side of the disc toward the anterior angles; two small tubercles are also at the middle of the anterior margin. The armature of the pygidium (seventh dorsal abdominal segment) consists of a single row of rather large setigerous tubercles, and the last ventral segment is truncated at tip, terminating each side into a bisetose cone-like process. The prothoracic spiracles are very large and conspicuous.

Judging from the specimens of sugar-cane received from Mr. Wickson, the damage caused by the beetle must be very great, since the stalks were completely riddled with the galleries of the larvæ, several of the latter being in a piece of cane about eight inches long. The galleries (Fig. 2) are wide when compared with the diameter of the larva, and not long, mostly running longitudinally, but some also across the cane. They are filled with macerated fiber which the larva apparently pushes behind itself. When ready to pupate, the larva somewhat enlarges the channel and forms a coarse cocoon of fiber in which the transformation takes place. The outside of the infested cane (Fig. 2) shows several small round holes which probably represent the place where the egg has been inserted by the parent beetle, and several large, oblong openings, which are probably the exit-holes of the emerging beetle.

As we received no other notes on the natural history of the species, we can say nothing as to time and mode of oviposition, the duration of the larval state, hibernation, etc. The only other information is that contained in the quotation from Blackburn and Sharp's Memoir on the Hawaiian Coleoptera, viz.: That the species attacks also banana stems, and further that it has been introduced (no doubt with sugar-cane or banana plants) from other islands in the Pacific ocean.

In the absence of any more definite informa-

*We are under obligation to Dr. Riley for the opportunity to reproduce the account of this interesting insect which affects our island neighbors, from "Insect Life," the official publication of the Division of Entomology, U. S. Department of Agriculture.

tion, it is difficult to suggest any preventives or remedies for this pest. Since the larva apparently works in the lower part of the canes and probably also in the roots, many larvae will no doubt remain in those parts of the plants after the rest of the cane has been cut and carried off to the sugar-houses. The remaining stubble should be carefully examined and all infested canes destroyed. The same should be done with all diseased or dying banana plants.

Since neither sugar-cane nor bananas are cultivated in California, there is little danger that this Sphenophorus will become acclimated in that State from the Sandwich islands.

FRUIT MARKETING.

Annual Meeting of the Fruit Union.

As stated in last week's *RURAL*, the annual meeting of the California Fruit Union was held in the new Viticultural headquarters in Platt's hall, beginning on Wednesday, Jan. 16th. P. E. Platt presided; H. A. Fairbank and B. C. Brown, secretaries.

Secretary Fairbank read his annual report, which was published in full in last week's *RURAL PRESS*.

A. Block of Santa Clara moved that the report be received. There was considerable discussion on the printing of the report, and it was finally decided to receive the report and have 1000 copies of it printed in pamphlet form.

The order of business was next discussed, and it was decided to follow out last year's program with the exception that discussion on matters of interest should precede the election of officers.

Senator William Johnston of Richland stated that there were several Eastern fruit dealers present who might be able to give the Union advice on various matters.

Addressess by Eastern Dealers.

Mr. Johnston then named his men, and E. Snow of Boston addressed the meeting. He said that the most remote points required the best fruit, and if good fruit were placed on the market in large quantities in Boston there would be a large demand for it. The judgment of shippers here, he said, should direct them a good deal, and if they found certain lines of fruit in great demand at a place, those are the kinds to ship.

Frank S. Thomas of New York and Chicago said that his firm was the first to take hold of the auction plan of disposing of California fruit in Chicago, and that they had made such a success of it that now they can handle from 400 to 500 carloads a season. The periodical sales gave the shipper an idea as to what to send, where to sell and what to expect in return.

E. L. Goodsell of New York said that, in his opinion, the sale of California fruit in the East was but in its infancy. He had at one time expressed himself to the effect that California could not grow sufficient fruit to supply the United States, but he wished to retract the statement.

Mr. Fry of Chicago was then asked to make a few remarks, but he excused himself.

Frank Ripley of Boston, another fruit dealer, was asked to speak. He took exception in a smiling manner to the several sly allusions to "cultured Boston" made by each of the previous speakers, and argued that if it was culture that had produced such good results from marketing California fruit in Boston, Californians should pray devoutly for New York and other places to be blessed with a little culture. The prospects for California fruit in Boston, he said, were bright, and the peaches of this State can compare favorably with those of Delaware.

There was a long and heated discussion as to whether the directors for the ensuing year should be named in open meeting or nominated by a committee. The subject was finally postponed until later in the session.

Evening Session.

Mr. Fry of Chicago was introduced. He is of the opinion that California fruits will not be sold any other way than by auction in the East. Even now many brokers in Chicago are figuring on California fruits for the next season. The old feeling that one purchaser thought another was getting better prices is entirely removed by the auction system. In answer to a question of Mr. Blowers, he said he believed the passenger-train service was not so beneficial as the special trains. He then recounted the various ways of railroad officials in keeping the fruits late on an average of 24 hours. This delay, when a car is standing still under a hot sun, will do more damage than two days' running. The auction system gave the people of California the advantage of quick sales, and, as a consequence, better prices by selling when the fruit is so much fresher.

Senator Johnston offered a resolution approving of the action of the directors of the California Fruit Union in adopting the auction system to sell its fruits in Eastern markets, believing that it was the feeling of the Union that the system was what they desired.

On the motion of A. T. Hatch, a vote of thanks was tendered to Director Weinstock for his services in connection with the establishment of auction sales of fruit in the East. The meeting resolved to perpetuate the vote by means of a suitable testimonial.

The resolutions were adopted.

A communication from the winemakers and vineyardists was read by the Chair, asking that a committee of the Fruit Union be appointed

to confer with them on the question of taxation of wines. The request was granted and the following named committee was appointed: Wm. Johnston, G. W. Hancock, W. Barter, W. M. Williams, S. Runyon, F. C. de Long, S. J. Stabler and C. W. Reed.

A letter from E. W. Woolsey & Son of Sonoma county, asking to be allowed to co-operate with the Fruit Union, was referred to the Board of Directors.

A Committee on Freight, as follows, was appointed: Hatch, Gregory, Blowers, Anderson and Flickinger.

The balance of the evening session was devoted to a running discussion between various stockholders as to whether the affairs of the Union had been well or ill managed during the past season.

Thursday Morning's Session

The first order was the discussion of resolutions introduced by Drury Melone, the gist of which were that the sense of the convention should be that Porter Bros. should not be retained as Chicago agents and that a large shipper on his own account was not the proper person for a general manager.

These resolutions precipitated again the general subject of the management of the Union for the last year. Agreement was finally reached by the passage of the following, which looks toward dispensing with agents wherever possible:

Resolved, That the Board of Directors be requested to deal directly with the auctioneers whenever possible.

That the "Superintendent of the Fruit-Growers' Union should not be a shipper on his individual account," was the occasion for considerable discussion, and was referred to the Board of Directors.

A series of resolutions introduced by Mr. Buckingham, instructing the board to issue monthly reports of the condition of Eastern fruit markets, was referred to the Board of Directors.

The next order of business was the election of nine directors. The names of L. W. Buck, John Reed, Jr., S. Runyon, H. Weinstock, J. Z. Anderson, W. H. Atkinson, T. H. Buckingham, E. J. Gregory, P. E. Platt, R. B. Blowers, Webster Treat, A. T. Hatch, O. W. Reed, B. T. McKevitt, E. R. Thurber, S. J. Stabler and John Markley were placed in nomination.

Each stockholder was entitled to one vote for every share of stock, and it took considerable explanation before the correct method of casting ballots was understood.

Mr. Motheral asked if the cumulative plan of voting would be allowed; in other words, if a director having 50 shares, which would give him 50 votes for each of the nine directors, or 450 for the whole, might cast the 450 for one candidate.

The chairman ruled that the cumulative plan would be permitted.

Frank H. Buck and Senator William Johnston were appointed tellers, and the members deposited their ballots as the roll was called.

The balloting did not conclude until 6:30 P. M. The canvassing of the votes was then proceeded with.

At 10 o'clock the canvass showed that five of the old management interest and four of the opposition had been elected, and the former were jubilant, deeming the result a vindication and indorsement of the present administration.

The result of the canvass was as follows: Buck of Vacaville (re-elected), 13,054 votes; Treat of Davisville (re-elected), 7768; Anderson of San Jose (re-elected), 9095; Gregory of Sacramento (re-elected), 8535; Platt of Sacramento (re-elected), 8695; Blowers of Woodland, 9727; Buckingham of Vacaville, 8427; Runyon of Sacramento river, 8882; Weinstock of Sacramento (re-elected), 11,397.

The foregoing nine were, therefore, elected directors. Other votes were as follows: Reed, 6633; Markley, 2382; Hatch, 3397; Stabler, 394; McKevitt, 195; Reith, Jr., 632.

The whole number of shares of stock represented was 11,043.

The London Exhibit

The following by Mr. Gregory was adopted:

Resolved, That the California Fruit Union, representing the fruit-growing and shipping interests of California, express hearty indorsement of the proposed London exhibit; to that end, our representatives in the California State Legislature are respectfully urged to use all honorable means to create and maintain said exhibit in a manner commensurate with the magnitude and importance of the interests represented.

Mr. Buck gave notice that at the next annual meeting he would move to amend the constitution by striking out that clause providing for refunding to members, when they surrender their stock, the amount they shall have paid on their stock.

President Platt gave notice that the Board of Directors would meet at Sacramento on Monday, Jan. 21st. The members of the old board were invited to be present.

The meeting adjourned sine die.

The Dried-Fruit Association.

At the meeting of the California Dried-Fruit Association in the rooms of the State Board of Horticulture, President Hatch occupied the chair and an informal reading of the first annual report of the general manager, General John T. Cutting, was given and followed by a general discussion.

By General Cutting's report it was shown

that he had visited many of the Eastern cities last fall, and everywhere the organization was looked upon with favor.

The opinions expressed as to the advisability of selling dried fruit at auction were about evenly divided, some of the merchants claiming it was the only true way of doing the business, and others that it would unsettle values and throw the whole dried-fruit interest into a chaotic state.

After a thorough investigation of the subject, and in consequence of a lot of California dried fruit being sold at auction in Chicago while he was there, which resulted very unsatisfactorily, he was forced to recommend to the trustees the abandonment of the auction plan, at least for the present.

The manager found Eastern markets, particularly Chicago, oversupplied with California dried fruit, of which the merchants did not appear to know the relative value, but the New York and Philadelphia markets were in better condition.

Dividing the Territory.

General Cutting stated that he had appointed J. K. Armsby & Co. the society's agents at Chicago and Messrs. Chapman and Meehan at New York. The former would embrace all territory east of Denver, Colo., and west of Pittsburg, Pa., and the latter all territory east of Pittsburg, including Philadelphia and Boston. This may seem a large territory for two agencies to operate, but it was deemed advisable to concentrate the business under the control of as few houses as possible, in order to avoid competition.

The first shipment made by the association was on Nov. 10th, and the last Dec. 13th. Between those dates the total shipment aggregates as follows:

	Pounds.
Pitted prunes.....	28,678
Dried grapes.....	92,081
Peeled peaches.....	3,125
Unpeeled peaches.....	97,249
Apples.....	14,157
Prunes, all varieties.....	229,616
Silver prunes.....	21,761
Plums.....	40,977
Pitted plums.....	22,131
Nectarines.....	18,882
Pears.....	549
Raisins.....	35,339
Almonds.....	19,749
Total.....	690,257

The report recommended that greater care be taken in the grading of the fruits, as at present, with few exceptions, California dried fruit is sold in this country ungraded, and therefore brings a lower price than it otherwise would.

In his report General Cutting declared that the dried-fruit market throughout the entire country was never known to be duller than at present or for the past 30 days. When we consider that choice New York State evaporated apples are selling at 4½¢, dried blackberries at 4½¢, choice half Tennessee peaches at 3½¢, and Turkish prunes at 3½¢, in Eastern markets, it is surprising that California products sell as well as they do.

California Fruit Appreciated.

"Does it not demonstrate the fact that California dried fruit is appreciated? In our opinion, if the fruit is properly prepared and the business handled intelligently there is a market at fair prices for all that it is possible to produce."

"The total amount in pounds of dried fruit, nuts and raisins, sent outward over the Southern Pacific and Canadian Pacific railroads during the year 1888 is as follows:

	Pounds.
Dried fruit.....	20,325,230
Nuts.....	924,616
Raisins.....	16,094,349
Total.....	37,253,380

"The Atlantic & Pacific Railway Company has failed to furnish us with the amount forwarded by their line, but from outside sources we learn that the shipments over their lines were about 4,000,000 pounds. If this estimate is correct it makes a grand total for the year 1888 of 41,253,380 pounds."

By direction of the Board of Trustees, the General Manager had engaged the services of W. H. Mantz of San Jose for two months to act for the association in receiving and shipping fruit from that point. He performed his duties acceptably.

Subsequent Proceedings.

The reports of the general manager and secretary having been received, a resolution was adopted tendering the thanks of the association to the trustees and officers for their efforts in behalf of the association, and particularly to General Manager J. T. Cutting, for his indefatigable efforts.

Mr. Goodsell of New York spoke at considerable length concerning the industry in its relation to the Eastern market. He explained the benefits of the auction system, and urged upon the association the advisability of making experiments in this direction. California growers need very much to understand the necessity of properly grading and packing fruit, and until then sales in the East will be irregular, and, to some extent, unsatisfactory. Many questions were put to Mr. Goodsell in relation to the Eastern market, and many important and interesting facts were developed.

Upon reassembling at 1 o'clock, F. L. Ripley of the firm of Blake & Ripley, Boston, said he thought it very important that California growers should learn to put up goods in standard

manner. Until it is possible for them to be sold in the East from sample, little success will attend the auction system. A. G. Freeman and F. G. Thomas of Chicago also spoke regarding the best methods of developing the Eastern trade.

E. B. Blowers of Woodland submitted a resolution, which was accepted as the sense of the meeting, indorsing the plan of an exhibition in London, and advising that application be made to the Legislature for a grant of \$250,000 to insure its success.

On motion of S. J. Stabler of Yuba City, Dr. Handy, A. G. Freeman and J. H. Flickinger were appointed a committee to consult and formulate a plan of packing and grading under the auspices of the association that may answer the purpose of a standard brand.

J. H. Flickinger, S. J. Stabler, I. A. Wilcox, T. H. Buckingham and H. Weinstock were appointed a committee to co-operate with similar committees of other societies on the matter of taxation of vines.

The following gentlemen were elected to serve on the Board of Directors for the ensuing term: A. T. Hatch, R. B. Blowers, W. W. Motheral, H. Weinstock, J. H. Flickinger, J. T. Cutting, I. Jacobs, A. G. Freeman and O. Stevens.

It having been determined to inaugurate a series of meetings throughout the fruit sections of the State for the purpose of common action on the part of growers in disposing of their fruit, the association adjourned.

The Raisin-Makers.

A convention of the raisin-growers of the State met Jan. 19th in the rooms of the State Horticultural Commission, in answer to a call issued to growers, packers and dealers.

The meeting was called to order by B. N. Rowley, who expressed regret that so few had thought fit to attend. He said that the raisins of California were to a very considerable extent taking the place of those imported from Spain, and that, realizing the necessity and importance of systematic and intelligent action to better enable the trade to meet the foreign competition, he thought it wise that some agreement should be arrived at regarding improvement of grades, style of packing and quality of goods.

W. W. Motheral of Tulare thought the grounds of discussion had been well covered by the Dried Fruit Association, and moved that the matter of packing and grading be referred to the directors of that body.

It was also decided to refer the consideration of substituting an American brand for a Spanish emblem to the Dried Fruit Association. The meeting indorsed the plan of a London exhibition and urged that the legislative grant of \$250,000 be made for the purpose of making it a success.

Messrs. Freeman and Goodsell of New York having explained the modes of selling in the East, the convention adjourned sine die.

Squirrel Meeting.

EDITORS PRESS:—A meeting of the farmers and orchardists of Ignacio valley will be held at the Oak Grove schoolhouse on Monday, Jan. 28, 1889, at 1 o'clock P. M., to consider the best methods of ridding the valley of the ground-squirrel pest, and to secure uniformity of action among the citizens to that end. Please do not allow anything to prevent your attending, and bring all your immediate neighbors with you. Also, please bring copies of all valuable recipes for mixing squirrel-poison, and other methods of exterminating the vermin, so that the information may be imparted to all present.

D. F. MAJOR, A. L. BANCROFT, E. RANDALL, C. S. LOUSE, H. P. PENNIMAN, W. W. WHITMAN.

Ignacio Valley, Walnut Creek, Jan. 19th.

THE AGE OF TREES.—Where the zone test can be applied, we know that the age imputed to the tree will not err in the way of excess. A clearly marked ring infallibly denotes a season's growth. Assuming an unfavorable season to have resulted in an unusually thin or perhaps an indistinguishable layer, one year's credit will remain unentered in the tree's automatic ledger. On this basis of computation the following ages have been strictly verified in Germany: In that country, as in Finland and Sweden, the pine and fir have attained to from 500 to 700 years. The greatest ascertained age of the larch (in Bavaria) is 274 years, while the silver fir has reached 248. The oldest known specimen of the holm oak (near Aachenburg) numbered 410 years; while in all the common oaks about 320 years old the heart was beginning to decay. The maximum ages of other German trees—as found by counting the rings—are as follows: Red beech, 245; ash, 170; elm, 136; birch, 209; aspen, 210; and alder, 145 years. The lime, beloved of the Fatherland, generally evades this test. Probably one of the longest standing of all, it is seldom found in a sound condition at an advanced age.

AGRICULTURAL DIRECTORS APPOINTED.—Gov. Waterman has appointed the following directors of Agricultural District, No. 8, composed of Santa Clara and San Mateo counties: J. P. Sargent, vice Ed. Younger, term expired; Wm. Boots, vice S. N. Rucker, term expired; D. J. Murphy, vice Wm. Buckley, failed to qualify.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

EUCALYPTUS PLANTATIONS.—Livermore *Herald*, Jan. 17: Robert Smith has just planted a gum-tree grove of 500 trees on his ranch near Altamont. We hope to see a hundred of our hill farmers do the same this season. They have plenty of practically waste land on which the gum would grow with but little attention. In a few years, 500 trees would supply them with firewood. Moreover, such a grove greatly improves the appearance, and adds to the value of their property. Joseph Brown has such a grove on very light hill-land on his ranch five miles northeast of Livermore, which more than furnishes him with firewood, and has for years. He will soon have plenty to sell to his neighbors, without diminishing the supply. In fact, when the trees are cut down they sprout from the root and grow with greater vigor than ever. A gum in good soil will make a cord of wood in ten years.

Butte.

A BOVINE OSTRICH.—Gridley *Herald*: C. E. Porter, of Central House, recently sold a cow to the Moore's station butcher. While dressing the animal for sale the purchaser found in her stomach 1½ pounds of shingle nails, a tablespoon and 16 inches of barbed wire.

Colusa.

IRRIGATION SURVEY.—Orland *News*: Civil Engineer Grunsky of Sacramento has begun the preliminary survey for canals and works of Kraft Irrigation district. It is proposed to take out water for the present at the junction of the hills with the creek on the north side of Stony creek, on the F. A. Graves place, seven miles northwest of Orland, and in that way secure water for the present season's irrigation. The permanent canal, however, will start from the Black Buttes, on B. N. Scribner's place, and follow the creek down to opposite where the temporary tapping of the creek is made, and then turn into Dry creek. The *News* is informed that parties are ready to take the bonds of this district as soon as they can be issued.

Fresno.

THE WHEAT OUTLOOK.—Expositor, Jan. 16: Capt. James Cottle of Riverdale says that during his long residence in Fresno county he has never seen such a large acreage sown to wheat, nor ever saw the crop look so well at this season. Exclusive of vineyards, he says the country between here and Elkhorn, a distance of 25 miles, is one field of deep green. He says there will be twice as much wheat harvested the coming season as has ever been cut during any preceding year. He places the area sowed to the cereal at 250,000 acres.

Los Angeles.

THE SUGAR BEET.—Pomona *Cor. Chronicle*, Jan. 19: At a mass meeting of the citizens of Pomona and land-owners of this valley this evening, to take steps toward accepting an offer to establish a beet-sugar factory here, providing that 5000 acres of sugar beets are planted hereabout, the attendance was so large that many could not gain admittance to the hall. It was found that an acreage much greater than that asked for will be planted, and the committee of Pomona citizens was instructed to enter into correspondence on the subject at once.

Modoc.

A TIDY STOCK-FARM.—Independent, Jan. 17: Last Friday we paid a visit to the ranch of J. Thad Jones, situated six miles south of Alturas, and found everything in apple-pie order. Mr. Jones has 2000 acres of land under a good, substantial fence. As his business is stock-raising, hay is his principal crop, and last season he put up 1500 tons of hay, and is now engaged in feeding it out to about 1000 head of cattle and quite a number of horses. Among his cattle are two thoroughbred Galloway bulls, also several Shorthorn Durhams, showing that he is endeavoring to raise good stock. Last spring he dehorned 300 head and is so well pleased with the result that he will follow up the work until he has not a horned animal left in his herd. Of horses he has two half-blood Clydesdales and one half-blood Norman stallion. At present he is weaning a number of colts, the progeny of these horses, and a finer lot of weanlings it is hard to find. Mr. J. says the colts from these horses and common-bred mares readily bring him \$100 a head at three years old. His dwelling, barns and other outhouses are models of comfort and convenience.

Placer.

WHAT FRUITS TO PLANT.—The Auburn *Republican* having asked horticulturists what fruits to plant for profit in a 20 acre orchard about Auburn, Penryn and Newcastle: E. B. Silva says plant 10 acres to pears and ten to prunes. E. Booth would set the whole 20 acres in either apricots, peaches or prunes. Jas. E. French said, two acres in table grapes, three in cherries and 15 in peaches. N. R. Peck, five acres in Bartlett pears and the rest in peaches. Wm. Barter and G. D. Kellogg said all in peaches. A. Moger, five acres in Bartlett pears and 15 in peaches. Two others advised a variety of pears, cherries and berries.

RIPE RASPBERRIES.—Record-Union, Jan. 21: There was picked yesterday from the fruit farm of W. R. Strong & Co., at Penryn, fine ripe raspberries in considerable quantity. There are on the vines at the present time ber-

ries in all stages of maturity, from half-grown to fully ripe, and the prospects are that ripe berries will be picked there all winter. The patch from which the berries were picked yesterday has yielded from \$800 to \$1000 per acre the past season. There has not been frost enough in that vicinity this winter to kill the new leaves on the raspberry bushes.

San Bernardino.

REDLANDS' FRUIT-GROWERS' ASSOCIATION.—Citrograph, Jan. 19: The stockholders of the Redlands Fruit-Growers' Association held a meeting Thursday afternoon at which the following gentlemen were elected directors for the first year: Charles R. Paine, F. P. Morrison, H. H. Sinclair, James S. Edwards, James B. Glover, George H. Crafts, C. T. Dean, I. L. Hewitt, and J. S. Hale. The By-Laws were adopted, and meeting then adjourned. At a meeting of the Board of Directors, C. R. Paine was elected President; H. H. Sinclair, Sec'y, and F. P. Morrison, Treas'r; all to hold office for one year.

FERTILIZERS.—Riverside *Press*, Jan. 19: In the matter of fertilizers J. E. Cutter, one of our most practical men, is in favor of the use of barnyard manure, because of its mechanical action on the soil, especially where there is an admixture of clay. L. F. Darling, who has a very fine young Naval grove on Arlington avenue, believes in using sheep-manure, as fresh as possible, and his trees are a thrifty testimonial to the correctness of his theory. H. J. Rudisill, an extended experimenter in citrus culture, believes we should use commercial fertilizers in connection with coarse manures, as the former will give quick results in fruit. He says fertilizers should be applied about twice a year, so as to furnish constant food for the voracious roots. D. W. McLeod, who has charge of the Riverside Land and Improvement Co.'s lands, is using sheep-manure almost exclusively. His experience with commercial fertilizers is not satisfactory. J. E. Cutter desires us to add that he has used the commercial fertilizers in connection with stable and sheep manure and obtained very satisfactory results. He says that sheep manure, when fresh, is one of the best fertilizers that can be used, but when old it is no better than so much punk, all the valuable elements having been washed out.

VINEYARD FIRE-SLED.—We saw a contrivance yesterday for use in vineyards, to dispose of prunings. It consists of a sled carrying a sheet-iron box, which is drawn by horses through the rows, the cuttings being cleaned up and thrown into the box as it goes. These are lighted and rapidly burnt. It is a queer-looking affair, as the horses pull it flaming along. Some say five, some say ten acres a day can be cleared of brush with this device, a team of horses and two men. It will probably cost about \$1 an acre to go over a vineyard in this way.

San Diego.

HONEY SHIPMENT.—San Diego *Sum*, Jan. 9: A. Wentzschler to-day shipped 14 tons of honey to San Francisco. The crop is very large and more than usual is being sent East. The price for extracted honey is from 4 to 5½ cents a pound; for the comb it is from 5 to 10 cents.

PROGRESS IN SAN JACINTO VALLEY.—Sun, Jan. 11: H. O. Ashenfelter of San Jacinto was in town to-day. He gives a most favorable statement of progress in the fertile back country. "Last year the farmers of San Jacinto valley had only 16,000 acres in grain, but this year the acreage in wheat and barley is 30,000," said Mr. Ashenfelter. "The acreage in fruit trees will also be largely increased this year. One man is setting 320 acres to deciduous trees and vines, and another is planting 80 acres to oranges, while one rancher is planting olive trees on 350 acres. At a low estimate 2000 acres will be planted in fruit trees, citrus and deciduous, and vines this season. The Hemet Valley Co. is improving a 300-acre tract by planting orange and other varieties of fruit trees. The county road up the mountains to this land will be finished by March 1st. In the artesian belt, land-prices range from \$60 to \$100 per acre, and the purchaser given the easiest terms. Choice mesa land is worth from \$25 to \$75 per acre. Settlers are coming in all the time and land is being bought for homes instead of speculation. San Jacinto lime has knocked out Santa Cruz in Los Angeles and we are now filling an order from that city for 2000 barrels, and are sending out on an average 120 carloads of freight per month, including shipments of wood to Pasadena and Los Angeles. We are also filling large orders for hay and grain."

STORAGE RESERVOIR IN PROSPECT.—Mr. Ashenfelter also gave some information as to the big reservoir, on which the Lake Hemet Co. will begin work in March. The dam is to be built of solid granite, across a gorge in the mountains, and at an elevation of more than 4000 feet above sea-level. This rocky gorge is only 25 feet wide at the bottom, and at a height of 140 feet the distance across is but 150 feet, so that the cost of construction will be reduced to the minimum. A full shipload of cement is in San Diego awaiting an order for shipment to the reservoir site, to which it can be transported from San Jacinto via the new county road. There is an abundance of granite at hand, and the only expense to obtain it will be the quarrying and handling. It is calculated that this dam will hold in reserve 6,000,000-000 gallons of water or 9000 miners' inches, sufficient to irrigate 100,000 acres of land; and

as the watershed embraces an area of 200 square miles, taking in a number of mountains whose tops are snow-clad during most of the year, there is no question as to the unfailing supply of pure, soft water.

EL CAJON NOTES.—Cor. Union: More than 1000 acres have been sown to wheat. There will probably be from 1500 to 2000 acres devoted to this crop, and an equal area to barley. Most of the wheat, I am informed, will be cut for grain and not for hay, as was done last year. The leading industry of El Cajon is the raisin grape, there being some 3000 or 4000 acres in vineyards, but much grain is also raised here. J. T. Gordon, who planted some 2500 orange trees last season, has had remarkable success with them. Out of the entire lot he has lost but five trees, and these were taken by gophers. El Cajon is getting to be quite famous for fine horses. Besides the excellent breeds of Ben Hill and Mrs. Cowles, Uri Hill has a number of beautiful Normans, equal to the best Eastern horses of that name.

San Joaquin.

FIRE IN THE TULE.—Stockton *Independent*, Jan. 18: There was a pretty display of fireworks in the west last evening just after sunset. The whole western sky, or rather the clouds which covered it, was ablaze with the reflection of an extensive fire which was raging in the dry tules near the river, about ten miles west of the city. The rain, which began to fall about half-past six o'clock, put an end to the display by putting out the fire.

Santa Cruz.

JANUARY BLOSSOMS.—Santa Cruz *Courier-Item*, Jan. 19: The gardens about town, notwithstanding the rather constant rains, are looking in good order, and are fragrant with violets, mignonettes, heliotrope and magnolia; there are a few roses, with promise of many more. The rose hedge on the Church-street side of F. A. Hihn's place is blooming quite vigorously. A casual count of the different sorts of flowers blooming in this and adjoining gardens, on Saturday, January 12th, showed 30 varieties besides those noted above. Among these were begonias, callas, scarlet salvias, nasturtiums, camellia japonicas, quince japonicas, daffodils, China New Year lilies, marguerites and others. From Mr. Hihn's place there was picked a second crop of June apples on the 1st of January. On Locust street a Lamarque rose, which clambers nearly to the top of the house, is white with buds and blossoms, while the odor of violets is everywhere.

NURSERY STOCK IMPORTED.—An immense consignment of fruit trees, fruit-bearing shrubs and rhubarb plants arrived in Santa Cruz on Saturday from a nursery at Walla Walla, W. T., in charge of Charles Russell Jr. and J. D. Wallace of Walla Walla, who were here to receive them and to distribute them to the various consignees. On Saturday nearly every farmer's wagon that left town had its load of northern fruit trees, and these will probably soon be adding their quota to the fruit crop of the county. In and about Santa Cruz there were distributed 20,000 trees of the following varieties and in the following order, as regards proportion, the first-named being the greatest in number: Prunes, apples, apricots, plums, nectarines, cherries, pears, peaches and a few others. There were also 20,000 fruit-bearing shrubs and vines taken here as follows: Gooseberry, currant, blackberries, raspberries, strawberries and rhubarb plants. These represent \$4300. In Watsonville there were distributed 30,000 trees, shrubs and vines in about the same proportions, at an aggregate cost of \$3200, making a total for the county of 70,000 trees, etc., at a cost of \$7500, or an average of about 10½ cents apiece.

Shasta.

GREEN PEAS.—Redding *Democrat*, Jan. 16: The latter part of last week John George placed on exhibition in the show-window of the Dooley restaurant several green pea-vines with numerous blossoms and well-filled pods clinging to them. More vines can be seen growing in his garden at the south end of California street. And this in mid-winter in Northern California!

Sonoma.

ORANGES.—Petaluma *Argus*, Jan. 19: On Tuesday last I. G. Wickersham gave us a bag of delicious oranges. In size, color and flavor they were equal to any that have been offered in the market this season. It proves what we have long contended for—good oranges can be raised this side of Riverside and outside of Oroville. These were raised 12 miles east of here, at the foot of Sonoma mountains, by Col. W. K. Rogers, who sent a box to Mr. Wickersham.

EXPANDING NURSERIES.—Santa Rosa *Republican*, Jan. 17: R. W. Bell, successor to L. Burbank in the general nursery business, informs us that in addition to lands purchased and leased from Mr. Burbank, he has leased from Mr. A. T. Davidson, for a term of four years, 22½ acres, one mile west of town, and is preparing to plant the whole in nursery stock. The soil is a strong, loose loam, well adapted to the nursery business. Mr. Bell now employs 16 hands, and has more engaged for next week. By employing reliable workmen and giving more room than usual to each tree, he confidently expects to raise stock equal to any in the world.

Tehama.

YOUNG HORTICULTURISTS.—Red Bluff *Sentinel*: About a year ago Warren N. Woodson purchased ten acres, Will Lewis and Doc Fuller five acres each, and subsequently Frank

Cadwalader ten acres, of the Berendos tract in Antelope valley, two miles east of town, and planted the ground to fruit trees and vines. Subsequently, Mr. Woodson bought Fuller's tract and George K. Bingham purchased ten acres of C. A. Williams' 20-acre tract. Last fall Miss Nettie Olendorf bought ten acres of the Reed tract, and recently Dillon and Nellie Dodson bought ten acres of the old Clark tract from Gen. Chipman. Messrs. Woodson, Lewis, Cadwalader and Bingham's trees and vines planted last year are growing nicely, only about five per cent having died. Mr. Woodson set out 1800 Kelsey plums, 100 White Adriatic figs, 50 oranges and 100 of various fruits for family use. Mr. Lewis put out cling-stone peach, orange, lemon and 50 other varieties of trees. Cadwalader planted the whole ten acres to almonds. Mr. Bingham's ten acres are planted with pears, peaches, prunes and a few other varieties. L. C. Paris is now planting 300 Bartlett pears, 300 peaches and 100 trees of other varieties. Nettie Olendorf will plant 900 French prunes. Dillon and Nellie Dodson will plant 300 Picholine olives, 300 White Muscat grapes and 100 White Adriatic figs, and one acre of blackberries.

GRAIN CROP.—Sentinel, Jan. 19: Maj. J. S. Cone, Jno. C. Tyler and P. C. Crumbaugh, three large, representative wheat-growers, say they never saw a finer outlook for a large grain crop in Tehama county. Some of Mr. Tyler's wheat is so thick and tall that he is now pasturing it, to prevent it growing so rank that it will fall down before it is ripe enough to harvest.

LIVE-STOCK THRIVING.—Stockmen tell us that it matters not what kind of weather we may have the remainder of the winter, cattle, horses and sheep will come out next spring in fine condition. Sheep are doing particularly well, and wool-growers look for, and will have, a very fine spring clip.

Tulare.

IRRIGATION BONDS.—Delta: The directors of Alta Irrigation district have called an election for February 15th for the purpose of voting bonds in the sum of \$675,000, which will be a debt of only \$2.50 per acre for the lands in that district. If the contemplated improvements (including the purchase of present works) can be made for that sum, we would like to see several other districts in Tulare county.

WINTER SPECIMENS.—Tulare *Register*, Jan. 15: Samples of Irish potatoes, volunteer wheat and burr clover in blossom, from W. G. Daunt, who lives in the foothills of this county, were brought to the Register office yesterday, to show what can be done on the upper Tule in the middle of a Tulare winter. The potatoes were dug on the 13th of this month and are large, fine ones, indeed. Mr. Daunt also gathered ripe tomatoes from his vines on the 14th.

DOG DISTEMPER is prevalent throughout this valley. Most of the best dogs in Tulare have it or have had it. Several very fine pups have died with it. Of the 25 thoroughbred dogs at the Bakersfield field-trial, about 20 were unable to go out last week because of distemper.

Yuba.

PAYING ORANGE TREES.—Marysville *Appeal*: Mrs. Karr's orange crop from the trees in the grounds of her residence, on Fifth and Sixth streets, is entirely picked. The ground covered by the trees in bearing, little over 30 in number, is less than one-third of an acre, and from these Mrs. Karr sold to J. H. Marcuse of this city 17,500 oranges, for which he has paid her \$306.25. She reserved the fruit of four or five trees for her own use. The oranges were of large size and good flavor. They were all free from signs of scale, as are all of the trees in her yard. Here is a practical demonstration of the profit to be obtained from orange culture in this locality. Mrs. Karr's trees are seedlings, and not in any way specially favored.

PLANTING AT COLMENA.—C. A. P. dispatch, Jan. 17: A contract was to-day signed with a nurseryman at Los Gatos for planting 30 acres in orange trees at Colmena, on the line of the California & Oregon railroad, six miles south of Marysville. It is strong testimony of his faith in citrus culture here that he supplies the trees and will get no returns until they come of bearing age, when he will have an interest in the orchard. Independently of this enterprise, the prospectus is out for the incorporation of a company to plant 100 acres of orange trees during the present season in the Colmena colony. The capital stock is \$100,000, divided into 1000 shares of \$100 each. Four hundred and fifty shares have already been subscribed. Land is supplied at \$70 an acre, and water for irrigation is to be obtained by a pump and wells. These are the first undertakings to grow oranges on a large scale in this neighborhood, though the profits from orange culture in a small way have always been large here. There is a large capital at the back of both enterprises.

ARIZONA.

VOLUNTEER WHEAT.—Phoenix *Gazette*: Major Evans has left at our office a large bunch of volunteer wheat which measured 32 inches in length, containing full heads and approaching ripeness. The grain was taken from the Utley farm, 4½ miles northeast of Phoenix. It is a remarkable showing for this season, as it will be remembered that it is a volunteer crop and has had neither attention nor water, and we are informed that there is a very large field of this grain growing on the farm.

Proposed Election Law.

Following is the full text of the law proposed by the Federated Trades for adoption in this State and urged as a remedy for existing political corruption:

SECTION 1. All ballots cast in elections for public officers within this State shall be printed and distributed at public expense, as hereinafter provided. The printing of ballots and cards of instruction for the electors in each county, and the delivery of the same to the election officers, as provided in Section 18 of this Act, shall be a county charge, the payment of which shall be provided for in the same manner as the payment of other county expenses.

SEC. 2. Any convention, as hereinafter defined, held for the purpose of making nominations to public office, and also electors to the number hereinafter specified, may nominate candidates for public offices to be filled by an election within the State. A convention, within the meaning of this Act, is an organized assemblage of delegates representing a political party which at the last election before the holding of such convention polled at least three per cent of the entire vote cast in the State, county, district or other political divisions for which the nomination is made.

SEC. 3. All nominations made by any such convention shall be certified as follows: The certificate of nomination, which must be in writing, shall contain the name of each person nominated, his residence, and the office for which he is nominated, and shall designate the party or principle which such convention represents. It shall be signed by the chairman and secretary of such convention, who shall add to their signatures their respective places of residence, and make oath before an officer authorized to administer the same that the matters stated in such certificate are true to the best of their knowledge and belief, and a certificate of the oath shall be annexed to the certificate of nomination.

SEC. 4. A candidate for public office may be nominated otherwise than by a convention in the manner following: A certificate of nomination containing the name of the candidate to be nominated, with the other information required to be given in the certificates provided for in Section 3 of this Act, shall be signed by electors residing within the district or political division for which candidates are to be presented, equal in number to at least one per cent of the entire vote cast at the last preceding election in the State, district or political division for which the nomination is to be made; provided that one thousand signatures shall be sufficient when the nomination is for an office to be filled by the electors of the entire State, and that one hundred signatures shall be sufficient when the nomination is for an office to be filled by the electors of a district or political division less than the State in extent. Said signatures need not all be appended to one paper. One of the signers of each such certificate shall swear that the statements therein made are true to the best of his knowledge and belief, and the certificate of such oath shall be annexed. Such a certificate, when made as above prescribed, shall have the same effect as a certificate or nomination made by a party convention.

SEC. 5. Certificates of nomination shall be filed with the Secretary of State for the nomination of candidates for offices to be filled by the electors of the entire State or of any district or political division containing more than five counties. For all other nominations to public offices certificates of nomination shall be filed with the clerks of the respective counties wherein the offices are to be filled by the electors, and where the district or political division embraces more than one county such certificates must be filed with the clerks of each county in said district or political division.

SEC. 6. No certificate of nomination shall contain the name of more than one candidate for each office to be filled. No person shall join in nominating more than one nominee for each office to be filled, and no person shall accept a nomination to more than one office.

SEC. 7. The Secretary of State shall preserve in his office all certificates of nomination filed therein under the provisions of this Act, and each County Clerk shall preserve in his office all certificates of nomination filed therein under the provisions of this Act.

SEC. 8. Certificates of nomination required to be filed with the Secretary of State shall be filed not more than sixty days and not less than forty days before the day fixed by law for the election of the persons in nomination. Certificates of nomination required to be filed with the County Clerks shall be filed not more than forty nor less than twenty days before the day of election.

SEC. 9. Not less than thirty days before an election to fill any public office the Secretary of State shall certify to the County Clerk of each county within which any of the electors may by law vote for candidates for such office, the names and the description of each person nominated for such office, as specified in the certificate of nomination filed with the Secretary of State.

SEC. 10. At least ten days before an election to fill any public office the County Clerk of each county shall cause to be published in at least two newspapers within the county the nominations to office certified to him by the Secretary of State, and also all those filed with the County Clerk. He shall make not less than two such publications in each of such newspapers before election day, one of such publications being made upon the last day upon which such newspaper is issued before the day of election. Such publication shall be made in two newspapers representing the political parties that at the last preceding election cast the largest and the next to the largest number of votes. The lists of nominations published by the County Clerks of the respective counties shall be arranged in the order and form in which they will be printed upon the ballot.

SEC. 11. Any person whose name has been presented as a candidate may, before the making of the publication of the nominations prescribed in Section 10 of this Act, cause his name to be withdrawn from nomination, by filing with the Secretary of State and the County Clerk his request in writing, signed by him and acknowledged before an officer qualified to take acknowledgments of deeds, and no name so withdrawn shall be certified by the Secretary of State or printed upon the ballots.

SEC. 12. Whenever a proposed constitutional amendment or other question is to be submitted to the people of the State for popular vote, the Secre-

tary of State shall duly, and not less than thirty days before election, certify the same to the clerk of each county of the State, and the clerk of each county shall include the same in the publication provided for in Section 10 of this Act.

SEC. 13. Except as in this Act otherwise provided, it shall be the duty of the County Clerk of each county to provide printed ballots for every election for public officers in which electors or any of the electors within the county participate, and to cause to be printed in the appropriate ballot the name of every candidate whose name has been certified to or filed with the County Clerk in the manner provided for in this Act. Ballots other than those printed by the respective County Clerks according to the provisions of this Act shall not be cast or counted in any election. Nothing in this Act contained shall prevent any voter from writing upon his ballot the name of any person for whom he desires to vote for any office, and such vote shall be counted the same as if printed upon the ballot.

SEC. 14. All the ballots shall contain the name of every candidate whose nomination for any office specified in the ballot has been certified to and filed according to the provisions of this Act, and no other name. The names of candidates nominated by each party shall be grouped together upon the proper ballot, and each group shall be headed by the name of the political party by which the candidates comprising said group were placed in nomination. There shall be a margin on the right-hand side of the names at least half an inch wide, and a reasonable space between the names to be printed thereon, so that the voter may clearly indicate, in the way to be hereafter pointed out, the candidate or candidates for whom he wishes to cast his ballot. Whenever any question is to be submitted to the vote of the people it shall also be printed upon the ballot in such manner as to enable the electors to vote upon the question in the manner hereinafter provided.

SEC. 15. All ballots when printed shall be bound in stub-books of two hundred ballots each, and both the ballots and the corresponding stubs shall be numbered consecutively in each county. A record of the number of ballots printed shall be kept by the respective County Clerks.

SEC. 16. The County Clerk of each county shall provide for each election precinct in the county one hundred ballots for every fifty or fraction of fifty electors registered at the last preceding election in the election precinct.

SEC. 17. Whenever it shall appear by affidavit that an error or omission has occurred in the publication of the names or description of the candidates nominated for office, or in the printing of the ballots, the Superior Court of the county, or a judge thereof, may, upon application by any elector, by order, require the County Clerk to correct such error, or to show cause why such error should not be corrected.

SEC. 18. Before the opening of the polls at any election within any county, the County Clerk of the county shall cause to be delivered to the Boards of Election of each election precinct which is within the county, and in which the election is to be held, at the polling-place of the election precinct, the proper number of ballots of the kind to be used in the election precinct.

SEC. 19. At the same time and in the same manner as inspectors and judges of election are now appointed in this State, two ballot clerks for each election precinct in the State shall be appointed, whose duty it shall be to have charge of the ballots on the day of election and to furnish them to the voters in the manner hereinafter provided. Such ballot clerks shall possess the same qualifications and shall be paid the same compensation as inspectors of election. In making the appointments of such ballot clerks, one of them shall be taken from the political party that polled the largest number of votes at the last preceding election, and the other from the party that polled the next largest number of votes at such election.

SEC. 20. All officers upon whom is imposed by the law of this State the duty of designating polling-places shall cause such polling-places to be suitably provided with a sufficient number of places, booths or compartments at or in which voters may conveniently mark their ballots, so that in the marking thereof they may be screened from the observation of others, and a guard-rail shall be so constructed and placed that only such persons as are inside said rail can approach within six feet of the ballot-boxes and of such booths and compartments. The arrangements shall be such that neither the ballot-boxes nor the box-booths or compartments shall be hidden from the view of those just outside the said guard-rail. The number of such voting-booths or compartments shall not be less than one for every seventy-five electors qualified to vote in the precinct. No person other than electors engaged in receiving, preparing or depositing their ballots shall be permitted to be within said rail, except by authority of the Board of Election, and then only for the purpose of keeping order and enforcing the law. Each of said voting-booths or compartments shall be kept provided with proper supplies and conveniences for marking the ballots.

SEC. 21. Any person desiring to vote shall give his name and address to one of the ballot clerks, who shall then in an audible tone of voice announce the same, and if the other ballot clerk finds the name on the register he shall in like manner repeat the name and address, and the voter shall be allowed to enter the place inclosed by the guard-rail as above provided. The ballot clerk shall give him one, and only one, ballot, upon which both ballot clerks shall have first indorsed their names or initials.

SEC. 22. On receipt of his ballot the elector shall forthwith, and without leaving the inclosed space, retire alone to one of the places, booths or compartments provided to prepare his ballot. He shall prepare his ballot by marking a cross after the name of the person or persons for whom he intends to vote—thus, X; and in case of a constitutional amendment or other question submitted to the vote of the people by marking in the appropriate margin a cross [X] against the answer which he desires to give. Before leaving the voting-booth or compartment, the elector shall fold his ballot, without displaying the marks thereon, in the same way it was folded when received by him, and shall keep it so folded until he has voted.

SEC. 23. Not more than one person shall be permitted to occupy any one booth at one time, and no person shall remain in or occupy a booth longer than may be necessary to prepare his ballot, and in no event longer than five minutes.

SEC. 24. Any voter who shall accidentally spoil a ballot may return such spoiled ballot to the ballot clerk and receive another one in its place. All the

ballots thus returned shall be immediately canceled, and, with those not distributed to the voters, shall be returned with the register lists and ballots as now provided in Section 1264 of the Political Code. Every elector who does not vote the ballot delivered to him shall, before leaving the polling-place, return such ballot to the ballot clerks having charge of the ballots, who shall immediately cancel the same and return them in the same manner as spoiled ballots.

SEC. 25. Any elector who declares under oath to the ballot clerks that he cannot read, or that by reason of physical disability he is unable to mark his ballot, shall, upon request, receive the assistance of any one or two of the officers of election that he may choose, in the marking thereof, and such officer or officers shall certify on the outside thereof that it was so marked with his or their assistance, and shall thereafter give no information regarding the same.

SEC. 26. No member of any Board of Election shall deposit in the ballot-box any ballot upon which the names or initials of the ballot clerks, as hereinbefore provided, do not appear.

SEC. 27. The County Clerk of each county shall cause to be printed in large, clear type, on cards, instructions for the guidance of electors in obtaining and marking their ballots. He shall furnish twelve such cards to the Board of Election in each election precinct in his county, at the same time and in the same manner as the printed ballots. The Board of Election shall post at least one of such cards in each booth or compartment provided for the preparation of ballots, and not less than three of such cards at other places in and about the polling-places on the day of election. Sections 30 and 32 of this Act shall also be printed on each of said cards.

SEC. 28. In canvassing the votes, any ballot which is not indorsed with the names or initials of the ballot clerks, as provided in this Act, shall be void and shall not be counted; but each such ballot must be preserved and returned with the other ballots.

SEC. 29. No person shall falsely make or fraudulently deface or destroy any certificate of nomination or any part thereof, or file any certificate of nomination, knowing the same or any part thereof to be falsely made; or suppress any certificate of nomination which has been duly filed or any part thereof; or forge or falsely make the official indorsement on any ballot, or make any mark or indorsement on any ballot or stub by which the ballot can be distinguished from other ballots. Every person violating any of the provisions of this section shall be deemed guilty of felony, and upon conviction thereof shall suffer punishment by imprisonment in the State Prison for not more than five years nor less than one year.

SEC. 30. No person shall, during an election, remove or destroy any of the supplies or other conveniences placed in the voting booths or compartments as provided in this Act for the purpose of enabling the voter to prepare his ballot. No person shall, during an election, remove, tear down or deface the cards printed for the instruction of voters. Every person willfully violating any of the provisions of this section shall be deemed guilty of a misdemeanor.

SEC. 31. Any public officer upon whom any duty is imposed by this Act who shall willfully neglect or omit to perform such duty shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by imprisonment in the County Jail for not more than three years, or by a fine not exceeding five thousand dollars, or by both such fine and imprisonment.

SEC. 32. No officer of election shall disclose to any person the name of any candidate for whom any elector has voted. No officer of election or any other person shall do any electioneering on election day within one hundred feet of any polling-place. No person shall remove any ballot from any polling-place before the closing of the polls. No person shall apply for or receive any ballot at any election precinct other than that in which he is entitled to vote. No person shall show his ballot after it is marked to any person in such a way as to reveal the contents thereof, or the name or names of the candidate or candidates for whom he has marked his ballot, nor shall any person, except a member of the Board of Election, receive from any voter a ballot prepared by such voter, or examine such ballot or solicit the voter to show the same. No person shall ask another at a polling-place for whom he intends to vote. No voter shall receive a ballot from any other person than one of the ballot clerks, nor shall any other person than a ballot clerk deliver a ballot to such voter. No voter shall deliver to the Board of Election, or to any member thereof, any ballot other than the one he has received from a ballot clerk. No voter shall place any mark upon his ballot by which it may be afterward identified as the one voted by him. Whoever shall violate any provision of this section shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by imprisonment in the County Jail for not more than two years, or by a fine not exceeding one thousand five hundred dollars, or by both such fine and imprisonment.

SEC. 33. In all counties, or cities and counties, in this State having a Registrar of Voters and a Board of Election Commissioners, the powers conferred and the duties imposed by this Act upon County Clerks and other officers in relation to matters of election and polling-places shall be exercised and performed by such Registrar of Voters and Board of Election Commissioners.

SEC. 34. All Acts and parts of Acts inconsistent with the provisions of this Act are hereby repealed.

SEC. 35. This Act shall take effect on the 1st day of July, 1889.

FLORIDA EXPOSITION.—We have received a complimentary invitation to attend the Florida International and Semi-Tropical Exposition which will open at Ocala, Florida, Jan. 29, and close May 1, 1889. Geo. W. Wilson is president and J. O. Clarke secretary. It is to be a grand display of semi-tropical products. The American Pomological Society will meet at Ocala Feb. 20th to 22d, according to announcement already printed in the RURAL. All who go East this winter should note these facts.

Two well-known Los Angeles citizens have been arrested on a charge of making fraudulent entries of Government land.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 220 Market St., S. F.

FOR WEEK ENDING JAN. 8, 1889.

- 395,804.—GATE—Jos. Albers, Wells, Ogn.
395,866.—PILE COVERING—Anderson & Elias, S. F.
395,876.—CHICKEN-BROODER—L. C. Byce, Petaluma, Cal.
395,957.—PULVERIZER AND AMALGAMATOR—E. Derbec, S. F.
395,700.—HAND-GUARD FOR ROCK DRILLS—B. Giovanni, S. F.
395,901.—CAR AXLE—W. Hayes, Los Angeles, Cal.
395,779.—FEED-WATER PURIFIER—A. Heberer, Alameda, Cal.
395,780.—STEAM BOILER—A. Heberer, Alameda, Cal.
395,831.—GANG PLOW—Wm. Holloway, Gilroy, Cal.
395,911.—POP SAFETY VALVE—F. A. Miller, Oakland, Cal.
395,847.—HAME TUG—G. W. Moliere, Ocean View, Cal.
395,916.—RAISIN-STEMMER—C. L. North, Fresno, Cal.

NOTE.—Copies of U. S. and Foreign Patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

Kentucky Shorthorn Cattle.

Particular attention is called to a sale of well-bred Shorthorn cattle to be made by Messrs. Goff & Prewitt of Winchester, Clark county, Kentucky, at the Bay District track, on Tuesday of next week, January 29th, at 11 o'clock A. M. A large portion of the cattle to be sold are descendants of imported Young Mary and imported Young Phyllis, two cows that have done as much to improve the cattle of the United States as any imported; in fact, probably no imported cow can show as many premium animals among her offspring as imported Young Mary, and, likely, next to her comes imported Young Phyllis. Representatives of other well-established families will also be disposed of at this sale. Among them are ten animals, including a two-year-old bull, which took premiums the past season in Kentucky. The pedigrees of the cattle are all recorded, and we are assured that no cow or heifer thought to be a doubtful breeder has been brought.

Mr. Goff was elected editor of the *American Shorthorn Record* by an association of leading breeders from Kentucky and other States, and both he and Mr. Prewitt, as well as their forefathers, have been identified with the cattle interest of Kentucky since their boyhood. They bring letters of introduction from Speaker Carlisle, U. S. Senator Blackburn, Congressman W. C. P. Breckenridge and others. We wish them a successful sale, for they bring a class of stock which would be a credit in any country.

Buena Vista Rancho.

This noted tract of land, containing 7725 acres lying next to the Santa Lucia mountain, along the Salinas river, about three miles from Salinas City, in Monterey county, has been subdivided into small tracts containing from 5 to 100 acres each.

On the 29th inst a grand excursion will be made to this rancho and an auction sale of tracts of land for three days, commences at the same date. This tract of land is one of the most productive and fertile sections in the State, and the advantages in climate and location make it especially adapted for building homes.

The round-trip ticket to Salinas City and return, good until Feb. 2d, has been put at \$2 50, and conveyances to and from the ranch will be provided free.

INTERIOR IMPROVEMENTS.—The firm of P. A. Buell & Co., proprietors of Enterprise Planing-mill at Stockton, are running on full time and with a good force of men. They are now furnishing mill material for the Southern hotel at Bakersfield, five large buildings in Fresno City, and several large orders for Carson, Nevada, Arizona and New Mexico. During the last year they furnished of manufactured mill material for construction of dwellings to the value of over \$150,000, and the demand for goods promises to be much larger this year.

A SHIPPING FIRM.—The firm of Gregory Bros. & Co. of Sacramento has been continuously in business as the successors of the founders of this produce commission-house since 1852. Mayor Gregory, one of the members of the firm, is one of the directors of the Fruit Union, and has been prominently identified in the shipping of fruit and produce a number of years. This firm has a large trade for California produce and a high reputation as a business house.

KINDLY APPRECIATION.—The San Jacinto Register, noticing the commencement of our 19th year, adds that the PACIFIC RURAL PRESS "to-day is the peer of any agricultural paper in this or any other State. It is a paper that every farmer should have; and we venture the assertion that if once taken he will never be without it."

N. W. Cor. California & Battery Sts.,
SAN FRANCISCO.

Postmasters are requested to be sure and notify us when the paper is not sent from their office. If not stopped in time by the night oversight or other mishap, do us the favor to write again.

THE STOCK YARD.

A Word About Jersey Steers.

EDITORS PRESS:—In your issue of January 5th I find a letter from a well-known San Jose butcher relative to the excellence of Jersey beef. The unqualified statements of that letter in regard to the superiority of Jerseys for beef over all other breeds of cattle were, to me at least, something of a surprise.

I have been in the stock-raising business for some 18 years, and have raised more or less Jerseys ever since they came into prominent notice on this coast. I have dealt in beef cattle for several years, and my experience with Jerseys—either pure-bred or mixed—as beef-producers has been very unsatisfactory. I am not by any means alone in this last assertion.

With no desire to reflect unjustly on either the writer of the letter in question or the real merits of Jersey cattle, still my experience, and the experience of many others, with Jerseys, and the result obtained, have been so very opposite to that set forth in the above-mentioned letter that a few queries pertinent to the subject naturally arise; and it may not be amiss for the benefit of prospective stock-raisers to state a few facts concerning Jerseys as beef-producers.

In the first place, you have probably noticed—what has always been claimed as a point in their favor—that Jerseys are small cattle, and where in my experience I have found one three-year-old Jersey steer weighing 500 pounds, I have found ten of the same age that did not exceed 460 pounds.

Three-year-old steers that dress upward of 700 pounds, as per letter, "having gotten their entire living off the hills back of San Jose," or any other hills as far or farther south, "taking into account how they were raised," are not small steers for any breed to produce.

I have not in my experience seen any such Jerseys as the Yerba Buena steers. "They weighed for their size more than any cattle I have ever killed," saith the butcher, and my experience—bought and paid for with gold coin—is that Jerseys will not net, on the block, half their gross weight, where common steers on the same pasture and same scales would, and did, net half.

The Michigan Agricultural College a few months ago fed quite a number of steers of different breeds with a view to testing the beef-producing qualities of the different breeds.

What the result was any reader of the RURAL PRESS may easily ascertain by referring to page 555 of his last numbers.

Among these steers was a Jersey "Rescoe." For 1161 days he had been specially stall-fed for the fat-stock show at Chicago.

At the age of three years two months he weighed upward of 700 pounds; about 745.

I was surprised that a Jersey steer fed and cared for even as he had been should have reached that weight at that age, but it was a result of scientific feeding, and in choosing a steer upon which to make the experiment, it is not likely that the college board selected one that was either unthrifty or undersized.

And yet this steer only equaled the Jerseys same age, killed by the San Jose butcher. They had not been stall-fed. The letter says so. "They had gotten their entire living off the hills back of San Jose." "Taking into account how they were raised," they really excelled the prize Jersey steer of the Michigan college.

Michigan agriculturists, behind the hills of San Jose hide your diminished heads. If San Jose was not an eminently truthful neighborhood, I think I could account for these exceptionally fine Jersey steers, by assuming that they were three-fourths Durham, but as it is, I can only exclaim with the poet, "There are more things"—scale bugs and Jerseys—"in heaven and earth"—San Jose—"than thou hast dreamed of in thy philosophy."

Grass Valley.

WILLIS PEASLEE.

Permanent Pasture.

EDITORS PRESS:—As the years roll by our ranchers are learning that land that is adapted to hay can be made more profitable by far when sown to grass than it has been in past years when grain alone was grown. To get a grass that will give a large yield of good hay and furnish a pasture that will not be tramped out by the stock is desired. My experiments have necessarily been on a limited scale, but of sufficient extent to show me that unless the same condition of natural or artificial moisture prevails the grass mixtures preferred in the East will not prove a success here. The most profitable mixture—that giving the greatest amount of hay—for our Eastern farmers is known as "Henderson's special grass mixture," consisting of orchard grass, meadow fescue, sheep fescue, English rye grass, Italian rye grass, red-top, creeping bent, sweet-scented vernal and meadow fescue.

Fifty per cent of the mixture is orchard grass, the remaining half being divided among the other varieties. Orchard grass has been forcing its way to the front, and now stays there as the most profitable grass to grow. Its habit of attaining a good growth before the ox-eyed daisy—the pest of Eastern farmers—can ripen its seed makes it of special value there in reclaiming land given up to the daisy pest. We

have no daisies, but some of our farmers have a superabundance of morning-glories that they fain would part with, and I think orchard grass would in time exterminate it. By reference to the root system of the different grasses and their ability to withstand drought, it will be found, more especially on trial, that few of these grasses do well in hot, dry climates, unless irrigated freely. After repeated trials I have culled from them and prepared the following mixture, which is easily obtained: Orchard grass, 10 pounds; Italian rye grass, 5 pounds; alfalfa, 5 pounds, and I stopped there. Try a patch in your pasture, weigh your crop, see how well it stands pasturing, how early it is fit to cut, and how little moisture it will live on compared with other grasses, and report your success or failure in the RURAL.

Murphy, Cal.

E. H. SCHAEFFLE.

From Vacaville.

EDITORS PRESS:—We are now having frosty nights and ice forms in the puddles in the roads. It is raining to-day. The roads are so we can get to town, but it is rough traveling. About 19 out of 20 persons, big and little, have a cold, and each one is ready to say that his or her particular cold is much worse than any one's else.

Nearly every one is busy pruning or spraying trees. Some are using a wash made of coal oil and some kind of bark. The trees after being sprayed look as bright as a little boy with his face washed for school.

We need some law to compel all who have orchards to take care of their bugs; also, some way to provide for the removal of willows and cottonwoods from along the creek, for they are worse to breed pests than fruit trees. Some of the oak trees here are as full of scale as they can be; but according to Prof. Klee's report they are not hurtful to fruit trees. I have seen the manzanita bushes covered with a white soft scale, but do not know what species they belong to. Mr. W. Long has two orange trees which were alive with scale two years ago, but he killed them all off by pouring dishwater on the trees.

Help is plenty at \$1 per day, Chinamen boarding themselves, white men boarded.

Mr. Derby, who has a ranch near Vacaville and is agent for Rock's nursery, says he has sold 75,000 trees around Vacaville, and would have sold many more could he have got them. Probably 25,000 more have been brought here from other nurseries. On a guess, about one-fourth of these will be used to fill out orchards planted last year, the others for new orchards and old vineyards. All of the leading varieties of peach and apricot trees have been out at the nurseries for some time.

Quite a number of nurseries were figured out on paper last year and the pits put into the ground, but they did not sprout, probably on account of being frozen. It is common here, when we want peach pits to plant, to bury them in the fall about six inches deep. By the time the ground is warm enough for the little trees to grow, the pits will be split open and the seed sprouted. Some crack the pits, but this makes a great deal of unnecessary work. Peach pits are better than apricot pits on account of the gophers.

Two years ago many of our fruit-growers engaged their dried fruit at 10 and 16 cents. Fruit went up on account of a short crop in the East, and those who did not sell early got the best prices. This last season dried fruit opened low; so quite a number resolved to ship East. They did so and much of the fruit is not sold yet, with a prospect that the expenses on it will make the returns very small. My experience and observation for the past ten years is that the man who sells his dried fruit just as soon as it is ready for market makes the most money. He takes no chances on the worms which will begin to crawl in new fruit in two weeks, nor risks of loss by fire, water, or other causes which every man takes who keeps his dried fruit on the ranch.

In the annual report of Secretary Fairbank, published in the PRESS of January 19th, he says: "These agents are all under heavy bond, and there is no possibility of a loss to any of our consignors." Now I would like to have a little explanation. In PRESS of December 1st, Mr. Block figures out that the returns on 17 carloads was not profitable to the shippers. In issue of December 8th Mr. Fairbank says in reply: "We have had some fine grape sales at the windup of the season, one car netting the shipper \$1800." How did that benefit the man who shipped the middle of the season and had to go down into his pocket for money to square up accounts? Mr. J. W. Gates shipped this season between eight and ten carloads of grapes East. Mr. Gates says he would have been \$3000 better off if he had left the grapes on the vines. Others here have had similar experiences, and it seems odd to me to say there is no possibility of a loss. G.

Vacaville, Jan. 20, 1889.

SENATOR JONES has introduced a bill compelling people owning barbed-wire fences to fasten a board at the top of each panel, so that animals may be less liable to run into the dangerous "improvement." The measure will be hailed with joy by the people of the interior, and ought to pass both houses.

A POSTOFFICE has been established at Forster, Los Angeles county, and John Farrell appointed postmaster; also, at Bimopolis, Ventura county, with Geo. A. Cutler for postmaster.

State Horticultural Society.

Prof. Hilgard presided at the last meeting of the State Horticultural Society. The attendance was small, owing to the attractions of the season.

Printed copies of the minutes of the November meeting, prepared by Gilbert Tompkins, secretary pro tem, were distributed, and by unanimous vote their reading was dispensed with.

F. J. Fletcher, 310 California street, Captain J. R. McKee of Napa and C. W. Reed Jr. of Sacramento were nominated for membership, and John Swett of San Francisco was elected a member of the society.

Samples of a seedling apple grown by I. J. Wickersham of Cloverdale were on exhibition, and a committee consisting of Messrs. Coates, Klee and Sweetzer was appointed to decide on its merits. The apple is of large size, yellow with a tinge of red, and is of excellent flavor.

By invitation of the president, Leonard Coates of Napa opened the discussion on tile-drainage. He said that drainage was an exceedingly important matter and should be done with great care. Tiles must be of the best quality, and also must be laid evenly. A great many farmers make a mistake in using too large a pipe when a small pipe is the most practicable. In draining the water flows very slowly through the large pipes, and silt will accumulate and stop the flow. Drains should be laid some 50 feet apart and 3 feet deep. He commended a plan of excavating a pond on the lowest place if no outlet could be found for water, letting all the drains run into it, and the water then escaping by evaporation. A well might serve the same purpose on a smaller scale by allowing the water to reach a pervious stratum.

Prof. Hilgard thought Mr. Coates' suggestion as to the use of small pipes a good one. In his judgment, a three-inch pipe was often large enough for main drains and two-inch for laterals. In regard to expense, he said that Californians with high-priced lands, yielding high returns, could better afford to carefully drain and improve their land in this way than farmers in regions where the best land cost only \$20 an acre. It is of importance to remember that tile drainage will improve adobe soil more than most soils.

Gilbert Tompkins of San Lorenzo read some interesting selections regarding tile drainage. He showed that in Illinois, Indiana and Ohio there are about 1800 factories. Mr. Tompkins figured that land can be drained here at a cost of about \$55 an acre, using three-inch pipe.

Mr. Coates called the attention of the society to some dried fruits he had purchased to send abroad as samples, thinking they were first-class in every respect. Mr. Coates said the top layers of the fruit—nectarines—were perfect, but when he came to the middle of the box he found pits, worms and spoilt fruit in such profusion that he was forced to return a portion of the fruit. The seller of the fruit, he said, thanked him for this, and promised to make good the loss. He kept one box, which seemed to be a little more select than the rest. He brought a bagful to the meeting and spread them before the president. The nectarines were not first-class, and Mr. Coates said that he hoped such fruit would not be sent to London and Paris as samples of evaporated California fruit.

At first Mr. Coates could not be induced to tell who sold him the fruit, but at the request of W. H. Bramhall, Mr. Coates said the fruit had been packed for Mr. Meade and not by him.

Mr. Bramhall thought it was a shame that such fruit should be placed on the market for sale, and said it was only proper for the packers to mark the boxes in some manner that would designate the individual who did the packing. The entire fault lay with the packers and not with the dealers. Mr. Bramhall then showed a card which was used by Weinstein & Lubin of Sacramento, and he made the motion, which was carried, that the society should make known as publicly as possible its desire to have every packer use such cards as the one he had in question. These cards have written on them the name of the packer and the date when packed, and a written request that it be returned if anything wrong is found with the fruit. One card is placed in every box.

D. B. Wier of Petaluma read a paper concerning the "codlin moth."

At G. P. Rixford's suggestion the subject for discussion at the next meeting will be "The Improvement of Our Wild Fruits;" also any other subjects that may be suggested by the meeting of the California Fruit Union.

AN ORDINANCE AGAINST BUGS.—We learn from a local paper that the anti-scalebug ordinance passed by the Pomona City Council provides that any person who refuses or neglects to destroy the trees or fruit upon which the scalebug may be found in Pomona may be fined \$300 or sent to jail for 30 days, while, at the same time, his trees or fruit affected by the pest may be destroyed.

HOPS TO ENGLAND.—According to reports of the S. P. C., California, during the year 1888, shipped direct to England 1,442,330 pounds of hops. This includes shipments all rail and via Sunset. In addition there was, of course, a large shipment of California hops from New York to England, which is not accounted for in the above figures.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, if requested the following articles (while this notice continues), at the very greatly reduced figures named at the right:

In writing correspondence, items of information, or on other business, please use a separate sheet.

Sample copies of this paper mailed free to persons thought likely to subscribe.

Send for free circular describing most of these premiums and any further information desired.

Inform your neighbors about our offers and paper.

Stockton Combined Harvester and Agricultural Works.

A RURAL representative visited the Stockton Combined Harvester Works at Stockton on the 16th inst. This great plant was in full blast and a good force of skilled mechanics at work. Mr. Dan'l Hauser, the inventor of the "Hauser" harvester, is superintendent. Mr. M. Laufenberg was at the works perfecting his cleaner, to be placed on the harvesters. With the many improvements made on the "Hauser," and such noted inventors superintending the construction, the farmers and ranchmen may conclude that they can have a combined harvester and cleaner far superior to any ever built at these works. Mr. Miller, the inventor of Miller's lightning hay-press, was also at the works, adding improvements and perfecting his hay-press.

It should be very gratifying to the California farmers to know that these successful inventors and this great manufacturing establishment are turning out implements that are peculiarly adapted to the ranches of the Pacific Coast.

What Every Subscriber Should Have.

AN EASY BINDER.—A. T. Dewey's Patent Elastic Binder, for periodicals, music and other printed sheets, is the handiest, best and cheapest of all economical and practical file binders. Newspapers are quickly placed in it and held neatly, as in a cloth-bound book. It is durable, and so simple a child can use it. Price, size of Mining and Scientific Press, Rural Press, Watchman, Fraternal Publishing Co's. journals, Harper's Weekly and Scientific American, 85 cents; postage 10 cents. Postpaid to subscribers of this paper, 50 cents. Send to this office for illustrated circular. Agents wanted.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

IMPROVED STOCK.—The herd of Cruickshank Shorthorns belonging to Heilbron Bros., Sacramento, purchased last fall, have done well this season. Of his Hereford herd, a grade calf six months old dressed 520 pounds.

Lands For Sale and To Let.

A RARE BARGAIN!

The undersigned offers for sale, on good terms, his CLOVERDALE DAIRY FARM of 500 acres, situated on Squirrel Creek, 2 miles west of Grass Valley. It is well watered by springs and has excellent irrigation facilities, commodious farm buildings, orchard of 160 trees and 6 acres of vineyard. A fine herd of Holstein, Ayrshire, Jersey, and Durham (thoroughbred and grade) cattle for sale with or without the ranch. Holstein and Ayrshire premium bulls on lowest terms, including "Tebama," which, on account of kinship to the herd, can no longer be used in breeding. A good dairy route is also included in this offer.

H. B. NICHOLS, Proprietor.

SALZER'S WHITE WONDER OATS.
PROLIFIC
Over 100,000 customers of 1888 gladly testify that they INCREASED ALL YIELDS. Yes, often DOUBLED them by sowing SALZER'S NORTHERN GROWN SEEDS. Because no other seed is so full of life, vigor and vitality—so prolific and early as Salzer's.
OAT NOVELTY--WHITE WONDER!
This is the most wonderful oat we have ever seen or heard of, and we have tested EVERY variety, beauty and quality. Scores of 1888 customers say: "Yielded 5 to 10 times as much as common oats!" Its enormous yield is due to its great standing properties, long ears and plump kernels. Early, fine, wonderful.
\$750 in prizes for Largest Yield in 1889. See Catalogue about it. First Prize \$100. Who wins it? The farmer wants big crops. Well, he can have them every time by sowing his seeds—sowing on wheat, 40 bu., barley 70 bu., new corn 125 bu., potatoes 60 bu., etc. Headquarters for all Farm Seeds, Grasses, Clovers, LUCERNE CLOVER, MILLET and ENSILAGE CORN.
Floor area of seed store 2 acres. Potato cellar capacity 5000 bu. 25 Packages Earliest Vegetable Novelties, post paid, \$1. Send \$ for Wonder Oat and Grain Samples or for Giant Cabbage and receive elegant Catalogue.

With no coil springs, or springs of any kind. No little rods, joints, levers, or anything of the kind to get out of order, as such things do. Mills in use 6 to 12 years in good order now, that have never cost one cent for repairs. All genuine Enterprise Mills for the Pacific Coast trade come only through this agency, and none, whether of the old or latest pattern, are genuine except those bearing the "Enterprise Co." stamp. Look out for this, as inferior mills are being offered with testimonials applied to them which were given for ours. Prices to suit the times. Full particulars free. Best Pumps, Feed Mills, etc., kept in stock. Address,

SEEDS

The Proposed London Exhibition.

The adjourned meeting of the convention in favor of the proposed California exhibition in London was held in Sacramento on Tuesday. The meeting was largely attended, and, according to reports in the Sacramento papers, was unanimous in sentiment and enthusiastically in favor of the project. Those who desire a full report of the meetings should send for the Sacramento Record-Union of January 23d.

Considerable time was given to a discussion of the form of law to enact in furtherance of the enterprise. The following is the original draft of the bill as prepared by Mr. Estee:

SECTION 1. There shall be appointed by the Governor seven Commissioners, and as near as may be from the two great political parties of this State, one from each Congressional District and one from the State at large, and who shall be selected as nearly as possible to represent the varied industries of the State, whose duty it shall be to gather and maintain in the city of London an exhibit of the products of California. For this purpose they shall elect from their own members a President, and appoint a Secretary, and such assistants as may be required. They shall have full power to transport such products to London, to engage suitable rooms for the exhibition in that city, and to do and perform every act necessary to maintain the exhibit for a period of not less than two years.

SEC. 2. Said Commissioners shall select one of their members to go to London and superintend and have charge of the exhibit, provided for in Section 1 of this Act. Such Commissioner shall receive as compensation for his services the sum of three thousand dollars a year. But the remaining six Commissioners shall receive no compensation for their services, except such actual traveling expenses as may be incurred while engaged in the service of the Commission within the State of California.

SEC. 3. The sum of one hundred thousand dollars is hereby appropriated out of any funds in the State Treasury, which sum shall be paid to said Commission in 24 monthly installments for the maintenance of said exhibit of the products of the State of California, in the City of London, England. Not more than fifty thousand dollars of said sum shall be paid in any one year, and the State Controller is hereby directed to issue his warrant monthly in favor of the President and Secretary of said Commission for the sum of \$4166.66 upon the State Treasury, and the State Treasurer is hereby directed to pay the same. Such warrant shall be issued upon the order of the President and Secretary of the Commission.

SEC. 4. The said Commission shall make to the Governor and State Controller quarterly detailed financial statements of all moneys expended by it.

In the discussion on this proposed law, ex-Senator Wm. Johnston favored retaining the amount of appropriation asked for in it, viz., \$100,000, but after a long discussion of plans and methods, the sentiment of the convention was declared in favor of asking the Legislature for \$250,000.

The Bill Now in the Senate.

The Sacramento Bee gives the following text of the London Exhibit bill introduced in the Senate by Mr. Moffitt and referred to the Finance Committee:

SECTION 1. It is hereby provided that an exhibition of the products and industries of the State of California shall be made in London, England, for the purpose of developing the resources of the State and the promotion of her commercial interests.

SEC. 2. A Board of Commissioners is hereby created to take charge of and manage such exhibit, which Board shall be known as the London Exhibition Commission of California. The Commissioners so created shall serve without pay, but shall be allowed actual expenses incurred in business of the Board.

The Commission hereby created shall consist of seven members, to be chosen as follows: One by the Senate and Assembly in joint convention to be held for that purpose, who when selected shall be President of the Commission, and one from each Congressional district in the State to be elected by the members of the Senate and Assembly from the respective Congressional districts, who shall meet in joint district convention for that purpose.

The members of the Commission shall be citizens of the United States and qualified electors of the State of California, and the members from the respective Congressional districts shall be residents thereof.

The Commissioners under this Act shall hold office for the term of two years or until their successors are appointed and qualified, and shall file their oaths of office with the Secretary of State within the time prescribed by law.

Within twenty days after the passage of this Act the members of the Commission shall assemble in the State Capitol and organize by the election of a Secretary and Treasurer, neither of whom shall be members of the Board.

The Secretary and Treasurer shall give bonds in sums to be fixed by the Board.

Immediately after its organization the Board shall provide a seal, and all of its official acts shall be evidenced thereby and by the signatures of its President and Secretary.

When organized the Board shall notify the Secretary of State in writing of the fact, giving the names of its officers and a description of the device adopted for a seal, and thereafter shall notify that officer of any changes in the Board as they occur.

When organized the Board shall have exclusive charge, management and control of, and exclusive power to receive and disburse all moneys appropriated under this Act; it shall also have power to fill all vacancies in the Board, occurring for any cause whatever, and to do all other things necessary or expedient within the purposes of its creation, and shall have power to appoint honorary members of its body.

SEC. 3. The sum of \$250,000 is hereby appropriated out of any moneys in the State Treasury not otherwise appropriated, for the purpose of carrying this Act into effect.

SEC. 4. The Controller of State is hereby authorized and directed, upon the written requisition of the Board of Commissioners, signed by the President,

countersigned by the Secretary and attested by the seal of the Board, to draw his warrant in favor of said Board as follows. On the first Tuesday of May, 1889, for the sum of \$50,000; on the first Tuesday of July, 1889, for \$50,000; on the first Tuesday of September, 1889, for \$50,000; on the first Tuesday of January, 1890, for \$50,000; on the first Tuesday of May, 1890, for \$50,000; and the Treasurer of State is authorized and directed to pay the same.

SEC. 5. Quarterly reports of all receipts and disbursements of the Commission shall be filed with the State Board of Examiners, and annual reports of the condition of affairs, including a full financial statement, shall be filed with the Governor of the State on or before the second Monday of January of each year.

Legislative Items.

W. S. Lyon, of the State Board of Forestry, appeared before the Assembly Committee last week and spoke in favor of the appropriation of \$111,300.

Among the bills which have been introduced in the

State Senate

And referred to committees are:

An Act to repeal an Act entitled "An Act to provide a system of irrigation, promote rapid drainage and improve the navigation of the Sacramento and San Joaquin rivers," approved March 29, 1878.

An Act authorizing the Boards of Supervisors of the several counties of the State to declare innavigable streams highways for the floating of logs and timber, and to provide for the improvement and use of the same.

An Act to provide for the incorporation of mutual fire insurance companies and define their powers and duties.

An Act creating the county of Orange out of the southwest corner of Los Angeles county.

In the Assembly.

The following bills, among others, have been introduced and referred:

An Act regulating the storage and sale of jute grain bags manufactured at the State Prison.

An Act making appropriations for the construction of buildings and the purchase of machinery for the manufacture of jute goods at the State Prison at Folsom, and other expenses incidental thereto.

An Act to amend an Act making an appropriation for the purchase of jute, to be manufactured at the State Prison at San Quentin.

An Act making appropriations for the purchase of additional jute machinery, and the erection of additional buildings for the manufacture of jute goods for the State Prison at San Quentin, and other expenses incidental and relating thereto, and providing for fixing the price at which jute goods shall be sold by the State.

An Act to create the county of Glenn, to establish the boundaries thereof, and to provide for its organization.

An Act defining the rights of pre-emption and homestead claimants on public lands of the United States within the State of California.

An Act to create the county of Orange, etc.

An Act to provide for the incorporation of mutual fire insurance companies, and define their powers and duties.

An Act to amend "An Act to amend Sections 2, 4, 6, 7 and 8 of an Act entitled An Act to form agricultural districts, to provide for the organization of agricultural associations therein, etc."

An Act to amend Section 400 of the Penal Code, relating to contagious diseases among animals.

An Act making appropriations of money for the use of State Board of Forestry.

An Act for the destruction of wolves and coyotes, and to authorize a bounty to be given by the State, to encourage such destruction.

An Act to appropriate money to pay the claim of Mrs. J. G. Lemmon, as Commissioner of Woman's Department at the New Orleans World's Industrial and Cotton Centennial Exposition, from November 15, 1884, to June 15, 1885.

An Act to prevent the sale of intoxicating liquors to persons addicted to the inordinate use of intoxicating liquors.

An Act to provide for the conduct of elections, and to more fully secure the independence of electors and the secrecy of the ballot.

An Act to amend Sections 10, 18, 19, 20, 21 and 22 of an Act entitled "An Act to provide for the organization and government of irrigation districts, and to provide for the acquisition of water and other property, and for the distribution of water thereby for irrigation purposes," approved March 7, 1887.

An Act to authorize and empower the Board of Fish Commissioners to remove certain obstructions in the American river for the passage of fish up said stream and its tributaries.

POSSIBILITY OF A LOSS.—On page 86 of this issue our Vacaville correspondent asks how Sec'y Fairbank's statement in his report that the agents of the Union "are under heavy bonds and there is no possibility of a loss to any of our consignors," can be true, and proceeds to cite instances of losses. Of course Mr. Fairbank's statement means that provision is made by bonds against any loss by malfeasance of any agent or employee, not against loss from decay of fruit or ruinously low market rates. The fact is simply that while a commission merchant might go to Canada or to bankruptcy and the consignor have to whistle for his returns, the shippers through the Union are protected by bonds from losses of this kind.

Another Improvement for Our Readers.

By reference to our new rates of subscription, it will be seen that we now offer subscribers 15 months for \$3, when paid strictly in advance, which is ten per cent better terms than ever before presented. We have also made our rates so that any who could not afford to pay a whole season in advance can get the benefit of our emphatic inducements for advance payments on shorter periods.

Combining the subscribers of the California Patron and the RURAL PRESS into one larger list makes it possible for us to afford these better terms to all who will pay in advance even for a single quarter.

It also renders it more agreeable for correspondents work for a larger circle of readers, by affording a stimulus for them to give more labor to perfect their contributions.

Unique Indeed.

Some weeks ago appeared a "Unique Map of California," prettily printed in half a dozen colors and studded with a score of little gems in the shape of bits of striking California scenery. It was well calculated to take the eye of tourist and immigrant, and appeared to have been "published under the auspices of the S. P. Co. and the State Board of Trade."

To guide the home-seeker in choosing where to settle, it also professed to mention the principal products of each county. How reliable its information is, in this last respect, may be inferred from the few instances we give.

San Bernardino—Figs, almonds, honey, grains. Butte—Oranges, grains, wines, fruits. Los Angeles—Cereals, minerals, semi-tropic fruits. Placer—Fruits, hops, oranges, iron, lime. Colusa—Grains, fruits, silk, etc.

The unfairness of the thing has raised a storm of indignation in the southern counties, and called forth such utterances as the following:

This map is a direct misrepresentation of South California and its products. It says, in effect, to Eastern people coming here for homes, "If you are seeking a climate and soil which will produce oranges, you must go to either Placer or Butte county, as these alone, in the entire State, grow oranges in sufficient quantities to entitle them to the name of an orange-producing section." This is so entirely at variance with fact that South California must protest against it vigorously and effectively.

And Secretary Davies has written to the President of the Riverside Board of Trade that the State Board had nothing to do, directly or indirectly, with the preparation or production of the map, but that it was prepared and published as a private enterprise by a Mr. McJohnstone, an attache of the passenger department of the S. P. Co. If the latter party has offered any explanation or disclaimer, it has as yet escaped our notice.

Santa Cruz Farmers' Union.

The following report appears in the Santa Cruz Courier-Item of Jan. 19th:

Thursday afternoon a meeting of the newly-elected Board of Directors for the Farmers' Union was held in their building at the corner of Pacific and Minnesota avenues. The affairs of the organization were freely and thoroughly discussed and the plans for the ensuing year fully determined upon. The "Union" is in a flourishing condition and its future prospects encouraging.

Stock to the amount of \$5500 was sold. It was decided to remodel the sales departments entirely, thereby adding to their convenience and attractiveness.

Mr. Louis Schwartz, who, as will be seen below, has been chosen by his associates as president and manager, will superintend the buying of a large stock, complete in all details, with which to fill the large and finely remodeled store.

A large and efficient Board of Directors was elected, as follows: L. Schwartz, S. F. Grover, D. W. Grover, F. D. Scott, J. W. Towne, James Corcoran, A. S. Hicks, B. Pilkington, J. Ho. Bailey, Thomas Crooks and F. R. Currier. The officers and their positions are as follows: President and manager, L. Schwartz; vice-president, S. F. Grover; secretary, F. D. Scott; treasurer, D. W. Grover.

FRUIT WEEK IN SAN FRANCISCO.—As the columns of the RURAL this week and last clearly show, the third week in January was largely given to public horticultural events. They may be recapitulated as follows: Tuesday, opening Viticultural Exchange; Wednesday and Thursday, annual meeting of the Fruit Union; Friday, annual meeting of the Dried-Fruit Association; Saturday, meeting of raisin-producers and packers. It is an excellent idea to have events of similar character grouped in this way, since it induces many to come from long distances because of the many birds to be killed with one stone. If the meetings were scattered, no one of them would seem enough of itself to warrant the expense of several hundred miles journey. It looks as though the third week of January would become famous as Fruit week in San Francisco.

California Products at Chicago.

CHICAGO, Jan. 23.—In California dried fruits the principal trade is in sun-dried peaches. For unpeeled there is a fair demand and some pretty good lines have been recently sold. The demand is mainly for fruit in sacks, and the stock of such lots is considerably reduced. Box lots rule quiet. If choice and dry they sell very well. Peeled peaches are quiet. The trade is hardly disposed to pay prices over sundried that is asked. Apricots are in fair demand for best grades, with evaporated preferred; choice bright goods only wanted; great many dark in market, which are slow on account of color. Trade in nectarines is fair, with trade quite equally divided between evaporated and sun-dried, but trade looking for cheaper grades; stock of this line of fruit is rather light. There are but few plums here and demand also light; market nearly nominal. Good demand exists for good prunes and the supply of these is also small. Raisins are in very good request.

Apricots—Evaporated, bleached, bxs, 13@14c; do, sun-dried, bleached, sks, 9@12c. Apricots, sun-dried, unbleached sks, 7@9c. Peaches—Evaporated, bleached, unpeeled, bxs, 8½@9½c; do, sun-dried, bleached, unpeeled, sks, 7@8c; do, unbleached, unpeeled, sks, 4½@6c; do, sun-dried, peeled, bxs, 10@10½c; do, peeled, sks, 10@10½c; do, evaporated, peeled, bxs, 12@13c. Nectarines—White, evaporated, bleached, bxs, 9@10c; do, sun-dried, sks, 8@9c; do, red, evaporated, bleached, bxs, 8@9c; do, sun-dried, bleached, sks, 7@8c. Plums—New, pitted, 4@10c; new, unpitted, 4@7c. Prunes, according to size, in sks, 5@9c; do, Silver, 8@10c; do, Hungarian, sks, 3@3½c.

Raisins—Loose Muscatels, new, ½ box, \$1.10@ \$1.35; do, London layers, new, \$1.75@ \$2.25.

Arrivals of beans are rather small. While present offerings may equal trade requirements, stocks, however, are not large, but rather moderate. Choice Navies meet with moderate demand, but mediums do not sell so well. Lots are slow and easy, while choice beans rule steady.

GEORGE M. PULLMAN is building for the Southern and Union Pacific railroads a train of passenger cars which will be an exact duplicate of those that make up the present train of the Golden Gate Special. The order for the construction of the new cars was given some weeks ago, and the purpose of their construction is to have the Golden Gate Special run twice a week between this city and Omaha.

THE biggest ice crop on record is being stored along the Truckee river.

California Sunshine.

This is the fitting title of a very delightful little book by Mrs. L. H. Shuey, so well known to readers of our journal as the Maid-of-all-Work, the pseudonym which she assumes in her contributions.

The collection includes "The Golden Spike," "Dare," a Napa college alumni poem, "In Memoriam" poems, a C. L. S. C. poem, and the "Home and Field Verses of California Farm Life on the Plains."

We can earnestly commend this work of one who writes so acceptably for our columns to all our readers who love pure sentiment, truth to life and loyalty to California in musical verse.

This book is for sale at book stores and by the author, Mrs. L. H. Shuey, 2509 P street, Sacramento, Cal.

H. H. H. HORSE MEDICINE.

The popularity that this curative compound has attained, induced parties to manufacture and sell an imitation under the name of the celebrated "H. H. H. Horse Medicine." By a recent decision, Jan. 4, 1889, Judge Spencer of the Superior Court of Santa Clara county, says this proprietary medicine belongs to H. H. Moore & Sons of Stockton, and any one selling his own or that manufactured by another, will be liable in damages.

This liniment has been used nearly 20 years on the Pacific Coast, and gained a reputation for being an indispensable article for the farmer and stockman. This reliable and enterprising firm feel under many obligations to their numerous patrons, and are stimulated to make diligent labor to keep the H. H. H. liniment up to its usual high standard of excellence. They also manufacture the "H. H. H. Healing Ointment" and "H. H. H. Condition Powders."

As druggists and pharmacists they rank high in their profession, and any curative compound bearing their trade-mark can be relied upon for the purposes indicated and set forth.

STOCKTON SAVINGS AND LOAN SOCIETY.

This Savings and Commercial bank was organized in August, 1867, with a capital of \$250,000, and soon after increased to \$500,000. Ten per cent of the original capital was paid in, and during all these years has paid, regularly, dividends of from 12 to 18 per cent; the one for 1888 being 18 per cent. Their policy has been to pay a stipulated sum as interest on all time depositors each year from 4 to 5 per cent. The capital stock is fully paid up with a reserve of \$337,000. Mr. L. U. Shippee is president, and Fred M. West, cashier.

Injurious Insects of the Orchard, Vineyard Field, Garden, Conservatory, etc.,

Remedies for their Extermination.

By MATTHEW COOKE.

Late Chief Executive Horticultural Officer of California. Illustrated with over 750 wood-cuts and 25 pages of colored illustrations. This book is designed for the use of orchardists, vineyardists, farmers and others interested in the subjects treated. It is designed to convey practical information concerning some of the species of insects injurious to the industries of cultivators of the soil, and those interested in earth produce generally. Price 84, postpaid. For sale by Dewar & Co., publishers, 220 Market St., San Francisco.

S. H. MARKET REPORT

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Jan. 23, 1889.

The weather the past week was, taken as a whole, favorable for farm work. Many localities complain of the season being too advanced, while, again, others report cold nights, which gives vegetation better rootage and a harder growth. General trade in farm products the past week was only fairly active, while prices under increased offerings and a strong bear influence shaded off. The European and the Eastern wheat markets have fluctuated some, with the tendency downward. The following is to-day's English cable:

LIVERPOOL, Jan. 23.—Wheat—Depressed. California spot lots, 75 5d @ 75 8d; off coast, 38 5d @ 37 9d; just shipped, 38 5d; nearly due, 38 5d; cargoes off coast, inactive; on passage, neglected and no business doing; English country markets, very slow and occasionally cheaper; French, rather worse; wheat and flour in Paris, slow; weather in England, frosty.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt:

	Jan.	Feb.	Mar.	Apr.	May	June
Thursday	78 1/2	78 1/2	78 1/2	79 1/2	79 1/2	78 1/2
Friday	78 1/2	78 1/2	78 1/2	79 1/2	79 1/2	78 1/2
Saturday	78 1/2	78 1/2	78 1/2	79 1/2	79 1/2	78 1/2
Sunday	78 1/2	78 1/2	78 1/2	79 1/2	79 1/2	78 1/2
Monday	78 1/2	78 1/2	78 1/2	79 1/2	79 1/2	78 1/2
Tuesday	78 1/2	78 1/2	78 1/2	79 1/2	79 1/2	78 1/2

The following are the prices for California cargoes for off coast, nearly due and prompt shipments:

	O. C.	P. S.	N. D.	Market.
Thursday	39 00	39 00	39 00	Improving.
Friday	39 00	39 00	39 00	Quiet.
Saturday	39 00	39 00	39 00	Quiet.
Sunday	39 00	39 00	39 00	Quiet.
Monday	39 00	39 00	39 00	Quiet.
Tuesday	39 00	39 00	39 00	Quiet.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York:

	Jan.	Feb.	May
Thursday	97 1/2	97 1/2	102
Friday	97 1/2	97 1/2	102
Saturday	97 1/2	97 1/2	102
Sunday	97 1/2	97 1/2	102
Monday	97 1/2	97 1/2	102
Tuesday	97 1/2	97 1/2	102

The closing prices for wheat have been as follows, at Chicago:

	Jan.	Feb.	May
Thursday	96 1/2	96 1/2	101
Friday	96 1/2	96 1/2	101
Saturday	96 1/2	96 1/2	101
Sunday	96 1/2	96 1/2	101
Monday	96 1/2	96 1/2	101
Tuesday	96 1/2	96 1/2	101

NEW YORK, Jan. 23. Wheat 96 1/2c for cash, 94 1/2c for Feb., 95c for March, 95 1/2c for May and 95 1/2c for June.

CHICAGO, Jan. 23.—Wheat—94c for cash, 94c for Jan., 94 1/2c for Feb., and 95 1/2c for May.

The Foreign Grain Review.

LONDON, Jan. 21.—The *Mark Lane Express*, in its weekly review of the British grain trade, says: Native wheats have maintained their values. The large proportion of inferior grades offered gives the market the appearance of greater depression than actually exists. Flour is dull. There is a fall of 1 franc for French flour, depressing the British market. Foreign wheat is weak. Corn has improved in tone, though there is a large American surplus. Wheat and flour on passage to the continent, 377,000 qrs.; wheat and flour on passage to the United Kingdom, 2,470,000 qrs.; imports of flour into the United Kingdom for the week, 180,000 bbls.; imports of wheat into the United Kingdom for the week, 162,000 qrs.

Eastern Wool Market.

NEW YORK, Jan. 18.—Bradstreet's says: No features of importance appear in any wool market. Business is going forward steadily with moderate takings for consumption, and prices are fully maintained. Rather more trade than usual has occurred in foreign wool, both in New York and Boston. Heavyweight wools will be carried over to next season to some extent, on account of the mildness of the winter, and this may affect the market hereafter. There is a general disposition to wait for the next series of wool sales at London, on the 29th, before making predictions for the future. For the moment a little more interest appears in foreign than in domestic markets.

At Philadelphia, wool is moving very slowly, and, while there is no abatement of confidence among holders, the market is not so buoyant as it was a short time ago. The advancing tendency has been checked, and some lots, recently held at 20c above the general market price, are now available at quotations. Stocks are light and receipts very small. No decline is anticipated by dealers.

BOSTON, Jan. 18.—The wool market has been devoid of new and interesting features during the past week, and trade has been quiet in all grades, transactions amounting to 1,866,000 lbs foreign and domestic. There is no weakness apparent in the market, dealers being quite unwilling to accept any but current quotations, the supply of wool in the country being the regulating force which keeps prices in their present firm position. Stocks of desirable wool are so small here that manufacturers find it difficult to supply their wants, and the Western markets must be well cleaned up. It is predicted that the opening prices of new wool in the spring will make the present seaboard prices seem low in comparison.

Miscellaneous.

NEW YORK, Jan. 20.—There is a sharp demand for raisins of even grade. Useful lots will soon rate higher.

Dried fruits, including prunes, are all plenty enough to fill present wants. Winter pears are unusually slow. The weather is bad for exposure, while cheap oranges and apples attract retail dealers. Lima beans advanced to 3c.

There is more doing in hides, but not enough to influence strong quotations.

The difficulty of duplicating fine quality for early

bought hops prevents the filling of good orders. If, as asserted, the cream has gone, brewers and steady exporters will give up looking for improved samples. London advices are favorable. The exports for the week were 1698 bales. Prices at last week's ranges are repeated.

Local Markets.

The following tables give the highest and lowest prices paid on Call during the past week:

	WHEAT.	S. S.	B. S.	B. '89.	S. '89.	Jan.
Thursday	146 1/2	146 1/2	146 1/2	146 1/2	146 1/2	146 1/2
Friday	146 1/2	146 1/2	146 1/2	146 1/2	146 1/2	146 1/2
Saturday	146 1/2	146 1/2	146 1/2	146 1/2	146 1/2	146 1/2
Monday	146 1/2	146 1/2	146 1/2	146 1/2	146 1/2	146 1/2
Tuesday	146 1/2	146 1/2	146 1/2	146 1/2	146 1/2	146 1/2

BARLEY.

	Buyer Season.	Seller 1889.	Buyer 1889.
Thursday	88	87	88
Friday	88	87	88
Saturday	88	87	88
Monday	88	87	88
Tuesday	88	87	88

BAGS—The syndicate bulls are again agitating for higher prices, and as has been the case every season, all statistics through the daily press are made to conform to their views. The market at present is irregular. Large holders do not appear disposed to make concessions, while buyers are offish. Spot parcels of Calcutta are quoted at 7 1/2 to 7 3/4c, and June-July delivery 7 1/2 to 7 3/4c.

BARLEY—The market has ruled dull and heavy throughout the week, with more sellers than buyers. Owing to the choice condition of grass-fed bullocks, there has been a decided falling off in the quantity of ground barley fed to stock. Brewers are not in the market at present. In options, trading on Call has been light. The following are to-day's sales:

Morning Session: Buyer 1889—300 tons, 92c; 100, 91 1/2c; 300, 91 1/2c. Buyer season—400 tons, 83 1/2c; 200, 83 1/2c per cwt. Afternoon Session: Buyer 1889—300 tons, 91 1/2c per cwt.

BUTTER—The market is depressed under free receipts and a very light demand. Dealers buy as little as possible. The outlet for supplies is as yet restricted.

CHEESE—Under increasing receipts and buyers not anticipating their wants, the market is shading off.

EGGS—The market is weak at lower prices. Receipts from the interior are increasing, which, combined with free receipts from the Central States, causes the low market.

FLLOUR—The market is weak. Although not quoted lower, yet concessions can be obtained.

WHEAT—The market has been very sick, with buyers constantly shading bids in sympathy with lower prices at the East and abroad. Although lower prices are quoted by us, yet it is doubtful if they can be realized to-day, owing to a bad break in the markets at the East and abroad. Futures in Liverpool declined from 1/4d to 3/4d per cental. In options, trading on Call has been very active, but at steadily declining prices. The following are the sales reported to have been made on Call to-day:

Morning Session: Buyer 1889—200 tons, \$1.41 1/2; 400, \$1.41 1/2; 100, \$1.42; 100, \$1.41 1/2; 700, \$1.41 1/2. Seller 1889—300 tons, \$1.32; 300, \$1.32 1/2. Buyer season—700 tons, \$1.37; 400, \$1.37 1/2; 200, \$1.37 1/2; 200, \$1.37 1/2; 700, \$1.37 1/2; 900, \$1.37 1/2 per cwt. Afternoon Session: Buyer 1889—500 tons, \$1.41 1/2; 100, \$1.41 1/2; 400, \$1.41 1/2; 100, \$1.41 1/2; 100, \$1.42; 200, \$1.42 1/2; 400, \$1.42 1/2; 700, \$1.42 1/2; 300, \$1.42 1/2; 400, \$1.42 1/2. Seller 1889, old—100 tons, \$1.33; 100, \$1.33 1/2; 100, \$1.33 1/2. Seller 1889, new—400 tons, \$1.35; Buyer season—300 tons, \$1.37 1/2; 100, \$1.37 1/2; 300, \$1.37 1/2; 600, \$1.38; 300, \$1.38 1/2; 300, \$1.38 1/2; 100, \$1.38 1/2; 600, \$1.38 1/2; 100, \$1.38 1/2; 500, \$1.38 1/2 per cwt.

[COMMUNICATED.]

Market Information.

Cereals.

A. Kains Jackson writes to the *London Farmer* of Dec. 31 as follows: Liverpool and New York are in deadlock over wheat and flour, but are easy in respect to maize. As to India and Russia, they go on shipping, and why? Because European buyers pay the rates asked, 33s to 39s per quarter. From Australia this season's prospects are strongly contrasted with those of December, 1887, when plenty of wheat was on offer at 20s per quarter under present rates. America and Australia are out of the running for our markets, say for the next four months. To keep value where it now is the wheat-buyer has to depend upon the British farmer and Russian merchant. If anything makes them difficult, prices may be expected to command a range of 3s to 5s per quarter above present currencies. Of course reliance is placed on the receipt of the Californian and Russian wheat now on the seas. Probably the bulk will arrive at our ports, but foreign ports are likely to divert a large share from our ports of call. But when the supplies afloat shall arrive they mean stock bought during the recent increase in value. Rare are the buyers who have got wheat cargoes to arrive at much under currencies. Against influences on seller's side the miller and other wheat-buyers reckon upon their stocks in hand, the stocks that also will arrive, and on the offer of spring shipments. In the midst of these various considerations, the center of trade is calm, a placid level in the midst of a whirlpool.

A more unsatisfactory market in cereals for the selling interest has seldom been witnessed than is now reported in this city, particularly in wheat. The largest manipulators or operators on Call, it is claimed, unloaded all their holdings at the high prices ruling in October and November of last year. Not only did they unload their holdings, but shorted the market; being short, they bent all their resources to hammer prices to lower levels so as to fill at a good round profit. This, there is no doubt, they are now doing while systematically keeping both options and spot down, in which they are favored by a close money market and the near approach of the time when tax assessments will have to be made. They are also favored by a light supply of disengaged tonnage in port and near-by arrivals. Both the Eastern and European markets show a fair degree of steady-

ness, although a slightly lower range of values is quoted.

Advices from the different agricultural sections in this State are confirmatory of a large increase in the acreage plowed and seeded to wheat. In some localities the plant, under favorable growing weather, has made such rapid progress as to necessitate the pasturing of the more mature fields; this of course will cause more stooing out, which was not the case last year. So far the weather has, in all respects, been favorable, but then it is the April and May rains that make the crops.

Barley has ruled weak and heavy under large supplies and buyers taking as little as possible. The supplies, although reported large, consist chiefly of poor grades, bright choice being in very light stock, but the prices of the latter are depressed, owing to the heavy offerings of the former. The consumption is quite large, owing to more farm work and also to railroad construction being well under way again. There will be a lessened acreage seeded this season, which will cause a lighter call for seed.

Corn is without essential change. The tone of the market appears to be steadier, due to the better feeling in the Central States. The consumption here does not seem to be up to preceding seasons.

In both rye and buckwheat there is nothing doing; quotations consequently are more or less nominal.

Fruit.

The market for apples has been very unsatisfactory. There were free offerings of specked and otherwise defective Eastern apples which aid no little in causing the weak and unsatisfactory market. Choice, good keeping Oregon apples are wanted at from \$1.25 to \$2 per box. At the close there is a stronger market at a slight advance for Oregon and California.

Continued heavy receipts of oranges with only a moderate demand have caused values to shade off still more. With milder weather it is claimed that there will be an increased consumption which will promote better prices. It hardly pays to ship poor oranges to this city with the market as at present, particularly those that are not good keepers.

Mexican limes are higher, under a slightly improved demand and reports of small consignments on the way.

In dried fruits the market is lifeless. To sell, low prices must be submitted to, but to buy, full quotations have to be paid. Choice fruits of good color are in light supply and consequently more firmly held. Fruits of off color are in overstock. It is very hard to get reliable or correct quotations. It is claimed that with the spring trade an increased demand will set in, when an improvement in the market is looked for; at any rate it looks as if it cannot do much worse. All quotations are nominal.

The raisin market, like that of dried fruits, is very unsatisfactory. The stock of choice of well-known brands is very light, causing holders to ask \$2 to \$2.25 per box for Three Crown layers and \$1.25 to \$1.50 for loose Muscatels. Outside or unknown brands range from 35 to 45c per box less for layers, and about the same for loose Muscatels. The past week a shipment of one carload of good loose Muscatels was made to the East. The price paid by the shipper ranged from \$1.15 down to 90c a box—the latter was the last price paid. There is no demand, and to force sales low prices have to be submitted to. Bananas are weak, owing to 4200 bunches being on the way to this port.

Wool.

The market is very quiet, owing to light stocks, that here being badly broken. This year's clip in this State will undoubtedly be one of the best on record, unless grass seeds ripen before shearing, which would naturally cause the clip to be more or less covered by them. The pasturage being exceptionally good, will cause the wool to be healthy, strong and lively. Eastern mail advices report that on Jan. 1st the stock of wool in Boston compared as follows:

	Foreign.	Domestic.
Year.	Pounds.	Pounds.
1889.	3,038,500	18,317,657
1888.	2,156,600	31,973,996

In other markets of the United States the stock of domestic wools is estimated to have been on Jan. 1, 1889, 43,340,000 pounds as against 78,000,000 pounds on Jan. 1, 1888. This shows a decided falling off in supplies, and accounts for the high prices now ruling. The stocks of wool abroad are also quite light and prices higher.

Live-Stock.

The market for bullocks and mutton sheep is still in buyers' favor, with all indications pointing to no change for the better in the immediate future. The mild character of the winter in all parts of this coast and in this State, and abundance of natural feed has put stock in the very best condition, and as assessment day will soon be here, many stockmen are said to be realizing. Owing to the superior quality of grass-fed cattle, stall-fed are lower. Small calves and lambs are scarce and high. Hogs are wanted for the block. Packers continue to take sparingly, their wants being fed chiefly with green meat by Chicago and Kansas City. Fresh milk cows are wanted at from \$30 to \$40 for the average run of fair to good dairy cows. In horses, there is very little doing. Medium to large work horses sell well, but light work horses are hard to place, although for the latter it is said there is a little more inquiry. For general utility horses, single-footers and roadsters, there is a good inquiry.

The market for dressed meat is quoted as follows by slaughterers to butchers (to get the price of stock on foot, take off one-third of the price for stall and grain fed and one-half from the price of grass fed, that is animals running at large).

The quotations for beef, mutton sheep and hogs are received from Miller & Lux of this city. The prices are actual sales.

HOGS—On foot, grain fed, 6 1/2 @ 6 3/4c per lb.; dressed, 9 @ 9 1/2c per lb.; soft, 5 1/2 @ 6 1/2c per lb.; dressed, 8 @ 8 1/2c per lb. Stock hogs, 4 @ 5c per lb.

BEEF—Stall fed, 8 @ 8c per lb.; grass fed, extra, 7 @ 7 1/2c per lb.; first quality, 6 @ 6 1/2c per lb.; second quality 5 @ 5 1/2c per lb.; third quality, 4 @ 4 1/2c per lb. VEAL—Small, 8 @ 8c per lb.; large, 7 @ 8c per lb. MUTTON—Wethers, 7 @ 7 1/2c per lb.; ewes, 6 1/2 @ 7c per lb.; lamb, spring, 7 @ 9c per lb.

Vegetables.

Tomatoes are firmer under lighter receipts. Other early vegetables from the southern part of the State are reported to be weaker under freer receipts and the high prices being against much of an increase in the consumption. With mild weather, vegetables

from the near-by counties will make rapid growth which will soon give us liberal supplies from this source.

Onions are without essential change. There is a large overstock of poor keepers which being forced on the market keep prices down. The very low prices, so far this year, will, it is said, cause less attention to be given to their cultivation this year.

The same unsatisfactory market for potatoes, heretofore reported, was the prevailing feature last week. Heavy receipts and no decided outlet are against values. It is claimed by dealers that all indications warrant the assertion that high water will be had this year on the Sacramento and San Joaquin rivers. This opinion is based on the heavy deposits of snow in the mountain ranges. With high water in the rivers the acreage seeded to potatoes will be less than two years past.

Cabbage continues to rule weak and unsatisfactory. The demand from the central markets this season has been almost nil.

Feedstuff.

In ground feed there is very little doing. The consumption is largely restricted by reason of the good pasturage. The output of bran and middlings is said to be lighter than usual at this season of the year, which keeps values from breaking much.

Choice to extra choice hay is not in liberal supply, but prices are kept from advancing by the lessened demand, owing to good pasture. Present appearances are favorable to a large crop this year.

Miscellaneous.

From the *Commercial News* of Jan. 22d, the following summary of tonnage movement is compiled:

	1889.	1888.
On the way to this port	212,648	251,330
On the way to neighboring ports	40,984	73,870
In port, disengaged	26,522	79,371
In port, engaged for wheat	28,398	38,439

Totals 358,552 | 443,010 |

To get the carrying capacity, add 60 per cent to the registered tons as given above.

From July 1st to Jan. 22d, the following are the exports from this port:

	1889.	1888.
Wheat, cts.	8,485,435	5,176,784
Flour, bbls.	424,442	397,442
Barley, cts.	1,135,115	845,670

Poultry has been fairly steady the past week. The receipts by rail from both Oregon and the central markets were only fair. California stock is still given the preference.

Beans are dull and heavy. To place a large parcel, concessions are necessary. There is considerable poor in the market for which buyers are few, and then only at very low prices.

Comb honey continues weak. Extract is scarce, but weak. The outlook is favorable to a large crop this year.

In hops, there is nothing doing. Supplies are light, as is the demand.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations while very poor grades sell less than the lower quotations.

Come, Fellow Farmers!

It is the good things and the new things you want. Here is a Catalogue full of them! Do you want tested seed, raised from stock selected with extra care, grown from the best strains, got from the originators? I aim to have mine just such. Do you want new varieties that are really good, and not merely novelties? I aim to have mine such. Do you want seed that the dealer himself has faith enough in to warrant? I warrant mine, as see Catalogue. Do you want an exceptionally large collection to select from? Mine is such. Do you want them directly from the grower? I grow a large portion of mine—few seedsmen grow any! My Vegetable and Flower Seed Catalogue for 1889 FREE to everybody. JAMES J. H. GREGORY, Marblehead, Mass.

The Date Palm in Fruit.

We have had a number of allusions to the date palm in California and engravings of the tree and the fruit, but none which presents the subject so directly and forcibly as the large photo facsimile on this page made by the

his oldest son, Edward Wolfskill, a prominent business man of the town of Winters, appears upon the step-ladder. Aside from the personal interest which pertains to these portraits, their figures serve to show the height of the palms.

The engraving shows the male and female date palms, the taller tree on the left being of

smaller palm began bearing fruit in 1877. It was then 15 years old, as the seed, taken from a dried date, was planted in 1862. The fruit is of a red color and becomes ripe and of good flavor. As the fruit ripens it turns black and falls.

The photograph from which our plate was made

is so near the residence that the ground around it is continually hard-tramped and it is crowded by large olive trees and other growths adjacent, and yet it is full of thrift. Until two years ago it was not irrigated, but the scant rainfall has led to its refreshment artificially.

The success of these dates and others in the

DATE PALM IN FRUIT ON THE GROUNDS OF J. R. WOLFskill NEAR WINTERS, YOLO COUNTY, CAL.

Dewey Engraving Co. from a photograph by W. R. Nutting of this city, who has given much attention to the catching of horticultural subjects with the camera.

The engraving is interesting from several points of view which we will briefly sketch. The scene is in front of the residence of J. R. Wolfskill, who, since 1842, has made his home on the south bank of Putah creek. The pioneer himself, in his eighty-sixth year, still full of interest and activity in horticulture, which is his chief delight, is seen in the foreground, while

the masculine persuasion. Even though the trees are so near, it is found necessary for fructification to take the blossoms from the taller tree and suspend them near the opening bloom of the bearing palm. It has been observed also that the fruit growing on the side of the cluster nearest to the suspended branch is perfect, and has seeds, while on the side farthest away many imperfect fruits are seen. For this reason the male bloom is broken to pieces and they are hung up here and there around the prospective fruit clusters. The

was taken about the middle of October, 1888, and some of the fruit was then ripe, and the mass of fruit was estimated to be twice the size of a flour barrel. About November let a cluster was taken from the tree and brought to the office of the State Board of Trade in this city, where it was suspended in the front window and was the admiration of all visitors. It has hung in the same place for nearly three months, and some of the fruit is still in eatable condition.

The tree is not in a favorable situation. It

same neighborhood of which we shall soon present another engraving, shows well how important it is that more attention should be paid to this fruit. All California date palms are seedlings. The University Experiment Station is now endeavoring to secure the importation of the best Algerian varieties, which have to be secured by buying suckers or offsets from the most famous African trees. We trust the effort will succeed, for it is just as important that we should have the best varieties of dates as of other fruits.

THE VETERINARIAN.

Equine Dentistry.

W. McLean, V. S., writes to the Portland *Oregonian* as follows: Veterinary surgeons who thoroughly understand the processes of digestion, the kinds of food to be digested and the composition of the tooth to do the work, know well that the less interference with the teeth the better for the horse and the digestive apparatus. There is not a veterinary dental school in the world. If such a thing were needed, scientific men would take it in hand and organize a school to advance men in the science, so that they would be useful to the community at large. But since there is no chance for scientific men to make a profession out of it, we have men going through the country claiming they are veterinary dentists, and yet they could not tell you the difference between the composition of a horse's tooth and a pebble-stone on the street; neither could they tell the kind of food a tooth was calculated to masticate, were you to bring a tooth to them. These things should be and are thoroughly understood by veterinary surgeons. What I mean by veterinary surgeons are men who graduated honorably at authorized veterinary colleges, for none other are veterinary surgeons. How men can presume to be veterinary surgeons or dentists and yet cannot describe the process of digestion, cannot tell the function of the salivary glands, cannot tell the composition or growth of the teeth, cannot tell the changes that are taking place in the processes of digestion at the mouth, the stomach, and on through the digestive canal, cannot tell the composition of the blood, the functions of the liver, the pancreas, the lungs, the kidneys, and the same with all parts of the body, passes comprehension.

As my subject is veterinary dentistry, I must return to it.

I do not for a moment say that the horse's teeth do not need attending to. This would be erroneous, for many times the teeth need filling, and often have to be pulled out, the same as in man, but not nearly so often. The kinds of food must be taken into consideration. We find the horse entirely a herbivorous animal, and the food must be ground, not crushed as for man. Then it would be foolish for men who know this to take a file and work the teeth down smooth. It will do for man's teeth to have a smooth, flat, crown surface, because he requires to crush his food where the horse requires to grind his with a lateral motion of the jaws. We have the same substances entering into the horse's teeth that man's teeth are composed of, only differently arranged. In man's teeth we have the crown surface as well as the body of the tooth above the gums encased with a solid coat of enamel. Inside of this coat we have the dentine and crusta patrosa, cementum, each in its respective place—the dentine making up the main body of the tooth, and the cementum covering the root or prong of the tooth. If the enamel becomes broken or destroyed in any way so as to expose the dentine, decay will soon take place. In the horse we have enamel, dentine and cementum, the same as in man, only differently arranged. All these substances are exposed to the atmosphere all the time. There is no crown surface of enamel the same as in man. On the outside of the horse's tooth we have a thick layer of enamel surrounding the whole body of the tooth above the gums. Next to this coat of enamel we have a thick layer of dentine, then two rings of enamel in molar teeth and one in incisors; then the inside of the rings is filled with cementum. Thus the reader may see that all substances of the horse's tooth are brought into wear all the time, and yet exposure to the atmosphere does not decay the tooth. The teeth are the hardest substance of the body, and it is folly to think we can work a pair of tooth-shears in all horses' mouths without danger to the teeth.

Horses' teeth rarely decay unless they are fractured, and I know of no better way to fracture teeth than with the tooth-shears, as the enamel once destroyed is never reproduced again. It is true the outer edges of the upper teeth and the inner edges of the under teeth wear sharp, owing to the grinding motion being from side to side and not a downward crushing motion, the same as in man. These sharp edges do no particular harm unless the horse lacerates his tongue or cheeks while eating. If such is the case, it will be easily seen, as the horse will dribble saliva from the mouth or drive on one rein or fight the bit when the bridle is on.

Our so-called horse-dentists tell us bowel troubles are produced by the teeth, which might be true in one case out of two or three hundred horses affected in that way. I find, in practice, where I have one old horse afflicted with bowel trouble I have three or four young horses from five to six years old, and as all horsemen know, the teeth are all up and in wear at six years old. The idea is untenable that the teeth are the cause of bowel trouble when the horse is in the prime of life. The cause in a great many cases is that the animal is young and vigorous and his appetite is ravenous when he is worked hard, and when he comes to his feed he gulps it down, not taking time to chew it, and as his food is chiefly a starchy matter, it must be thoroughly masti-

cated in order to become thoroughly moistened with saliva, which has the power of converting starch into sugar. I admit teeth get very uneven sometimes and need attending to, but long, projecting teeth are not found when the teeth match evenly, for a tooth in the upper jaw could not grow long, because its fellow in the lower jaw would keep it crowded back. We may have a lack of nutrition to a tooth in the lower or upper jaw; then the growth of the tooth would be impeded. Such being the case, the opposite tooth above or below, as the case may be, would grow longer. If such is the case, a small portion of the tooth ought to be removed, by a file or shears, to give the opposite tooth a chance to grow up. If the projection is very great, and the tooth is cut down even with the rest, there must be a large space between the teeth that food will collect in and decompose, and in all probability destroy the tooth. A better plan would be to file it down gradually from time to time. When the outer edges of the upper teeth and the inner edges of the under teeth get sharp, a file is all that is needed, and there is no danger of cracking the enamel of the teeth and setting up decay and ruin to the teeth.

There is small use for quacks in any profession, and less for the quack who preys upon the dumb brute, who cannot tell his pain. I might be asked how it is that professional men cannot run quacks out. I can safely say that two out of three cases of ordinary disease will get well by good care and nursing, a fact that gives the quack a percentage to work upon, because he is generally a good nurse, although I can mention cases in this city where a quack would have nursed a number of cases to death had not timely interference been brought about. I will say, further, that a quack saves no cases where a knowledge of pathology is required in order that medicines may be given to counteract the disease.

SERICULTURE.

The Work of the State Board.

From the great demand for mulberry trees and cuttings it is evident that the number of persons interesting themselves in silk culture is increasing rapidly. The nurseries keep few mulberry trees. The State Board of Silk Culture volunteered to supply all applicants, but a limited appropriation has prevented the managers importing as many as they desired. Nevertheless several hundred trees and cuttings have been sent out until now the supply is exhausted. The imported trees are of the *cattaneo* Italian variety. They were obtained from near Milan. Cuttings have been sent out from old white mulberry trees on the Sellers place near Brentwood, Contra Costa county. Letters come daily from all parts of the State asking about methods and means of silk culture, and Secretary Rienzi and her assistants are kept very busy answering questions relating to all branches of the interesting subject.

An idea of the widespread interest in silk culture is given by the list of localities to which trees or cuttings have been forwarded. They went to San Leandro, San Jose, Berkeley, Fresno, Santa Rosa, Colfax, Los Angeles, San Diego, Tulare, Santa Barbara, Ventura, Marin and Solano counties, St. Helena, San Luis Obispo, and many other points.

The directors of the Board ask for an appropriation of \$10,000 for the next two years. It is clear that the industry is being developed very rapidly all over the State. Arrangements are now being made with Eastern firms for the product of the Board's filatures. A. Paterson, N. J., firm has offered to take all that can be supplied. Eastern manufacturers compliment the directors on the quality of silk produced. A new engine is desired at the filature and other improvements are needed.

The Secretary's biennial report, now in the State Printer's hands, gives many facts of interest. Last spring the Board reared more than eighty thousand worms in its rooms in the Flood building. Because of lack of funds no exhibits have been made at the fairs. Custom House figures show that the value of raw silk imported into this port from China and Japan during the year ending June 30, 1888, was \$12,069,430. These figures show how necessary it is to develop this industry in the United States, so that that amount of money may be kept here at home. With a little encouragement from the Government of our State, in a few years the women will be so educated in the silk industry that they will be able to raise all the silk consumed in the United States. The Board has distributed silkworm eggs to parties wishing to rear the worms. The subject of silk culture has been attracting a good deal of attention in the southern part of the State, particularly around San Diego, from which place the Board has received numerous communications asking for information. One gentleman writes he has already prepared ten acres of land to be devoted to the industry. Another writes that he has made several successful experiments and has decided to devote his time and money to the silk industry. In no case is there any doubt expressed as to the final result. The report notes that a diploma of merit was awarded to the California Board of Silk Culture for a meritorious display of silk at the New Orleans Exposition.—*Evening Bulletin*.

THE FIELD.

Growing Sugar Beets Near Watsonville.

A short time ago, in alluding to the season's run of the Watsonville sugarie, we promised some account of the farmers' experience in growing the beets which might be instructive to other farmers contemplating such a crop. We condense as follow from the *Pajaronian*:

It is now about a year since arrangements were made to start sugar-beet cultivation in Pajaro valley. Claus Spreckels made the move and the farmers seconded his motion by entering into contract with him by which they pledged themselves to plant and work a certain acreage of beets, he furnishing the seed, and, moreover, giving directions how to plant, cultivate and harvest the beets. Mr. Spreckels bound himself to pay \$4 a ton for beets that polarized 14 per cent saccharine, and more if they yielded above that standard.

The beets have now nearly all been harvested and delivered at the beet factory in Watsonville. By looking over the whole field of this industry for the first year of its trial, every candid observer must say that both parties of the contract have endeavored to carry out what they agreed upon, but nevertheless there is more or less general dissatisfaction among the beet-growers about the results obtained. The general cry is, "they don't pay \$4 a ton." What Mr. Spreckels says about his pay we do not know; he does not and cannot accurately know before he has made his settlement at the end of the season. But this is a known fact, that he is well pleased with the quality and also with the quantity of the sugar percentage. The farmers can already tell whether it is for them a paying industry the way they have been raising them this year—more or less under immediate directions and control of Mr. Spreckels' agent, and they all agree "they do not pay for \$4 a ton."

The great complaint farmers make against the raising of beets is, "there is too much manual labor; too much to do with the hoe in cleaning and thinning." In answer to this it must be admitted that there has been too much of that kind of work the past season, and it must also be stated that in America, and especially in California, farmers are not accustomed to work with hoe and spade, and that that kind of hired help is really too high to be paid for by farmers. Machines do our principal work, not only in cities but also in the country. But is there no other way of cleaning our beet-fields other than to do it with the hoe? Can we not plant the beets in such a way as to work them with the cultivator, sow them with the common drill? I think we can.

In pulling, or rather loosening the beets, use the cultivator, only exchange the shovels for the pointers. By growing the beets that way, the manual labor with hoe and shovel would be reduced to at least one-eighth of last year's work, if not to one-tenth, and the pulling the same.

Another objection is, "the topping and cleaning is too tedious work." There is some truth in that; it is tedious, slow and expensive. But could no machine be invented to do some of that work?

The beet industry adds another branch of agriculture to this fertile valley, and for this reason it should be fostered as much as possible. Besides this, the sowing of beets and the harvesting of them fall in seasons when our California farmers are not very busy. Wheat and oats and barley have been sowed when beets must be sowed, and in fall these crops have been harvested when the beets are ripe and fit for the factory. The beets come in, as it were, to fill a kind of gap in our agriculture that could otherwise not well be utilized except in some cases by useless going to town and spending the time there talking politics.

Beets may be attended, cleaned and weeded by women and children, as we saw last year. Many boys made good wages who would otherwise have been doing nothing. They tend to banish idleness, the fruitful source of mischief.

The cash we receive is not the only value the farmer gets for his labor. The pulp at the factory, of which the beet-growers get a share, is worth considerable, especially as it is ready for use at a time when the pastures of California are poor. At the beginning of this season, when the hills were bare and dry, the farmers were very anxious to get the pulp for their stock, and even those who did not have any beets to deliver at the factory, because they had been too timid in contracting with Mr. Spreckels, did not refuse the good pulp for their cattle.

There was one blunder made by many beet-growers this year; they planted too many acres. Instead of cultivating 10 acres they had 40 or 50, even more. That was too much for proper attention in the time of harvesting. By planting in a different manner it may do well enough to have that many acres, but even then the acreage should not be too large. Next year they will be more careful and not contract for more than they can properly manage.

Another Grower's Experience.

"Does it pay to raise beets?" was the first question asked Geo. D. Rodgers by a Santa Cruz *Sentinel* reporter Friday.

"It paid me," promptly replied Mr. Rodgers. "I realized a profit of \$42 per acre for the five acres I put in beets. The average yield of my land was 16½ tons of beets to the acre, and the beets averaged 16 per cent of saccharine matter. I received for my crop of beets \$5.50 per ton, or \$458 33½."

"I allowed myself \$3 per day for the work I did, with one team. It took me three days to plow the land, one day to plant, three days to cultivate twice over. All the work was done by myself. It cost me \$1 per acre for weeding out, and \$12 per acre for thinning out the beets."

"By the way, the thinning out, I have not the least doubt, will be done away with next season, as improved machinery for planting the seed will be used."

"But to continue: my beets grew nicely, and in due season were plowed up by myself, which required three days' time. Then came the expense of topping off and loading the beets into the wagon, which was done by hired help, and amounted to \$1.05 per ton, or say \$41 65 for the job. I understand that others only paid 60 cents for the same work. I hauled the beets and allowed myself and team 50 cents per ton. As I said before, I realized a profit of \$42 per acre, that is, allowing a fraction over \$24 for miscellaneous expenses."

"And then there is the feed and the lime which the farmers are allowed at the factory, in addition to the above, which in many cases has been sold by them at from 50 cents to \$1 per load."

"The same land on which my beets were raised is an orchard, from which I realized \$100 on fruit."

"Do you propose to raise beets next season?" asked the reporter.

"Not on the same land. If Mr. Spreckels will offer better facilities for unloading the beets, I will put in five or more acres in another part of my orchard. I would rather run the chance of getting a good crop of beets than anything else that is adapted to growth in the Pajaro soil."

"You say you will raise beets if Mr. Spreckels will furnish better facilities for unloading. What is there in this that causes trouble?"

"Considerable time is wasted in waiting to get the beets weighed. I have spent as much as an hour at a time waiting to drive on to the scales. You see there is only one set of scales, and we have to weigh the beets and then the empty wagon. At times there are 40 wagons at the scales. However, Mr. Spreckels informs me that this matter will be remedied next year, and that four extra bins will be built."

THE DAIRY.

Marketing Butter.

EDITORS PRESS:—Our farmers' wives object to butter-making because of the unremunerative prices, and many of them either make cheese or let the calves have the milk. Butter may range ever so high in our city markets, yet the butter from the country seldom reaches a price that farmers can afford to make it. Then again, the groceryman, though he may assort and receive different prices for his butter, has one general buying price, and *strong, able-bodied* butter, grease, or cheese will bring as much from the average county groceryman as the sweet, firm, golden and best butter. This of course is all wrong. The *Journal of Agriculture* suggests a remedy: Let farmers grade and pack their butter in new tubs and form clubs. By this means of co-operation butter-making may possibly become remunerative. There is no better place to discuss this subject than in the Subordinate Granges. The next trouble to arise would be to find a buyer. Strange that this should be the case, yet there exists no doubt on this point. It is well known that perfect organization exists between grocery-men and the wholesale or commission men. A groceryman in Portland was anxious to have farmers from Marion county ship eggs and good butter direct to him. He would pay the market price less the commission! If the farmer is to have all the trouble of shipping his products and then receive no more than if they were sold through the commission men, where is the gain to the farmer? A compromise might be advisable.

Turner, Or.

The Flavor of Butter.

At a recent meeting of dairymen in Sherman, New York, an old and reliable butter-buyer remarked that the standard quality of butter in Chautauque county is not as high as it was 25 years ago. The question was asked, it is true, what is the cause? This is the answer given:

Twenty-five years ago there were nearly 400,000 sheep in Chautauque county. They, in a large measure, cleaned the pastures of weeds and rubbish, turning into the best of wool what is now a nuisance and the first cause of bad butter. The sheep are gone, and now our pastures and meadows blossom out with white and yellow daisies, rag weeds grow up, golden-rod beautifies the fields, toad plantain runs up its seedy rods, adder-tongues speckle the hills. All of these and many others grow luxuriantly in this county. Cows eat them, and thus every pound of butter is made bitter, and it is impos-

sible to make good butter from such feed. Rest assured any bitter herb taints and defects the butter.

Second—In many cases during the latter part of the summer cows do not get plenty of pure water, so essential to the making of fine butter. Now springs and brooks fail much sooner than 25 years ago.

Third—In some cases cows are driven to and from pasture by dogs. Cows that get hot and nervous give milk that is fatal to good butter, and will taint the entire lot. To make good, sweet butter, it requires healthy cows, good, sweet feed, pure water and gentle treatment.

If these are the causes for reducing the high standard of butter in New York, may they not be the cause of the low standard of some butter? We would suggest that where there are no sheep to keep the pasture clean, a hoe be used, and that everything you would not cut for hay be cut with the hoe. If you have not facilities for having water where your cows can help themselves at any time, give them an opportunity to do so at least three times a day, and don't dog them.

POULTRY YARD.

Notes on California Practices.

We understood from pretty good authority that there has been a little sharp practice indulged in by the egg speculators. When fresh ranch eggs were selling readily at 45 and 50 cents per dozen, Eastern eggs were plentiful at 30 cents. The plan was to ship the Eastern eggs out into the country and then gather them in as fresh ranch eggs. Of course experts could not be fooled that way, but the people were, and it had a bad effect on the market for good eggs.

Southern California is having a boom in chickens, and it is time they were doing something to keep up the reputation of California as a producing State. The carloads of poultry and eggs that have come into the State this season are proof enough that one cannot miss it far by raising some chickens.

If you want to fatten fowls or chicks quickly, give them plenty of milk—sweet, sour or buttermilk. A handful of bran stirred in the milk will be much relished by them. Add to the mess enough salt and pepper to season. This, fed with a grain diet, counteracts all deleterious effects of either the grain or the milk. No water is necessary when milk is fed.

Quarantine all new stock, even if from best sources, until found to be free from vermin and disease.

Feed the breeding stock well and get them in good condition. A little hemp and canary seed occasionally will be relished and do them good.

If in need of new stock, buy early; you will stand a better chance to get extra good stock, and if not suited you will have a chance to buy again before the season is too far advanced.

Lime and ashes are disinfectants. Use them freely, no matter if they dim the brightness of the yellow legs; it is better to have healthy fowls with dingy legs than sick ones with yellow legs.

Spend as much time as you can afford with your fowls, and don't be afraid to handle them. Keep them quiet and tame and they will be just as profitable and give you many times more pleasure.

If your fowls are backward in molting, give them flour of sulphur; a tablespoonful mixed with a quart of soft feed will be found beneficial occasionally. The shedding of the old feathers and the forming of the new ones occasions a great drain upon the vital powers of the fowl, and this waste should be supplied artificially, and especially if the fowls are confined. As the new feathers are largely composed of sulphur, in order to form them rapidly and easily, nature should be supplied and assisted.

This is the season when you should give the Douglass mixture frequently in the drinking-water. It is one of the most useful medicines in the poultry-yard. Dissolve one pound of sulphate of iron in two gallons of soft water; then add four ounces sulphuric acid; when thoroughly mixed add one ounce of phosphate of soda and one tablespoonful of table salt; keep in a glass demijohn. Be careful with the sulphuric acid; besides being a deadly poison it cauterizes wherever it touches. Use about one ounce of the mixture to each quart of the drinking-water twice a week.

Don't forget to supply the fowls with a variety of food; they like it as well as you do. The season approaches at which the supply of vegetable and insect foods are cut off. These must be supplied by the breeder. Don't feed much corn; on very cold days it may be given at night. Burning it occasionally adds variety, and the burnt grains are very much relished by the fowls. Feed cut clover-hay steamed thoroughly three times a week, in the morning; season with salt and pepper, and add meat scraps or fish to the mess. For the rest of the week give for breakfast corn and oats, chaff and bran, stirred up with boiled vegetables of any kind, adding a few handfuls of linseed meal. You will have no scarcity of eggs if this system of feeding is adopted, and at the same time they

will not only be very fertile but strong in vitality.

Palmer T. Reed of Sierra Madre writes: The capon will weigh from one-quarter to one-third heavier and put on nearly double the breast of a cock. The flesh is finer, more tender, and of better flavor. There is just as much difference in the quality of the meat between a capon and cock as there is in a steer over a bull. And then your capon is an orderly citizen—not prancing and tearing around, asking some fellow to knock a chip off his shoulder; his sole object seems to be to put himself in Al condition for the table. I even caponize that best of layers, but worst of all table fowls, the Leghorn. Raising eggs for market, I believe my chickens do better with a free run. Turn loose 40 or 50 young Leghorn cocks in my flock, and there is a row and turmoil all the time. As a capon he becomes quiet and makes a very nice roast. We prefer at home the Houdan capons, but for the market I have found the Light Brahmas the best. The Langshans I have never tried, but expect to next spring. Don't let any one be fooled into raising chickens with capons. He is not much more than a warming-pan; broods well, but thinks of his own crop first, and can't cluck worth a cent.

H. R. Bickford of Monterey writes: The dimensions of my poultry-house are 10 feet wide by 20 feet long. The room where the roosts are is 10x16 feet, the net-room is 4x10 feet, the front is 8 feet 6 inches high, and the back is 6 feet. The front is covered with lattice down from the top for 2 feet for ventilation. The roosts are 3 feet high, and are on a level to avoid crowding, and are set on posts, and are held in place by a peg in the top of the post. The roosts are held in place on the roost beams in the same manner, so they can be taken out and cleaned in a minute's time. The nests are all made separate, so one can be taken out and cleaned or turned around to set a hen in and not disturb the rest. They are placed against the opening in the partition, on a rack one foot high. This house will hold at least 100 hens without any crowding.—*California Cackler*.

THE APIARY.

Honey-Boards.

The *American Bee Journal* of Jan. 12th has an essay by James Heddon on the history, uses, etc., of honey-boards, from which we quote as follows:

Older bee-keepers will remember that Father Langstroth made and introduced, with his excellent hive, a rack, frame or board, whichever we may choose to call it, which was placed intermediately between the surplus receptacles and the brood-chamber. This was a $\frac{3}{4}$ -inch board with three slots running crosswise, and consequently crosswise of the brood-chamber and frames below. Upon this board, surplus receptacles were placed, having slots which were made to range with the slots of the honey-board, making a passage for bees, keeping the bottoms of the receptacles clean, and facilitating the operation of getting the boxes on and off—a very important aid in the days when we had no smokers and less knowledge of how to handle bees.

From this board I began my operations, which resulted in the break-joint, bee-space honey-board, which has now become so popular the world over. I got my first idea of a bee-space in the honey-board from a desire to use a honey-board which would maintain perfect bee-spaces everywhere and leave a perfect bee-space between the surplus receptacles and the brood-chamber when it was not in use. Of course no honey-board could do this unless it contained a bee-space in one of its surfaces. Very soon after constructing and testing, to my great satisfaction, the bee-space principle of the honey-board, I struck upon the plan of having many openings, creating the general surface of the board of slats, and having these slats and the spaces between them so arranged that the slats and spaces exactly break joints with the top bars (and spaces between them) of the brood frames below; which, while it gives a perfectly free communication to the hive, making a passage for the bees from below to the surplus receptacles above, at the same time breaks the direct communication, almost wholly preventing the building of brace-combs between the top surface of the honey-board and the bottom of the surplus honey receptacles above.

While it has a tendency to lessen the amount of brace-combs which will be built in the bee-space between the top bars of the brood frames below and the lower surface of the honey-board, yet it does not entirely prevent the brace-comb building there; but this does not matter much, as we do not remove the honey-board anywhere near as frequently as we do the surplus receptacles which rest upon the honey-board. So now we can work the tiering-up process with surplus receptacles without the annoyance of brace-combs.

A little study will soon convince the practical hive-maker that no honey-board of any value can be made that does not contain either one or both the bee-space and break-joint principles. If a honey-board is made without the bee-space principle, the material in it must be thick; and the thicker the slats which form the general surface of the hive, the more apt are the bees to build brace-combs between their

edges, and the heavier, more bungling and expensive is the honey-board. It must be thicker, in order to have any solidity, but where the bee-space is used, the space is formed by the thick outer rim which gives the honey-board its solidity.

Then again, the only way the tiering process can be worked with the surplus receptacles over a honey-board, without a bee-space, is by putting the bee-spaces in the supers, at the bottom, rather than the top, which is very objectionable, for reasons too numerous to mention here. There are few beekeepers but that have discovered their mistake, if they ever put the bee-space at the bottom.

This break-joint principle also tends to keep the queen below, and I will say that there is so little trouble from queens getting into the surplus receptacles, when these honey-boards are used, and the honey-comb is the production, that it is hardly worth while to make them queen-excluding. But for the production of extracted honey, it is well to have them so, and there are many conveniences even in comb-honey production, in having the boards queen-excluding; consequently for the last four years we have used all of ours that way.

The best method of making them queen-excluding is to run a narrow saw-knife into the edges of the slats, and as the honey-board is put together, slide in a narrow piece of zinc containing one row of queen-excluding bee passages.

While Father Langstroth was my honored guest last spring, I perfected a new invention for queen-excluding honey-boards, which greatly pleased him. It was tested, and proves to make a very excellent arrangement; although, perhaps, it is not much better than the combined wood and zinc board. It consists of an all-metal honey-board containing the same rows of queen-excluding bee passages, placed on the break-joint principle, the same as the other honey-board. For my eight-frame hive, eight rows of openings are made, and in such position that they come directly over the center of the top-bars of the brood-frames below. The whole honey-board is a quarter of an inch shorter and narrower than the wood honey-board. This contraction in the dimensions prevents all bother from corners of the supers slipping down in. Now this is a complete honey-board, the very best in the world for the avoidance of the brace-combs, both owing to its composition and thinness of surface, but it has the objection of being liable to bag in the center, or "sag," as some say. To avoid this, two A or V-shaped pieces of heavy tin are soldered to the under side of the board (when in its normal position); and although they are so large that they come down as much as three-eighths of an inch, still they will not touch the tops of the brood-frames, because each stiffener (as we will call them) points to the center of a space between the brood-frames, so that the bees pass all around them freely. This makes a complete board.

There is no absolute necessity for these stiffeners, but the beekeeper needs to learn how to manipulate the all-metal honey-board. He should not pry it loose and then lift directly up on the corners, but after loosening the propolis about the edge, give it a lateral twist and it cuts the brace-combs and twists them in two.

THE IRRIGATOR.

Government Work for Irrigation in California.

The following is the correspondence between Gov. Waterman and the Director of the U. S. Geological Survey, relative to the irrigation of the arid lands of California, to which we alluded briefly in last week's *RURAL*:

SACRAMENTO, Dec. 10, 1888.

W. F. Vilas, Secretary of the Department of the Interior, Washington, D. C.—SIR: I am informed that at the last session of Congress an appropriation was made for the survey of the arid regions of the United States with a view to ascertain the best location for reservoirs for the storage of water for irrigation and to reserve for public benefit such reservoir sites as are still upon the public lands. I am also informed you are now forming surveying parties for the purpose of such surveys.

My object in writing this communication is to present the claims of California to a share of the benefits which may accrue from the expenditure of this appropriation.

In support of this claim, I have the honor to represent that there are large areas of rich soils in this State which have a small rainfall. These areas have a semi-tropic climate, and with irrigation would grow semi-tropic productions of immense value. These areas are located along the eastern slope of the Coast Range, and extend from the northern portion of Shasta county to the southern boundary of the State, a distance of 700 miles. The average width of this belt is 20 miles, or 8,960,000 acres, which must be irrigated to be of public or private value. Intersecting this long belt of land there are a large number of streams, draining the whole Coast Range, which carry large volumes of water in the rainy season and which are dry in the summer and autumn months, when growing crops need water the most.

In the Coast Range, near the sources of these streams, there are narrow valleys, ravines and canyons that with small cost could be converted into storage basins for an inexhaustible supply of water.

It has been proved beyond doubt by experiments extending over a period of years that with water these lands will grow cotton, sugar beets, tobacco, oranges, lemons, prunes, apricots, olives,

raisins, grapes and many other semi-tropic productions, as well as a long list of deciduous fruits.

If these lands were cultivated to these various products they would supply much of the large amounts now imported from foreign countries. We have proved by ample experiments that 20 acres of such land, irrigated and planted to these semi-tropic products, will yield a liberal support to a family, and therefore you will see that this belt of land, now arid and comparatively valueless, would become the home of a population equal to that of some of our larger States.

The annual production and wealth which the development of these lands would give would be enormous. It is therefore of the first importance to the United States and to California that the steps contemplated by Congress in making this appropriation should be taken at once.

I respectfully invite your earnest attention to the claims of this section to a fair share of the benefits of that appropriation, and urge your early action thereupon.

R. W. WATERMAN, Governor.

DEPARTMENT OF THE INTERIOR,
UNITED STATES GEOLOGICAL SURVEY,
WASHINGTON (D. C.), Jan. 11, 1889.

To His Excellency R. W. Waterman, Governor of California, Sacramento, Cal.—SIR: Your favor of December 10th, in which you call the attention of the Secretary of the Interior to the desire of the State of California to share in the advantages of the irrigation survey, has been referred by the Secretary to the Director of the Geological Survey.

In response, I have the honor to assure you that the importance of irrigation survey to the agricultural interests of California is profoundly appreciated, and that there need be no fear that the State will fail to receive its due share of attention. As set forth in the accompanying executive documents, it is believed that the special surveys for the selection of reservoir sites and the segregation of irrigable lands should be based upon a general topographic survey, including the entire catchment basin of each stream. Such topographic surveys have been in progress under the direction of the Geological Survey for several years, and portions of Central California and Southern California have been included in this work. The appropriation made by Congress to initiate the special irrigation investigation could not be economically administered by the simultaneous institution of work in each of the 15 States and Territories of the arid region. As will be seen by the accompanying preliminary report to Congress, it was thought best to organize only five parties at the start and to select for the work of these parties a series of representative localities calculated to develop as rapidly as possible the methods of work which would prove most advantageous.

It is hoped the Congressional appropriation for the next fiscal year will permit the corps engaged in the irrigation investigation to be greatly enlarged, so that the work can be rapidly carried forward at a large number of points. J. W. POWELL, Director.

Director Powell Explains.

WASHINGTON, Jan. 23.—Major Powell, Director of the Geological Survey, explained today to the House Committee on Territories the plan for the reclamation of the arid lands of the West by irrigation. He illustrated by means of maps the location of the proposed reservoirs, dams and canals in the James river, New Mexico, and said he thought reservoirs could be constructed for \$450,000, whereby 155,000 acres of land could be reclaimed. The lands were worth nothing now, but if reclaimed by irrigation would become very valuable.

Major Powell said that between 90,000,000 and 100,000,000 acres of arid land in the West could be reclaimed by irrigation. After the works had been constructed and in operation the annual cost to the farmer for irrigating his land would be from \$1 to \$2 per acre.

DIFFERENCE BETWEEN WOOL AND HAIR.—Although there is a very great difference between wool and hair, it is found quite difficult to correctly explain what that difference is—the one sometimes seems to run almost imperceptibly into the other. A correspondent of the *St. Louis Globe-Democrat* furnishes the following very interesting paragraph on this subject: The difference between wool and hair is not so great as might be supposed, since very fine hair bears a strong resemblance to very coarse wool; but when the microscope is brought into operation a marked difference may be observed. The surface of the hair will appear to be perfectly smooth, as though it were polished, while the surface of a fiber of wool is imbricated, as though the trunk were covered with infinitely small scales. A hair is therefore seen to be an entirely different thing from a fiber of wool; and a further variation is noticed in the fact that hair never curls in the way wool does, for hair—when it is curly at all—curls in long, wavy lines, and wool in short half circles, which almost return into themselves. The texture of wool is also varied by fine lines, from 2000 to 4000 in the inch; so, by means of the microscope, wool may be easily known from cotton or any other animal or vegetable fiber.

A NEW MEXICAN RAILROAD PROPOSITION.—Among the numerous railway enterprises which continue to be made public, one of the most ambitious is that of the Mexican Pacific, which contemplates a line from San Diego, Cal., southeast to the Gulf of California, thence south along the coast to Mazatlan and thence to the City of Mexico, a total distance of some 1900 miles. Such a line would run through regions abounding in coal, valuable woods, cotton and woolen manufactures and many other sources of traffic, while it would reach a vast population to whom a railway is unknown.

RAILROAD INCREASE LAST YEAR.—A total of 5790 miles of new road was added to the railroad system of the United States last year.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Greater Inducements for Subscriptions.

NEW RATES for PACIFIC RURAL PRESS.

Annual Subscription.....\$3 00
If paid in advance, 15 months for..... 3 00
If paid in advance, 10 months for..... 2 00
If paid in advance, 5 months for..... 1 00
Trial subscriptions for three months, paid in advance, 60 cents.

Official Endorsement.

In consideration of a certain contract entered into this day between Dewey & Co., publishers, and the California Patron Publishing Company of San Francisco for the publication of a weekly Grange edition of the PACIFIC RURAL PRESS and the California Patron, as a monthly, resolved that the Executive Committee of the State Grange of California hereby designate and endorse the PACIFIC RURAL PRESS as the weekly organ and the California Patron as the monthly organ of the State Grange of California.

W. L. OVERHISER,

Master of State Grange of Cal.

A. T. DEWEY, Sec'y S. G. of Cal.

San Francisco, Cal., Jan. 11, 1889.

Worthy Master S. C. Carr.

Arrangements for Visiting the Different Granges.

As stated last week, Bro. S. C. Carr, Worthy Master of the Wisconsin State Grange, has agreed to devote one week to visiting the California Granges.

The suggested program for speaking has been accepted by all the Granges mentioned, as will be seen by the following replies to letters of inquiry sent them:

From Sacramento Grange.

A. T. DEWEY: DEAR BROTHER:—Your letter in relation to Bro. S. C. Carr's meeting with our Grange was duly received. I submitted it to our Grange yesterday, and they unanimously adopted your suggestion to meet on February 7th, Thursday, at 1 o'clock. They will call special meeting for that purpose, and will not hold regular meeting on the following Saturday.

Please give general invitation through your paper. We shall invite American River, Enderprise, Florin, Franklin, Elk Grove and Galt Granges to be with us that day, and give the brother in a distant land a hearty welcome, and, although away from home, he is among friends and kindred.

Bro. Carr has been Master of the great and growing State Grange of Wisconsin for 8 years, has been to the National Grange 7 times, where he has met and exchanged views with representatives from all parts of the Union, and has become thoroughly imbued with the wants of the farmer and the Grange. I bespeak for him a friendly and fraternal greeting, and let us show to him that we are alive to the great interest of the tillers of the soil, so that he may carry back a strong heart and determined will to labor in the great field before him. Fraternally yours,

Sacramento, Jan. 27th. DANIEL FLINT.

From Stockton Grange.

DEAR SIR AND BROTHER:—I received your letter on Friday announcing that you had made arrangements with Bro. Carr from Wisconsin to deliver a few lectures to the Granges and farmers of San Joaquin and Sacramento valleys, and would fill the following appointments: Tulare on Monday, Feb. 4th; Merced, Feb. 5th; Stockton, Feb. 6th; and Sacramento, Feb. 7th.

Stockton Grange met yesterday and made the following arrangements: To hold a Grange meeting in the forenoon, commencing at 10 o'clock, Harvest Feast at 12 m., and an open meeting at 2 p. m. At the Grange meeting all Patrons of good standing are cordially invited to attend, and at 2 p. m. the public, and especially the farmers, and their wives, sons and daughters, are invited. No doubt you will hear from the Secretary of Stockton Grange.

Stockton Grange has changed their place of meeting back to their old quarters, over Austin's store, where the State Grange was held. Now I shall expect you and Sister Dewey on that occasion. As you have arranged the meetings, I see there will be no chance for Bro. Carr to visit us on his way to Sacramento. I have written to him to so arrange his appointments as to stop over with us on his way back to Pasadena. I will write to Bros. Flint and Johnston and invite them. Now let us be up and doing, old leaders and all, and make this reception to our guest, the Worthy Master of Wisconsin, as hearty a California greeting as he could wish. He will not disappoint those who turn out to hear such a representative

Patron from the Eastern side. These discussions listened to by hundreds should prove of essential value to the farmers' cause.

Yours fraternally,

Stockton, Jan. 27th. W. L. OVERHISER.

DEAR SIR AND BROTHER:—At our meeting this day, upon the reading of your circular to Worthy Master Overhiser, Stockton Grange decided to have a reception for Worthy Master Carr of Wisconsin and party, on Wednesday, Feb. 6th inst. Grange to meet at 10 o'clock A. M., with a Harvest Feast at 12 o'clock, to which all members in good standing are invited, and an open meeting at 2 o'clock P. M., to which the public are respectfully invited. The meeting to be held in Good Templars' hall, corner of Main and American streets, Stockton. Yours fraternally,

Stockton, Jan. 26th.

From Tulare Grange.

EDITORS PRESS:—We will arrange for a public meeting to be addressed by Bro. S. C. Carr, on Monday, Feb. 4, 1889, at 1 o'clock P. M., and do all we can to make the meeting as much of a success as possible. Yours fraternally,

J. M. MOORE, M. Tulare Grange.

Tulare, Jan. 26th.

We are glad to hear so promptly from our Tulare wide-awake Patrons. We hope representatives from Hanford and Buena Vista Granges will turn out in good numbers. Such an opportunity for a good, rousing farmers' meeting cannot be expected often in Tulare county until more fully organized. Let each Patron and farmer learning of this meeting in time notify others.

From Merced Grange.

DEAR SIR:—Your favor of the 26th inst. at hand and contents noted. Please inform Master S. C. Carr that we will make arrangements to have him speak to us on Tuesday afternoon at 1 o'clock, Feb. 5, 1889.

We will thoroughly advertise the lecture, giving notice that it will be an open meeting for farmers "en masse." Full arrangements will be made to receive and entertain the speaker. Yours truly,

Merced, Jan. 26th.

From Yuba City Grange.

DEAR SIR AND BROTHER:—Yours with regard to Worthy Master Carr is at hand, and I hasten to say that the day of meeting suits us exactly (Feb. 8th) and will gladly make all necessary arrangements to meet the brethren. Bro. Frisbie will see you Wednesday. Fraternally yours,

Yuba City, Jan. 26th.

DEAR SIR AND BROTHER:—Your card asking for the hour is just at hand. I am inclined to think that 1 P. M. is perhaps the best hour we could select, and I therefore name that hour. This will give all those at a distance time to come, and I have no doubt we shall have a large attendance from this and Yuba county to hear Worthy Master Carr. Fraternally yours,

Yuba City, Jan. 26th. GEORGE OHLEYER.

From Eden Grange.

BROTHER DEWEY:—Saturday last I laid before our Grange your letter and inclosed slips touching the proposed visit of Brother and Sister Carr, and after conferring on the matter, the following resolution was adopted:

Resolved, That Eden Grange having received notice from the Secretary of the State Grange of the proposed visit, meetings to greet Bro. and Sister Carr, especially to listen to an address from Bro. Carr of the Wisconsin State Grange, which proposition is subject to the invitation of San Jose Grange, will cheerfully join Temescal Grange in providing for such meeting in case no action is taken by San Jose Grange.

Still I have little doubt but the San Jose Grange will avail itself of the visit proffered them, and if we would listen to the eminent Patron on Grange matters, I think we will have to proceed to the Garden City for such purpose. Fraternally yours,

Haywards, Jan. 26th.

From San Jose Grange.

BRO. DEWEY:—Yours of the 24th inst. was read in open Grange Saturday, and it was the unanimous sentiment of the Grange that your proposition be entertained, and that Bro. Carr, M. of Wisconsin State Grange, be invited to meet San Jose Grange Feb. 9th, and that the invitation be extended to Eden, Temescal and Contra Costa Granges, collectively or individually, as may suit their pleasure. Of course, we would like to have them all come.

We had a very interesting meeting last Saturday. The brothers and sisters were wide-awake and full of animation.

I can tell you, brother, that San Jose Grange started in with the new year on a "flood tide." "There is a tide in the affairs of men when taken at the flood leads on to fortune." Now we are going to try to keep in mid-stream. Every meeting has been better than the last, and every one has shown an increase in members. We have initiated one and have the names of others who are coming into the "fold." So you see we can give you some evidence for the faith that is within us. The star of hope gleams brightly and imbues us with a spirit of confidence.

The Grange is a necessity of the times, and I believe that its future will be more brilliant than its past, with all its glorious record.

Every tiller of the soil should be in the Grange; it is his home, and the sooner he finds it out the better it will be for him. We have got to be vigilant, for "eternal vigilance is the price of liberty." We have got to fight, and the sooner we join hands and buckle on our armor the better. What with syndicates, monopolies, combines, corners, trusts and "sympathetic" movements, God save the mark, we have either to fight or go to the wall.

I think the Patron's new dress very becoming. The RURAL and Patron combined make a very good team, and, I think, a safe one. The Secretary of San Jose Grange and myself were appointed to make all necessary arrangements for the reception of Bro. Carr, and all those who may be pleased to meet with us on Feb. 9th. We hope, then, that we shall hear from you as soon as possible, so that we can make all necessary plans. If it is decided to meet here, please let us know what train they will come on, so that we may be there to meet them, which we promise to do if we are apprised of their coming.

I see that I am spinning this communication out longer than I started in to, so will close with saying that we hope to have a good big meeting on February 9th, and one that will create and send forth an influence that shall be for the uplifting of humanity. Fraternally yours,

San Jose, Jan. 28th.

We see no other reasonable way but to let San Jose, the Garden City, with the indorsement of Eden, lead the way to a, no doubt, delightful time, and trust that the Alameda and Contra Costa county Patrons will do the best they can as to attendance. There is no better place to go, you know, Tulare always excepted, of course.

The Route.

Bro. Carr will probably arrive at Tulare by 1.25 A. M., Monday, February 4th, and will speak at Tulare Grange at 1 P. M. on the same day.

He will leave Tulare on the 1.25 A. M. train Tuesday, Feb. 5th, and arrive at Merced at 5 A. M. the same day. He will speak at Merced Grange at 1 P. M. Leave Merced on the 5 A. M. train Wednesday, arriving at Stockton at 8 A. M. February 6th. As will be seen by the above letters, Stockton Grange will hold a regular meeting at 10 A. M., and an open meeting at 2 P. M. on that day.

Bro. Carr will leave Stockton on the morning train for Sacramento, where he will arrive at about 10 A. M. Thursday, Feb. 7th. Sacramento Grange will meet at 1 P. M.

In going to Yuba City, Bro. Carr will take the Oregon express, which leaves Sacramento at 11 P. M., arriving at Marysville at 1.25 A. M. Friday. He will meet with Yuba City and other Granges in that vicinity on Friday, February 8th, at 1 P. M.

From Marysville he takes the 1.25 A. M. Oregon express Saturday for San Francisco, where he will arrive at 7.45 A. M. He will then leave San Francisco on the 10.30 A. M. train for San Jose, where he will arrive at 12.19 Saturday afternoon. He can then meet with San Jose Grange in the afternoon, February 9th.

Bro. Carr's first meeting in California will be held at Tulare, in Library hall. He will have such able and patriotic supporters as Deputy J. M. Moore, Bro. J. W. Mackie, Past Master Merritt and a score of other intelligent and go-ahead brothers and sisters.

It is expected that a goodly gathering of Patrons and farmers will greet Bro. Carr at Merced under the auspices of Merced Grange. The officers of this Grange are to be installed Saturday, Feb. 21. Bro. B. F. Frisbie of Yuba City, Deputy of Northern California, having been invited to act as installing officer, passed through the city this week on his way thither. A class will be instructed in the Third and Fourth Degrees, accompanied as usual by a Harvest Feast.

Worthy Master Overhiser has promised to meet Brother Carr at Merced. We have no doubt but a very interesting meeting will be held. The irrigation improvements and rapid growth of Merced city and its surroundings can hardly fail to interest an Eastern Patron like Brother Carr.

Yuba City Grange will meet at 1 P. M. in the Grange hall, and the meeting will be under the auspices of Butte County Pomona Grange on behalf of Yuba City, North Butte, South Sutter, March and Wheatland Granges.

WE wish to return thanks to the Masters and members of different Granges addressed in regard to the meetings to be held next week for their prompt and earnest attention.

FOR THE SOUTHERN COUNTIES, Bro. A. P. Roache has been appointed General Deputy by Worthy Master Overhiser.

From Tulare to Yuba City.

The prompt acceptance of the services of Wisconsin's Worthy Master by our Granges from Tulare in the south to Yuba City in the north, is very encouraging. The good work done by his brothers in the early days of the Grange in California certainly should not be forgotten.

The services rendered from the beginning of the organization by Dr. Ezra S. Carr while Professor of Agriculture in the College of California, and later in the State University, and his sincere interest in agricultural progress, are a part of the history of our State. His administration as State Superintendent of Public Schools, with his wife, Sister Jeanne C. Carr, as deputy, was an honest and satisfactory one, and Sister Carr, while Lecturer of the State Grange for two years, was an honor to her sex, her lectures being some of the most happy, instructive and brilliant efforts recorded in our Grange literature. They were the outcome of a warm and faithful heart, bright intellect and rich experience.

Dr. Carr's history of the Farmers' movement and Grange organization on the Pacific Coast is an able and exhaustive work, and one of permanent value in the annals of the State.

In the early efforts to establish the Indiana Colony and what is now known as Pasadena, Dr. and Mrs. Carr were among the first to join, when the enterprise was derided as a delusion. They still own some 40 acres adjoining the tract which they sold and which is now in the heart of that beautiful city. All who know them rejoice in their financial prosperity, and hope their useful and eventful lives are to be extended through many happy and peaceful years.

It was to visit Dr. Carr in his feebleness that the Worthy Master of Wisconsin and his brother, J. G. Carr, left their northern home for a two-months' sojourn, it being a rare thing for them to spend over a week away from home except at the session of the State or National Grange.

Bro. Nelson Carr and wife have always been exceptionally dutiful and faithful in the important official duties placed upon them by their State and subordinate Granges, and are noted among their extensive Grange acquaintances for their sincere and unflinching interest in the whole work of the Order.

About 1875, five of the brothers were Masters of subordinate Granges, Dr. E. S. Carr being Master of Temescal, Nelson C. Carr of Bennett Valley, M. C. Carr of Sanol, and the two visiting brothers Masters of Subordinate Granges in Wisconsin.

Brother Nelson C. Carr, formerly Steward of the State Grange, has promised, with his wife, if able, to accompany the Master on his journey through California. Is a noble tribute to our State from Wisconsin's Master to pledge his time and also insist on paying his own expenses in visiting and revisiting the northern counties and assisting so many of our Granges; and, in response, we have no doubt our brothers and sisters of California will turn out in full force and welcome this able and distinguished brother and friend of the farmer.

There should be no strife between our Granges in this matter, except as to which can bring the largest number of farmers, with their families, to the gatherings which are to be considered as district meetings for all Granges located within traveling distance, or in any place from which time and convenience will permit them to assemble for conference and exchange of greetings and progressive sentiments.

At our office, last week, we enjoyed all too brief a visit from three of the above-named brothers, with Sister Hannah Carr, and we believe Master Carr and any friends who may accompany him will be warmly appreciated, whithersoever they may go, among the Patrons of California.

Granges Should Turn Out.

There is little time to advertise the different points where Worthy Master Carr will speak during next week. It is, therefore, more important that such Patrons as are advised should mention the matter to fellow-Patrons and other farmers who would be interested and favorably influenced by attending. On such occasions no Grange or Granger should wait for any formal invitation.

The meeting at Sacramento might well take the shape of a State gathering of farmers, rather than a local affair merely. We hope that matters relating to legislative reform will be well discussed there and so far as time will permit at other meetings, and that all farmers may be induced to use their voice in the community and their influence with the members of the Legislature, in season to accomplish the enactment of some of the very important laws now before the Senate and Assembly. We hope especially that all Past Masters, State officers, and past officers will manifest a lively interest in attending the meetings announced, and in common with other Patrons, get warmed up to more effective work throughout the State.

ATTENDANCE at the revival meeting of Salinas Grange has caused the manager of our Grange department to be absent at the time of going to press with this issue.

BRIGHTER PROSPECTS seem to be looming up for the Grange on this coast. With kind words spoken of our enterprise by correspondents, we are altogether encouraged in our work.

Have Your Subjects Previously Announced.

It would be well if no subordinate Grange session should be closed until some subject of conference or discussion was announced for the next meeting, and one or more Patrons appointed to lead in debate.

This gives each member time to think over and perhaps read and search for fresh information that will give the subject new interest and value to all.

Such discussions bring out an exchange of ideas that are worth repeating in the local and Grange press to a circle of readers far greater than the audiences of the largest and best-attended metropolitan churches.

Prepare and say something and do something worth publishing at every meeting. Then have it written up for your local press if you have to pay for its reporting. It would prove a good investment if necessary to pay for it out of the treasury of any Grange. Your local editor would like to get it (to help sell his papers), and its publication would soon make every good and enterprising farmer in this jurisdiction respect your meetings and wish to join your Grange.

Your old grumblers would soon stop repeating their old saying, what is the use of spending time in going to the Grange? Every member will improve faster, and more of the ablest and best will get into the Legislature, where their presence would be a God send to the country.

In 1873, when the Grange took its first start on this coast, there were over 30 Farmers' Clubs in California, prosperous and increasing in membership from the influence of their discussions and previous announcement and final reporting of the same in the local papers and the RURAL PRESS. Patrons, you cannot overrate the importance of regular discussions, if you make sure to report them.

Few able speakers would like to spend their evenings, or other valuable hours, in study preparing to speak only to a dozen or two fellow-members. But for reaching out through the press and benefiting thousands of readers, laborious researches may become a pleasure.

For this line of improvement we may well give here, as suggestive of some subjects of interest to most farmers or their households, the following annual program of exercises for the first meeting in each month, submitted by the Lecturer of Temescal Grange of Oakland, Cal., following the reported successful practice of the subordinate Granges of Massachusetts and some other Eastern States in announcing in advance for the year the leading speakers and their

Subjects for Discussion.

JANUARY—The Australian system of voting and legislative reforms.

FEBRUARY—Practical education, including hints on cooking, etc.

MARCH—Hired help on the farm, indoors and out.

APRIL—Picnics—illustrated.

MAY—Camping and recreation.

JUNE—Harvesting grains, etc.

JULY—Horticulture and preserving fruits.

AUGUST—Agricultural fairs.

SEPTEMBER—How best to interest young people in Grange and farm work.

OCTOBER—Convicts; their treatment while in prison and the needed education to enable them to earn an honest living after they are released.

NOVEMBER—Pruning, grafting and seed-sowing.

DECEMBER—Literary exercises appropriate for the Grange birthday anniversary.

We shall be pleased to publish gratuitously in our columns, at first the full program for the year, and then monthly in advance the program for each month singly of all Granges in the Oregon and California jurisdictions that will adopt this plan of creating a new and lasting interest in their meetings.

Occasionally, when the subjects are suitable, the debate might be accompanied with recitations and musical exercises at an open meeting, inviting all farmers and friends of members.

It is good news to many, no doubt, that the National Grange, at its last session, ordered the issue of what is termed the "Optional Combined Ritual" for conferring the degrees for men and women together, instead of separately, thereby lessening the time and work for conferring degrees about one-half.

The use of the old or new rituals will be optional with each Grange. The new rituals will be furnished at the same cost as the old, after the slight revision ordered in the first experimental samples tested by a few of the State Grange Masters just previous to the last National Grange session has been made, which we presume will be within a month or two.

This will happily afford all growing

Granges that adopt the new ritual much more time for social and literary exercises.

We invite the suggestion of appropriate questions and comments from readers on the subject of this article.

The Water-Front Railroad Bill.

The construction of a railway along the water-front of the city of San Francisco we consider a project of immense importance to farmers, as all the produce now landed in this city is heavily taxed for drayage. The same tax also occurs on all goods sent from the city to the country, which tax has to be paid by the consumers, eventually at any rate, and usually with a heavy percentage added as profit in passing through the hands of dealers.

There is no sense in having the streets near the water-front blocked and worn out as they are most of the time from over-use, when railroad transportation is so much cheaper than horse-and-wagon transportation.

We wish farmers would wake up to this question over the whole State. What use is there in their being obliged to contribute to the support of an army of wharfingers, collectors and many others who live off their toll-gatherings from our present system of wharfage and drayage at our city-front? Every dray or hand-cart taking an agricultural implement or package of provisions on to the wharf for shipment to the interior is taxed a wharfage fee to the State, a large proportion of the same being consumed in the expense of collecting the tax in dribbles. The whole system needs overhauling. Will not some brother look into this bill and present some facts for action to the meeting of Grangers on Thursday next?

OUR LEGISLATIVE COMMITTEE.—Last week Bro. Coulter, chairman of the Legislative Committee at Sacramento, was obliged to return home temporarily, we suppose on account of private business. Bro. Thos. McConnell of the committee remains at the Capital, and we have no doubt they are both doing good service. We hope they will appear at the reception of Master Carr, and help make the Grange meeting on Thursday next one of important results.

BROTHERLY CONDUCT.—Master S. C. Carr of Wisconsin, in passing through Oregon, made a special railway trip to the station bearing the P. O. address of Worthy Master Hayes, but found that the W. M. resided some five or six miles from the depot. As it was raining hard at the time, Bro. Carr had to acknowledge himself flanked by the elements and turn his face California-ward with sincere regrets at not visiting Bro. Hayes and his farm.

ALHAMBRA GRANGE.—On Saturday, Jan. 19th, Alhambra Grange met early enough in the day to have a very enjoyable Harvest Feast and elect officers for the ensuing year. Our Worthy Master was re-elected, and almost thought he was badly used. Our meetings have been interfered with by bad roads, but we are not going to say die.—M. B. L.

MORE GRANGES.—The revival of Salinas Grange on Friday of this week is quickly to be followed by the organization of a new Grange at San Lucas, between Salinas and San Miguel, being in S. L. Obispo county, 25 petitioners having already signed for a charter. Patrons, keep the work going.

COMING ALREADY.—Since our efforts began, to secure the National Grange session here, California has already been visited by several of its members, i. e., Bro. A. Brigham, W. M. of Massachusetts State Grange; Bro. S. C. Carr, W. M. of Wisconsin State Grange; and Bro. D. Woodman of Michigan, a frequent visitor to the National Grange.

SONOMA COUNTY PATRONS ACTIVE.—At the regular meeting of Sonoma County Pomona Grange held in the city of Santa Rosa, Wednesday, Jan. 16, 1889, the following committee was appointed to make an effort to revive old Granges that have failed to keep up their organization: S. T. Coulter, Mrs. Nelson Carr, H. Gregory, L. Cnopius, E. A. Rogers.

SEVENTEEN more new Granges are reported by the National Lecturer in his last report. In New York seven were organized; Connecticut, three; Massachusetts, two; Oregon, one; New Hampshire, one; Nebraska, two.

BRO. AMOS ADAMS, former Secretary of the State Grange, was married in this city last Tuesday to Nellie G. Ailsworth.

A Tulare Matron Speaks.

EDITORS PRESS:—It is the Sabbath, and dinner not yet over, but the aroma from the duck and spinach has already claimed more territory than the kitchen, and in the interval before putting on my potatoes, etc., I want to tell you what a grand success we think this last combination of PRESS and Patron is—so many good things are in it. So many subjects of real importance opened that it is a puzzle which were the best to discuss first as being likely to bring us the earliest benefits. Under the headings of "Railroad Taxes," "Reassessment of Property," "A Cause of Regret," "The Mortgage Tax Law," "Improving Election Laws," "Bad Outlook for Labor," "Dakota and Single Tax," we find food for much thought and opportunity for a good deal of work. When we see letters from different parts of the State, so nearly alike in substance, it looks very hopeful, and as if there might yet be such a gathering of ranks and a co working among the laboring classes as has never been known before. Now that we have begun to see alike, there should come easily sympathy for and faith in each other, and a strong belief that by long and strong pulls together all those things so necessary to the advancement of the working classes can be accomplished. We can discuss these things in the Grange, ask for needed laws, and, by voting in a body, get them. What can it avail us to complain of heavy taxes and other abuses to those who are enriching themselves off of us? We must rather know what we want, declare we will have certain laws, and combine our strength in every way, till they can no longer resist us.

We find that ours is a grand Order—the one which is to bring the hearts of the people together. Through the columns of our Grange organ, new names are coming to the front and identifying themselves with us by grand, earnest words, not many "Matrons," it is true, but we know while it takes two or more to talk up these subjects, it takes only one to write, and we will venture to say that there is a "gude wife" at nearly every elbow of him who wields the pen.

As to the "Single Tax" movement, we have always wished to know more about it; so when we read D. E. W.'s article, we exclaimed that "a few letters as plain as that would make a single-tax man of us."

Our other half said: "'Single-tax woman' would be more appropriate." We just had to "snap" a little, and declare we were glad to be a woman, since it could never be thrown up to us that though we had a chance to cast a ballot according to our conscience, we still allowed the stale old tariff nonsense to pull us into line, as our brothers did ever do.

Tulare, Jan. 27th.

S. A. M.

Newcastle Grange.

MESSRS. EDITORS:—The officers of Newcastle Grange were installed Saturday, the 19th, by Bro. W. L. Overhiser, W. M. C. S. Grange, assisted by Bro. L. D. Thomas, P. M. of Roseville Grange. The day was fine, and many visitors were present, among them ten brothers and sisters from Roseville Grange. The Third and Fourth degrees were conferred on one sister by Worthy Master Overhiser, and then during the recess, while the tables were being made ready, we were favored with some fine music, both vocal and instrumental, by Rev. Mr. Wright and wife of Penryn.

After dinner (in preparing which the sisters of Newcastle Grange are never excelled) had been fully enjoyed, especially by those who had driven from 12 to 16 miles, there was an open installation. Worthy Master Overhiser surpassed even himself in making the ceremony impressive, and then, with closed doors, gave the Grange good practical advice, which we hope will impart some of his zeal to the lukewarm and make all resolve anew to work with heart and hand in a cause that is doing much to benefit the farming class.

Antelope, Jan. 21, 1889.

S. J. C.

Grange Work in the North.

BRO. B. F. Friebie, Deputy, informs us that he has installed Grange officers in his northern district as follows: Yuba City, Jan. 5th; North Butte, 12th; Wheatland, 19th. He reports North Butte Grange as on the eve of a season of unusual prosperity since its change of location from Pennington to Live Oak, Sutter county. Five or six new applications have been received, and this promises soon to be a stronger Grange than ever. He will visit North Butte Grange again on the 9th inst.

SAN JOSE GRANGE met January 19th, with O. F. Alley in the chair. Bro. Hiram Pomeroy read a succinct and interesting account of his recent visit East after an absence of 35 years. He graphically described the journey and his visit to the Mormon Tabernacle at Salt Lake City and the Sunday services therein. H. A. Brainard, the secretary, read a paper on co-operation, advocating its adoption and the future spread of the principle. Mr. Holland called attention to a proposition to be submitted to the present Legislature, to repeal the law which now provides for a tax on mortgages, and stated that the members of the Grange should exert all their influence to prevent the passage of such a law. It was to the interest of Grangers to let the law remain as it is at present.

New Water Laws.

A new law of a radical character has been introduced into the Legislature providing that the State shall make improvements and distribute the waters of the State at fixed rates instead of having them dealt out by corporations. This is a matter worthy of discussion, as new light may thereby be thrown on the subject, whether the intent of the bill be political or otherwise.

This water question is immensely important to the people of California—perhaps more so than to those of any other State in the Union. The Wright bill, so called, should probably be maintained for the present, but we have no doubt it can and should be much improved. If it is not practicable to amend it to advantage at this session, we would ask if there should not be a commission appointed to examine, consider and report as to what action it would be best for the succeeding Legislature to take. We are inclined to think that before wholly satisfactory provisions can be made for disposing of the waters in this State, constitutional amendments will be needed.

There are men of honesty and candid minds who have studied this matter in its different bearings, almost from sheer necessity, for many years. We would thank such men to write out their views candidly on the water question for the benefit of others who are not so well informed. In fact, the great difficulty in handling the water question arises more from the ignorance of the great majority than from lack of intelligence and good judgment on the part of the few who are most interested in and best acquainted with the subject.

Railroads and Mails.

In answer to a request of the House Committee on Postoffices and Postroads, the Postmaster-General gives his opinion on House bill 12,109, which requires railroad companies to carry the mails at rates of compensation fixed by law. He points out the present condition of the law, under which any railroad company may refuse to take the mails, and the department can secure their carriage by contract only. He suggests that a state of things under which service may be stopped at the caprice of a carrier, constitutes a reproach to a Government established to promote the public welfare.

The committee unanimously voted to report the bill. It provides that if any railroad company shall refuse or neglect to convey any mails upon any train upon which the Postmaster-General may require such service, or willfully refuse to obey any law respecting the transportation of the mails, it shall be liable to a penalty not exceeding \$1000 for each day in which such refusal or neglect shall be persisted in.

A Legislature of Appropriations.

If one-tenth of the appropriation schemes, big and little, that have been projected before the present Legislature should meet with success, the current session could fitly be called the Legislature of Appropriations. Look over the list of bills for extraordinary appropriations; take out your pencil and figure up the amount. We are sure it would astonish almost any quiet-going citizen who has left a spark of patriotism or concern for the welfare of coming generations.

Grange Election.

ALHAMBRA.—Dr. L. Strentzel, M.; E. B. Smith, O.; W. A. Fraser, L.; E. B. Barber, S.; Jas. Kelley, A. S.; L. D. Messer, C.; H. Raap, T.; Mrs. M. B. Lander, Sec.; J. Cornwall, Jr., G. K.; Mrs. L. Strentzel, Ceres; Mrs. H. Bent, P.; Mrs. Lillian Tompkins, F.; Mrs. Alex. Boss, L. A. S.; M. R. Barber, Trustee; Miss Mollie Kelley, Org't.

THE INTERSTATE COMMERCE COMMISSION recommends that the Interstate Commerce Act be so amended as, 1st, to define what shall be considered excursion and commutation tickets; 2d, to prohibit all payment of commissions on sale of tickets, and all sale of tickets for interstate business except by regular agents of carriers; 3d, to require carriers to provide for the speedy and convenient redemption of unused tickets or coupons. Former recommendations as to joint tariffs and notices of reduction of rates are renewed.

SAN LUCAS GRANGE, No. 284, will be the title of the first new Grange lately organized in this State. It is located in the southern part of Monterey county. Through the active efforts of Bro. F. B. Logan, correspondent of the RURAL PRESS, 25 names have been signed to the petition, and Bro. A. P. Roache has been applied to to organize the Grange at San Lucas on Thursday afternoon.

A BILL providing for the appointment of a commission and appropriating money for the reception of the National Grange was introduced in the State Senate by Langford on the 29th ultimo.

In sending report of the Roseville Grange meeting, Sister Cross kindly mentions the RURAL PRESS as coming to her Saturday with a very pleasant and attractive face.

P. of H. news continued opposite page 108.

The Cherubs.

Long years ago, across the sea,
Two lovely baby boys
Filled a small home with merry glee,
With laughter, fun and noise.

Their young Italian mother sat
Beside her door and spun,
While by her side her lovely twins
Rolled laughing in the sun.

Till, tired at last, they'd leave their play
And by her side recline,
While she of little Jesus told,
The babe of Palestine.

One day a handsome stranger passed
The humble cottage door,
As listening at their mother's knee
They heard the tale once more.

Not laughing now, but rapt and still,
With calm, uplifted eyes,
Hearing the oft-repeated tale
With ever fresh surprise.

The stranger heard the story too,
And to the mother said:
"And will you bring your boys to see
A picture I have made—"

"A picture of the Jesus-child
Held on his mother's arm?
If you will bring your lovely twins,
They shall be safe from harm."

And then each day he painted them
As first he saw them stand—
One chin upon the folded arms,
One resting on the hand;

And made of each an angel-child
With wings like little bird;
And placed them at the feet of him
Whose story they had heard.

And still, though centuries have passed,
The glorious picture stands
Just as it left, so long ago,
The painter Raphael's hands.

And still the fair Italian twins
With earnest eyes you see
Just as they stood that summer's day
Beside their mother's knee. —Ex.

Good-Bye, Old Cow.

Good-bye, old cow, you've got to go,
Of course 'tis hard to tell you so,
For your forefathers and my own
For ages this old farm have known.

You're lank and flabby—to be brief,
You're fit for neither milk nor beef;
You yield but little at your best,
And then go dry six months to rest.

Your horns are long, your bones the same,
Too little meat for such a frame,
With stomach large and udders small,
The different parts don't match at all.

I looked at you with sad regret
And mourned to think we ever met,
For every wrinkle in your horn
Proclaims of wasted hay and corn.

My neighbor farmers live with ease,
While I wear patches on my knees,
The reason, simple, plain and true,
They've kept good stock, while I kept you.

Such common scrubs no more I'll feed,
Henceforth I'll try a better breed;
I plainly see my error now—
You've got to go; good-bye, old cow.

—Mark Lane Express

Home Decoration.

A Plea for the Window Garden.

Written for the RURAL PRESS by MRS. MARY E. WOODARD.

That the cheerful influence of a window garden is duly appreciated by people in general I am fully persuaded, for I have not an article of furniture, a book or a picture in my rooms which attracts the attention of and seems to give the amount of real pleasure to my friends that my plants do. But among the many who admire, comparatively very few make any similar attempt at window gardening in their own homes. The idea that house-plants are a source of great care is presumably the real reason; but it frequently occurs to me that if even a very few minutes now and then were taken from the hours spent in other modes of household decoration now so common among us, and devoted to caring for a little of nature's own decoration, the effect would be often more restful and pleasing, and the expense and labor inestimably less. This is undeniably an era of home adornment—not even the whisk-broom holder or the bag for soiled clothing escapes in this universal enthusiasm for beautifying. And while I in no way underrate the real value of the motives which actuate this reign of decoration which has swept over the land, I would

suggest one or two methods whereby the same results might be achieved in a way more satisfactory to the ordinary housekeeper. For instance, the young wife and housekeeper just launching out in life with limited means but a nature keenly alive to the effect and influence of a beautiful home, beholds with a growing discontent that her family sitting-room has a bare and unattractive appearance, after having spent a few minutes of an afternoon in the home of some friend whose means and leisure far exceed her own. To be sure, there is a bright new carpet on the floor, and a pretty lounge, and a shining parlor stove, and a few modest pictures, and a little table with a few books; but yet—the young housewife pauses and looks around with a sigh. The room lacks something. There is scarcely an article in it that is not there for some real use. There are no bright spots here and there to catch the eye and hold it, pleasing the intellect by its general tone and effect, whether or no the observer is fully aware of the exact reason. There is nothing to call forth that delightful volley of praise and questions from the intimate lady caller and by the innocent discussion thereby following make an otherwise dry call a cheerful one. In a word, her home lacks decoration. "It doesn't look homelike," she concludes. "I must have some pretty things." But our young housekeeper belongs to that large and most excellent class of people who carry on the world's real work. Her girlhood has been filled with a labor which admitted of no time or money to be spent on education in the fine arts. "I will find no trouble in buying a few little articles," she thinks, but is disappointed when prices of such as she desires are made known to her. That table scarf of old gold hanging in a shop window with roses and butterflies and lilies elegantly embroidered thereon, seems to her very costly at \$5.00, and all other such articles proportionately so. "I cannot afford them," she says finally, "but what can I make?" "Oh! it is not at all hard to learn Kensington and Lustra painting," say certain of her friends, sympathizing with her efforts to beautify her home, "and one can make such lovely tidies and other things by means of it," and straightway she begins. Perhaps her outfit costs a little more than she had anticipated, but she consoles herself that the expense is well-nigh all embraced therein, and by and by little articles of velvet and satin and plush begin to appear about her rooms, some of them pretty, to be sure, but generally (I speak from the standpoint of an ignorant critic) of questionable beauty or utility; for after all the real artists are few among us, and paint is one thing that refuses to respond satisfactorily to the mediocre touch.

Our young housekeeper with the cares of a growing household has no time for a thorough course of lessons in the art, and often beholds with misgiving the result of her untutored labor; for painting is labor, to which fact many aching eyes and fingers and backs can testify. She grows a little nervous now when ladies call who have means and leisure to make a success of this branch of art, and is amazed at the sum total (for she is a careful housekeeper and keeps strict account of the cents as well as dollars) to which the cost of her materials has amounted, for there are no end of ribbon bows and satin linings and pompons and crescents needed for the "finishing-up" process, which seem so small in themselves that one is often unconscious of their possible amount in the aggregate. "I have spent double the amount which it would have taken to have purchased outright a few articles of real and lasting beauty," she finally concludes in dismay, and her case is not without parallel.

However, as I said in the beginning, this is a plea for the window-garden. Nearly every sitting-room contains at least one sunny window; a plain shelf or an ornamental bracket, or a small flower-stand can be placed before it at trifling expense. Plain terra-cotta pots cost but a few cents each, and with a very little more expended at any one of the excellent floral nurseries so numerous in the State and country the materials may be had at and the foundation laid for an ornament which is not there at the expense of aching head or tired eyes—an ornament which will give an air of bright homelike refinement to the most plainly furnished room, and one which is at no time a source of mortification, no matter how fastidious may be the observer, for Dame Nature does well whatever she does at all. There are no violated laws in her grouping of colors, no stiff lines and angles which "would be improved by practice," for she solved all those riddles ages ago and stands ready to-day to yield the benefit of all her wonderful stores of beauty knowledge to whoever will invite her by a little proper attention to her very simple wants. The time this requires is so slight as not to be missed even by a busy wife and mother, and is a relief rather than a trial to nerves already strained by cares of the work-a-day world. And not to the home alone is the wholesome influence of a healthy, well-selected window-garden confined. The handful of bright geranium leaves and blossoms sent in winter to some invalid friend is prized beyond the comprehension of the well and strong, and the sprays of delicate cypress and wax-like tube-roses placed tenderly in the hands of the little dead baby at a time when flowers are scarce are fondly remembered for years by the sorrowing mother. But in plants for house culture, more than for outdoor growth, is discretion needed in the selection. So far as my experience goes, I give the geranium preference above all others. They come

easily from slips, grow with little attention if given plenty of sunlight and water, are cleanly in habit, and if slipped at different times can be made to bloom at any time of the year with equal brilliancy. Scarcely any other plant embraces such an endless variety of shapes and colors, both as to leaves and blossoms, so that a window would seem to lack nothing which contained nothing else; and not least in their favor is the fact that insects do not affect them as readily as some other plants. Always bright and of easy culture, also are coleus and acynanthes, and can be had in unlimited shades and shapes. Silver-edged periwinkle is also a hardy plant, and is always elegant, either trailing from its basket or cut for use in bouquets. Of equal beauty is the "tradiscantia multicolor," or variegated Wandering Jew, with its leaves of green and pink and white bronze stripes, which asks little save plenty of water to insure its successful growth.

The value of the hanging-basket must not be disregarded in the matter of window decoration, and of this it can truly be said that expense is not a factor, although the market abounds in beautiful ones; for the real object of a hanging-basket is to allow drooping foliage to follow its natural inclination, hence the more thrifty the growth of the plant the more obscured is the basket. In my own window are three sorts—prettily painted terra-cotta ones, wire ones, and lastly, one of my own make, probably best termed "rustic." I beheld such a one while on a tour through the beautiful conservatories of Golden Gate park a few months ago, and, interested as I was in flower-gazing, its simplicity and beauty caused me to stop and ponder on its construction. It was composed of little strips of wood about a foot long and probably a square inch in thickness, fastened together "log-cabin fashion" by means of four wires strung through little holes made an inch or so from the ends of the sticks, thus allowing them to project past each other at the corners in truly rustic style; a filling of moss completed the architectural part, and nature's greenery did the rest.

I followed this pattern one day, and have nothing else in which the flowers seem to thrive as well as in that. They twist themselves around the long wires by which it is suspended, and clamber down and in and out among the many little wooden ends at the corners, clinging to the wood as they will to nothing else, the colors contrasting prettily with the green of the moss.

I find it a pretty fashion to place in each basket five or six plants, each of different color and habit; some erect, some climbing, some trailing. I have always found them to thrive well, and the effect is decidedly novel and picturesque. The time between this and early spring is the best to compare catalogues and prices at leisure. And the fresh new catalogues are now beginning to come to hand, some of them indeed beautiful; and your name on a postal stating that you desire one, and sent to any nurseryman advertising in the RURAL PRESS, will bring you one free of cost.

So successful has become the "mailing" system of sending small plants, and at so little cost can they be procured in this way, that expense cannot be urged as a reason why rare and beautiful blossoms should not literally be strewn in all pathways.

Tulare, Cal.

An Ungainly Posture.

EDITORS PRESS:—I have often thought I would write about bad habits children are allowed to get into, but deferred from time to time; but the article in a late RURAL began the work, so I take time to mention one, to me, very bad habit that children have, namely, that of standing with one foot upon the other. It is impossible to break them of it when they are allowed to do it at school. How a teacher can endure to see it passes my comprehension. It is so ungraceful, and the habit, unless checked, is continued all through life. I know several men who stand that way, and of all the ungainly positions the human body can get into, that is about the worst.

When they want to rest one foot, it is much easier to pass the foot quite over the other and rest it on the tip of the toe. It looks graceful, and is certainly more restful. I think teachers should train the body as well as the mind. Slouching, ungainly habits may not mark the mind. But when we see a boy or girl, man or woman, with awkward ways, we always feel that there is, or was, a sorrow loose somewhere.

Our teachers have taken one step toward the good health of their scholars by the calisthenic exercises during the session for the purpose of straightening the shoulders, and if they would take still another, and insist on a good position when standing, I for one would be much more pleased than I am, when, after hearing a child go successfully through a difficult examination, he or she drops into the horrid position so often taken by the youngsters. MRS. J. HILTON.

Los Alamos, Jan. 7, '89.

CHICKEN BITES.—Little Johnny (looking curiously at the visitor)—Where did the chicken bite you, Mr. Billus? I don't see any of the marks. Visitor—Why, Johnny, I haven't been bitten by any chicken. Johnny—Mamma, didn't you tell papa Mr. Billus was dreadfully henpecked? Why, mamma, how funny you look. Your face is all red!—Exch.

"Twa Dogs."

Curious Canine Characteristics.

[Written for the RURAL PRESS by J. W. GALLY.]

Let me now tell you some circumstances about dogs. Some time or other, before the great war, ex-Judge David H. Terry, so I have been told, went to Europe and from the Hospice St. Bernard in the Alps, brought away to California a pair, male and female, of the genuine St. Bernard breed of dogs. A son of those dogs was brought to Lone, Nye county, Nevada, in which county a fine specimen of that dog's heirs interbred with the coyote, and yet, curious to say, one of the heirs of that interbreeding had all the size, bulk and appearance of his St. Bernard ancestors—still he was about a quarter-breed coyote. This dog was removed to Belmont, the present county town of Nye county, and he was the property of a miner, but he (the dog) boarded with a saloon-keeper along about the years 1867-68. The mines at Belmont are mostly situated out of town, over a low hill, about a mile away. From these mines to this town, in the heats of summer and the storms of winter in the very changeable climate of that land, came the hardy silver miners, and they, or some of them, at times would jollify in the saloons and not return very early to their several mining cabins where there was no woman, no wife, no children, and, occasionally, one would start late for home in a condition not at all fit to be a prominent member of the W. C. T. Union. Well, the inebriated miner, we will say, starts for home on a cold night, and now comes the dog aforesaid and placing himself gravely beside the staggering miner, he never leaves him until he leaves him at his home; if the inebriate falls the dog lies down beside him, and no one, not known to that dog as the miner's friend, can lay hands upon the prostrate man without a compromise with his canine guardian. This dog seldom barked, but he had a very big growl. He did not seem to have any particular favorite among his human pets; providing the man was a patron of the saloon where he (the dog) boarded and was, also, so "full" as to be uncertain of the steadiness of his steps. I am sorry that after so many years I cannot now recall the name of this dog, but he was a well-known character back in the late sixties. He guarded many a miner to his home, and the most singular thing about him was that he could not very often be deceived by a simulated drunk. "The boys" often tried to fool him, but in those cases he simply looked serious out of his solemn eyes and slowly wagged his tail.

Sam K., who owned and drove a big ox freight team in 1867, had a black "sheep-dog" named "Carlo," which followed Sam and his team from town to town. Sam loved "Carlo" and under certain circumstances "Carlo" liked Sam, and as there are no flies in Nevada, and as Sam, like all men there in his line of business, camped at night with and slept beside his wagon on the dry ground of that country, the dog lay beside him outside the blankets and kept very faithful guard over his sleeping master—generally, but not always.

On arriving in a mining camp, as it was Sam's habit to do his own cooking, one of his first moves was to go to the butcher's shop and buy a beefsteak or some chops for himself and a bone of meat for "Carlo"—the dog following him at the time—and Sam might also buy a drink of whisky, for immediate consumption, and then, with his dog and his meat, go back to his camp and cook supper. After supper was cooked and eaten our bovine persuader might straighten up his camp, and then, with his dog, walk back into town. If he remained to a late hour up in town and found some old, or even new friends, he was liable to imbibe "his keg full," and "Carlo" would follow him faithfully from one saloon to another; but just the moment that "Carlo" saw his master becoming noisy or showing the effect of his liquor—and it did not take him long to see it—right then and there he would leave Sam and no amount of coaxing could induce him to remain. He would go straight down to camp looking as ashamed as any dog can look—and dogs can look ashamed—and there he would lie down; but whether he had tears in his eyes I never knew, shouldn't wonder, though.

These are facts which I state about these "twa dogs," and I think if I was over in Nevada even now I could prove them.

Watsonville, Jan. 23, 1889.

The Billy Goat.

There is a good deal of dynamite in a billy goat. It won't do to drop on to one suddenly unless you want to be lifted. Any man who runs against a goat without telegraphing him beforehand acts as if his business education had been neglected. For a goat is the embodiment of a terrific energy when aroused, and nothing starts him quicker than a sudden appearance. Any man who approaches him without circumspection is liable to lose some part of himself. More than one man has lost his balance and his self esteem by such carelessness. Both these essentials of standing and character are apt to remain absent during the entire interview.

A goat is endowed with great quickness of apprehension, and he acts on his impulses. When a goat of the masculine gender stands

and gazes at you with a look of curious deliberation in his eyes you will, if you are a rational being, promptly pick the nearest tree and get behind it. This is the only wise course to adopt. Nor should you be slow in doing this. It is not safe to take any chances with a billy goat if he is within 50 feet of you and has in his own mind decided to act. You cannot rely on his remaining where he is any considerable length of time. He is apt to move suddenly, and when he moves he always moves in a straight line and with his objective point clearly in view.

To know a goat thoroughly, gentlemen, I am convinced that a man should begin his investigations in childhood. The knowledge needed is not acquired readily by an adult. A man can pilot a steamboat better than a boy can, but to steer a goat successfully into a paddock without any back-action of the paddler is a feat at which a boy will beat his father every time. The innocent sprightliness of early life is an essential element of success in such an undertaking. A deacon of mature age and dignity of character might do it, but he would never be fit to hold the office after he had finished the job. His record would be broken, as it were. What he had gained in fluency of expression he would have lost in resignation of spirit and the sweet placidness of his vocabulary. A deacon should always leave the management of a billy goat to his hired boy, and keep out of hearing too when the boy and the goat are in close communication. Any material departure from this rule will always result in unhappiness. The manners of the goat will be spoiled, and the deacon—if the matter be fully reported—will surely lose his office.

A goat is like any other highly organized creation. He learns evil fast and forgets it slowly. He is a creature of vanity and relishes success. After he has learned a man's anatomy by experiment the knowledge is fixed in his mind forever. Time may obliterate the impression he has made on you, but it never obliterates the impression you have made on him. Years may pass; your hairs be whiter and his coarser, but if he ever gets a chance to hit you again, your years and venerable appearance will not save you. The old reprobate will hit you in the same spot. I have never been able to satisfactorily explain this to my own mind, but the fact remains. I have seen it demonstrated.—W. H. H. Murray's "Daylight Land."

Why Pianos Get Out of Tune - A Growing Plant a Remedy.

"This is the time of year when we are driven nearly crazy with work," said a tired-looking piano-tuner to a New York Sun reporter. "Everybody wants his piano tuned for Christmas, and most of them forget about it till the last moment. And besides being the busiest season, we have been having the most trying weather. These cold, dry days throw pianos out of tune every time, and besides that the sounding-boards are beginning to split. It always surprises me what poor care most people take of their pianos. Let a man buy an expensive watch, and he'll treat it as though it were a live thing, but people don't seem to realize what a delicate piece of mechanism a good piano is. Pianos are not affected so much by heat or cold as they are by dryness and dampness. Of course, if you stick one end of a piano up against a stove, or a heater, or a register, and let the other end come near a cold, leaky window, it'll raise Ned with it, but most people are on to that. The trouble is, the piano is too dry."

"You know the sounding-board—the life of a piano—is forced into the case when it's made so tightly that it bulges up in the center, or has a 'belly,' as we call it, on the same principle as a violin. The wood is supposed to be as dry as possible, but, of course, it contains some moisture, and gathers a lot more on damp days and in handling. Now, when you put a piano in an overheated, dry room, all this moisture is dried out, and the board loses its 'belly,' and gets flabby, and finally cracks. Even if it doesn't crack, the tone loses its resonance and grows thin and tinny, and the felt cloth and leather used in the action dry up, and the whole machine rattles, and everybody kicks."

"How can you prevent it? Easily enough. Keep a growing plant in the room, and so long as your plant thrives your piano ought to, or else there's something wrong with it. Just try it, and see how much more water you'll have to pour in the flower-pot in the room where your piano is than in any other room. Some people keep a huge vase or urn with a sopping-wet sponge in it near or under the piano, and keep it moistened, just as a cigar dealer keeps his stock. They keep this up all the time the fires are on."

BIRDS AS VENTRILOQUISTS.—At a recent meeting of the American Ornithologists' Union, Mr. Ernest E. Thompson of Canada said that some birds, especially sparrows, have ventriloquial powers. Birds, when surprised in the act of singing, will be silent for a moment, and then give forth a faint song that seems to come from a distance, though the singer be not farther than ten feet away. Thrushes and robins, the lecturer said, also have this power.

INDIANS.—It is a curious fact that there are as many real Indians in New York State as in Minnesota—about 500.

YOUNG HOLKS' COLUMN.

Lessons in Trees.

[Written for the RURAL PRESS by MARTHA T. TYLER.]

How do trees grow? The oak, for instance, with its thick, knotted trunk, and multitudinous branches, how is it developed from the insignificant acorn? The seed is planted by accident or design in the cool, damp earth, where, fattened by the soil, and nourished by the moisture, the tiny germ containing the principle of life begins to push upward, protected by two green sheaths. The leaves are there hidden between the cotyledons, as the outer parts are called, but in a minute form folded upon one another, like the wings of a butterfly in the chrysalis. These tiny leaves unroll to the light and air as the plant mounts upward, but there are some slender fibers attached to the germ that from the first take an opposite direction; they are the roots of the future tree, and their function is to suck up food from the soil for the sustenance of the oak. The root is really of the same nature as the stem and branches, but is subject to different conditions. Some one tried the experiment of planting an oak with its branches in the ground and its roots in the air, whereupon the branches became roots and the roots were, in time, transformed to branches. An example of this mode of growth may be seen in the banyan tree of India, the branches of which are furnished with rootlets that lengthen little by little, until the ground is reached, when they fasten themselves in the soil, and each root becomes in itself the stem of a tree and acts like a prop to the parent plant.

The most important element in the history of a tree is the circulation of the sap. The skin of the bark is a thin, paper-like substance composed of cells between which are little pores or mouths, which drink in the air and allow it to circulate all over the tree. Beneath this outer covering is found a layer of green cellular tissue which holds the sap. This flows in channels arranged for it in the most wonderful manner. It glides upward from cell to cell, passing through all the branches to the tips of the leaves, where it becomes purified. The refuse part of the sap is discarded in the shape of wax and various other substances, and the surplus moisture which it contains is thrown off through the pores of the leaves. Then the refined fluid descends, carrying with it those qualities essential to the health and life of the tree.

Passing now to the third important point in the growth of a tree we come to the *liber* or inner bark, which is, in fact, the actual seat of vegetation. If a tree be wounded and the wound screened from the air, after a little a viscid substance will exude and spread itself over the surface of the wound. This will gradually harden, and become green and full of cells like the bark—become, in short, fresh *liber*, the sticky substance being no more nor less than the descending sap. Every year the rich sap forms a layer on the inner surface of the fibrous *liber* (just as it will form a layer on the surface of the wound) which becomes wood in an immature state, and is called *alburnum*; in a year it will have hardened into true wood, and new *alburnum* will have been formed, which in turn hardens, thus increasing the bulk of the tree from year to year.

The heart of the tree contains the pith, and from this, little ray-like veins spread to the outer bark. These veins make the "grain" of the wood and add greatly to its beauty when the timber is used for building and other purposes.

The noblest of the oak tribe is the British oak. For durability the wood cannot be surpassed, and long ago, when it was plentiful in England, it was used almost entirely in carpenter's work.

Windsor Forest abounds in ancient oaks. One of them is known to be 1000 years old. The trunk is hollow, and 20 persons have been comfortably seated in it. Herne's oak, which was blown down some time ago, was an object of superstition for centuries prior to its overthrow.

Herne, we are told, was keeper of Windsor Forest during the reign of Elizabeth. Having violated the forest laws by hunting there without permission, and fearing punishment, he haunted himself on this tree, and the spot was believed to be haunted. Shakespeare alludes to the legend in his "Merry Wives of Windsor": "There is an old tale goes that Herne the hunter, Some time a keeper here in Windsor Forest, Doth all the winter-time, at still midnight, Walk round about an oak."

Then there is "Queen Elizabeth's oak," near Hatfield House, where, when a princess, she was confined as prisoner of State, being allowed, however, to wander at pleasure through the grounds. One morning a messenger arrived at the house, and having sought her there in vain, looked for her in the park, where he discovered her sitting beneath a favorite tree, and there saluted her as Queen of England.

I love all trees excepting only the gloomy eucalyptus. This is an ascetic, incommunicative spirit, and I have observed that even the birds are shy of it, but the kindly oak, the hospitable chestnut, the romantic and meditative willow, the loquacious poplar, I love each one of them, and more than all the sympathetic pine. The last is pre-eminently the friend of

man. Its uses are manifold. The Scotch fir is a blessing to the country where it grows. The poor man's hat is lighted by torches made of the branches, which, owing to the resinous nature of the wood, burn most brilliantly. In the barren parts of Sweden and Lapland the peasants select the oldest and least resinous of the branches, take out the inner bark, which they grind and mix with their scanty supply of meal and work the whole into dough, of which cakes are then made, called *bark-bread*.

In the spring, when the sap is in motion, a notch is cut in the tree and a channel scooped above the notch. The resinous juice runs down the channel into the notch, is dipped out with a ladle and strained, when it becomes common turpentine. From the pine also we get tar. This is done by stripping the tree of its bark, thus checking the flow of the sap and consequently the growth of the tree. The impeded sap changes to a thick black gum, known as tar, and when, after a few years, the tree is cut down, it is found to be full of this useful substance. The pine furnishes masts for our vessels, and all the ropes and cables of a ship are dipped in boiling tar to give them the required durability.

Coal, which is so essential to our comfort, is the remains of mighty pine forests that existed long before the memory of man, and its inflammable nature is due to the resinous properties of the pine.

With the pines, the firs and the larches are included the cedars, at the head of which stands the cedar of Lebanon, once like Solomon in all his glory, the pride and ornament of Palestine, but now almost a thing of the past. Seven only of the ancient trees remain, and they all show signs of desolation and decay. They are colossal in size, however, and have beautiful fan-like branches. They stand in a little valley on the mountain-side, and around them in a semi-circle are the old rocks of Lebanon covered with perpetual snow.

GOOD HEALTH.

Health of the State.

We collect from the monthly report of the State Board of Health for December the following information in regard to the general health of the State:

Mortality reports received from 75 cities and towns within the State give collectively the number of decedents as 917, in an estimated population of 700,600 exclusive of those towns reporting no deaths, having a population of 10,500, so that actually in a population of 719,100 the mortality gives the exceedingly low percentage of 1.27 per 1000 for the month of December, when the death rate is expectedly increased everywhere within the temperate zone. If our mortality reports were reported as they should be, from every village and town in the State, we have no doubt the same condition of diminished mortality would be found. We trust the Legislature will see the importance of so amending our health laws that reliable statistics may be obtained, as by them we can demonstrate clearly the advantages of California as a health resort.

Reports received from 65 towns indicate, with few exceptions, that the amount of sickness is very limited, and what does prevail is of a mild and not serious character. This may be owing to the favorable temperature throughout the month, which was not characterized by any sudden changes.

Diarrhea and dysentery have subsided almost everywhere. Cholera infantum is almost entirely absent from the State, or so seldom met with that it is no longer reported. Measles is reported in several places, but the number of cases is very limited, and it is no longer epidemic.

Scarlet fever is more widely diffused, but in a very mild form.

Diphtheria occupies quite an extensive range. Dr. H. N. Miller, writing from Colfax, says that 13 cases came under his observation during the month, but the type is mild. We have yet to learn upon what factor or factors the type of an epidemic depends, and, again, to what we owe the appearance of certain diseases in regular cycles, appearing and disappearing with a certain regularity that has so far baffled the sanitarian.

Croup accompanies diphtheria with unfailing regularity, almost compelling us to believe in the identity of the diseases.

Whooping-cough was in North Bloomfield, Lodi, Angels Camp, Anderson, Downey, Placerville and San Francisco.

Erysipelas was observed in Red Bluff, Fresno, College City, Cedarville, Newcastle, Downeyville, Sierra City, Lincoln, Truckee and Lockeford.

Typhoid fever is reported in quite a number of localities. The range over which typhoid fever prevails would indicate that sanitary defects exist in these places that ought to be remedied. Typhoid fever is, of all diseases, the most preventable, and if the Sanitary Inspector, which the State hopes to appoint according to law, does nothing but instruct the people how to keep clean and prevent the development of typhoid, he will have earned his salary and saved the State many thousands of dollars.

Remittent fever is mentioned as prevailing

in many places, but in type is not severe and mortality very limited.

Pneumonia still prevails to a considerable extent, but is not nearly so prevalent as it was in November.

THE CAUSES OF BOILS.—A boil may attack any portion of the body, but it oftener appears on the neck than on any other part, and no spot seems to the patient so undesirable to have it as the very one upon which it is located. The causes of these painful visitations are not well understood. They occur not only in the debilitated, but in those who are seemingly in ordinary health. Some writers assume that they are the result of a low and depraved state of the system induced by general debility, excessive fatigue, nervous depression, improper food and exercise, irregularity of the functions of the body, and the like. Not unfrequently they appear on athletes while training. There are certain diseases—among them diabetes—during the course of which boils, singly or in crops, are quite apt to occur. They are also noted in skin affections, which are characterized by severe itching; the constant irritation of the skin seems to invite their appearance. Certain medicines when used externally are capable of producing an eruption of boils. One writer says: "To judge from the previous observations, I think I may say that individuals who have a rough skin, thick, dark hair, and a vigorous growth of hair, are more predisposed to the formation of furuncles."—*Boston Journal of Health*.

TOBACCO SMOKE.—In the country districts of England, 40 or 50 years ago, it was universally believed that tobacco smoke was a prophylactic against fever. Nurses smoked at the bedside of fever patients, and friends were called in to take a hygienic pipe in the sick-room. The superstition has been dissipated by the known results of careful scientific investigation. It has, however, been revived in Florida by the reported fact that not a single cigar-maker has been attacked by yellow fever throughout the course of the epidemic, which has ravaged Jacksonville so terribly. The physicians there, it is said, recommend tobacco smoking as preventive, even women being advised to take an occasional cigarette as a precautionary measure. This will prove a pleasant doctrine to smokers, who will argue that the greater includes the less, and if tobacco will keep away the infection of yellow fever, it will serve as a preventive to other minor maladies as well. So it will. 'Tis fear kills more than infection, and in a believer's mouth a pipe may be an antidote to fear.

DOMESTIC ECONOMY.

SPONGE CAKE.—One dozen eggs with the whites and yolks beaten separately, one pint of sugar, one pint of flour, and the juice of two lemons. Have a moderate oven.

RAISIN PUDDING.—One-half cup of molasses, one cup of milk, one cup of raisins, one-half cup of butter, two eggs, two cups flour, two teaspoonsful of baking powder. Steam one hour.

MOLASSES COOKIES.—Two cups of molasses, one cup each of sugar and shortening, eight tablespoonsful of hot water, one tablespoonful each of vinegar, soda and ginger, and flour to roll.

CORN PONE.—Two quarts of sweet milk, eight teacupfuls of cornmeal, four teacupfuls of flour, one teacupful of salt and one teacupful of molasses; mix and bake three hours in a slow oven.

RYE FRITTERS.—One and one-half cups flour, one egg, one-half cup rye meal, one tablespoon sugar, a little salt, two teaspoons cream tartar; mix with milk and drop from a spoon into hot lard.

GRAHAM CAKE.—One cup of brown sugar, one cup of sour cream, two eggs, two cups of graham flour, one teacupful of soda, a little salt and cinnamon if liked. If the cream is not sour, use less soda. Do not stir too stiff.

CORNSTARCH CAKE.—Two cups of pulverized sugar, three-fourths of a cup of butter, stir to a cream; one cup of milk, the whites of seven eggs beaten to a stiff froth, two cups of flour, one of cornstarch and two teacupfuls of baking powder. Flavor with lemon or orange.

FLANNEL CAKES.—Out dry, light bread in pieces, put over it enough sour milk to cover it, let it stand over night; in the morning wash it well, and to every quart of bread add one egg well beaten, a teacupful of soda, a pinch of salt and flour to make a moderately thin batter; bake on a griddle.

LAYER CAKE.—One cupful of sugar, one-half cupful of butter, three eggs, one-half cupful of sweet milk, two cupfuls of flour, one-half teacupful of good baking powder or a teacupful of soda, and one-half teacupful of cream of tartar. Beat the sugar and butter to a cream. Do not melt the butter, but warm slightly if too hard. Stir the milk well into this, and then add flour into which the baking powder has been well sifted. Stir thoroughly. Then add the eggs, one at a time, taking care to stir each one in well before adding the next. Bake at once. This will make four layers. The lightness of a cake depends far more upon the way it is put together than the mixture itself. If the directions be carefully followed, success is insured.

The Week.

The most stirring distant topic seems to be whether we shall declare war with the German Empire because some of her old war-tubs are threatening the people of Samoa. According to report, President Cleveland's Cabinet officers are fighting among themselves so as to get their mad up in case they should have to pitch into Germany, and incoming President Harrison is summoning the old legal warriors of the Great West around him, so they will be ready if the row hangs over till the fifth of March. But really we hardly think it would be polite to declare war with Germany now; she has recently had two bereavements in her family, and we understand that Bismarck isn't right well at present. Perhaps if Mr. Cleveland would write William a postal-card suggesting that if he wants to fight to take one of his size and not be pestering those poor Samoans, it would serve the purpose and it will not be necessary for the California Legislature to tell the world that San Francisco is the easiest place to burn up with hot shells in existence.

The Legislature is still at work trying to spend the money which the assessor will order

on the 1st of March. We are glad to see that Governor Waterman doesn't propose to honor all the drafts which may be made on the Treasury.

The weather is fine for the season, but rain will very soon be desirable. The rainfall figures so far are respectable, but the ground was so dry that it will take a good deal of rain to wet it down well.

California Forestry.

The California State Board of Forestry has made another notable contribution to the popularization of tree lore and to the cause of preserving and extending our forest area in their Second Biennial Report, which has just been issued from the office of the State Printer.

It is a volume of 182 pages and contains much matter of interest regarding the work of the Board and also advice of value about tree-culture. The present Commissioners are Abbot Kinney of San Gabriel, John D. Spreckels of this city, and Walker S. Moore of Los Angeles. The secretary is Sands W. Forman.

In our reports of the meetings of the Board during the past two years, we have kept our readers generally informed on the establishment of Forestry Stations, the propagation and distributing of seedlings, etc. Concerning the purposes of the Board with reference to these stations, the report says:

These stations are at Santa Monica, Chico, Merced, Hesperia and San Jacinto, and land has been offered for two others. The plan is to plant these stations in park form, while also having all the trees properly labeled and catalogued, so that the people will be charmed by the beauties of these parks, and at the same time instructed by the information they will give as to the capacities of different trees in our different soils and climates. Golden Gate park is of inestimable value to all citizens. The experimental parks of this board, if properly supported and carried out, will have the same and an additional value to the residents of the State where they are situated. Besides this, they will add greatly to the attractiveness of the State itself. Few places in France are more generally visited than the botanical gardens at Paris; in England than the gardens at Kew; in Germany than the Thier Garten, near Berlin, etc.

In these parks scientific tree-culture is the main feature. Our experimental stations in California, owing to our climate, can be made both more useful and more attractive than any of them. It seems certainly advisable to show by such State institutions what the different parts of the State are capable of in tree-culture. These stations will do this by actual visible experiment to show what will succeed, and by reliable record to show what will not succeed, and thus save time and expense to the citizens, all the time attracting the settler by the beauties demonstrated in the park itself as a capacity of California.

Other portions of the volume contain reports from the engineer of the Board, H. S. Davidson, who submits detailed forestry maps of several of the northern counties of the State, and reports concerning the illegal cutting of forests on Government land, which the Board is endeavoring to stop. There is also a report by W. S. Lyon, head forester, concerning the adaptation of certain trees to California conditions, which we shall present to our readers at another time.

Our attention is naturally arrested in this first glance at the Report of the Commission by the work of Prof. and Mrs. J. G. Lemmon, the botanist and artist of the Board. These estimable scientists are so well known to the readers of the RURAL, either personally or by their contributions to our columns, that we have no doubt their share of the Report will be of especial interest in our parish. They visited nearly every county of the State and Lower California in their investigations of the pines of the Pacific Slope. After introductory statements treating of ocean currents, atmospheric conditions and land configuration—the several factors of forest production—a brief general view is taken of the Pacific forests, and especially those of the Sierra Nevada. Then follows a conspectus of the order of cone-bearers and tables showing distribution, etc., after which the main body of the work is reached—the pines of the Pacific Slope, giving first a descriptive list of the groups and species. The cone-bearers of the Pacific Slope, classed in three sub-orders or tribes, comprise 14 genera and 52 species.

Prof. Lemmon is entitled to special credit from lay readers in that he makes the attempt, which seems to us notably successful, to so classify, name, and simplify descriptions as to popularize the study of our interesting pines by the

ordinary reader, who is often deterred from study by the many technical particulars used in most works of instruction or discussion.

Following the "descriptive list" are extended descriptions of each of the California species, including in most instances a history of their discovery. A special investigation of two of our most valuable lumber trees—*Pinus ponderosa* and *P. jeffreyi*—follow, after which are placed "Pines in Literature;" and various topics of interest, including the discussion of the microscopic and other abstruse characters which, however, are necessary to a correct and full study of the pines, and are presented in a paper by themselves, "The Diagnosis of the Genus *Pinus*," placed at the end of the report.

Artotype illustrations, 24 in number, from photographs taken in the forests of characteristic trees, and from prepared specimens of cones, flowers, leaves, seeds, microscopic cross-sections of leaves, etc., have been carefully prepared. The larger and more elaborate water-color paintings by Mrs. Lemmon, treating closely of details, life size, of our California pines, could not be chromo-lithographed for this report, owing to the much greater expense of such works; but they will be perfected in certain details and augmented by other paintings, completing the series of California pines, when, it is hoped, a future report may be accompanied by these finished and most instructive illustrations.

But we cannot follow this valuable report further at this time. Though the name of the chairman of the commission, Abbot Kinney of Los Angeles county, only appears incidentally in the work, those who know his zeal and thoroughness in pursuit of ends he believes in well know that a leading share of the credit for the work done is due to him, and will award honor to whom honor is due.

The Monroe Doctrine.

It is about two-thirds of a century since President James Monroe announced the doctrine that bears his name, the pith of which is, that European powers must not meddle in the political affairs of the American continent. In his annual message at the meeting of Congress in 1823, he proclaimed to the world that the United States should "consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety," and "that we could not view any interposition for the purpose of oppressing or controlling in any manner their (governments on the American continent whose independence we had acknowledged) destiny by any European power in any other light than as a manifestation of an unfriendly disposition toward the United States." The occasion which called forth this announcement was the alliance of several European nations for the purpose of enabling Spain to subjugate Mexico and other countries on the southern part of the continent.

The Senate in recently passing the Edmunds Panama Canal resolution by a unanimous vote has fearlessly and emphatically reaffirmed the Monroe doctrine. Against any legitimate private enterprise on this continent, the United States offers no objection. A syndicate of French capitalists may spend shiploads of their money in the Panama canal and welcome, but no European power can assume connection with this or any other enterprise that in any way threatens to interfere with the liberty, happiness and prosperity of any people on this hemisphere.

There is no politics nor sectionalism in this position. It has become a sentiment akin to patriotism, and citizens of all shades of partisan opinions are united to enforce it. The time had come for the United States to define anew its attitude on this question. It was done by the Edmunds resolution in a very courteous tone. No threats were used that could give reasonable offense to any country, and yet all Europe was given to understand that it must keep its hands off this continent.

So far the Monroe doctrine has been no empty manifesto. The Holy Alliance dissolved more than half a century ago at its promulgation, and when France took advantage of our Civil War to invade Mexico, our Secretary of State informed the French Emperor that he was trespassing upon the Monroe doctrine. He treated it with contempt, and all the wits of Paris laughed in mockery, but before the smoke had died away after Gen. Lee's surrender, a

missive was sent to Paris that the French must bundle out of Mexico, or they would be put out at the point of the bayonet, and Gen. Sheridan, with a strong force, actually started to the Rio Grande for that purpose, but the French army was withdrawn before he got there.

A Notable Celebration.

The present Government of the United States under the Constitution was inaugurated in New York City April 30, 1789, when George Washington took the oath of office as President. Hence Tuesday, April 30, 1889, will be the one-hundredth anniversary of that event, and really the centennial of the United States as a nation. If the centennial of the Declaration of Independence was an event to be celebrated by such an industrial exhibition as that at Philadelphia in 1876, surely the centennial of the formation of the present system of government, the crown and consummation of the declaration that "these colonies ought of right to be free and independent," should receive some recognition.

To that end a committee for some time has had the matter in hand in New York and has just announced their program. Early on Monday, April 29th, the President and his Cabinet, Congress, and many other officials of distinction, will leave Washington and proceed via Philadelphia and Trenton to Elizabethport, in New Jersey, taking the same route that Washington took in going from Mt. Vernon to New York to be inaugurated. At Elizabethport the President's party will take the Government dispatch boat and steam up New York bay to the foot of Wall street, and all the vessels in the harbor will salute the party, as the vessels in the harbor in 1789 saluted Washington as he was rowed by 13 pilots in an elegant barge to the foot of Wall street. On Tuesday morning it is proposed to hold a brief religious service in St. Paul's Church, where Washington, Vice-President Adams and the two Houses of Congress attended service just 100 years before. The formal literary exercises will take place on the steps of the Sub-Treasury building on the corner of Nassau and Wall streets. Rev. Richard S. Storrs of Brooklyn will conduct the religious services, the Quaker poet John Greenleaf Whittier will furnish a poem and Hon. Chauncey M. Depew will deliver the oration.

Irrigation in Southern California.

These days are prolific in official agricultural literature, for the crop gathered by the State Printer is being distributed. The most notable perhaps is the report of the State Engineer, Wm. Hammond Hall, on irrigation in Southern California, embracing the counties of San Diego, San Bernardino and Los Angeles. It is not presented as a complete volume on the subject, for the summarizations on irrigable and tillable lands, water supply, practice of irrigation, storage of water, and others less important, are yet to come, each in a separate chapter, with its addendum of tabulated matter.

The work, then, in its present shape, is a most careful and detailed account of the organization and operation of irrigation enterprise and maintenance and running of irrigation work, the flow of streams, conservation of waters, and the history of the local enterprises. It gives, in short, a full and detailed description of such a variety of undertakings in developing, storing and distributing water, that it cannot fail to be directly and valuably instructive to all capitalists or co-operative associations of settlers who may be contemplating irrigation enterprises. We count it exceedingly fortunate for the progress of the State that such a report has been made, and we hope the portions relating to practice of irrigation will not be long delayed.

We notice that Mr. Hall, in his report to the Governor, makes what seems to us a well-grounded complaint that the publication of other officers working for the development of the State are issued free to all who wish them, while the reports of the State Engineer have to be purchased from the Secretary of State. Such is the law, but unfortunately so, for the work of the State Engineer should be made as free and available to the public as the work of other branches of the development machinery which the State is conducting. It would be of great public service to have Mr. Hall's last report as widely circulated as possible.

Artesian Wells.

The Requisite and Qualifying Conditions.

Drillers are now developing the sinking of artesian wells into a specialty, and through the aid of geological reports are mastering the stratigraphical elements of the problem in their several regions. Artesian wells form one source of pure water supply, but not always an un-failing one. This inconstant feature is an element which should lead to discussion, since they are a valuable resource in certain regions and under certain limitations, while in other regions they are only a lure to useless expenditure.

T. C. Chamberlain has contributed to the U. S. Geological Survey an article on the "Requisite and Qualifying Conditions of Artesian Wells," which is of great interest. He speaks of artesian wells as applied only to those that flow at the surface, condemning the use of the term as applied to denote deep wells not flowing. Artesian flow is but an expression of the common law of flowage made a little unusual by its special conditions. Any seeming strangeness

(Fig. 2) or else terminate in such a way (Fig. 3) or take on such a nature (Fig. 4) that water cannot escape in that direction. Now let rainfall and surface water penetrate the elevated edge of the porous bed and fill it to the brim. That such beds are so filled is evident by ordinary wells, which commonly find a constant supply at no great depth. Now it is manifest that if such a water-fat bed be tapped by boring at some point lower than its outcrop, the water will rise and flow to the surface, because of the higher head in the upper edge of the bed. If the surface water continually supplies the upper edge as fast as the water is drawn off below the flow will be constant.

Fig. 2 is an ideal section illustrating the chief requisite conditions of artesian wells. *A*, a porous stratum; *B* and *C*, impervious beds below and above *A*, acting as confining strata; *F*, the height of the water level in the porous bed, *A*, or, in other words, the height of the reservoir or fountain-head; *D* and *E*, flowing wells springing from the porous water-filled bed, *A*.

Fig. 3 is a section illustrating the thinning

and *H*, wells that do not flow. The bed *A* might give a flow at *G* and *H* but for the defect in *C*, which permits the water to descend into *B* and escape through its outcrop, which lies below the surface of *G* and *H*.

Fig. 8 is intended to illustrate the aid afforded by a high water surface between the fountain-head and the well. *A*, a porous bed; *B*, a confining bed below; *C*, a confining bed above. The dark line immediately below the surface represents the underground water surface. Its pressure downward is represented by the arrow *m*. The pressure upward, due to the elevation of the fountain-head, is represented by the arrow *n*. The line *F* represents the level of the fountain-head. There can be no leakage upward through the bed *C* except near the well *D*. There may be some penetration from the bed *C* into *A*, which would aid the flow.

Fig. 9 is a double section illustrating the effects of high and low water surface in the cover area. In this *A* represents the porous stratum inclosed between impervious beds, *B*, *C*. The source of supply is at *H*, and proposed well at *F*. Let *E* be supposed to represent

Fig. 12 illustrates a common effect of erosion upon the surface area of the porous stratum, and the contour of the resulting basin. The dotted lines show the original contours.

Fig. 13, section illustrating the advantages of low inclination. *A*, porous bed; *B* and *C*, impervious beds. *A'* and *A''* indicate porous beds of higher dip.

We shall continue this subject of artesian wells and give some facts relating to their proper distribution in certain regions.

THE WALLA WALLA UNION says: The Northern Pacific Railroad Company has perfected a gigantic colonization and immigration scheme for Washington Territory. Agents will be sent to England and Scotland to encourage the emigration of agriculturists. The land to be settled lies in the Big Bend and belongs to the Northern Pacific.

REMEDY FOR BLACK ROT IN GRAPES.—Experiments made during the past year, in both this country and Europe, have shown that black rot of the grape can be wholly pre-

Fig.

GEOLOGICAL CONDITIONS AFFECTING THE FLOW OF ARTESIAN WELLS.

springs from partial observation. Certain portions of the water of every stream are always "running uphill," though its average mass is moving down. The bottom layer flows up and down, according to the inequalities of the bed, while the top layer declines more uniformly with the surface slope. In the artesian stream we only see the rising column issuing from the earth and the brooklet that flows away. The more potent descending volume that forces the flow is concealed. No portion would rise if it were not forced up by a superior portion pressing down.

Fig. 1 of the cuts (see page 53) is a longitudinal section of a stream, illustrating in part its upward currents, subordinate to the general downward flowage.

To fashion a single idea of the common class of flowing wells, picture to the mind a pervious stratum through which water can readily pass. Below this let there be a water-tight bed, and let a similar one lie upon it, so that it is securely embraced between impervious layers. Suppose the edges of these layers to come to the surface or some elevated region (save that they may be covered with soil and loose surface material) while in the opposite direction they pitch down to considerable depths, and either come up to the surface again at some distance

out of a porous water-bearing bed, *A*, inclosed between impervious beds, *B* and *C*, thus furnishing the necessary conditions for an artesian fountain, *D*.

Fig. 4 is a section illustrating the transition of a porous water-bearing bed, *A*, into a close-textured, impervious one. Being inclosed between the impervious beds, *B* and *C*, it furnishes the conditions for an artesian fountain, *D*.

Fig. 5 is a section illustrating the usual order in which the strata of a basin come to the surface; *A* and *B*, porous beds; *D* and *E*, impervious beds; *C*, a half impervious bed; *F* and *F'*, the water levels of *A* and *B*, respectively.

Fig. 6 is a section illustrating the possible effect of erosion upon strata originally like those in Fig. 6; *A* and *B*, porous beds; *D* and *E*, impervious beds; *C*, a half pervious bed; *F* and *F'*, the water levels of *A* and *B*, respectively. If the stratum *C* is not practically a confining layer, the water from *A* will pass through it and escape at the edge of *B*, so that a flow cannot be obtained at a higher level than it, but may be had below the line *F'*.

Fig. 7 is a section illustrating the failure of an artesian well because of defects in a confining bed below. *A* and *B*, porous beds; *D* and *E*, impervious beds; *C*, a defective confining bed; *F*, the water level of the stratum *B*; *G*

surface of ground in one of two supposed cases, and *D* the surface in the other. The arrow springing from surface *E* represents upward tendency of water in porous bed, owing to pressure from fountain-head, while the arrow depending from line *D* represents downward pressure of ground water, whose surface is represented at *D*, and is, it will be observed, more than equivalent to the upward tendency due to pressure from the fountain-head. A flow at *F* could be very safely predicted if the surface were as represented by *D*, while it might be doubtful whether one could be secured if the surface were as represented by *E*.

Fig. 10, illustrates the possibility of a flow from a bed even when exposed at a lower level; *A*, a sandstone bed, thick and coarse at the right, its shore edge, and thinner and finer at the left. *B* and *C*, confining impervious beds. *F*, the water-level in *A*. *D*, a well which may flow notwithstanding the lower exposure at *E*.

Fig. 11 shows the dependence of the collecting area on the thickness and slope of the porous beds. In the left-hand figure the porous bed *A* is thin, and, coming to the surface at a high angle, gives but a small section. In the right-hand figure the bed *A* is thick, and, coming to the surface at a low angle, its beveled edge is broad.

vented by the proper application of the sulphate of copper compounds. A circular describing the manner of applying these has been prepared by B. T. Galloway, Chief of the Section of Vegetable Pathology in the U. S. Department of Agriculture at Washington, D. C. It will be sent on application to all grape-growers and others interested in such matters who may send their names to Mr. Galloway as stated.

TIMBER ON GOVERNMENT LAND.—The jury in the case of the United States Government against the Sierra Lumber Company after deliberating all Friday night, returned a verdict in favor of the plaintiff and assess the damages at \$41,000. It was said that several members of the jury were in favor of rendering a verdict for \$175,000, but the compromise was effected for the amount of the verdict. The case has been dragging on in the Circuit Court since Dec. 4th last, and was brought by the Government to recover \$2,217,254.20 for damages for cutting timber on Government land in Tehama county.

THE mild weather is causing loss to New York apple-growers, who have half a million barrels of fruit stored. Rot has set in and it is feared one-half will be lost.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

GLANDERED MULES.—*Oakland Tribune*, Jan. 24: Four weeks ago, G. W. Jones, West and Lydia streets, purchased a pair of mules from a Napa man for \$300. The animals were worked in this city for a week, when they became sick. Jones took them to a veterinary surgeon, who attempted to cure them. They kept getting worse and Jones took them to Dr. G. W. Stimpson, who announced that they were suffering from glanders and farcy and condemned them. This morning they were taken to the bone-yard and killed. Dr. Stimpson states that there are a number of so-called veterinary surgeons who attempt to cure this disease and thereby endanger the lives of human beings as well as other horses.

HAY FOR NEW YORK.—*Livermore Herald*, Jan. 24: Two carloads of Livermore hay will leave this place to-day for Sheephead bay, N. Y., in response to an order from Senator Hearst. It will be shipped by the Farmers' Union. An agent of Mr. Hearst made the purchase, and will inspect every bale. The hay is for the use of the Senator's racing stock. The freight is \$29 per ton, making this a pretty expensive lot of hay, even for a millionaire. This is a decided compliment to Livermore valley.

PLANTING FOR GOOD.—W. W. Colestock is planting 20 acres of his farm in the east end of our valley with apricots and almonds in a novel way. Owing to the high price of nursery stock, he is simply planting the seeds—apricot pits and almond nuts—where he wishes the trees.

Amador.

NEW HARROW.—*Jackson Ledger*, Jan. 26: Wm. J. Glanville of Amador City has invented an improved harrow. It is made of four-inch links of steel, so joined together that every alternate link works on its angle, and these links perform the harrowing work. It is said to answer splendidly for cleaning land of grass roots, for covering all kinds of seed and leveling the soil. It is a great labor-saver, doing its work as well as the ordinary harrow in two-thirds the time. Mr. Glanville has applied for a patent for his invention.

ABOUT PLYMOUTH the weather has been so favorable that farmers have got in the largest acreage that has ever been put in in this part of the county, and it is looking better than ever before.

Inyo.

CORN.—*Inyo Independent*: A few days ago we were shown two large piles of husked corn on the farm of W. L. Hunter, at George's Creek. One of the piles was from seed corn common to all parts of Owens valley for many years. The other was from seed sent to this paper from Washington two years ago and given to Mr. Hunter. The entire product of the first lot was saved and used as seed, from which this corn is the product. Compared with this the old native corn is the meanest kind of nubbins. The newer variety has large ears and plump, well-filled grains. One bushel of these ears would be worth two of the old variety. This corn was planted and tended by an Indian, who worked for a part of the crop. He made a good thing of it, and Mr. Hunter is well pleased with his share.

Kern.

FEWER HARES.—*Bakersfield Echo*, Jan. 24: An impromptu rabbit-drive was held at H. Borgwardt's ranch west of town last Sunday. A large number went out from town, but the catch was a small one, only about 200 being corralled and killed. This ranch was one of the favorite places for this exhilarating sport last year, and a catch of 1800 was the least one made. From that the number ran up as high as 5000. The explanation for this great falling off in the number killed this year is that the rabbits are not to be found. The lines were well drawn Sunday and but the usual per cent escaped. If the result of this drive shall prove a good criterion by which to judge the number of rabbits in the county, there will be much rejoicing among the farmers.

HORTICULTURAL COMMISSIONERS.—The supervisors have reappointed C. A. Maul to be a member of the Horticultural Commission, vice himself, term expired, and M. Wyatt of Kernville, vice J. B. Batz, resigned. Their compensation was fixed at \$5 per day, which, the order says, shall cover their expenses. Col. L. W. Burr, the third member, informs that he and Mr. Maul will act at once on any complaints that may be lodged with them. We have not heard whether Mr. Wyatt will accept his appointment or not, but presume he will. There is some scale in the county, and it is to be hoped that fruit-growers, as well as people generally, will give the Commissioners every possible assistance in the work of ridding the orchards of these pests.

Los Angeles.

POISONING LINNETS.—T. M. C. in *Pomona Progress*, Jan. 17: Linnets are becoming as great a nuisance here as the sparrows are in the far Eastern States. They destroy the buds on the fruit trees, and thus do injury to the crops. Now the only preventive is to poison the birds. During the past week I have killed over 350 linnets in this way, and if every fruit-grower would take the matter in hand, we should soon be rid of them. Take apples,

quarter them and make a hole in each quarter large enough for strychnine about the size of a pea. Then punch the fruit in 12 or 15 places so that the strychnine can permeate every part. Place the quarters on the twigs of the fruit trees, so that the linnets can easily peck at them, and chickens cannot reach them. The poison acts almost immediately on the birds. I find that nearly all of them die within 100 feet of the poisoned apples, and many within 10 feet. If every orchardist hereabout will at once begin poisoning the linnets, we shall be comparatively free from them for a long time. Care should be taken that the poisoned birds are quickly buried so that their bodies may not cause more poisoning.

NAVEL ORANGES.—*Orange Tribune*, Jan. 26: F. M. Wilber deposited in the show window at Seaber, Scott & Co.'s office last week a Riverside Navel orange from a tree upon Mrs. N. C. Robbins' place. The specimen was a great big beauty weighing one pound, seven ounces and measuring 15 inches around. A pair of twin Navel oranges was given us this week by Ernest Parker, taken from his father's ranch, which weighed considerably over two pounds and were pretty to look upon. One of them went East as a specimen. To a friend, at 45 cents express charges. You can't send fresh fruits by mail.

SUGAR BEETS.—*Anaheim Gazette*, Jan. 24: A large and enthusiastic meeting of citizens of the valley was held at Santa Ana Monday afternoon to consider the establishment of a beet-sugar factory. Representatives from Orange, Tustin, Garden Grove, Fairview and other sections were present. An exhaustive report of the result of a trip to Watsonville was given by S. W. Smith, and beets and sugar made there were on exhibition. Sixty-four packages of beet seed will be distributed among the ranchmen, in order to test every variety of soil in the valley. At least six months will be required to complete the test. The ranchmen are particularly interested in the matter, and show a disposition to sift the industry. A vote of thanks was tendered the citizens, especially the managers of the beet-sugar factory at Watsonville, for courtesies shown the representative of Santa Ana valley during his sojourn among them.

LARK VS. SCALE.—*Los Angeles Cor. Chronicle*: L. J. Rose has just received a consignment of 25 skylarks from Europe, which he ordered five years ago. His agent had great difficulty in securing the birds, which are said to be the only specimens in America. The birds are supposed to be the natural enemy of the scale bug. They will be let loose in a few days, except a few pairs which will be kept for breeding purposes.

Merced.

A CHEERING OUTLOOK.—*Merced Argus*, Jan. 26: The weather continues favorable for the growth of cereals, and prospects for an unusually large yield next harvest-time continue to improve. Winter plowing and planting are prosecuted industriously, and already a very large increase in acreage over past seasons is in cultivation. Along the East Side canal several thousand acres have been sown to alfalfa; large tracts of hitherto sheep-pasture have been put in grain; the soil is in good condition and easily irrigated. Some thousands of acres, subject to irrigation, will also be planted to vines and orchard, affording employment to a large force of men upon the farms. Labor, so far, has been abundant at reasonable prices.

PUTTING THEM TO WORK.—*Merced Cor. Bulletin*, Jan. 24: Constable Leggett brought before Justice Jones this morning 13 tramps charged with sleeping in Starving's barn with out consent of the owner. All pleaded guilty and each was sentenced to ten days in jail. They will be put to work on the streets and the Courthouse grounds.

Napa.

IN THE THERMAL BELT.—*Mallie S. in St. Helena Star*: On the northern slope of Howell mountain the orange trees in sight of my window are green and growing luxuriantly, but are not yet of sufficient maturity to bear; grapes, ripe and fit for table use, are still on the vines, as up to the present time—the middle of January—we have had no frost to hurt; geraniums, fuchsias and other varieties are still blooming in the open garden; so also are roses, pinks, japonicas, violets, phlox, verbenas, and just now the sweet-scented narcissus, that queen of winter blossoms, is in all its beauty. In the vegetable garden we have new potatoes and green peas—planted in the autumn—lettuce, onions, carrots, parsnips, beets, etc., ready for use. I must not forget to add that strawberry plants are now in bloom, and the Cathbert raspberry continues to bear—blossoms, green fruit and the red, ripe, juicy berries being all on the same stem.

Nevada.

A DITCH PROPOSED.—*Grass Valley*, Jan. 25: Farmers in the southwestern part of Grass Valley township are organizing to construct an irrigation ditch to take water from the South Yuba Canal Co. and lead it by Osborne hill, through Forest Springs, and then on down the country. The proposed ditch will be an advantage to a good farming and fruit country and will give power for working a number of mines which are below the fields and orchards.

San Benito.

EDITORS PRESS.—Farmers here are nearly through putting in their crops and are looking anxiously for rain, late-sown grain being badly in need of a shower. Most of the farmers living up the San Benito river are through with

their crops. We have had frost almost every night for a couple of weeks, and sunny days. Pasture is short, owing to the cold nights. Stock which depends upon the grass for a living is in a poor condition and stock-raisers look gloomy. A warm rain would help the grass immensely. Quite a number of acres in this locality have changed owners during the last year or two. The land formerly owned by the Southern Pacific Co. has been sold, Mr. Promis of San Jose having bought a large tract, which he rented to W. Nobles of this place, who is now farming it. Several new buildings are being erected, and things look prosperous at present. Mr. Churchill is intending to plant out a nursery and vineyard this spring. Some experiments in raising early garden stuff were tried here last year and met with perfect success, potatoes and peas yielding well and of excellent quality. Turnips also do well here, growing very large and being sweet and juicy. Several people from the East visiting here complain of our roads being in such poor condition. Why don't our supervisors see that our roads compare favorably with those of other counties? Hollister needs an intelligence office; help is very scarce.—A. F., *Hollister*, Jan. 25th.

FINE ARTESIAN FLOW.—*Cor. Chronicle*, Jan. 26: A magnificent flow of artesian water was obtained to-day on the B. McMahon ranch, two miles north of Hollister, at a depth of 450 feet. Through an eight inch pipe, with the boring tools still in the well, which is choked with sand, the water rises to a height of 8½ feet above the ground. When cleared, the water will rise 30 feet. There are over 100 artesian wells in the county, but this is the best.

San Bernardino.

ALMONDS.—*Ontario Record*, Jan. 23: E. P. Norwood, one of Cucamonga's pioneers, is making a new departure, and will give almond culture special attention. His almonds received a silver medal at the Los Angeles Pomological Fair last year. He has seven varieties, ranging from the paper-shell to the regular almond of commerce. The specimens shown us were the handiest we have ever seen. Mr. Norwood has 30,000 young trees started, and can supply any wishing to plant this nut.

PRODUCTS OF THE COUNTY.—A *Times* reporter dropped into the rooms of Rising & Pope, on Third street, and found that quite a number of exhibits had already been placed in position. On the west side of the room, next to the desk of the Board of Trade, is the Chino exhibit, which consists of vegetables of all kinds, watermelons, pumpkins, etc. Directly opposite is Redlands' fine display of oranges, lemons, raisins, dried and preserved fruits, grains, etc. Opposite this is coal, gypsum, alum and minerals of various kinds from South Riverside. In the front of the room on the east side is a fine display of plants, ferns, etc., made by Wagner & Soule, nurserymen. San Bernardino has a display of oranges, lemons, tomatoes, strawberries and other things in the front center. The exhibits now in place are attracting a great deal of attention from strangers.

San Diego.

EDITORS PRESS.—The country is looking finely now. We have had 11 inches of rain in this locality, and prospects were never brighter at this time of the year. Barley and wheat are looking their best. Beemen are in good spirits, and real estate is looking up compared to what it was six months ago. There is no more "Sweetwater," but "Dehesa."—A. W. Osburn, *Dehesa, San Diego Co.*, Jan. 21, 1889.

FRUIT INSPECTOR.—*National City Record*, Jan. 24: The Board of Supervisors did a wise thing in creating the office of Inspector of Fruits of San Diego county, and appointing J. P. Jones to the place. His salary is fixed at \$2500 per year and all expenses. Mr. Jones has taken great interest in horticulture, and his observations and experience will be of great benefit to all fruit-growers. His principal duty, of course, will be to keep the county clear of all pests. He has established an office in the rooms of the Chamber of Commerce.

LARGE SHIPMENTS OF ORANGES are being made from Sweetwater valley to San Francisco. So far both Mr. Higgins and Mr. Whitney have confined themselves to picking enough fruit to prevent a breaking of the trees, which are heavily loaded. Of oranges alone these gentlemen will ship 2500 boxes each this season. This does not include lemons.

Santa Clara.

VAGRANT HORDS.—"You may tell the householders of San Jose and the county generally for me," said Sheriff Sweigert to a *Mercury* representative the other day, "that there is an influx of tramps such as we have never known before. They are pouring in from all quarters, but chiefly from Los Angeles and San Diego, whence they have been driven out, and they are the chaps who have been doing so much petty pilfering lately. No house left alone is safe, and at night all doors should be carefully locked and watchdogs turned loose."

NEW POTATOES.—*Los Gatos News*, Jan. 25: Mr. L. Hill sent to this office this week some very fine new potatoes grown on his place. This shows what good soil will produce. There is no reason why our people should not have luxuries all the while. The grape season lasts till Christmas, and then new potatoes, raspberries and other fruits and vegetables easily grow in open air.

Shasta.

TAMARACK COLONY.—*Cor. Redding Democrat*, Jan. 17: We have had a most beautiful winter so far—scarcely any snow. In the Tam-

arack colony all seem to be happy and doing well. The new-comers are all good workers and are improving their farms by felling the pine timber, clearing their land, plowing their ground and sowing the same in grain. Most of them have got water on their places and can raise fine spuds, beans, onions and alfalfa. Whitmore, owned by Mr. Whitmore, is the postoffice for the vicinity. He has some grain in that looks as fine as any I saw between here and San Francisco. Mr. Jones has some fine-looking grain and a young orchard growing on red-land without irrigation, which will bear in a couple of years. Mrs. Beanyer has some fine grain. I saw her out plowing; pretty good for a woman! If she doesn't make a success of farming, it won't be her fault. Owen Daily has as fine grain as can be found anywhere. He has water on his place, taken from South Cow creek. He also has some fine timothy meadow and a young orchard that was loaded down with fruit last year. Henry Stacher, 24 miles from Millville, raised some fine oats, wheat and hay, which sells on the Tamarack road. East of his place is the Summit sawmill. Six other places in the vicinity of the mill are all doing well. South of the mill is Tom McMullen's place, which is seeded down in meadow grass and red top.

Sonoma.

COYOTE SCALES.—*Petaluma Courier*, Jan. 23: At the meeting of the Board of Supervisors last week a bounty of \$15 for each coyote killed in the county was granted. This news will be hailed with pleasure by people who have been pestered with the varmints. We understand that they are quite numerous in some places in the county and very destructive.

CANNING COMPANY.—*Santa Rosa Democrat*, Jan. 26: A stock company was organized in Healdsburg Thursday under the name of the Magnolia and Healdsburg Canning Co. with a capital stock of \$100,000. The directors elected were: Geo. E. Guerne, E. H. Barnes, J. Dail, R. Robe, W. J. Hotchkiss, J. W. Cottle, T. Merchant was elected president. The company is composed of energetic and substantial business men thoroughly conversant with the needs of the fruit industry. It is proposed to build a large addition to the cannery and make such other improvements as the handling of the growing fruit product of that section may require.

Stanislaus.

A NOTABLE CLUSTER.—*Oakdale Graphic*: Silas Bishop has a branch of an orange tree suspended from the ceiling of his room in Oakdale that has an even half hundred oranges on it. The oranges are clustered so closely that the wonder is how they could cling to the branch long enough to grow and ripen. The twig was cut from a tree in Kasper Vogt's orchard at Knight's Ferry, and brought to Oakdale by Mr. Vogt in person.

A SOLID COLT.—*Modesto Herald*, Jan. 17: This week Matthew Moyle turned over to Willis Bledso, of Modesto, the Norman colt which the latter gentleman purchased of him some six months ago. The colt is now two years and nine months old and weighs 1605 pounds.

A RED GUAVA (*P. pomiferum*), the only tree of its kind in Stanislaus county, is to be seen in the orchard of Mr. Baloh, at Knight's Ferry. The fruit when ripe is oval, and about the size of a peach. The outside has the astringent taste of the pomegranate, but its pulp is very agreeable, and from it is made the delicious guava jelly of commerce.

THE OAKDALE IRRIGATION Co.'s engineers have completed the survey for the canal. The Graham survey runs on lower ground than the Fowler survey, and the cost of construction will be much less. The ditch will cross the road between Sawyer's and Cottle's, passing south of Oakdale near the house formerly occupied by D. W. McPherson. There is no question but that water from this ditch can be taken to all parts of Oakdale, including the Garden tract. From 60,000 to 100,000 acres of as fine garden and orchard land as lies out of doors will be within reach of the waters from the Oakdale Irrigation Co.'s canal. Much of this land will be cut up into tracts of five acres and upward and sold in quantities to suit purchasers. Need we offer a remark as to the beneficial effects of this change from a wheat-growing county with one family to a section, to one with a family to every 40 acres?

Tulare.

WILD HOGS and deer, says the *Visalia Times*, abound in the thickets adjoining Richard Chatten's farm on the south, five miles east of town. Persons who have never visited that section can hardly realize what a scope of wild country there is in such close proximity to this city. Occasionally a deer is laid low in those parts, but it was Mr. Chatten's good luck to enjoy some profitable sport there last week, when, with the assistance of a few men, who understood the business, he caught 71 head of wild hogs. The porkers were shipped to San Francisco.

Yolo.

GOOD REPORTS.—*Capay Cor. Democrat*, Jan. 23: The grass in the hills is fine. Our stock of all kinds is doing well. Stockmen report as yet no losses in their herds. Everybody is busy. The farmers are getting along finely with their winter sowing, and will soon be done. There was never a more favorable season than the present, plenty of rain, yet plenty of time to sow, warm and pleasant with but very little frost. The crops are far advanced for the time of the year.

THE LUBIN PULVERIZER.

THE LUBIN PULVERIZER saves much time in preparing the soil as well as the expense of teams. But the great consideration is, that it WILL DO THE WORK WHICH NO OTHER MACHINE ON THE MARKET WILL DO, and all must admit that with all crops very much depends upon the preparation of the soil to receive the seed, vines, trees, etc., as the case may be.

These machines are made in the three following sizes:

3 feet machines for 2 horses.....	\$ 65 00
5 feet machines for 2 to 4 horses.....	80 00
8 feet machines for 4 to 6 horses.....	125 00

HORTICULTURE.

That So-Called Muir Peach.

EDITORS PRESS:—In your issue of Dec. 15, 1888, appears an article from the pen of Mr. G. W. Thissell of Winters, in defense of his pet—the so-called "Muir peach"—wherein Mr. Thissell proposes to "settle forever" the question of identity of said peach.

"I say the Muir is a true California seedling," "a seedling of the Crawford."

The last above is Mr. Thissell's text, and from that text we would naturally expect a chain of genealogical "linking up" that would make his position clear. But having no trail to follow (he doesn't like trails), he gets the thread of his intended argument tangled up in the jungle, and forgetting everything but his text, he again vehemently announces that, and closes with a few rambling remarks upon dissenters and troublesome inquirers.

In my letter of *RURAL* Oct. 13, 1888, I traced the Old Pool's Late Yellow with unerring foot prints from the Socol nurseries, Napa county, to the celebrated orchards of the Woolfskills on Putah creek. It was there and in that vicinity that the Pool's Late was largely colonized, cared for, and diligently nursed, until it developed, or rather degenerated, into an emphatic tramp. Being found wholly valueless and unprofitable, it was, as a cumber of the ground, evicted from every orchard, and simultaneously expunged from every nursery catalogue of the State.

It was there it perished and was buried. And it was there, in the very environs of that Old Pool's Late burial-ground that Mr. Thissell says "he found" his so-called Muir, which he vehemently declares is a "true California seedling," and, most remarkable, "a seedling of the Crawford."

Now here is where the most important point in this controversy comes in. Why does Mr. Thissell presume to float his so-called new find, the Muir, under the ample wing of the Old Crawford? That is the question which Mr. Biglow of Antioch asks.

What is the answer of Mr. Thissell to that modest question? And also to another pertinent question of Biglow's? He, Thissell, says (*RURAL* Dec. 15, 1888): "I cannot tell, but suggest that Mr. Biglow put Thompson of Vacaville on the trail, and he might explain."

Yes, Thompson of Vacaville is already on the trail and fully prepared to explain, and, if needs be, in a future article of the *RURAL* will, for the benefit of whom it may concern, be most happy to explain.

Now all the peculiar characteristics of that old Pool's Late, not only of the fruit as it appeared a quarter of a century since on the Pacific Coast, but of the tree and its habit of growth, and the leaf thereof, are well known to numbers of the old residents of this now famed "Vaca Fruit Belt," and in fact all along the "old trail" which I "blazed out" in my letter in the *RURAL* of Oct. 13, 1888, are still living and to be found.

The early residents who became familiar with the old Pool's Late, and who are now familiar with the so-called Muir, what do they say? In every instance, without a dissenting voice, these old and early fruit-growers pronounce the so-called Muir a perfect fac-simile of and identical in every particular of fruit, tree and foliage with the Pool's Late. Can it be possible that all these people, fully as substantial and reliable, and perhaps fully as observant as Mr. Thissell, can be mistaken? Is it fair or reasonable to pronounce all these old residents ignoramuses who do not know what they talk about? Is Mr. Thissell the one and only "wise man" of all this renowned "Vaca Fruit Belt"? Of that a discriminating public must judge.

Mr. Thissell, in his vain endeavor to bolster up his position, flees to the old authorities, and quoting simply from the descriptive catalogues thereof triumphantly remarks (*RURAL*, Dec. 15, 1888): "Any man with common sense that will read the description of Pool's Late, as given by Downing and Thomas, and then read Thompson's description of the same (*RURAL*, October 13, 1888), will see at a glance that Thompson was talking about something he knew nothing about."

Now right here I beg to submit the question: Does not every old and experienced fruit-grower on the Pacific know from observation and repeated comparison that the descriptions of fruits as given by those old authorities are simply descriptions as they found these fruits on the Atlantic seaboard of America? Do not all the old and observant orchardists of the Pacific Coast know that in many instances descriptions by those old authors will in no way apply to nor fit the same fruits as they develop on the Pacific seaboard? Is it not a fact patent to all close observers that in the rich soils and genial climate of California a new pomology has been developed, the like of which was never dreamed of in the philosophy of those old authors? Some varieties are vastly improved by the change; others degenerate into veritable tramps. Among the latter the Pool's Late Yellow peach, the undoubted alias of the Muir, was one of the most pronounced. Being fickle and erratic in character, it so degenerated as not to be recognized as the same peach described by Downing and Thomas, Elliot and others.

Let us for a moment pause and see what

those "old authorities" say on the subject of the peach.

Mr. Downing in his exhaustive treatise (and the other authorities all concur) traces the peach from its native home in Persia down through the Roman Empire and thence to America, on whose soil he follows it for a period of 150 years, minutely noting all its peculiarities and eccentricities of development, closes his remarks as follows. I quote *not his exact language*, but the substance thereof:

In the description of peaches, the form and outlines of kinds are so nearly similar that we are obliged to resort to other characteristics than those presented in the fruits themselves in order to distinguish the one from the other. Where a question arises as to identity, we must go to the leaf of the tree.

The leaf is constant and unvarying in its peculiarities, and for the very purpose of settling questions and verifying opinions, they, the authorities, have divided the peach family into three classes, to wit:

- 1st. Leaves serrated without glands.
- 2d. Leaves with globose glands.
- 3d. Leaves with reniform glands.

In no instance do those authorities rely upon the color or outline of the fruit; in no instance do they refer to the pit or its surrounding color as a distinctive guide for the purpose of determining a variety. Why? Because color and general characteristics of the fruit and pit are fickle and liable to changes, while the leaf remains always the same, unchanged and unchangeable, by soil, climate, exposure or culture.

Now, with the fruit of the so-called Muir and that of the Pool's Late being identically the same, with the habit of tree and growth of wood precisely the same, willowy and pendent, and, above all, the leaf of both belonging to the same class—reniform glands (as per the authorities), with all these facts and unmistakable features standing out prominently before him, I ask with all deference, on what grounds, other than his flat and unfortified assertion, can Mr. Thissell claim his pretended new find, the so-called Muir?

The question naturally arises: Has Mr. G. W. Thissell of Winters, like a veritable Columbus, presented us with a new pomological feature, or has he, like the grave-digger in "Hamlet," wandered into Pomona's burial-ground and therefrom exhumed the skeleton of a relegated race, and, dressing it in the habiliments, and crowning it with the glory, of the old monarch of the orchard—the Crawford—presented it to the public as the scion of that old family with the following most remarkable and extravagant eulogy? I quote Mr. Thissell's language as per *RURAL* of Dec. 15, 1888:

"The Muir is undoubtedly a seedling of the Crawford, and yet the Muir *excels* the Crawford as far as day excels the night."

What a monumental beacon of delusion to hang on our horticultural horizon! Small wonder Mr. Thissell's table is laden with inquiring letters; small wonder that Mr. Biglow of Antioch flees to the columns of the *RURAL*, and, in the agony of disappointed hopes, exclaims: "About this so-called Muir there hangs a mystery."

There is absolutely nothing in the experience of modern peach culture, nor in the authorities, to warrant the above *misguiding assertion* of Mr. Thissell. "This borrowing the livery of royalty in which to dress and present the rabble" is what envelops our pomology in vexatious uncertainty and muddled confusion.

I regret having been drawn into this controversy; but Mr. Thissell having sent for me, I have come; he having called me, I am here, and having demanded my proofs, I beg to say when the season of fruits and foliage again rolls around, I will be glad to meet Mr. Thissell before a competent pomological court and offer ample testimony in support of my position.

THOS. H. THOMPSON.

ORANGE CULTURE IN CALIFORNIA.

A Timely Treatise.

Now that the interest in the culture of the orange is extending so as to embrace nearly all parts of the State, a book giving the results of experience in parts of the State where the growth of the fruit has been longest pursued will be found of wide usefulness.

"Orange Culture in California" was written by Theo. A. Garey of Los Angeles, after many years of practical experience and observation in the growth of the fruit. It is a well-printed hand-book of 196 pages, and treats of nursery practice, planting of orange orchards, cultivation and irrigation, pruning, estimates of cost of plantations, best varieties, etc.

The book is sent post-paid at the reduced price of 75 cents per copy, in cloth binding. Address Dewey & Co., Publishers "Pacific Rural Press," 220 Market St., S. F.

GEO. P. LOUCKS.....Pacheco
B. F. FRISBIE.....Yuba City

BRO. OLIVER JORY of Salem Grange, Oregon, called at this office January 30th. We were pleased to receive a visit from this representative Oregon Patron and requested him to visit some of our California Granges while here. He has agreed to visit Stockton Grange on the 6th, when Bro. Carr will be present, and we predict for him a hearty welcome.

BRO. V. W. STILL writes us that Eureka Grange has not been prospering as well as he had hoped it would. They have elected a new set of officers, and intend to make a strong effort toward prosperity. Bro. Still says that he intends doing some work for them soon, and hopes to obtain new members.

WE are pleased to note that Alhambra Grange has again elected Dr. J. Strentzel Master. He has served faithfully many years as Master of this Grange. The Overseer, Steward, Assistant Steward, Treasurer and Secretary were also re-elected for another term.

Official Circular to Subordinate Granges.

Jan. 25th the following circular was sent to each Subordinate Grange in California. We insert the same here, so that in case the circular failed to reach any secretary any member reading it might call attention of their Grange to the same. Nearly all the printed matter included to appear in one or the other of our issues for Jan. 19th and 26th:

OFFICE SEC'Y STATE GRANGE, P. OF H.,
S. F., Cal., Jan. 25, 1889.

W. M. and Patrons:—I have the pleasure to transmit to you the accompanying official notices, together with other matters of important interest to all Patrons, as published in the Grange edition of the PRESS. Being too lengthy to read in full before the Grange, in some instances at least, I would recommend the Worthy Master and Secretary to peruse the printed notices, and after consultation have some of the most important ones read, and a condensed review of the information contained in others given to the Patrons by the Secretary or Worthy Master. Such portions as time will not admit of reading might well be discussed at subsequent meetings.

There are strong evidences of progress in our Grange field, and it is hoped that all good and true Patrons throughout our jurisdiction will take new courage, and with renewed zeal use extra efforts at once to revive the work and increase our numbers.

We would call your attention to the new arrangements for publishing the official weekly organ of the Grange, which, it is believed, will prove a permanent and satisfactory improvement, and one which can be confidently and vigorously supported by every Grange and every Patron. To make this, as well as any other enterprise of the Grange, a well-rounded-out success, requires the active support and patronage of all intelligent Patrons. It therefore remains for you to support our official journals to such an extent as to make their efforts productive of good results.

Worthy Master Overhiser requests that the Masters of subordinate Granges of counties or districts for which District Deputies are appointed shall confer, with as little delay as possible, and recommend to him for appointment, or re-appointment, suitable and active Patrons as Deputy Lecturers for the ensuing year. All present Deputies will continue until they are notified, in case of new appointments.

I would suggest that you make the bills to be acted upon at our present legislative session, published or named in the accompanying printed matter, the subject of discussion, either at some stated regular meeting or an open meeting called for the express purpose, inviting the attendance of farmers generally, taking pains to give ample notice through local and Grange papers.

You will find inclosed a copy of the amendments adopted by the State and National Granges, which should be preserved for reference; also a circular from the publishers of the PACIFIC RURAL PRESS to be read and considered at your meeting.

It seems to me there was never a time, brothers and sisters, when duty called us to work more faithfully in a cause we believe unrivaled in importance by that of any other fraternity in the land. We shall strive to do our whole duty, and hand in hand, we trust, with all good and true Patrons, do our work well and with ultimate success.

Yours in F. H. and C. with F.,
A. T. DEWEY,
Sec'y S. G. of Cal.

Magnolia Grange.

MESSRS. EDITORS:—Magnolia Grange held a special meeting January 26th and installed its officers. We are now ready to begin work for another year, with prospects for an increase in membership. We are out of debt and have money in the treasury. The change in our organ seems to give general satisfaction, and we feel that what was done was for the best interest of the Order.

The farmers in this section are not through seeding yet, and are beginning to feel the need of rain. Grain that is up is looking well. We have had some frost but no snow. Fraternally,
V. W. STILL.

A Secretary of Agriculture.

At the last session of the National Grange the following was adopted:

"We continue our demand that the Commissioner of Agriculture be made Secretary of Agriculture and a member of the President's Cabinet."

It is now fully 12 years since this question of elevating the Department of Agriculture was first taken up by the Grange, and during all these years it has continued to push the matter, keeping it before the people of our whole country and before our legislators in Congress. State and subordinate Granges have followed up the work, and little by little public sentiment in its favor has been created, prejudice and opposition have been overcome, until now it is an almost assured fact that the bill before Congress will become a law before adjournment, March 4th, and that this most important of all industries in our country will have the recognition in this direction that it has in several other countries.

No sooner is it conceded that this important forward step is to be taken than a number of candidates for the position of Secretary of Agriculture are in the field in different parts of the country. Now if by the unwritten laws and rules of politics there must be a change in the present efficient head of the Department of Agriculture, one of the most practical men ever in this place, being a farmer himself, one who has popularized the Department and made it of real value to agriculture, and one whom tens of thousands of farmers of all parties would like to see retained in the place—if a change must be made, have not the farmers in the great national farmers' organization, the Grange, that originated, stood by and carried forward to success the idea of having a Secretary of Agriculture, a fair claim, a just right to expect that a member of their organization shall be the first to fill the new position? In fact it would seem that other "aspirants" would gracefully withdraw in favor of a Patron of Husbandry for the position. Why should any one, however great his abilities otherwise, who has never even by becoming a member of the Grange, aided in this work, seek to "reap where he has not sown"?

All other things being equal, a Patron of Husbandry should first occupy a position that Patrons of Husbandry have made possible. The Grange numbers in its ranks thousands of the most intelligent, the most successful and the most advanced farmers of our country. In fact the Grange has developed the very talent and qualifications needed for this important position. The farmers ask and are expecting that this place shall be filled by a practical man from their own ranks, and that it shall not become simply a "place" for a professional politician.

That the members of the Grange generally take it for granted that a representative of this farmers' national organization shall first fill the place is shown by the prompt manner in which, in widely separated sections of the country, they have advanced the names of good men and true for the position.

Of these, three are prominent for their abilities, their past records and fitness for the position. Mentioned in the order in which their names have appeared in the public press, they are:

Ex-Governor Frederick Robie of Maine, an extensive farmer, college bred, one who for many years has represented his people in the Legislature, and who was twice elected to fill the Governor's chair. As a member of the Grange, he is now serving his eighth year as Master of the State Grange of Maine. The membership has more than doubled under his guidance, and to-day his State has the largest membership of any in the Union; a man of broad, national views, an officer in the Union army during the war, one every way qualified for the place.

J. H. Brigham of Ohio, an extensive farmer, coming up from the ranks; for ten years Master of the Ohio State Grange, president of the State Board of Agriculture, director of the State Experiment Station, the bill creating which he introduced and succeeded in passing while a member of the State Senate; a soldier of the Union who went out as a private and came back in command of his regiment; now at the head of the Grange organization, being Master of the National Grange; a man of broad, liberal views, few his equal, none his superior for the position. The Ohio State Grange unanimously indorsed him for the place at its last session.

J. J. Woodman of Michigan, a practical farmer and stock-grower, for 11 years a member of the Legislature, six years Speaker of the House, six years Master of the State Grange of Michigan, and six years at the head of the Grange in the United States as

Master of the National Grange; the organization being honored by his appointment by President Hayes as Commissioner to represent the agriculture of this country at the Paris Exposition. Unanimously recommended by the Michigan State Grange for the place at its last session.

These are the kind of men that the Grange is expecting that the Secretary of Agriculture will be selected from. They not only expect it, but feel their right to the claim. The farmers in the Grange in Canada some time ago succeeded in getting their laws changed so that the representative of agriculture becomes a "Minister of Agriculture," with a place in the Cabinet of the Governor-General, and the Hon. Chas. Drury, who has just been honored with the place, is a member of the Grange.

We would respectfully call the attention of President-elect Harrison to the fact that his grandfather had a Granger in his Cabinet. It was Postmaster-General Francis Granger of New York. The farmers of this country, being tillers of the soil, are not by trade cabinetmakers, but the million or more who are in the Grange urge their claim that the first Secretary of Agriculture under the law the Grange has brought about should be a member of their organization. Let Patrons everywhere use all honorable means to bring this about.—Mortimer Whitehead, Lect. N. G.

A Voice to Young Farmers.

There is frequent questioning on the part of brothers and sisters of the Grange why the young people are not more attracted to the farm and Grange, and we are glad to say there seems a growing disposition to make the Grange pleasing to attract young people and to allow them to introduce more social and literary exercises for their own enjoyment as well as for all the members.

That there is really more inducement for young people to join the Grange than old. Of this there is no doubt because that they have so many more years to receive instruction and enjoy the influence of the Order.

One difficulty is that young people, being strangers, seldom get interested in the first few meetings, and therefore consider the business a dull routine, and quit while there is a real mine of pleasure and benefit uncovered just a little ways before them. We therefore feel to thank Dr. L. F. Roush, for the following truthful words spoken for the encouragement of young farmers at the recent proceedings of the West Virginia State Grange:

And now to the young farmer I wish to speak words of encouragement, of high hope and expectation for the future. Do not too hastily leave the farm for the purpose of following a professional life or to hunt employment in the towns and cities. The life of the farmer is the most independent. The world of knowledge, power and influence is within your grasp, as well as the professional man, if you will only qualify yourselves to act well your part. Qualify yourselves—there lies everything. Position in society, political influence, are all yours if you will only prepare yourselves for the duties involved in position.

But you will ask the question, How are we to make this preparation? Our time is all taken up on the farm, and when we work hard we have little disposition for study or the improvement of the mind. So is the professional man's time taken up with his professional duties, but he must study. If not, he falls behind his professional brothers, and so you will fall behind your more energetic neighbor. Read while waiting for breakfast or dinner, on rainy days and in the winter-time. Take agricultural books and journals and read them. Practice what strikes you as being a good thing; prove all things; hold fast to all things good; join yourselves to a farmers' club or Grange organization; discuss questions relating to agriculture, and get yourselves interested in what relates to your own practical business. Don't let the foolish prejudice of your neighbor deter you from connecting yourself with a farmer's club, because herein lies one of the means of your advancement. You will learn to think and to speak in these organizations, besides the new ideas you will get from others by association. Every industry, trade or profession has its organizations, and so must you have yours, and you must not be apologists for belonging to the same. It is a credit to you to have membership in such organizations, and nothing but ignorance and prejudice will ever keep you from belonging. Organizations of this kind are not simply combinations against somebody else, and should not be looked at in this light, and are not, only by those who are ignorant of their objects. They are for your own mutual advancement and improvement.

It is no less important for our young woman to participate earnestly in improving themselves in thought and speech, and enjoy the social privileges and inspiring and elevating spirit of the Grange, one of the noblest of all human associations.

OREGON P. OF H. DEPARTMENT.

BRANCH OFFICE,
Turner, Oregon.I. L. HILLEARY, Corresponding Editor.
W. M. HILLEARY, Branch Agent.

Oregon State Grange Officers.

Master—H. E. Hayes, Oswego, Clackamas Co.
Overseer—J. Voorhees, Woodburn, Marion Co.
Lecturer—John Simpson, Sluslaw, Lane Co.
Steward—J. W. Cook, McMinnville, Yamhill Co.
Asst. Steward—W. A. Sample, Umatilla Co.
Chaplain—David Eby, Goshen, Lane Co.
Secretary—Mrs. M. J. Train, Albany, Linn Co.
Gate Keeper—S. A. Dawson, Albany, Linn Co.
Pomona—Mrs. R. P. Boise, Salem, Marion Co.

J. C. JENNINGS, Junction City, Lane County, Or.

From Worthy Master Hayes.

The Granges of Oregon are not going to become dormant if Bro. Hayes can help it. He is using his best efforts to keep them at work and interested in the cause. In a letter to this office he says:

I am going to appoint a committee of ladies in each county, whose duty it will be to see that every Grange in their county has a lady committee to see that work is assigned to the sisters for every meeting. Pomona, Flora and Ceres should see that their important branches of the farm and home (the fruits, flowers and grains, with all their different varieties and culture) do not s'umber in ignorance, but keep pace with the age in which we live. In the fall let each Grange hold a fair and exhibit the products of the members. The sisters might exhibit fruits, flowers and grains, needlework, penwork and composition, and many other things that their inventive minds could suggest. This will make the occasion both instructive and enterprising. Let the parents offer a premium for the best declamation to the boys and girls who belong to the Grange, and a premium for the best pies, cakes and bread made by any sister under say 16 years of age; to the boys for the best lecture upon finance, etc. You see my idea. What do you think of it? Please send suggestions.

We wish to call the attention of the California sisters to the good suggestions in the above, thinking that they might enter into pleasant rivalry with the Oregon sisters.

Salem Grange.

Salem Grange met in regular session on the third Saturday of January, Worthy Master T. L. Davidson in the chair. The attendance was good, and the meeting of more than usual interest. Salem Grange has dressed itself out in "brand splinter new" regalia, which gives a decidedly "tony" air to the Grange. Now we do away with the old-style brown-and-white sash regalia, and each appears in a neat blue-satin, gilt-adorned badge.

Salem Grange concurred in the resolutions adopted by Juniper Grange, No. 212, of Eastern Oregon, with a few exceptions.

Past State Master R. P. Boise discussed at length the Railroad Commission bill, advocating, in strongest terms, its continuance. It was still further discussed by Bros. Waggoner, Smith, Genn and others.

A second discussion upon the Australian ballot system was replete with interest.

The discussion on precinct assessors by

J. P. Robertson, Waggoner and Stump was quite breezy.

A change proposed in the road law by Juniper Grange was most thoroughly agitated, and was vetoed. The resolution favoring the homestead law of exemption to the amount of \$2000 was warmly discussed and adopted. The following resolution was also adopted:

Resolved, That we favor the bill introduced by J. B. Waldo in the present House of Representatives to repeal the section of the Revised Statutes of this State providing for the punishment of persons who receive bribes for voting at elections, as it will expose to prosecution persons who are guilty of bribing.

Also the following by Bro. Wisner of Polk county:

Resolved, That this Grange petition the Legislature to pass a law exempting only \$2000 from taxation on account of debt.

Moved by Bro. Boise to amend by striking out \$2000 and allow no exemption, and was adopted. A motion was carried to meet again on fourth Saturday of January at 1 P. M. for the purpose of furthering legislative reform.

Mount Holly Grange.

MESSRS. EDITORS:—Inclosed find the sum of \$2 on account of subscription.

I wish, brothers, you would talk up in your Granges the subject of the change of school-books by vote of county superintendents. We have just had a change of 20 or more of the books used in the public schools of this State, which is no doubt a very useless drain on the pockets of the parents, who have none too much money to spare; and a bad feature is, we cannot tell, as they are sealed ballots, which superintendent is under the thumb of Ivison & Blakeman, and which is not. Now, could the matter of a change be put to the vote of the directors of each district, the publishers would not have enough influence to go around, as there would be too many for it to pay any big thing.

I would like some brother or sister to give us what information he or she can about the query-box in the Grange. Yours in fraternal friendship,

Isabel, Jan. 19.

[Will some of our readers who have the means of investigating this subject inform Bro. Bradford and others through our columns concerning this matter and the best remedies possible for the evils suffered?—EDS.]

Grain Sacks.

An Oregon brother wishes to know where grain sacks are manufactured. Most of the grain sacks sold in this market are manufactured in India, or in Scotland from jute grown in India. The California State Prison has a large bag manufacturing plant, which runs night and day, but the sacks manufactured there do not get very far away from home before they are put to use. It is safe to say that the farmers of Oregon never see them. There is also a manufactory in Oakland, Cal., but its product is also quickly seized upon by the California farmers.

STATE MASTER HAYES was in attendance upon the Farmers' Congress, which was in session the 14th and 15th in Salem. Past Master R. P. Boise was also among the speakers. Though the Congress may be the means of giving "light" to a few, we cannot but think that were the same energy spent within the Grange and for the same object, much more good might result. Farmers cannot expect to accomplish ends if, before they are ready, they allow the shark equal chances with themselves. Lay the wires, formulate and be ready before giving to the public your plans. The Grange, with its age and experience, certainly should have the confidence of this little body of reformers.

THE PRESS generally of Oregon expresses its contempt for the outrage perpetrated upon the people of Oregon on the schoolbook question. It is to be hoped the present Legislature will take steps to protect the people and prevent a repetition of such rascality.

BRO. FRANK M. KRUSE, Secretary of Tualatin Grange, writes that Bro. H. E. Hayes was chosen to install their officers January 26th, in the afternoon. The installation was public.

The Eastern Oregon Granges.

MESSRS. EDITORS:—Eastern Oregon is holding its reputation for mild winters. So far we have had a pleasant season. The prospect for a good crop is fine. Times are good and the country in general is prosperous. The Patrons of Husbandry are working slowly, but always gaining ground.

It has been my pleasure to visit Cold Spring Grange. At their last meeting, on January 4th, they initiated seven new members. I note a great deal of progress since my former visit. They will install their officers January 25th and enjoy the pleasures of a grand dinner.

On the 12th, I spent the evening with Vansycle Grange. They have increased from 17 to 28 members. They initiated one brother that evening. They have extended invitations to neighboring Granges to be present on January 29th to assist in partaking of a good dinner and witness the installation of their officers. May success be theirs.

Juniper Grange is not left in the race. We will initiate four new members at the next meeting, on January 24th, and the sisters, "bless them," have concluded to prepare a fine dinner.

I go up to Eureka Grange on the 19th to assist in installing its officers. I hear they have made a success of their Grange, and why should they not?

In order to maintain our position in the affairs of the nation, we must come to some understanding; we must talk together, work together, and demand that justice shall be done to the patient tillers of the soil. Our work is great and demands the attention of all men engaged in agriculture. Ours is a common cause. To bring relief to our class, we must have laws enacted that will destroy the power of men to form trusts or otherwise to arbitrarily control the markets of the country to the detriment of the productive industries.

We have made a good start among the P. of H. in Oregon this winter. The resolutions that have been adopted by the Hillsboro Grange are a move in the right course. They embrace a great many things of interest to the State at large.

Unless the farmers take a hand in the way of bettering their condition, how can they expect relief? Experience has taught us that men will take advantage of every opportunity to enhance the value and corner the markets of the world so as to replenish their own coffers, no matter if it should rob the widow and orphans and create suffering among their fellow-men. To deal with that class and prevent others from following their course, we must provide laws that will insure relief to the toiling millions.

Our revenue laws must be changed. All classes should bear their share in the financial aid to our State and Government. The different resolutions that the Grangers of Oregon have prepared must be placed before the Legislature. The resolutions that the County Grange of Umatilla has had printed and forwarded to every member of the Legislature, and all other plans asking for aid, not alone for the farmers, but the laboring class in general, will have their influence; and if the farmers would use the power they have in their own hands, they would see that no man was sent to the Legislature who was not willing to give justice to all. I send for publication the resolutions adopted by the Umatilla County Grange.

Helix, Jan. 14.

Barlow Gate Grange.

MESSRS. EDITORS:—Barlow Gate Grange is situated about 30 miles south of The Dalles in a fertile part of the county, and consequently the land has been settled with a hardy set of old practical farmers and their families. Since its first settlement, we have been blessed with our little country stores that have succeeded in getting the most of our hard earnings; but, through the help of Bro. H. E. Hayes, we are fast achieving our independence and taking higher grounds in our thoughts and our aims, feeling that we, as producers, have the God-given right to enjoy at least some of our earnings.

We are putting forth earnest endeavors to make our Grange second to none in this State. We were most fortunate in securing a good set of officers in our first organization, with Bro. End as Master and Bro. Swift as Overseer; and our Secretary and Treasurer were as true as steel to the interest of the Grange. Our little Grange has stood the sneers and the thunderbolts of the lawyers, speculators and moneyed sharks, and to-day we are out of all danger from external foes, and with the present good feeling in the Grange, we are in no danger of internal decay.

Barlow Gate Grange has experienced a good degree of prosperity. During the last

few months we have taken in new members at almost every meeting, and at our next regular meeting we have seven to initiate, and more are coming. It looks now as if we shall soon clear this part of the field. Our present officers, M. Wing, Master; A. I. Swift, Overseer; E. N. Chandler, Treasurer; Mrs. E. N. Chandler, Secretary, are true to their part of the Grange work. In this Grange, and perhaps some other Granges, there is a backwardness in speaking for the good of the Order. This is the life of the Grange. It gives the Lecturer much assistance and the members an opportunity to express their thoughts in public.

Wamic, Jan. 20.

B. F. BONNEY.

Marion County Pomona Grange.

The Pomona Grange resolution, to request the Governor to appoint only educated and practical farmers to fill vacancies in the Board of Regents in the State Agricultural College, goes to the merits of the question, and is the only way to accomplish the creation of a distinctively farmers' board. Of course we need not know what vacancies will occur to reach that conclusion. Probably vacancies occur annually, and always to put a farmer in the place must in a few years create a board of farmers. The Governor does not need to be told that there are many well-educated and competent farmers. He can find, literally speaking, hundreds of good men, prosperous in their own affairs and competent to manage this institution. With a Board of Regents made up of Oregon farmers, the college will command the respect of agriculturists, and farmers' sons will attend there by hundreds. It must be made a popular educator, and enlighten the rising generation of farmers as to the various forces in nature on which their success as farmers will depend.—Oregonian.

Oak Plain Grange.

MESSRS. EDITORS:—Grange met January 12th in its hall. The regular routine of business being disposed of, a recess was taken for dinner, which every one seemed to enjoy. After the sumptuous feast, the Grange was called to order, and Bro. J. H. Scott, W. M. of Tangent Grange, proceeded to publicly install the officers for the ensuing year, assisted by Bro. P. Cochran of Tangent Grange and Sister S. J. Cornett of Oak Plain.

We had a good attendance, and there is a good interest taken in the Grange work. We restored one old member and conferred the Second Degree on a class of two—a brother and a sister—with prospects for more new members soon. Yours fraternally,

Shedd, Jan. 12.

JONAS DAVIS.

Grange Elections.

EVENING STAR.—A. F. Miller, M.; William Kerns, O.; Gus Patterson, L.; Mrs. E. A. Kelly, S.; Bro. Hall, A. S.; Thomas Howitt, C.; Plympton Kelly, T.; Mrs. Mary Wills, Sec.; John Hirt, G.; J. Johnson, P.; Mrs. Mary Howitt, F.; Miss Rosa Lent, C.; Miss Lily Wills, L. A. S.

GRAND PRAIRIE.—A. J. Zamwalt, M.; Milard G. Flint, O.; A. C. Jennings, L.; Edgar W. Zamwalt, S.; Robt S. Poole, A. S.; I. W. Bond, C.; A. E. Jennings, T.; J. C. Jennings, Sec.; Allen Bond, G. K.; L. M. Zamwalt, P.; Rachel Bond, F.; Martha Smith, Ceres; Helen Bruce, L. A. S.; Hynson Smyth, Allen Bond, J. C. Jennings, Delegates to Pomona; A. J. Zamwalt, A. C. Jennings, Hynson Smyth, Linn County Council.

LIBERTY.—E. Pitman, M.; E. W. Trout, O.; W. A. Hanna, L.; J. J. Woolery, Sec.; Geo. Bolton, A. S.; J. H. Trout, C.; A. D. Bolton, T.; P. P. Underwood, S.; Geo. Rice, G. K.; Laura Trout, P.; Elsie Hanna, F.; Lydia Woolery, C.; Annie Stirnweis, L. A. S.

MOUNT ZION.—Eli Williams, M.; W. H. H. Wade, O.; W. T. Lion, L.; J. O. Linn, S.; Robert Currin, A. S.; L. Hale, C.; Mrs. E. A. Manson, T.; F. J. Harkenrider, Sec.; Geo. E. Linn, G. K.; Miss Esther Williams, P.; Miss Mary Linn, F.; Mrs. Mattie Wade, Ceres; Miss Frankie Currin, L. A. S.

OAK PLAIN.—R. H. Wright, M.; J. B. Cornett, O.; J. Davis, L.; B. Johnson, S.; T. B. Springer, A. S.; John Barton, C.; John Duncan, T.; C. J. Shedd, Sec.; H. B. Springer, G. K.; Sister Dora Davis, P.; Izzie M. Springer, F.; Cora Davis, Ceres; Addis Fletcher, L. A. S.

TUALATIN.—Sister S. L. Hayer, M.; J. L. Kruse, O.; Geo. C. Day, L.; R. V. Short, S.; Fred Elngsen, A. S.; Sister N. E. Turner, C.; T. L. Turner, T.; Sister A. E. Downing, Sec.; Frank M. Kruse, G. K.; Miss Ola Barnes, P.; Miss Ella Turner, F.; Miss Allie Hayes, Ceres; Miss Bada Sharp, L. A. S.

CAPE HORN GRANGE.—Bro. J. O. Wing installed the officers of Cape Horn Grange January 19th. While there, he induced them to subscribe for the Patron for their Lecturer.

LIBERTY GRANGE meets at 10 A. M. the first Saturday in each month.

Address of G. B. Cornelius at Turner Grange Installation.

Worthy Master, Ladies and Gentlemen:—If I am not mistaken, the notice I received some time since was an official one signed by your Worthy Secretary, and hence was accepted as doubly complimentary, for which you will please accept my sincere thanks.

The impressive exercises of installation day bring with them many pleasant recollections of "happy days gone by." New friendships are made and old ones renewed. The old and new rejoice together and congratulate each other in the triumphs through the stormy past, and sympathize with each other on account of reverses, if any. Happiness being the summing up of all the ordinances of our nature, let us inquire for a moment how to invest to insure the desired result.

It has been said that intellectual and moral excellence is the great cause and condition of happiness. Our fine school system in Oregon furnishes ample opportunity for the youth to become fitted for any occupation. Then higher institutions have been established in different localities to furnish those who desire higher education. We should do all in our power to encourage and support these schools. No special legislation should be granted to any. I mean such special laws as the granting life certificates to those who happen to be educated in certain schools and denying them to others. This unjust law should be repealed. Special legislation is not necessary to build up meritorious institutions of learning. Every honest man and woman should down this fraud perpetrated by careless lawmakers.

This Monmouth or Normal School is not superior to other good schools like the State University, Willamette University, or even the Portland High School.

We represent here the industrial classes. Those who live without useful occupation should be despised, not honored. The industrious are nature's aristocracy.

What is needed is the union of effort and kindred souls, supported by enlightened, honest motives. What we ask of State or National legislators will then be granted.

We must honor our profession, and be interested in one another, and hurl existing evil from its throne, and establish the necessary laws for our protection and advancement. At the same time encourage every industry calculated to build up our country.

Contrast our situation with business ventures in railroads, mills, and manufactories of different kinds. Only one road in our State exists completed without having been placed in the hands of a receiver. Look at some of those fine flouring-mills go down with a crash. Gigantic brick blocks go under the salesman's hammer, while comparatively few farms have been so disposed of.

The Farmers' Congress.

The address issued by the Executive Committee is so full of visionary fears as to make it worthless. There has never been a brighter future in the world's history for the producer than now. One stroke at the producers' industries last November was repelled with such vigor and promptness that all mankind of every clime paid tributes of honor to the producers and the American industries without regard to party.

This Congress complains of unjust taxation to farmers. How is it? About one-fourth of the true value of our farms is assessed. Marion county was put down by the assessor at a little over \$6,000,000, and the Equalizing Board reduced it one-fourth, leaving the amount in round numbers at \$4,000,000. The real value of Marion county is not less than \$25,000,000. While moneyed men escaped, no doubt, farmers also escaped taxation. The large and flourishing cities so deplored by this so-called Congress should cause us no fear, but rather encourage us, in that our country is in a prosperous and healthy state. Those huge brick walls and mansions bespeak better times for us. Those railroads are necessary to develop new and otherwise waste and desert lands. All we desire is reasonable rates, and that is wisely provided for in the creation of railroad commissions. Our State has saved nearly \$1,000,000 already under its operations.

All admit that Oregon is now ably and honestly represented at Washington. No other State in the Union has received more attention than ours. Those large appropriations granted show plainly the powerful influence this trio exerts in securing ample means for the improvement of our rivers and harbors. And now let us tell them in a fair and honest way what legislation we desire as farmers.

How shall we keep up our soil? Keep plenty of stock on the farm. No need of land in Oregon being impoverished. One of the most beautiful instances of the principles of economy in nature is found in the principle

stated in physiology, that animals imbibe oxygen from the atmosphere and return carbonic acid to it, and that vegetables imbibe carbon and give off oxygen. Hence a given piece of land, tilled in the best possible manner, if enriched only from the cast-off portion of its own products, will support human life and yet become richer and more productive forever.

I know of land 40 years old that is as full of life as the newest land, kept up by a similar process, but mainly by stock sheep and turning under vegetation. By adding a thin dressing of manure from decayed stacks and contents of stables, it is doubly productive. This talk of "worn-out land" seems to me to be foolish.

Our world was not created yesterday, and will not grow old or be destroyed to-morrow. Those exhaustless stores found in nature, capable of being converted into vegetable and animal life, were not created in vain and will not be destroyed, but, during countless generations to come, will go on to augment the earth's fertility and minister to human need. By wise and judicious management, nature is assisted. Rotation of crops and thorough pasturing are the rule. Let every variety of vegetable and animal food be raised. Poultry, swine, cattle, sheep, turkeys, and, in many places, ducks and geese, are profitable. Why, let me tell you, eggs from Iowa and other places East, in large quantities, were shipped to Portland and other cities. Dealers reboxed a lot of those stale eggs and sold them for Oregon fresh eggs in Portland. I saw Eastern turkeys that had been dressed about one month. They looked blue with age. Yet those stale things were sold and eaten in Portland Christmas. Let that committee address our producers and tell them to supply our own markets with food fit to eat.

I don't care if cities grow at the rate of 500,000 a year; we could feed every one. I want them millionaires at that, so we can get some of their money in exchange for wholesome food, and manufactures at same rate, so every article of clothing, machinery of every kind and grade, could be manufactured at home. We have the natural advantages for thousands of machine-shops propelled by water—the cheapest power known to man—18,000,000 pounds of wool to start on, and in two years could have 36,000,000, since we can rest assured that foreign competition cannot hurt us. We cannot afford to raise so much wheat. Let us raise more stock—paying stock, such as can be converted into food and money—with a thousand other articles shipped to us now. Exporting money doesn't pay.

Tangent Grange.

MESSRS. EDITORS:—I will again try and give you a few words of encouragement from Tangent Grange. We are still alive and in good working order. We own our hall and the land on which it stands; have a goodly number of earnest members who are always ready to put their shoulders to the wheel and push forward whenever necessity requires.

We know for a certainty that the Grange is of vast interest to us, for at the last meeting of the Linn County Council the worthy agent read his annual report, which was enough to satisfy any one of the importance of co-operation. Why so many good honest farmers stand aloof from the Grange is a mystery to me. They certainly can see that in union there is strength. Then why not join forces with us, and all march along to victory together? Come now, throw aside your skeptical ideas, bring your wives, sons and daughters, and join one of the best social, educational and financial Orders ever known to exist.

The education obtained from the Grange is of more benefit to any one than twice the expense and time lost in attending the meetings. Socially, it is a grand success; for there we meet with brothers and sisters from all parts of the country, exchange greetings, spend the day in the best of society, go home in the evening feeling that the time has been well spent.

The Grange is becoming stronger all the time, the numbers are increasing, and its influence is bound to be felt more in the future than it has been in the past. Hold out faithfully and we are bound to succeed.

Tangent, Jan. 18.

J. H. S.

"WHEAT IS KING."—In point of value of the product, the leading industry of Portland is flour and feed, there having been ground nearly 3,500,000 during 1888. The value of the product for 1888 is \$3,357,662; number of men employed, 169. Portland now classes herself among manufacturing cities, her output value for 1888 being nearly \$14,000,000, an increase of 78 per cent over the previous year.

The Silver Question.

Worthy Master H. E. Hayes of Oregon, in a letter to this office, touches upon the silver question as follows:

I see John Sherman has presented a memorial of the National Board of Trade, held in Boston, to Congress asking for the suspension of the coining of silver dollars. Was Cleveland a Democrat or a Republican when he asked for the same thing? Farmers and laborers have parties; wealthy capitalists have none. Grangers better be up and doing, or their effects will be lowered in value one-third again by such financiers as Senator Sherman and Mr. Cleveland. One more Eastern syndicate plot in the financial affairs of our country, and President Lincoln's prophecy will be fulfilled: "All of liberty will be lost, and moneyed aristocracy will reign supreme." Many times it is difficult to get a \$20 piece changed now, and to make it any worse by stopping the coining of silver would be suicidal to the people. Let us have free coinage of our precious metals and do away with the present national banking system, and re-establish the Government of our fathers in the place of the Wall-street, English, money-gambling institution we have had for the last 22 years. Then the tiller of the soil will own the land, and not the bankers and the nobility of England or the syndicates of Germany, as at present.

Fruit Outlook.

A recent article in the *Oregonian* shows the Oregon nurseries to have grown nearly 5,000,000 of trees in 1888, and of these at least 3,000,000 will be planted out. It is only within the last few years that Oregonians have paid special attention to this branch of agriculture. It is now beginning to leave its impress on trade. Oregon dried fruits, especially prunes, have made for themselves a name in the world's market. The apple crop for 1888 was immense, but the ravages of the codlin-moth destroyed a great part of the crop. There is no doubt that Oregon needs a Horticultural Commission such as exists in California. The codlin-moth destroys both pears and apples, and it is necessary that the State help stay the ravages of this pest of the orchard.

The sales of Oregon green fruit in Portland in 1888 aggregated \$300,000, most of it going to the Sound markets and the Inland Empire. Much of the fruit of Southern Oregon finds a market in California.

Grange Movements.

The Grange does not regard the farmer as a mere machine, a mere drudge. It looks upon him as a reasonable, responsible being and seeks to elevate and improve him. It stretches over him the shield of its protection against the enemies that assail him and seek to rob him of the reward of his industry. It offers him the means of social enjoyment and teaches him the duty of healthful recreation and pleasure. It recognizes the right of woman to share the pleasures as well as the cares of man, and secures her pure and ennobling influence and co-operation in its work; and it teaches the lesson that the most intelligent and thoughtful farmer is sure to be the most successful.

In short, the Grange seeks to make better farmers of the agricultural class. "It claims no authority to coerce them into any course of action, no right to command. It is merely an advisory body, and it seeks the improvement of its members only by its moral power. It is to the farmer a wise and judicious friend." MRS. MARY HOWD.

The Agricultural College.

The following has been extensively circulated and signed by the farmers of Marion county and forwarded to His Excellency, the Governor:

WHEREAS, In the past 18 years and with an expenditure of \$75,000 of State funds, Corvallis Agricultural College has not done anything in practical agriculture; and

Whereas, There never has been a majority of its Board of Regents that were practical farmers, earnestly desirous of having practical agriculture taught; and

Whereas, We believe that the material interests of the great State of Oregon demand a greater proficiency in the science and practice of agriculture;

Therefore, we, the farmers of Oregon, earnestly petition His Excellency, the Governor of the State of Oregon, to appoint none but practical farmers to vacancies on the Board of Regents for the Agricultural College, until a majority of said board is composed of practical farmers.

It is the general sentiment of the people that the present Legislature is one "put up favoring capital," and little favoring the people may be expected from it.

The Grange is What We Make It.

What would you think of a farmer who would say in early spring when the ground gets dry and warm that he had not time to sow his fields; that it would be time enough; or let others do it, that he was too hurried to attend to it? Would you not tell him to tie a wet cloth around his head; that unless he did it himself while he was able, no one would do it for him, and that he would be poor and hungry before long, and some one else would soon own the farm? So it is with the Grange. It will be what we make it. It is our own field, and will yield fruits just as it is used, and no field, even the most fertile on our planet, will yield a more bountiful harvest if tilled properly and in season; but we must be early, be in earnest, and have confidence, and then it will be a success. Come early to the meetings, give encouragement and assistance in every department, have faith in ourselves, for we are told that strong faith will move mountains, but the same author says that faith must be accompanied by good works, which always insure success.—*Toronto Grange Bulletin.*

PENNSYLVANIA PATRONS.—The *Harrisburg Telegraph* has this to say about the Grangers who met in State convention in that city lately: "You had an idea that the Granger was a hayseed, didn't you? Well, you are away off, you are. If you had seen the Grangers, and their wives and daughters and other female relatives, in Harrisburg this week, you would have dropped to the conclusion that they are far, far from being hayseeds. A more intelligent body of men and women I never saw assembled for business in Harrisburg. They dressed well—many of the charming ladies in sealskins and silks—and they talked well, and in their discussions they showed a knowledge of current events, politics, public doings, literature, art, etc., to say nothing of farming, that you will never find in a body of mere politicians. The happy, healthy people with bright eyes, proud bearing, and erect, vigorous walk, are the salt of the earth, so far as Pennsylvania is concerned. There isn't the sign of a fly on the Grangers. They are not built that way. They are wide-awake, keen-eyed, strong-limbed and hearty, and they know what's what."

IMMIGRATION.—Secretary Struble of the Oregon State Board of Immigration has furnished the *Oregonian* with the summary of the volume of immigration for the year 1888. The total influx for the year is 96,850, the distribution of which has been very general. Register Burney of the Oregon City Land Office reports the business of his office for 1888 as nearly three times greater than ever before in its history. In the Willamette valley and Southern Oregon, the spirit of activity is such that an approaching boom seems inevitable. Jackson and Josephine have nearly doubled their population during the year. It is thought the immigration of 1889 will double that of the past year.

OREGON SCHOOLS.—From State Superintendent E. B. McElroy's report of the school system of our State we find that Oregon's special institutions established and supported by the same include the State University at Eugene City, State Agricultural College at Corvallis, State Normal Schools at Ashland, Drains, Monmouth and Weston, School for the Blind at Salem, School for the Deaf and Dumb at Salem, Orphans' Home at Salem, Orphans' Home at Portland. The total of private schools, academies, colleges and universities nears 50, or thereabout. The number of organized districts in the State in the year 1888 was 1556; number of children enrolled in the public schools, 55,402; number of teachers employed in public schools for the year 1888, 2343.

BRO. B. F. BONNEY of Barlow Gate Grange has joined the list of contributors to our organ. In another column will be found an entertaining letter from him. We hope he will write often, and that other brothers and sisters will follow the good example set and contribute to the entertainment of their fellow-members through the columns of our paper.

A BROTHER asks why a co-operative life insurance is not introduced in the Grange somewhere on this coast. He says the Patrons' Aid Societies are successful in other States.

THE *Inter-Ocean* publishes a map of Dakota showing that within its limits, on the same scale, can be placed the States of Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, New Jersey, Indiana and South Carolina, and still have a great many unfilled nooks and corners. South Dakota alone would be twice the size of Ohio.

Sound Advice to Patrons.

The Worthy Master of the Colorado State Grange, Bro. Levi Booth, delivered an able address at their last session, from which we make the following extracts:

We must still urge Congress to pass laws for the better protection of our present forests. The timber upon our mountains serves as reservoirs which hold back our deep snows, causing them to melt slowly under the summer's heat, thus giving us the waters in our mountain streams gradually as we need them for irrigation, as well as, in a great measure, preventing the destructive floods that so frequently devastate our fertile valleys.

We must also in every manner encourage the planting of forest trees, as the extensive growth of forests will eventually bring about those climatic changes so much to be desired on our present arid plains. If the rain belt is ever extended, it will only be accomplished by the exclusive growth of forests upon the borders of those belts where forests can now be grown.

Political Counsel.

We must still labor for a law providing for an amendment to our National Constitution so that our U. S. Senators may be elected by the direct vote of the people. The present practices of our ward bummers and our political hacks should be stopped at once. The money of political aspirants should no longer be allowed to control the election of State legislators. Corrupt corporations pay enormous fees to the brightest and most unprincipled attorneys in our land, and then, with their ill-gotten gains, elect them to our National Congress to pass laws, not for the benefit of the people, but for their own aggrandizement.

The common voter is made to believe that he must vote for the candidates placed upon his party ticket because they are pledged to carry out the principles of his party, when in fact the candidates were placed upon their tickets for the reason that they would favor the interests of combinations and trusts and would work against the interests of the voters who elected them. Intelligence, honesty and virtue are no longer necessary qualifications to entitle a candidate to the suffrages of our citizens.

The only questions are: "How much money did they furnish in order to secure our election? How much dirty work did they do for our party, and how much boodle will they furnish in the future? The people be damned; we are looking after our own interests and the interests of our clients, the gigantic corporations, our masters." These are the sentiments of a majority of the office-holders of to-day.

Again, we should do away with our present farce, the Electoral College. Let the people cast their franchises directly for the man they wish for President and Vice-President, the same as they should for every other officer whom they elect.

Trusts.

Any and all combinations of men and capital calculated to destroy full competition in the manufacture and sale of any commodity should by law be severely punished; and such combinations should be disbanded, for the reason that they are doing that which is against public policy.

The ultimate success of any and all classes of industry depends upon a free and unobstructed competition. Supply and demand should fix the value of an article; but where trusts are allowed to exist, supply and demand have nothing to do with the market values. It is the sweet will of the man appointed by this trust that says what the buyer shall pay and the seller shall charge.

Gambling in the necessities of life, such a business as is being carried on in all our mercantile exchanges, should be prohibited by law, as such practices tend to enhance the value of products to the consumer, while it depreciates it in the hands of the producer.

Usury.

We must work for the passage of a usury law, such as will protect the one who has to borrow from the greedy Shylocks who ever exact the "pound of flesh" from their victims. Six per cent a year is all that any farmer can afford to pay, and it is all the money-loaner ought to receive, and he who seeks to exact more should forfeit principal with interest.

Railroads.

I cannot close this address without again calling your attention to the present system of railroad management. We must have a Railroad Commission established in our State; and such commission must have the power to compel our transportation companies to charge fair and just rates and to serve all alike. The rich and the poor, the

wage-worker and the merchant, the tourist and the business man, should be treated alike. We demand that there shall be no discrimination between persons or localities either in freight or passenger rates. This we demand not only for the benefit of the patrons of our roads, but for the good of the companies themselves. Fairness and honesty will win with corporations as well as with individuals, and if railroad officials will not act honestly and uprightly, it is our duty to compel them to so act.

Wisconsin State Grange.

The seventeenth annual session of the Wisconsin State Grange convened at Madison on the 11th ult., and lasted four days. All the officers were present, and a profitable session was held. From a copy of the proceedings of this session, kindly sent us by the Worthy Secretary, Bro. H. E. Huxley, we extract the following paragraph from the address of Worthy Master S. C. Carr, referring to election reform, which is pertinent to the discussion on this subject now taking place in the Granges and press of our State:

We are in favor of a constitutional amendment changing the election of United States Senators to a direct vote of the people. It is an outrage upon good society to know of the rings and cliques that are formed, and bottles of champagne emptied during the election of a Senator by the Legislatures. We are also in favor of doing away with the long and cumbersome process of electing a President by presidential electors. Why not come right down to business and vote direct for whom you want? And then also the presidential term should be lengthened to six years instead of four, and not be eligible to re-election. As it now is, the business of the country is unsettled every four years, and we believe such a change would greatly benefit the masses of the people. The election of postmasters by a direct vote of the people interested would give every voter in the country the right to say by ballot who should handle his mail. The way it now stands, nine-tenths of the patrons of an office may petition for the appointment of some desirable person for postmaster, and it has no weight whatever in governing the appointment if half a dozen politicians who stand solid with the administration sign another petition.

Bags, Jute, and Tariff.

MESSES EDITORS:—I saw an article in the *Patron* a short time ago, in which the author, J. D. Huffman of Lodi, shows some anxiety about the price of bags. Well, I do not wonder at it. He has done his level best to keep up the outrageous high tariff on jute, and now he kicks about the price of bags, and wants the State Prison Directors to help him out of the difficulty, and in case of a failure there, he proposes to ask the Legislature for relief. Now the brother is on the wrong track. The first thing he should do is to eat a big dose of crow, draw up a petition and ask his Republican friends in Congress to put jute on the free list; then he can, with some reason, ask the State to furnish bags at a cheaper rate. The Democratic Grangers have done all they could to have the people of this State get cheap tin, cheap lumber, coal, iron and jute. Our Republican brother Grangers have done all they could to prevent the above articles being put on the free list, and now they are squealing. The fact is, there is too much partisanship among Grangers for their own good, and if it were not that the innocent would have to suffer with the guilty, I would like to see those Grangers who voted against having jute, etc. placed on the free list cinched severely. A Granger who will vote and work against his own interests, and every other man, woman and child in the State, needs to take a new departure and do better. Now, Bro. Huffman, come on with your petition, and let us see what we can do for ourselves. Fraternally yours,

JOHN NORTHRUP.

INSURANCE TRUSTS.—Take them all in all, the people of this State who own property requiring insurance are about the most quiet to be found anywhere in submitting to be badly cinched. How long will they stand it? How best to rid themselves of the trusts should be the prime question for discussion in our Granges and reform meetings nowadays.

BRO. J. B. BAILEY, Master of the Mississippi State Grange, sends us a list of Patrons in his State to whom we might send sample copies of our paper. We have done so, and believe it is a good idea. We invite others to do the same, hoping that it might be the means of enlarging our influence in the Grange field, and thereby helping the cause throughout the Union. We invite Bro. Bailey to repeat the experiment from time to time.

GRANGE DIRECTORY.

POMONA GRANGES.

BUTTE MOUNTAIN (No. 4)—SUTTER AND YUBA COUNTIES—Fifth Saturday in March, June, September and December, fourth Saturday in May, at 1 P. M., in Masonic Hall, Yuba City. M., Geo. Ohleyer, Sr., Yuba City; Sec., Jas. B. Wilkie, Yuba City.

SACRAMENTO COUNTY (No. 2)—Fifth Saturday January, April, July, October, December, at 1 P. M., in Grangers' Hall, Sacramento; M., Morris Toomy; Sec., D. D. Hull, Sacramento.

SAN JOAQUIN COUNTY (No. 3)—Last Thursday February, May, August, third Thursday November, at Lodi Hall, Lodi, at 10 A. M. M., S. W. Sollars; Sec., J. D. Huffman, Lodi.

SONOMA COUNTY (No. 1)—Third Wednesday October, January, April, July, at 10 A. M., in Grangers' Hall, Santa Rosa. M., G. N. Whitaker, Santa Rosa; Sec., W. C. Crane, Santa Rosa.

SUBORDINATE GRANGES.

ALHAMBRA (No. 290)—First and third Saturdays at 2 P. M., in Grange Hall, Martinez; M., Dr. J. Strentzel, Martinez; Sec., Mrs. M. B. Lander, Martinez.

AMERICAN RIVER (No. 172)—Second and fourth Saturdays, at American River Grange Hall, from October 1st to April 1st, in the evening; from April 1st to October 1st, in the afternoon; M., Carl Halverson, Routiers; Sec., Mary Cox, Routiers.

ANTELOPE (No. 100)—First and third Saturdays at Antelope School-house, at 10 A. M. M., John D. S. Taylor, Sites; Sec., P. Peterson, Sites.

BENNETT VALLEY (No. 16)—First and third Saturdays, at 2 P. M., M., Wm. P. Crane, Santa Rosa; Sec., Miss Rhoda Whitaker, S. R.

BUENA VISTA (No. 258)—Second and fourth Saturdays, M., C. E. D. Wheatley; Sec., J. T. Morgan, Delano, Kern county.

DANVILLE (No. 50)—First and third Saturdays at 2 P. M., M., C. E. Howard, Danville; Sec., J. H. White, Danville.

EDEN (No. 100)—Second and fourth Saturdays at 2 P. M., in Parlor of Congregational Church, Haywards; M., Wm. C. Blackwood, Haywards; Sec., Josie Sharal, Haywards.

ELK GROVE (No. 86)—First and third Saturdays; M., James Caples, Elk Grove; Sec., Geo. Williamson, Elk Grove.

ELLIOTT (No. 183)—Second and fourth Saturdays at 2 P. M., in Odd Fellows' Hall, Elliott; M., H. H. West, Elliott; Sec., M. A. West, Elliott.

EUREKA (No. 238)—Fourth Saturday at 1 P. M., in Good Templar's Hall, Auburn. M., J. C. Burns; Sec., Annette Furth, Auburn, Placer county.

ENTERPRISE (No. 129)—First and third Saturdays, M., U. G. Wilson, Perkins; Sec., Etta Plummer, Perkins.

FLORIN (No. 130)—Second and fourth Saturdays, 2 P. M., M., Wm. Johnston; Sec., L. H. Fassett, Florin.

FRANKLIN (No. 147)—First Saturday at 2 P. M., M., Wm. Johnston; Sec., C. P. Freeman, Richland.

GALT (No. 180)—First and third Saturdays at 2 P. M., in Brewster Hall, M., Hiram Chase; Sec., A. B. Bryant, Galt.

GRAND ISLAND (No. 22)—Second and fourth Saturdays at 10 A. M., in Davis Hall, Sycamore. M., J. R. Totman, Colusa; Sec., E. G. Morton, Sycamore.

GRASS VALLEY (No. 256)—Every Saturday, at 7:30 P. M., M., S. L. Richards, Grass Valley; Sec., J. W. DeGolis, Grass Valley.

LINCOLN (No. 187)—Third Saturday at 2 P. M., in Grangers' Hall, Lincoln. M., Hollis Newton, Lincoln; Sec., A. J. Soule, Lincoln, Placer county.

LODI (No. 95)—First and third Wednesdays at 2 P. M., in Lodi Hall, M., S. Ferdun; Sec., J. D. Huffman, Lodi.

LUCERNE (No. 260)—Every Tuesday evening at 7:30, M., S. Walker; Sec., Henry Walker, Lemoore.

MAGNOLIA (No. 261)—Second Saturday at 10 A. M., at Magnolia Grange Hall, one mile north of Bear River, Nevada county. M., V. W. Still, Auburn; Sec., Wm. Cunningham, Auburn.

MARCH (No. 267)—Second Saturday at 2 P. M., at West Butte Hall, M., W. W. Wilbur, West Butte; Sec., Mrs. S. I. Noyes, West Butte.

MERCED (No. 7)—First Saturday at 10 A. M., in Pythian Castle Hall, M., W. E. Elliott, Merced; Sec., E. S. Elliott, Merced.

MONTEZUMA (No. 158)—First and third Saturdays at 1:30 P. M., Odd Fellows' Hall, Bird's Landing. M., T. T. Hooper; Sec., Miss E. Daniels, Bird's L.

NEWCASTLE—Meets on the second Saturday of each month at 2 P. M., at Penryn, Placer county. M., J. L. Robertson, Penryn; Sec., A. F. Hall, Penryn.

NORTH BUTTE—Meets the second and last Saturdays in each month, at Union Hall, Live Oak, at 1 P. M. M., L. D. Hedger, Live Oak; Sec., James Myers, Gridley.

PESCADERO—Meets first Saturday in each month, at Good Templars Hall, 2 P. M. M., L. C. Steele, Pescadero; Sec., M. A. Chandler, Pescadero.

PILOT HILL—Meets on Saturday, on or preceding the full moon in each month, at 7:30 P. M. M., C. S. Rogers, Greenwood; Sec., A. J. Snmpter, Pilot Hill.

PLACERVILLE—Meets every two weeks, on Saturday, at 1:30 P. M., at Odd Fellows' Hall, M., P. J. Isabel; Sec., J. P. Allen, Placerville.

PLUMAS—Meets on the Saturday next succeeding the full moon in each month, at 1 P. M. M., Wm. A. Sperry; Sec., M. C. Bringham, Beckwith.

PLYMOUTH—Meets second and fourth Saturdays in each month, M., J. F. Gregg, Plymouth; Sec., Miss Clara Saltee, Plymouth.

POINT OF TIMBER—Meets first and third Saturday in each month, at 2 P. M., at Brentwood, M., J. E. W. Carey, Brentwood; Sec., M. B. Skaggs, Brentwood.

POTTER VALLEY—Meets at 2 P. M., February 24, and every two weeks thereafter, M., Wm. Eddie, Potter Valley; Sec., W. V. Kibbourne, Potter Valley, Mendocino county.

ROSEVILLE—Meets on the first and third Saturdays of every month, M., E. L. Hawk; Sec., Mattie Leavell, Roseville.

SACRAMENTO—Meets the second and fourth Saturdays in each month, at 1:30 P. M., at Grangers' Hall, M., Joseph Sims, Sacramento; Sec., Wm. Sims, Grangers' Store, Sacramento.

SAN JOSE—Meets every Saturday of each month, at 10:30 A. M., at Grand Army Hall, First street, San Jose. M., O. F. Alley, San Jose; Sec., H. Brainard, San Jose.

SANTA ROSA (No. 17)—Second and fourth Saturdays at 1:30 P. M., M., E. A. Rogers, Santa Rosa; Sec., Miss Martha Lumsden, Santa Rosa.

SEBASTOPOL—Meets first and third Saturdays of each month, M., Martin Litchfield; Sec., Geo. Harris, Sebastopol.

SIERRA VALLEY—Meets every other week, M., N. N. Strang, Sierra Valley; Sec., A. E. Knerr, Etta.

SOUTH SUTTER—Meets fourth Saturday in each month, M., J. W. Jones, Pleasant Grove; Sec., Parthena E. Hall, Pleasant Grove.

STOCKTON—Meets every Saturday at 1 P. M. M., N. E. Alling, Stockton; Sec., N. T. Root, Stockton.

TEMESEAL—Meets the first Saturday in the month, at 7:30 P. M., in Odd Fellows' Hall, corner Eleventh and Franklin streets, Oakland, and the third Saturday, at 2 P. M., at the same place. M., S. Goodenough, Santa Clara; Sec., Mrs. Nellie G. Babcock, North Temescal.

TULARE—Meets first and third Saturdays of each month, at 2 P. M., at Goldman's Hall, Tulare. M., J. M. Moore; Sec., D. O. Harelson, Tulare.

TWO-ROCK—Meets the first Thursday of each month, at 1 P. M., M., Walter Church, Petaluma; Sec., J. C. Purvine, Petaluma.

VALLEY—Meets in Odd Fellows' Hall, Pacheco, second and fourth Saturday in each month, at 1:30 P. M. M., F. L. Loucks, Pacheco; Sec., E. A. Majors, Concord.

WALNUT CREEK—Meets second and fourth Saturdays in each month, M., C. Sharp, Walnut Creek; Sec., Miss Mary Baker, Walnut Creek.

WASHINGTON—Meets first and third Saturdays of each month, M., Reuben S. Pardo, Pomegranate, Amador Co.; Sec., Sam. C. Waters, Clements.

WATSONVILLE—Meets first and third Saturdays in each month, at 1 o'clock, P. M., M., Mrs. E. Z. Roche, Watsonville; Sec., Mrs. S. J. Kidder, Watsonville.

WEST SAN JOAQUIN—Meets first Saturday of each month, at 1 P. M., M., A. P. Stocking, Tracy; Sec., Jas. C. Allen, Tracy.

WHEATLAND—Meets first and third Saturdays in each month, in Odd Fellows' Hall, at 2 P. M., M., Frank Kishner, Wheatland; Sec., I. W. Huffaker, Wheatland.

WOODBRIDGE—Meets first and third Tuesday in each month, at 2 P. M., in Grangers' Hall, M., G. H. Ashley; Sec., B. G. Williams, Stockton.

YUBA CITY—Meets the first Saturday in each month, at Masonic Hall, Yuba City. M., J. B. Wilkie, Sec., Josie Walton, Yuba City.

Grange Trial Clubs.

We offer for the present to furnish the official Grange edition of the *RURAL PRESS* to Grange clubs of ten or more names paid in advance for SIXTY CENTS for THREE MONTHS. All Secretaries are invited to act at once in getting up trial club lists, and also for longer-term subscriptions. If no officer moves in this matter, any Patron will be empowered to act. Sample copies, when desired, will be sent free on application to this office.

To Old Subscribers of the California Patron.

We will send you the WEEKLY OFFICIAL GRANGE EDITION of the *RURAL PRESS* and the monthly issue of the *California Patron* both for one month, in order that you may examine and determine which of the two papers you prefer to have continued to you after that date, according to the terms plainly stated in our contract with the *California Patron* Publishing Co.

Choose, then, which paper you prefer to receive, and notify us by letter, giving your name and post-office address plainly and in full, with complete directions as to your wishes in the matter. During the trial month no charge will be made for the paper you do not choose to continue.

We hope many will take both issues, and with a view to give or send one away for the good the copies may do the readers, our cause and our State.

However, if no word is heard from any subscriber by the end of the first month, we shall continue the weekly Grange edition of the *RURAL PRESS*, as successor to the weekly issues of the *Patron*, and discontinue sending the monthly beyond a single issue.

The next issue of the *Patron*, and the first as a monthly publication, will be issued for Saturday, February 9th.

We hope (after receiving a few copies at least) to hear from our readers how they like this new Grange edition of the *RURAL PRESS*.

Saturday, February 9, 1889.

The above will be the date of the first issue of the *California Patron* as a monthly, at the reduced price of \$1 per annum. We intend to make it a large, handsome, and valuable sheet—especially to those who do not feel able or inclined to subscribe for a weekly agricultural and Grange paper.

We shall not specially urge subscribers to the *Rural Press* to take both issues, as some of the choice reading matter in the *Rural* weekly will be transferred to the monthly issue. Still there will be considerable Grange and other select reading which will appear in the *PATRON* only, and ample to justify the taking of both papers at the low rate they are offered in combination, viz., \$3 for the two for 12 months.

SAY "GRANGE EDITION" in ordering or corresponding about this edition of the *RURAL*.

SUCCESSORS TO THE
IMMIGRATION ASSOCIATION OF CALIFORNIA,

415 MONTGOMERY STREET, - - SAN FRANCISCO, CAL.

Send 10 cents for C. H. Street & Co.'s map and description of California and colony lands (74 pages). Land for sale in large or small tracts on the coast or in the interior; valley, hill, mountain, open, timber, mineral, or non-mineral land, improved or unimproved; with or without irrigation; suitable for stock, dairy, grain, fruit, or general farming; for investment or actual settlement; for cash or on installment; will show Government land. C. H. Street & Co., 415 Montgomery St.

The "San Jose" all Iron & Steel Frame CULTIVATOR.

We take pleasure in calling the attention of the Orchardists and Vineyardists of the Pacific slope to our NEW ORCHARD AND VINEYARD CULTIVATOR. The most complete and easily handled machine in existence. Weight, 335 pounds. The Cultivator is raised and lowered by means of a foot and hand lever, reducing the labor of handling to almost nothing.

It is the only Cultivator that can be handled successfully on a side hill. By means of the Shifting Pole the tendency to crawl down hill can be overcome. This feature is of advantage on level ground as well. The pole is shifted by the horses and can be checked at any angle by means of a foot lever. The Cultivator is increased from 7 to 9 teeth by sliding arms into a grooved casting in the ends of the frame. We lack space for a further description. WRITE FOR CIRCULARS. Address:

SAN JOSE AGRICULTURAL WORKS,

Lands For Sale and To Let.

A RARE BARGAIN!

The undersigned offers for sale, on good terms, his CLOVERDALE DAIRY FARM of 500 acres, situated on Squirrel Creek, 2 miles west of Grays Valley. It is well watered by springs and has excellent irrigation facilities, commodious farm buildings, orchard of 150 trees and 6 acres of vineyard. A fine herd of Holstein, Ayrshire, Jersey, and Durham (thoroughbred and grade) cattle for sale with or without the ranch. Holstein and Ayrshire premium bulls on lowest terms, including "Tehama," which, on account of kinship to the herd, can no longer be used in breeding. A good dairy route is also included in this offer.

H. B. NICHOLS, Proprietor.

LAND TO RENT

On Exceedingly Liberal Terms.

The S. E. quarter of Sec. 13, T. 21, R. 23, and all of Sec. 16, T. 23, R. 24, in the artesian belt in Tulare county, will be rented at a nominal rent for winter sowing, if applied for soon. The greater part of this land is rich, level and all ready for the plow. Address L. E. Smith, Pixley, Tulare Co., Cal., or Ranch Owner, office RURAL PRESS San Francisco, Cal.

FOR \$5000.

A Ranch in El Dorado county, near Placerville, contains 160 acres, nearly all fenced in with a four-strand barbed wire fence, a good house of 11 rooms, hard finished, two brick chimneys, cut stone basement with cut stone steps, a good barn and stable, chicken house, work shop and other out-houses, a good well of water, one water ditch for the land, 1000 fruit trees, all in bearing, Peach, Apple, Fig and Cherries, 1000 Grapevines; 30 acres cleared and ready for the plow, all nearly level; about 25 acres woodland, pines, etc., all of which can be cleared; three cows and two calves. The Ranch is five miles from Coloma and nine miles from Placerville. The soil is a red loam, the house stands on the county road and the stage passes it twice every day. A span of horses, a new harness and wagon, plow, harrow and other farming utensils to be given with the Ranch. The title, U. S. Patent. For further information address, "RANCH," Box 2361, San Francisco, or care of Illustrated Publishing Co., 220 Market St., S. F.

Agricultural and Grazing LANDS FOR SALE.

7975 Acres of fine grazing and agricultural land, including 4000 head of fine grade stock sheep; abundance of water; 9 miles from Merced City, and near Merced River; price, \$7.25 per acre; 1000 acres good wheat land. Address

THE STOCK YARD

California's Animal Interests.

From advance sheets of the forthcoming annual report of Hon. E. F. Smith, Secretary of the State Board of Agriculture, we take the following pertinent remarks concerning our live-stock interests:

One of the first and most staple interests is the breeding of all classes of live-stock in California, and the future promises exceptionally fine prospects.

The various improved breeds of horned stock here have such prominence that insures us the commercial standing given other States less favored with advantages, an impetus resulting exceedingly remunerative to the breeders of cattle.

The "breeding up" of cattle is an advantage that those interested are not slow to accept. The introduction and crossing of pure blood in all classes, with a view of improving the beef and milk qualities, is the constant study of successful breeders of cattle, and the increased herds of this character that are each season on exhibition at the State Fair is an example of what is being accomplished in this respect. It is a highly interesting part of the exhibition, and one that attracts the attention of all lovers of high bred stock.

With our large area of grazing lands we are in a better condition to breed on an extensive scale, not only cattle, but sheep, goats and swine, than are many of our sister States. But as new interests are now attracting the land-owners, the raising of sheep and swine has to some extent come to be neglected. Where formerly this interest was leading, it is now carried on by comparatively few.

The business of the breeding and raising of horses of all kinds, from the fleetly thoroughbred to the powerful Clyde, is on the increase, and is one of our most successful industries. There is money to be made in this business, as the farmer, who, by improved breeding, is enabled to sell his surplus stock at good prices, can readily substantiate, while those who make it a business complain not of the returns made each season.

In addition to the many staple classes of live-stock here bred, we are fast assuming the lead in the breeding of a class that is commanding the attention of all lovers of that noble animal—the thoroughbred—throughout the United States, thereby creating a market for an additional resource, for which, by reason of climate, we are especially adapted to produce.

The sales by public auction of this one breed of stock, in yearling form, for the season of 1888 in the United States amounted to \$520,230, there being 779 head sold for this sum, and they the get of but 122 stallions, showing an average of \$667.82—a grand result taking the number into consideration.

One of our principal breeders, taking advantage of the increased demand, sold about 70 head of yearling racing colts for \$112,000, at an average of about \$1600 per head—a phenomenal sale. This event will give California the standing she is entitled to in this important industry. These annual sales are a most desirable method, and one which has given Kentucky a world-renowned reputation as a breeding State, and they have already drawn attention to the produce of California by those who are desirous of obtaining the produce of our well-established breeding farms, where all can avail themselves of the blood that has proven successful on the turf.

The turf interest of this State is of some magnitude, and should be encouraged in every possible way. The breeding and sale of race-horses is as much of a resource as any other production, and by proper encouragement can be made valuable to our now prosperous State. This interest gave England a prominence that will last for ages. She is the parent of this most fashionable breed of animals. Kentucky was and is still the favored spot of America in this interest, but California is fast approaching an era when the home of the thoroughbred will here be located; when those who are seeking the pure-blooded, well-muscled colts are bound to come to purchase. California now has the reputation of not only producing the various necessities of life, but likewise the principal luxuries. The race-horse is a luxury, and necessarily high priced, which to the producer is a grand fault (?), and he can well afford to have it so.

The raising of standard bred and roadster classes of horses is likewise an important factor in this State. The prominence given some of our youngsters abroad has turned the attention of this class of buyers to our shores. These light-harness classes are desirable in all sections of the country, and the sales each season of California-bred ones are regular and remunerative to the breeder.

The breeding of the heavier classes of horses is one of the best paying investments that could be made. The demand for truck and delivery wagon animals is continual. One of our breeders of this character sells at public sale from \$30,000 to \$40,000 annually.

It is thus apparent that live-stock breeding in this State, of the kind and character in demand, is in itself one of our greatest industries,

and one which we desire to encourage in every possible way.

Quarantine Laws.

Accompanying this report will be found one from Thos. Bowhill, M. R. C. V. S., upon the diseases of live-stock in the State. It is clearly shown by examinations made that we have in our midst anthrax and Texas fever among the cattle, and cholera in swine.

It is highly necessary that action should be had at once for the extirpation of these plagues. Stringent quarantine laws would, in our opinion, be of great assistance in preventing importation, when the necessary remedies could be applied to eradicate the diseases now here. The appointment of a State veterinarian is one of the first steps necessary, as nearly every case afflicted can be traced to importation. Stop this, burn all carcasses of animals dying with disease, destroy all afflicted, and burn the ranges traversed, this plague can be easily stamped out. Until quarantine is placed on all stock coming into the State, it is useless to attempt its destruction, as the disease travels far faster than remedies unless check is placed on the fountain-head.

Pure Dairy Products.

EDITORS PRESS:—In your last issue you mention that Assemblyman Black of San Francisco has introduced a bill in the Legislature "prohibiting the sale of adulterated milk and other dairy products, and keeping cows in an unhealthy condition. It provides that no acids or fats or other deleterious substances shall be used in the manufacture of cheese or butter; prohibits the sale of milk except in the county where produced, unless the milkman be plainly marked with letters at least one-half an inch tall, showing where it was produced. It also provides for the appointment of a dairy commissioner, and prescribes the test that shall be used upon milk."

With the foregoing brief outline of the bill, I am not prepared to say whether it will meet all the requirements needed, but trust that it will. Readers of the PRESS will remember that last July I called attention to the fact that under the law of the State milkmen were permitted to water their milk to the extent of (I think) one-third. Such milk is of very little value as a food product, and the law should prohibit, under a heavy penalty, the adding of water to milk. In a majority of the States it is prohibited.

Keeping cows in a crowded or filthy condition should also be prohibited. Milk is a great absorbent, and carries with it, unless absolutely pure, the disease of the cow, germs of scarlet and typhus fever and diphtheria; and much of the sickness of infants can be directly traced to the use of milk from unhealthy cows, or cows kept in a crowded or filthy condition.

The bill prohibits the mixing of acids, fats or other deleterious substances with butter or cheese. This is a good section and should become a law. We have a national law providing for the sale of butterine and oleomargarine, but it is very easy for retailers to evade that law. Suppose the manufacturer of imitation butter in Chicago ships a carload of the stuff to this coast, who follows it to see where it is sold and whether the retailer has taken out a license? And is there not a great deal of the imitation butter sold in this State? Some three or four weeks ago several of the local newspapers, speaking of the scarcity of butter, added that Eastern butter was being shipped to the State to supply the demand. Who knows whether it was butter, butterine or oleomargarine? The imitation butters can be purchased so much cheaper than the pure product that it offers great temptation to people in the trade to buy it under its true name, and then sell it to an unsuspecting public for what it is not.

There is much to fear from adulterated cheese, also. There is a large number of creameries in the United States in which cheese is made from the milk after butter has been made from it. The cream is separated from the milk by centrifugal force, and there is not fat enough left in the milk to grease the joint of a pair of scissors. This skim milk is then made into cheese, having neutral oil added to give it the semblance of full cream cheese, and is known as "filled cheese." Only an expert can detect the fraud. The neutral oil comes from hog fat, but whether the hogs have died of cholera or other disease is never known; the oil is deodorized before being put in the cheese, and gives the latter the appearance of a fine full cream cheese; but it has no keeping qualities. Just now Illinois is waking up to the fact that this kind of cheese is not a wholesome article of diet, and the Legislature will be called upon to prohibit its manufacture, or cause it to be properly branded so that consumers may know what they are eating. Then there is the regulation skim cheese, unpalatable and indigestible, yet sold to an unsuspecting customer as full cream cheese. The appointment of a dairy commissioner for the State is a good move and should not long be delayed. He should be given ample power to enforce the law, and in providing penalties none will have a more salutary effect than that of imprisonment. Men can easily pay fines from their ill gotten gains, but a six-months' sojourn in a county jail usually destroys the desire to violate such laws. In nearly all the States wholesome laws have been enacted against the adulteration of milk and butter, and California

should not be in the rear any longer in protecting food products.

After 20 years' residence in Illinois, where I was intimately connected with the dairy industry of that State in various capacities, I have seen the need of stringent legislation to protect the honest producer as well as the innocent purchasers against bogus goods, and am fully aware of the necessity of having good laws and a thoroughly competent person as commissioner. New York, Iowa, Ohio, Minnesota, and other States have appointed commissioners, and the result has been beneficial to all classes. Other States and cities have milk inspectors, and the result is a much better quality of milk for the consumers. No producer of milk or manufacturer of butter or cheese should object to any law that prohibits the adulteration of these products, and when health and life itself is at stake, consumers should hail such a law with gratitude. Should the bill be passed, and the Governor be at all doubtful of its utility, he need only inquire of his former neighbors in Northern Illinois, and they will cheerfully give him information that will remove all doubts and lead him into instantly recognizing the fact that pure-food products is a boon craved by all.

R. P. MCLINCY.

San Jose, Cal., Jan. 28, 1889.

FOR NEW SUBSCRIBERS.

Something New and Rare.

PACIFIC COAST RELIEF CHART.

PHOTO-FACSIMILE.

With subscriptions paid one year in advance for this paper, and 10 cents to pay postage and mailing tube, we will send a fine Photoplate Relief Chart of the Pacific Coast, embracing California, Nevada, Oregon, Washington Territory, and part of Montana, Idaho and Utah. Photographed from a topographical relief model in plaster, (5 feet 3 inches by 5 feet 6 inches in size) made recently by Isaac Winston and Prof. Geo. Davidson (the latter Chief of the U. S. Coast Survey on this coast for the past 20 years).

While it does not take the place of an ordinary map, it illustrates, comparatively, the elevations and depressions of the principal mountains, valleys, rivers, lakes, ocean and bay-shores of the Pacific States and Territories, and makes a permanently useful, handsome and desirable picture for either library, office or home.

The charts are 19x24 inches, well suited for framing, if desired. It is as handsome, and even more durable, than an ordinary photograph. Seldom is so choice an article offered as a newspaper premium. Sent to old subscribers on the same terms on paying one year in advance of current date. Subscribe and secure this permanently valuable chart.

Address Publishers of this paper, No. 220 Market St., S. F.

PERFECT MUSIC BOOKS

For CHOIRS, for CLASSES, for CONVENTIONS, are perhaps impossible—but DITSON & CO.'S matchless books are just on the line.

Emerson's Easy Anthems, 80 cts., \$7.20 per dozen, are 40 in number—quite new—give about one for each Sunday in the year, and are full of grace and beauty.

Song Harmony, 60 cts., \$6 per dozen, by L. O. Emerson, is a new and very "perfect" book for Singing Classes perhaps the best of a long series of books by the same author.

The Graded Singing School, 50 cents, dozen, by D. F. Hodges, is a sensible, practical method, by a very sensible, practical teacher, and is fully furnished with good material for successful work.

Jehovah's Praise, \$1, or \$9 per dozen, by L. O. Emerson, is a full size Chu ch Music Book, with a large number of Anthems and Tunes for Choirs, also Glees, Part Songs, and a multitude of melodious exercises for classes.

Temple Chimes, Evangelist Luther, just published, is a very superior collection of new Gospel Songs, of Hymns and Tunes.

Praise in Song, 40 cents, \$4.20 dozen, by L. O. Emerson, is a new Sunday School and Praise Book, full of uncommonly good music and hymns. A very "perfect" book for vestry singing.

Any book mailed for retail price.

QUERIES AND REPLIES.

Is it the Eastern Pear Blight?

EDITORS PRESS:—In June last Prof. E. W. Hilgard of the University of California received a letter from Mr. P. Hansen, residing in Butte county, which was referred to me for consideration. The correspondent stated that in the middle of July, 1887, his pear trees were attacked by what appeared to be a disease. The small limbs were affected first in the manner described below and finally three six-year-old pear trees died. In the spring of 1888 the disease showed itself on all his Bartlett pear trees, and concluding that he had something dangerous, he dug them all down and burned them, except three or four of which the diseased part was removed. Later on the disease showed itself again, also affecting apple trees. Mr. Hansen stated that his pear trees had previously always been thrifty and healthy.

I replied to the above statement that I was somewhat puzzled what to think of the trouble; that there was a similarity to the true Eastern "pear blight," but I thought it required a personal investigation on the spot to reach more definite conclusions and at that time I was unable to go.

Thus the matter rested until November, 1888, when, during the convention at Chico, Mr. Geo. Gray, superintendent of the orchards at Rancho Chico, exhibited branches of pear trees affected in a similar way and invited several gentlemen, all experienced horticulturists, and myself to see the trees from which the branches were taken. The trees shown to us were all old trees and had dying branches all through them. Generally the disease would start at the base of this year's growth, gradually spreading, the bark appearing as though burned clear around the twig, the leaves on the smaller twigs would wither and turn black. Removing the diseased limbs, Mr. Gray stated, had not stopped the disease, and it was plain that it was extending over the tree. The opinions expressed by most of the gentlemen present were to the effect that the trouble was due to sunburn.

As stated before, all these trees were large and old, and had been suffering from this affection for two years, but so far no tree had been killed. Mr. Gray, however, stated that young trees in other portions on the ranch had been killed to the ground. To see them I accompanied Mr. Gray the next day to a young Bartlett pear orchard just coming into bearing, and here I saw a number of trees affected in a similar way. Several had died to the ground; in some, only a portion of the limbs, while in others half of the tree was affected. Instances of this kind were found all over this portion of the orchard, and did not seem to be confined to any particular spot, one tree here and another there being affected. The dead trees had been attacked the previous season. The trees were all low-trained, the soil deep and rich, and the conditions did not seem materially different from hundreds of acres planted to pears in other portions of the State.

The same day I examined limbs brought by Mr. B. F. Allen from his orchard on Butte creek. The indications were the same dead spots commencing at the base of last year's growth. Mr. Allen has lost a number of trees, and says he has observed the disease for about three years. His land where these trees grow is at times pretty moist.

In view of the importance of the subject and the possible danger of contagion, I forwarded specimens of affected limbs to Mr. Galloway, Chief of the Division of Vegetable Pathology, Dept. of Agriculture, Washington, giving description of the symptoms. Under date of Dec. 5th, I received the following answer:

W. G. Klee—DEAR SIR:—Your favor of the 25th of November, together with diseased pear limbs, is at hand. The large branch which shows the dark discoloration for about half its length is certainly affected with the well-known blight that occasions such widespread injury in the Eastern and Central States. The smaller branches appear to be affected with the same malady, although they are so completely killed that I would not assert positively that they have the blight also. If it is the blight due to *Micrococcus amylovorus*, Burrill, it would be an easy matter to prove it by inoculating healthy twigs with the juice of the diseased ones. We have published a very complete account of pear blight in the annual report of this Department for 1886. B. T. GALLOWAY, Department of Agriculture, Washington, D. C.

It will be seen that Mr. Galloway unreservedly pronounces the affection pear blight. It being thus declared by an authority to be the dread disease, I naturally concluded to get more data from the correspondent in Grainland (Mr. Hansen), and, with this in view, sent him several questions bearing on this point, which, with his replies, are introduced herewith:

Question—What kind of weather prevailed previous to your seeing your trees affected?

Answer—Very warm and sunny. It was in the last part of June, 1887, that I first noticed the disease; the trees were growing very thriftily.

Question—What is the nature of your soil?

Answer—A clayey loam 2½ feet deep resting on a clay subsoil.

Question—Well drained or not?

Answer—No artificial drainage, but good natural drainage. There is never any water standing on or near the surface; it all disappears a few hours after the rain ceases.

Question—Whence did you receive your trees?

Answer—My trees were received from San Jose in 1882.

This question was put to ascertain if all the affected trees in Butte county did not come from the same place. The answer does not encourage this theory.

Mr. Hansen adds: "I have no specimens to send you at present, for on receipt of your letter I dug all my trees up, excepting four older ones, and those I pruned all the diseased wood off, but in a month it reappeared on a few small limbs. I removed the attacked part again, and this time it did not reappear. The disease appeared most aggressively in the months of June and July. It would strike a limb frequently in the middle and work both ways, and I have noticed the top of the limbs to stay green and appear thrifty for two weeks after the bark had turned black clear around the limb for six to eight inches. Likewise the small twigs on unaffected limbs will remain green for a week or two after the bark has turned black and begun to crack on the main limbs, showing, I think conclusively, that the disease works from the outside toward the heart."

It must be confessed that the symptoms of and appearance of this affection are very much like the true Eastern pear blight, yet it differs in certain points. The Eastern pear blight shows dying at the top of the branch first, while in this case the dying is from the base of the branch up. It will be well to try the test of the true pear blight on some few healthy trees by inoculating the limbs with the sap of a diseased one. If this succeeds, the identity of the disease will be proved.

It is a little difficult to believe that the theory of sunburn advanced is correct. If so, why should the trouble not have shown itself before, and why, when once started, should the affection spread and go on from year to year? Yet I hope it is not this, and have reason to believe that it may be ascribed to other causes than blight.

One of the strongest reasons for not believing it to be this disease is the fact that we have seen the pear tree thriving under the most trying circumstances, growing and bearing, and bearing good fruit in wet land after having been submerged for weeks or months, living in locations where everything else dies from bad drainage and drouth—in fact remaining healthy under conditions no other tree can resist. I know of an orchard of some 150 varieties of pears imported 12 years from New York State; of all these only one kind has showed any dying back or unhealthiness, and this in spite of the fact that other kinds of fruit have died by the wholesale alongside of them, owing to the bad drainage.

A microscopic investigation of the diseased bark (with a low-power objective) has not developed anything very important. The discoloration (red) of the cells of the bark is very plain, varying in intensity. New spots in tissue but little affected are noted of a bright-red color, but no spores of any fungus appear with the low power I have used (one-fifth). The pith of the affected parts turns dark, but does not differ essentially from that of any other dying branch.

W. G. KLEE,

State Inspector of Fruit Pests, Berkeley, Cal., Jan. 25th.

Sub-Irrigation.

EDITORS PRESS:—Where can I obtain some information concerning sub-irrigation, cost, etc., and results obtained by that method when compared with ordinary surface irrigation?—W., Ukiah, Cal.

We receive many such inquiries, and we would be very glad to hear from our readers on their experience with the sub-irrigation system which was put forth with such earnestness a few years ago. Is the system practicable or not, and why?

Cost of Steel Rails.

EDITORS PRESS:—Believing that you are all strictly honest in your advocacy of a protective tariff as beneficial to the interest of farmers, I do not think you would make, or allow to be made in your paper, any statement, no matter how effective for your side, if you knew it to be untrue. I therefore take the liberty to call your attention to a statement in the number for Dec. 29th as to a former and the present price of steel rails.

Any one reading your statement would think you intended to say that in 1868 the normal price of steel rails was \$120 per ton, and that this price was the combination of labor, capital and profit, when in fact it was made up in the following manner:

Rails.....	\$55 00
Duty.....	28 00
Freight, insurance, etc.....	7 00
Premium on gold, 33 per cent.....	29 70
Currency price.....	\$119 70

W. S. CUNNINGHAM.

Lemoore, Jan. 20, 1889.

PIGS AND POULTRY AT HAW HILL.—Springer Bros.' catalogue (No. 9) of Berkshire pigs, Light Brahma fowls and Royal Bronze turkeys, bred by them at "Haw Hill," Springfield, Ill., gives considerable information about the improved breed of swine in question, and is embellished with portraits of two of their choicest specimens—Royal Granite and Orient Maud.

Big Price for a Squeezed Orange.

On the attempt, now being made at Sacramento, to induce the State of California to take the "Bancroft Library" off the owners' hands and leave in its place the trifling sum of a quarter-million dollars, the *Bulletin* remarks:

A similar bill was before the Legislature two years ago. Some surprise was then expressed at the proposed cost. The explanation which went around privately was that it was estimated it would require \$50,000 to pass the bill, and that sum, beyond the supposed value of the property, was provided for in the bill. That excess it was proposed to draw from the State Treasurer, to "grease the ways." The bill recently introduced again proposes that the State shall pay \$250,000 for this library. If our informants are not mistaken, it has been offered for sale to private parties for a much less sum, and has found no buyers.

No doubt this library embraces a valuable collection of documents relating to the history of the Pacific Coast. But a very small proportion of the whole has any relation to the history of California. From the data furnished by this library, there have been constructed 30 or more large octavo volumes which have been circulated by subscription, in all parts of California and all over the country. Presumably, these volumes are found in the State library, as they are in a number of other State institutions. The essence of these historical documents has been extracted and turned over to the public. Great as the work may have been, it has not been attended with any loss, but rather by a large profit. The question in its simple form is, *Shall the tax-payers now furnish a quarter of a million of dollars to buy a private library, which was collected as a business venture, and, having successfully served that purpose, is on the market?* It goes without saying that the collection is a desirable one. But is that a reason why the State should add to the fortune of a private individual and deplete its own treasury by buying property for which it can have no practical use?

We are decidedly of opinion that the State can spend the people's money to better purpose.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

From the official report of U. S. Patents in DEWEY & Co.'s Patent Office Library, 220 Market St., S. F.

FOR WEEK ENDING JAN. 15, 1889.

THAT UNIQUE MAP AGAIN.—The Riverside Press of Jan. 26th publishes quite a lengthy letter from Wm. H. Mills regarding "The Unique Map of California," in which he says, on behalf of Gen. Supt. Fillmore, that "no body connected with the S. P. Co. in any official capacity authorized the publication of this map, or supervised its publication, or was in any manner conscious of the features it would present, or that it was to be published." Mr. Mills also states that "the publishers of the map on being inquired of concerning the use of the names of the State Board of Trade and the S. P. Co., said that they placed that plate on the face of the map merely as a compliment to the two organizations, and admitted fully that it was without authority of either."

ILLEGAL FENCING.—In the RURAL of Aug. 11th last, mention was made of an investigation by Special Agent J. B. Brockenbrough into the inclosing of some 50,000 acres of public lands in Modoc Co. by Jesse D. Carr. The Commissioner of the General Land Office has lately transmitted to the Secretary of the Interior Maj. Brockenbrough's report on the case. He states that the inclosure contains about 52,480 acres of land, of which 12,568 acres are State lands, 160 acres entered lands and the remainder (39,752 acres) vacant public lands. The Land Commissioner recommends that civil and criminal proceedings be instituted against Carr for violating the provisions of the Act of Feb. 25, 1885.

PRODIGIOUSLY RICH IN OIL.—A report is getting widely quoted about a certain large olive orchard in which (it is said) "many of the trees bore six pounds of berries, which will make one gallon of oil." Reckoning by the venerable rule that

A pint's a pound

The whole world round,

This would give four measures of oil from three of berries. We know California products are marvelously rich, but this is past our credence! Wonder if the gentleman who witnessed the picking said "six pounds"—or something else.

REMOVAL.—The well-known establishment of W. C. Price & Co., formerly at the corner of Clay and Front streets, may now be found at 320 Davis street. Shippers and buyers of produce should note the change.

SHORTHORN SALE.—So few were in attendance at the proposed sale of Shorthorns at the Bay District track on Tuesday, that the sale was postponed.

Our Seed Offering—1889.

Great Inducements for New Subscriptions.

To encourage gardening and further extend the circulation of the PACIFIC RURAL PRESS, we will offer, while this notice remains in our columns, to furnish to all old or new subscribers the following seeds on the favorable terms named below:

Is the Best Bar Cart ever brought to the Coast.

Just the thing for the Farmer to go to town in and for children to go to school in. They are very popular. Dealers buy them at first sight because they sell rapidly. They are worth all they cost to break colts in and also save your buggy during muddy times. Price (Wheels, Springs and Axles guaranteed for a year), \$25.

Rigoletto.

Our engraving shows a fine horse for all purposes, the property of F. Brughelli of Napa. He bears the euphonious title Rigoletto, and is worth attention both for his striking individu-

which will commend itself to horsemen. Rigoletto is a bay 8 years old, stands 17 hands high, and weighs 1585 pounds. He has a fine coat, good bone and muscle and good disposition.

Mr. Brughelli has another stallion in which he takes much pride and names Boccaccio.

Lawless Railroad Managers.

The Interstate Commerce Commission now has a fine opportunity to make an example of the railroad managers who have refused to comply with the orders recently made by the Com-

It is evident that nothing short of a firm and rigid enforcement of the law will prevent its constant evasion or violation. The evidence is that the agreement entered into a few weeks ago in New York, which promised a full compliance with the requirements of the Inter-

BAY STALLION RIGOLETTO, OWNED BY F. BRUGHELLI, OF NAPA.

ality, which the artist has caught very well in his sketch, and for his lineage, which is honorable.

Rigoletto was sired by Jno. M. Patchen, he by Geo. M. Patchen, Jr.; the dam of John M. Patchen was the celebrated trotting mare, Lady Geneva; she was sired by Rysdyk Hambletonian. The dam of Rigoletto was sired by Bay Chief, full brother to Sim Holden's running mare Comet, he by Black Prince, he by Satin Lomix. Bay Chief's dam was Morgan and Woodpecker, his grandam full-blooded Morgan. Thus Rigoletto is seen to combine Patchen and Hambletonian blood on the side of his sire and Lomix and Morgan on the side of his dam—a fusion of trotting and running points

Boccaccio, also a bay horse, is six years old, and full brother to Rigoletto. From their dam Kitty B. he has also a weanling stallion by Alcona 730, an animal of much promise. Rigoletto and Boccaccio both took premiums at the Napa and Solano District Fair in 1887 and 1888.

LARGE ORCHARD INTERESTS.—A. T. Hatch has 800 acres set to fruit trees near Suisun, 160 acres in Contra Costa county, 315 acres in Livermore Valley, 640 acres near Lodi, 35 acres at Vacaville, 10 acres of oranges in Butte county, and 20 acres in Placer county. He also has an interest in 1200 acres, half planted between Marysville and Oroville and seems entitled to the "boss orchardist" medal.

mission in Chicago. It will be remembered that the investigation then prosecuted resulted in disclosures which surprised Judge Cooley, the chairman of the Commission, and caused him to talk very plainly to the offending managers. He took care to warn them that a repetition of the abuses would be summarily punished. They paid no heed to the warning. Complaints of a violation of the orders of the Commission have become so numerous and weighty as to make it necessary to again visit Chicago. If these charges are substantiated, as it seems most likely they will be, it is expected the Commission will proceed against the offenders to the full extent of its authority.

This Commission should do so by all means.

state Act, has been deliberately disregarded, thus furnishing additional and more convincing proof of the faithlessness of railroad managers. The plain duty of the Commission is to hold all the violators of the law to a strict and severe responsibility. There should be no respecter of persons. The greater the offending official, the sterner should be the retribution. This class of property must be made amenable to the law and subordinate to the public interest, and if the law is not ample and flexible enough to put a stop to abuses and oppression, then strengthen it as experience shows the need.

DURING last year 185 carloads of Lima beans were shipped from Santa Barbara to Boston.

Calaveras Notes.

EDITORS PRESS:—Hilly and rock-crested, overgrown in sections by wild, impenetrable thickets of chemical and chaparral, river-worn and torn, Calaveras seems to offer but little to the farmer as a reward for all his toil. There the miner has blasted and drilled, dug ditches and built the dripping weed-grown flume for miles along the mountain-sides that he might pour its ruddy tide upon his ever-turning noisy wheel or against the rocky red-soiled bank; and for all his toil he has found a path that has been golden-lined and even glorious in its bountiful rewards. None who have ever known of the marvelous fortunes unearthed around Angels, Table Mountain, Murphys and other camps, can doubt that the miner has been well repaid for every pound of dirt he has "panned," or every stroke of his shining pick. For notwithstanding the fact that many a poor prospector has returned travel-stained and heart-sick without an ounce of the gleaming dust for which he toiled so many lonely days among the wild unpeopled hills, the successful mining man places an armed guard on the stage that bears away his bullion, and smiles contentedly upon the rugged blast-torn hills that have lifted him to his high pinnacle of wealth and fame.

And yet, notwithstanding all this, the golden empire of the miner is useful to the farmer and fruit-grower as well; and the future will yet bring the harvest of golden fruit that falls to the soil as plentiful and as glorious as the yellow ore that once was buried in it.

In some districts irrigating ditches have made the blossoming orchards spread far and wide over the sunny slopes and in the rich meadow lands, as at Knight's Ferry, Vallecito, Angels and Murphys; but compared with Tuolumne, Calaveras county is as yet but beginning her orchards and grain-fields, and still her natural advantages nearly equal those of her sister county. The enterprise and spirit of the orchardists of Tuolumne have combined to bring the clear pure waters of the mountain rivers into every highland garden, and the Tuolumne ditch, which cost but a few hundred thousand dollars, has inestimably exceeded that sum in the wealth and industry that has flowed from its limpid stream. But not so with Calaveras. The fertile uplands, the rich hillsides that invite the vine and berry, the alluvial swales and the sheltered valleys have failed to attract the attention of the fruit-grower, who only saw the wild thickets and the miner's hills and passed on to other fields. And still again, the mining ditches have chanced to flow in ways chiseled out of solid rock, or through deep echoing canyons instead of near those spots favored of nature for the culture of the peach or grape.

And so when Autumn comes to Calaveras, with her purple haze and dull-red mists weaving the drowsy spell that ever comes with Indian summer around its rugged cliffs and ore-strewn hills, the tangled creek margin and the black-oak forest bear its largest wealth of fruits and brilliant leaves; while in Tuolumne the fall is heralded by a rain of red and golden apples, pears luscious in their mellow perfume, grapes transparent green or dusty purple, and plums that bear the soft rich tinge of amber as well as the bloom-whitened royal hue of purple.

The very air is steeped in the sweet mellowness of fruit and leaf, until the frost-touched trees that seem to blush and tremble with the joy of all this great fruit harvest, hang out bright leaves like blood-red tongues still thirsty for the perfumed breath and juicy shower around them.

But while Calaveras still remains in most sections a striking contrast to all this wealth of tree and vine, unplanted and unplanted, she still has many little homes and gardens to be proud of in those less-favored districts.

About four miles southeast of Copperopolis, on the O'Byrnes ferry road to Sonora, Mr. L. C. Honey has found a small tract of land in the valley that slopes brokenly for several miles from the foot of Table Mountain, which has proved to be richly fertile and encouraging. Out of this 160 acres, 100 of it make excellent farming land which in seasons of prosperity will yield about 25 bushels of barley to the acre of winter-sown and 35 bushels of summer-fallowed land.

The climate of this region is almost unequalled for fruit-culture. Situated at an altitude of over 2000 feet above sea-level, it has the delightful sharpness to the atmosphere which gives the fruit the rare flavor found in mountain districts, and yet the danger from frost blight is very little. No gardener yet has lost the whole product of his year's labor in one night, as has been the case in many localities where the climate is no more severe than on this sheltered western slope, although peaches have sometimes suffered in size and flavor from this cause in the more unfavorable seasons. Yet this rare affliction is more than recompensed by the excellence of the fruit grown, often for years in succession, without the slightest tinge of harm from the keen mornings.

On Mr. Honey's place a fine orchard has been planted, since he has several natural springs that yield water the year around, capable of irrigating 200 fruit trees. As yet he has ob-

tained no great fruit harvest, the trees being scarcely old enough to bear abundantly, though he has ample promise of rich returns in the future.

Situated almost directly in the warm belt that reaches its mildest and balmiest at Knight's Ferry, and causes that little place to blossom forth with billows of fragrant tropic bloom, Mr. Honey thinks his place especially adapted to the culture of orange, walnut, olive and almond trees. Accordingly he has planted quite a number, intending them more as an experiment than anything else. He expects to raise them without irrigation after the first year, believing that when the soil is not too dry naturally, this method produces sturdier trees and finer fruit than when they are artificially watered through the dry season.

Mr. Honey has inclosed his land by wire fences, which he finds has proved very satisfactory in turning away stock from the grain-field.

He has little trouble at harvest-times in securing his crop rapidly and thoroughly, although neighboring farmers in this foothill country, where it does not pay to keep elaborate and costly machinery for harvesting purposes, often find it difficult to get their grain safely cut and stored away if bad weather threatens. This advantage over others Mr. Honey finds in the

Australian Stripper Harvester,

Which also yields a fine income on other ranches in harvest season after his own crop is disposed of. This machine was manufactured by Mr. L. Smith of Okdale, Stanislaus county, though as yet there are but few in use in this State. In Australia they are very much in favor, however, and are extensively used. Relatively speaking, they are inexpensive machines, costing but \$450, which indeed is soon saved in grain and expense in running. The stripper both strips and thrashes in the field at the same time; it gathers no straw and does its work cleanly and thoroughly.

In appearance the stripper is quite a small, compact machine, made very strong and ready for immediate use at any time. The grain is stripped from the stalk by means of a comb five feet eight inches in length, which instantly transfers the combed heads to the beater or reel running at the rate of 600 revolutions per minute. Here grain in all its stages of being thrashed is mingled together and steadily beaten till the round hard kernel of grain, perfectly whole and free from chaff, is admitted to the box, which carries about 20 bushels of thrashed grain at a time. The straw and chaff made in thrashing fall to the ground beneath the stripper in the progress over the field. It can be saved if desired.

In this harvesting implement Mr. Honey believes many small farmers have supplied a long-felt want. The expense of running it is 10 per cent cheaper than other machines, and yet it is perfectly complete in itself, answering every purpose, and in a short time transforming a field of heavy-headed nodding grain, ripening only too fast beneath a glowing sun, into a thinly covered, parched and forsaken land of cracking golden stubble. MAY BLOSSOM DAVIS.

Evergreen Millet or Johnson Grass.

EDITORS PRESS:—Having seen in your issue of Jan. 19th inst. something about Johnson grass, or evergreen millet, I am led for the possible benefit of the writer of the article in question to give a little of my experience with that "valuable grass."

Having some six years since seen in an inclosure of a friend of mine something in a manner resembling bamboo, or a very tall, dark, rich-colored, fine-leaved corn, I asked what it was, and was answered that it was evergreen millet, a forage plant of great value, and flourishing abundantly where no other known plant will grow and without cultivation or irrigation, needing neither even in dry and barren soils, filling the soil with succulent, nourishing roots, and yielding from 5 to 10 tons per acre of a fine, rich quality of hay.

So my friend having thoroughly enthused me, and having the proof of his statements before me in the luxuriant growth of the millet before us, I resolved to try it for myself. Learning from him where I could get seed, or rather roots (for the seeds were not always reliable and the roots were), I sent, and at a cost of about 40 cents per pound procured 25 pounds of roots, which I planted according to directions, and as they did not grow as fast as I thought they ought, I tried irrigation and cultivation, and found that this stimulated growth, and so, for the first season, I raised a fair crop. Where I tended it best and watered it most it grew some six feet in height, but I could only raise one crop of that style; all succeeding growth was stunted and growing along the ground. It was almost impossible to harvest, and not amounting to anything in quantity, although stock eat it readily.

I have, since its second year with me, been trying to get rid of it, but the more you tear and break it up and tear up the ground also the more it flourishes, but I have never found it to amount to anything, as there has never been sufficient top growth to pay for gathering, and the same land will give a better and more paying yield in grain or corn.

The soil was light sandy loam, some of it quite sandy, and some heavier and more clayey, the only difference being that in the stiffer soil the roots did not "run" so much as in the sandier, the top growth being the same in both,

and where I had kept the ground well soaked with water, the roots (juicy white roots the size of one's thumb) penetrated deeper than I wanted to dig.

In my hay-field, from the roots of my "nursery" I planted some six acres, sowing grain with the roots, and I found that growing among the grain it would grow upright and admit of being mowed along with the grain, and for three years I replanted the same ground, or the most of it, but to no avail, and I gave it up finally and to-day no vestige of it is to be found where I tried so hard by replanting in my hay ground and even harrowing the ground thoroughly when I had my hay crop off, so that I find that it is of comparatively no value for hay or grazing; that it becomes worthless, or, to speak more correctly, more worthless each year, until, as in my case, where the land is cultivated in summer, it finally disappears altogether, and where it is cultivated as in summer crops, it lingers along, neither doing anything itself nor suffering anything else to make good growth, and so is an unmitigated nuisance, which is impossible to be gotten rid of in any way that I know of or have tried but by letting the land go for pasture or hay for even two or three years.

For proposition four of your Mendocino correspondent: "Would it pay to plant it on average corn land if one did not need it for anything else?" Perhaps for hogs it would to consume the roots, as they could hardly "root it all out;" but I don't believe it would, as it has been tried by several in this neighborhood and has proved unsatisfactory.

If the ground is thoroughly cultivated and loosened, the roots will extend in all directions, rotting freely, however, and so thinning themselves, but standing the heat and drought, and growing, but never enough to make it desirable or a paying crop, while without cultivation it will die out in from two to three years.

THE DAIRY.

Grass for Alkali Soil.

EDITORS PRESS:—There has been a great deal written and much thought expended on what will make our alkali soils available. Professor Hilgard has written a treatise on how to neutralize alkali soils and make them productive, and I think his method was in the liberal application of gypsum.

That would involve a good deal of expense, and would it be lasting?

We want something that will not entail much expense and is sure of part of a crop if not a full one. On my farm on the right bank of the American river, 1½ miles above the junction with Sacramento river, I have a piece of very bad black alkali soil. I had despaired of making anything grow but an alkali prickly weed which nothing would touch.

Greatly to my surprise, in the latter part of the summer a few years since, I saw some kind of a grass taking possession of this alkali spot and choking out the worthless weed. On further investigation I found it growing up and down the bank of the river.

It was such a surprise to me that I sent a sample of it to Prof. Hilgard of the State University (in 1885), asking for a name, its home, nature, and its worth as a forage plant. He stated that it was common in Oregon and the Territories thereabouts, and was known as rye grass or wild rye, and sometimes called "cow hay" to distinguish it from the sweeter kinds. It propagates itself very rapidly from joints on runners that penetrate the ground in every direction, about three inches below the surface.

These runners have hardened points on them similar to a carpenter's scratch awl, and do not yield right of way to anything less hard than themselves. They are frequently found with one runner grown right through another at right angles. These runners are about the size of a carpenter's chalk line, and in sandy soil will grow to great length. Roots are formed at every joint, which are two to three inches apart, and every joint throws up a spear of grass. This grass grows well in timber land where the underbrush is not too thick. It has a slender stock with plenty of leaves or laterals. It is the first grass that comes up in the fall after the rains, and in fact it can hardly be said it ever stops growing. The seed is very small and does not pay to gather, for the way to propagate is by cutting up the roots or runners in short pieces and sowing in drills or broadcast. It can be very easily killed out by plowing in hot weather, as the roots do not go deep.

I have seen these stocks grow five and six feet high where supported by the limbs of a tree. I consider this a good stock grass, especially for horses. My stock, both horses and cattle, when they had access to the rye grass and alfalfa, kept one equally cropped with the other. The rye grass has another good quality that all forage plants do not possess. Like alfalfa, when not over-cropped, the tops can be fed off, leaving the bottom six to eighteen inches high to ripen or cure. These bottoms or stubble will stand up against rains and storms and furnish good picking for stock in the winter.

I would not advise the planting of this kind of grass, except on alkali soils. I will show this grass to any one wishing to investigate, or who has alkali soil.

Sacramento, Cal.

D. FLINT.

THE FIELD.

The Movement Against the Squirrels in Contra Costa County.

The squirrel meeting held at Oak Grove school-house, Ignacio valley, Jan. 29, was well attended, and the action taken by those present threatens dire destruction to the troublesome squirrel. The meeting was called to order about half past one by Mr. A. L. Bancroft, who was chosen chairman. B. H. Bancroft was chosen secretary. The chairman briefly stated the objects of the meeting, dwelling upon the damage done by these pests, and finally asked that those present give their experiences in squirrel killing.

Mr. George Westcott had tried smoking with sulphur and green weeds, but found this method rather expensive both in time and material.

Mr. Charles Lohse had tried poisoned barley with some success. He produced a letter he had received on the subject under discussion from Mr. Vincent Hook of Pacheco. The letter was read by the secretary, and following in the manner of poisoning Mr. Hook has adopted and advocates: "Take about one gallon of clean, dry wheat and add one ounce of pulverized strychnine and mix thoroughly. Take one cup of white sugar and add water enough to simply wet it. Then add this to the strychnine-coated wheat and stir until the wheat regains its original color; let dry and put out. You can, if desired, add 3 or 4 drops of oil of rhodium. You can readily see the advantage of this over all others, because you have the poison completely disguised. In my opinion, there is but a short period in which to do this work effectually, and that is from the first of September to the middle of October. My reason for thinking so is this: I have noticed that the squirrel will be found with his pouch full at that season of the year, which goes to indicate that he is busy storing up for winter. You may put out a bucket full of wheat in January, December or February, and he won't pick any down into his hole for the reason that it is out of his line of business at that time. He may eat some and get killed, or he may not touch it. My opinion is, that it is useless to try to exterminate them unless there is some way of getting at the hill lands used for pasture purposes. I can kill all the squirrels on my ranch, but until there is some way found to totally obliterate the hole, it will sooner or later be occupied again."

Mr. J. T. Walker put in a good word for bisulphide of carbon, saying he had tried 15 gallons of it in the months of March and April with great success. He saturated balls of cotton batting with the stuff, put them into the holes and then closed the latter up.

Mr. C. Sharp, however, said that the bisulphide of carbon was no good in the hills. He had used some smokers with little success.

W. L. McDonald used bisulphide of carbon and had great faith in its destructive power. His success with it has been great. He made balls of cotton batting about the size of a walnut, put them into a glass jar and poured the bisulphide upon them. When thoroughly saturated, he placed the balls into the burrows as far as he could get them and closed the holes securely.

A. N. Wright of Concord believes in strychnine, which he has used with excellent effect. Mr. Wright claimed to have a mixture which made the squirrels eat the poisoned wheat. He was so earnest in the praise of this mixture that the other members of the meeting became very anxious to know its ingredients. Mr. Wright was much less anxious to disclose his secret. The chairman asked whether Mr. Wright would take \$10 for his recipe. Mr. Wright would not, and the value of the mysterious mixture grew in the opinions of those who wished to possess it. Mr. Wright would take \$50, however, and a committee was appointed by the chairman to give Mr. Wright's mixture a test, and, if it proved satisfactory, to buy it. The amount of strychnine used by Mr. Wright was one ounce to three quarts of wheat. Mr. Wm. Caven said Mr. Wright's mixture would do all its owner claimed for it. The committee appointed to test Mr. Wright's recipe consisted of Messrs. C. Sharp, Charles Lohse and H. B. Gregory. Mr. Nathaniel Jones, H. B. Gregory, and others made some remarks upon the subject under discussion and were attentively listened to. Most of those present seemed to be decidedly in favor of the use of poison for the extermination of squirrels, and a canvass of the opinion of the meeting resulted in nine votes for poison and one for bisulphide. About this time J. H. Wheeler, chief executive officer of the Viticultural Commission, arrived with Mr. E. B. Smith. Mr. Wheeler, who is a manufacturer of bisulphide of carbon, at once launched out upon the merits of the article and created a very favorable impression. He spoke of its efficacy and the safety with which it might be handled, and also claimed that it was most economical in the long run. Mr. Wheeler went through a good deal of questioning and offered to sell in 100 gallon tanks at wholesale rates.

Mr. James Foster of Walnut Creek then arose and suggested that a committee be appointed for the purpose of finding out whether land-owners could not be compelled to kill the squirrels on their respective places. A Committee on Legislation Against Squirrels was

chosen as follows: E. B. Smith, James Foster, A. L. Bancroft and W. Caven. E. B. Smith was elected chairman of the committee. An agreement was then drawn up, the signers of the same pledging themselves to make relentless war upon the festive squirrels. Following is the agreement:

IGNACIO VALLEY, Jan. 28, 1889.
We, the undersigned, farmers, orchardists and land-owners of Ignacio valley and vicinity, do hereby agree and promise to faithfully and promptly take the steps decided upon by the meeting held this date for the purpose of securing uniformity of action in exterminating ground-squirrels in our neighborhood, viz.: We will each of us have all of the land owned, farmed, pastured or used in any way by us gone over each Monday, commencing February 4, 1889, to, and including, Monday, December 30, 1889, and put out poisoned grain in or near each open squirrel-hole; or smoke each open squirrel-hole; or inject bisulphide of carbon into each open squirrel-hole found on our respective places for the purpose of destroying squirrels, and for the faithful performance of this we give our word and pledge our honor. Whenever a Monday within the dates named above proves to be rainy, so that this work cannot be done, we promise to do it the first day thereafter when it does not rain.

The following committee was appointed to secure signatures to the above agreement and to see that its provisions were carried out: H. B. Gregory, D. F. Majors, B. H. Bancroft, S. J. Soto, O. Sharp and Mr. Billings.

After some informal discussion, the meeting adjourned until Feb. 4th, at 2 o'clock P. M., when the reports of the committees will be received and other business attended to. Others present besides those mentioned above were Messrs. John Larkey, E. Randall, L. Moore, Benj. Hodges, Capt. Darham, James Slow and T. A. McMahon.—*Martinez Item*

FRUIT MARKETING.

The Future.

EDITORS PRESS:—The California Fruit Union and the Dried Fruit Association have held their annual meetings, and the reports of their secretaries show a vast amount of fruit as having been moved and marketed. But of dried fruit, while much of it has been shipped to Eastern markets, yet of the amount so shipped, much remains unsold and market flat. Now why is this? One reason advanced is that Eastern dealers carried over a large stock from the preceding year. There may be some truth in this, but if so I think this alone could not account for the continued depression of Eastern fruit markets. An over-supply of marketable products of one year, unless supplemented by full supply in the succeeding year, would not long tend to depress the market. The fact is, that while California did not of itself produce an over-supply of dried fruit the past year, the fruit products of the Atlantic States were most abundant. These products seek a market in their own centers of consumption, to the exclusion of California productions. The producers of Eastern prepared fruits can and do sell at a profit at prices which are ruinous to the California producer. The California producer is handicapped by high-priced labor and heavy transportation charges, from all of which the Atlantic producer is exempt. The Eastern producer by the aid of evaporators produces a desirable fruit for consumption, as does the California producer. Consequently in the matter of dried apples, dried peaches and dried plums and berries the California producer is being driven from the market, or his products are sold at prices below the cost of production.

But will the Atlantic producer be able to continue to fully supply the Atlantic markets in the above-mentioned fruits? Why not? They have the climate, the land, the necessary labor element and the evaporator. They find a profit even at present going prices. During the last few years Eastern orchardists have, and still are, largely extending their orchard area, thus keeping pace with the demands of an increasing population. Their fruits are now on sale in every town and hamlet in Montana, Wyoming and Colorado, to the exclusion of California products.

In the matter of apricots, figs and olives, California may for a time have the exclusive production, but dried apricots will have to compete with dried peaches in the Eastern markets, and the California prune with the French, the German and the Turkish prune. My own opinion is, that the California prune-grower can successfully compete with the foreign grower in the Atlantic markets, and eventually drive him from our markets. So I think will the California raisin-grower finally expel the Spaniard from our markets.

With low-priced raw fruits (by low priced I mean such prices as will return a living profit and no more to the California orchardist), I know not how far the business of fruit-canning may be successfully extended. The canners themselves say it is almost limitless. But the canners must have the choicest fruit. This being so, a large percentage of the crop must, if possible, be converted into dried fruit which, as I view the outlook for a future market for dried fruits, promises nothing or next to nothing to the grower in California who pays ruling rates for labor. Such products of the orchard as will not pay for manipulation must necessarily perish in the orchard. If our orchard products are to be made into dried products, in

view of future markets for dried fruits, the price of labor must be materially reduced.

Now as to Marketing Green Fruits

In the Atlantic cities. In the first place, experience has proved that it is a waste of time and money to send to those markets anything but the choicest fruits, thus leaving all inferior fruits still to be disposed of, if possible, in some other way. Here we are again face to face with the question how to dispose of such portion of our orchard products without loss. If the orchardist must bear this loss, can he sell his choice fruits at such a price as will compensate him for such loss and also return him a reasonable profit on his investment? Let orchardists answer this query.

I will not undertake to say in advance that all our surplus choice fruits can be sent East to a remunerative market. Trial and enterprise must determine that.

Now as for Oranges.

I do not know how cheaply oranges may be grown in California at a profit, but I have before me the reports of many auction sales of both Mediterranean and Florida oranges in New York and Chicago on a general average of about 1½ cents each. This, I judge, will return to the Florida orange-grower not more than three-fourths of a cent each for his fruit, the remaining half cent being absorbed in charges. Can the Californian grow oranges profitably at three-fourths of a cent each? Let him answer. The orange business is being rapidly extended not only in California, but in Florida and also in Mexico, where the tree grows almost spontaneously and without any special care. These Mexican fellows are handicapped by a duty of 20 cents per box, but freight from Hermosillo and Guaymas is little more to New Orleans or Chicago and St. Louis than it is from Los Angeles or Riverside. The Mexican or the Florida orange is equally palatable to most people's taste with the California orange, and just as pleasing to the sight. If produced in sufficient quantity, they could be sold, and still with a profit, so as to drive the California orange from all our markets. In view of these facts, does it not behoove those of us who contemplate going into the orange culture to pause and consider? True Oregon, Washington Territory and Idaho, filling up as they are with an enterprising population, will consume many oranges and will naturally look to California as their nearest point for supplies, but the Pacific islands and Mexico have the advantage of cheap labor and cheap lands, together with easy water communication, and should there ever be a sharp competition for retaining the orange market of the Pacific States and Territories between the places named and the California orange-grower, I opine he would find himself driven from the Pacific markets.

WM. C. BLACKWOOD.

Haywards, Jan. 28, 1889.

[Judge Blackwood takes a rather more doleful view of the future than necessary. It is just as well, however, to look on the dark side occasionally to prevent over-enthusiasm—a brake is a good thing sometimes on the lightest vehicle. If Judge Blackwood's statements lead people to think on the subject, they will be a general benefit.—EDS. PRESS]

THE VETERINARIAN.

Splenic Apoplexy and Texas Fever.

EDITORS PRESS:—In your issue of January 19th, under the heading Veterinarian, concerning the difference between splenic apoplexy and Texas fever, I wish to say that it is necessary to look for a more diagnostic symptom than the color of the urine or the presence of tick.

Bloody urine may be a symptom of either anthrax, red-water or Texas fever; again, an animal suffering from any of these diseases, particularly Texas fever or anthrax, will seek solitude in the scrub and there become covered with ticks. In fact, it is well known that all animals in a more or less debilitated condition are liable to be infested with parasites.

In splenic apoplexy you always find the bacillus anthracis, which any microscopist can demonstrate in a few minutes with a cover specimen from the blood of the spleen. In Texas fever no pathogenic germ has as yet been isolated. The spleen, or—as it is commonly known—the milt, is enormously enlarged in both diseases, but in splenic apoplexy the pulp or parenchyma of the organ is so disintegrated that by hanging it perpendicularly from one extremity, the pulp will gravitate, like sand in a sand glass, to the other end, while in Texas fever it retains its consistency more or less; further, in splenic apoplexy all the tissues are stained with a dark, non-coagulable blood, while in Texas fever the flesh is of a bright, yellowish-red color, and the blood almost brick-red and highly coagulable. The main macroscopical diagnostic symptom is found in the liver, which in anthrax is enlarged, of a blue-black color, and on section large quantities of black uncoagulable blood will escape, and the gall bladder is in a normal condition. In Texas fever the liver is enlarged, of a red brick-dust color, the surface of the organ being covered with yellow straw-like streaks due to the injection of the

bile capillaries, the gall bladder is moreover enormously distended and full of a dark-green inspissated bile. There are numerous other differences, but the above are sufficient to determine the nature of the diseases in question.

Your correspondent also recommends that all animals dying of anthracoid affections be removed from the pasture before post-mortem examination. Why carry the disease to another part of the ranch, and likewise imperil the lives of the attendants should the disease prove to be anthrax? Would it not be more rational to make the autopsy where the animal dies, cover it with fagots of wood and coal oil, and burn, the ashes to be buried with quicklime six feet under ground? Coyotes are very active carriers of contagion in this state, but they will not touch anything which has been saturated and burned with coal oil.

I may explicitly state in writing this letter that I do not consider my qualifications to arise from any superiority or perspicuity of intellect, but from the intense interest I have taken in the subject of cattle diseases in this State, from my conversation with Mr. Mercer, the Government agent who visited this coast, and my own observations since that time as a medical man, I have had unusual facilities for acquiring a practical knowledge of the subject.

WM. G. HODSON.

Distemper in Dogs.

EDITORS PRESS:—Several parties have recently lost some valuable dogs from distemper. Advice from Dr. Bizard on the disease would be thankfully received.—A. L., Santa Rosa.

EDITORS PRESS:—Distemper is a specific fever peculiar to the dog, which has very varied manifestations. It runs a definite course, and all that can be done is to direct the course of the disease and to aid nature by judicious nursing. Those animals that have least physic make the best recovery.

There are at least three well-defined types of distemper, which may either remain distinct or may be present together as complications of one of the other. These are the pulmonary or lung form, the enteric or bowel form, and the nervous.

The first is the most common. The symptoms first observable are general dullness, refusal of food, a slight cough, injection of the visible mucous membranes, dryness of the nose, with a watery discharge from both it and the eyes, together with considerable thirst.

From this point we may branch off into any of the forms above mentioned. The cough may increase and the discharge from the eyes and nose become more copious and of a different consistency, until it is of a thick, greenish-yellow, that smells so foully as to render the presence of distemper about the premises detectable by the nose alone. (This is in extreme cases.)

Where the lung structures are invaded, the cough is soft; where confined to the air passages, it is dry and hard in its character. Dysentery often accompanies this, the discharges being foul-smelling, bloody and badly colored.

From this point the patient wastes to a mere shadow, and looks like a living skeleton, the emaciation being particularly rapid. Sometimes we get a series of fits, which end in the establishment of a peculiar twitching of the muscles known as chorea, or St. Vitus dance. This is the nervous manifestation. The liver is frequently involved, and it is the especial trouble with the hound breeds, greyhound and foxhound puppies often perishing from liver complications.

In the absence of a specific remedy, and with so many varying types, all that can be done is to treat the symptoms as they arise. The dog that has had rational treatment prior to the attack, i. e., that has been cleanly housed, plentifully exercised, and not overfed, suffers less than either the neglected or the pampered.

Treatment.

On the first symptoms being observed, the animal should be removed from other dogs to a place that, while warm and dry, has a plentiful supply of fresh air without draught. Give plenty of fresh water and change it frequently, as it soon gets contaminated with the discharges.

If there is constipation, a dose of castor oil and syrup of buckthorn is useful, but, as a rule, purgatives, or anything likely to increase the debility, must be carefully avoided.

Where the ordinary form, as indicated by fever and a discharge from the eyes and nose, is present, give chlorate of potash, 10 grains, with one drop of Fleming's tincture of aconite in a little water three times a day. Where the liver is markedly involved, give mercury and chalk, three grains; Dovers powders, two grains; quinine, one grain; James powder, two grains; with exipient to form a pill. These pills are always useful where the symptoms of any particular form are not marked.

Where there are fits, castor oil and injections with moderate doses of bromide of potash are indicated, and if the common sequel chorea appears, strychnine and iron are the most reliable remedies.

To keep the animal warm and dry and to combat the debility, are the essentials of the highest importance. As a rule, very little food will be taken, but milk, eggs, strong beef tea, arrowroot, port wine, or brandy, must be given according as they are indicated. When dysentery supervenes, arrowroot, brandy and eggs are exceedingly useful. Nursing is a great

thing, and unremitting attention, both night and day, has saved many a dog that medicine was powerless to cure.

HORTICULTURE.

Horticultural Hints.

EDITORS PRESS:—I send you the following notes which I hope may be of interest to some readers:

To Heal Wounds in Trees.

In pruning, it is sometimes necessary to remove a large limb. If the stump or exposed wound is left unprotected, the wood dies into the heart, and in a few years the tree is dead. Nothing heals so readily, and is so cheaply prepared, as a paint made by boiling linseed oil (free from cotton-seed oil) one hour, with an ounce of litharge to each pint of oil, then stir in sifted wood ashes until the paint is of the proper consistency. Pare the bark until smooth, as the fuzzy edge left by the saw will cause it to die back. Paint the wound over in dry weather, and if the wound is very large, cover with a gunny-sack. I have healed over a stump one foot in diameter in this way, the wood keeping hard and solid.

Grafting Wax.

The following mixture will be found "just right," neither so soft as to run in hot weather nor too stiff to work, but will dry like paint and therefore can be depended upon:

Rosin, 4 lbs.
Beeswax, 1 lb.
Boiled linseed oil, 1 pint.

Melt together, and when sufficiently cooled, pull like taffy and form into balls. Be sure that you have linseed oil, as the greater part of the linseed oil now sold is heavily adulterated with cotton-seed oil, which melts, like so much lard, in the sun.

What Apples to Grow.

"What varieties of apples do best in high altitudes?" asks one of your subscribers. If the ground is moist and the fall months cool, Rhode Island Greening; but in warm localities it shrivels or wilts. The Porter, than which there is no better keeper, and the Swaar crowd the Yellow Newtown Pippin for "yellow apples." The Bellflower "skins" so easily that it does not make a good shipper, otherwise it is a fine apple. But most apple-eaters in their choice of apples are like the Dutchman with his barn who, when asked what color he'd have it painted, replied: "Any color so it's red." Size and color determine the price and market of the red apples. Baldwin, Winesap and Esopus Spitzenburg leave little to be desired. In fall apples the grower can suit his fancy. The Alexander for size and color is preferred. Summer and fall apples are poor keepers, and come into the market when it is glutted, so that the winter apples only should be planted in any quantity. While all apples do well in cool altitudes, it is only necessary to stencil a box of apples "Baldwins," or "Spitzenburgs," to make them "go," and the fewer varieties you have the less expense and trouble in storing.

To your subscriber who wants to know "How to Build a Barn," I would advise the purchase of "Barn Plans and Out-Buildings," \$1.50; "Harvey's Barns, Out-Buildings, and Fences," \$4. Both books can be furnished by Dewey & Co. at the prices named.

Murphys, Cal.

E. H. SCHAEFFLE.

Apples in the Mountains.

EDITORS PRESS:—I saw in the RURAL PRESS of January 26th a question about apples. As I live in the Sierras at an altitude of 2300 feet above sea-level, where snow falls once in awhile, I thought a few words from me would not come amiss. My observation about apples is, that the Esopus Spitzenburg is the best for this region. It is a vigorous grower, a hardy tree and a good bearer. The fruit is of elegant shape, beautiful color and fine flavor. Next comes the Ortley, which is a splendid apple of oblong shape, good size, and for quality can't be beat. The Baldwin is a good apple, deep red and of good size, but it is a shy bearer with me. The Swaar is a fine apple, prolific bearer; tree hardy. These I can recommend, for I have tried them all and many more.

M. V. ROE.

Nimshew, Butte Co., Cal., Jan. 28, 1889.

EDITORS PRESS:—In reply to "W's" inquiry in your issue of Jan. 26th, with regard to the best variety of winter apples grown at an elevation of from 3000 to 4000 feet above the sea level, would say that we have had the greatest success with the White Winter Pearmain and Newtown Pippin, and they are generally considered to be the best in this locality. We also have the Winesap, Ben Davis, Blue Pearmain and Red Spitzenburg, all doing well and good keepers. We are about 4000 feet above the sea, and have more or less snow every winter, the mercury sometimes getting down to zero, but not often. We also grow successfully plums, prunes, strawberries, raspberries, blackberries and gooseberries. Would be glad to hear through your columns from other mountain orchards.

WM. P. CATHEY.

Darrah, Mariposa Co., Jan. 30, 1889.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of Granges to the Pacific Rural Press are respectfully solicited for this department.

Greater Inducements for Subscriptions.

NEW RATES FOR PACIFIC RURAL PRESS.

Annual subscription, in advance, 12 months for..... \$3.00
If paid in advance, 10 months for..... 2.00
If paid in advance, 5 months for..... 1.00
Trial subscriptions for three months, paid in advance, 60 cents.

Official Endorsement.

In consideration of a certain contract entered into this day between Dewey & Company, publishers, and the California Patron Publishing Company of San Francisco for the publication of a weekly Grange edition of the PACIFIC RURAL PRESS, and the California Patron as a monthly,

Resolved, That the Executive Committee of the State Grange of California hereby designate and endorse the PACIFIC RURAL PRESS as the weekly organ and the California Patron as the monthly organ of the State Grange of California.

Salinas Grange Again in the Field.

MESSRS. EDITORS:—Salinas City was visited on the 30th ult. by A. T. Dewey, Secretary State Grange, A. P. Roache, Deputy State Master, and E. Z. Roache, Master of Watsonville Grange. They came pursuant to appointment of a meeting for the revival of Salinas Grange. This announcement for the meeting on that date was not propitious, it being one of the days on which the great sale by Briggs, Fergusson & Co. of the Buena Vista Rancho took place, which attracted some who should have been present. The meeting had, therefore, to be deferred until Friday afternoon, following the day of organization of San Lucas Grange.

Perseverance usually wins, and accordingly the last named meeting proved successful. The Grange was reorganized with 15 members, mostly old veterans in the cause of equal rights, who were frank to confess their mistake in ever allowing their organization to collapse.

Farmers here, as elsewhere, have their grievances, which can never be righted effectually by the "stand-along" policy they have practiced in the past. As an instance: The Central Milling Company of Salinas buys the farmers' wheat at San Francisco prices less the freight, and manufactures it into flour, which it sells consumers at \$5.40 per barrel, or about \$1 above San Francisco prices for the best article. Co-operation is what is needed to rectify such evils.

There is ground for the belief that Salinas Grange is in earnest now, and will rapidly increase in numbers and influence for good.

She elected a very efficient set of officers for the ensuing year, as follows: W. J. Hill, M.; Wm. Robson, O.; Geo. Abbott, L.; Wm. King, S.; Mr. Treat, A. S.; U. Hartnell, C.; I. Tucker, T.; O. A. F. Schuchard, Sec.; Geo. Hunter, G. K.; Mrs. S. B. Treat, Ceres; Mrs. M. Williams, P.; Miss Victoria Archer, F.; Miss A. E. Williams, L. A. S. F. B. L.

[Having personally met a number of the above-named officers, we are very confident from their apparent ability and good reputation in the community in which they have long been known, that Salinas Grange will again become one of the best and most efficient in the State. It is backed by a splendid farming district and population. Perseverance and a fair share of activity on the part of those who have taken this new and commendable start will give them a harvest in due season of which every brother and sister may be proud. We recommend that they make an effort to secure the premium offered in this issue by Worthy Master Overhiser. —EDS.]

SELECT DEPUTIES.—As before noticed, Worthy Master Overhiser desires the Masters of subordinate Granges of each county or district to confer and recommend some Patron for appointment as Deputy Lecturer for the current year. Let this matter be attended to as soon as practicable. All Deputies are desired and expected to continue in their official stations and duties until other appointments are made, the same as if this notice had not been published.

FOR SOUTHERN COUNTIES.—Bro. A. P. Roache has been appointed Special Deputy by Worthy Master Overhiser to co-operate with General Deputy I. C. Steele in some of the southern counties. He commenced nobly by putting new life into two good Granges last week.

San Lucas Grange.

MESSRS. EDITORS:—Deputy State Master A. P. Roache of Watsonville and E. Z. Roache, Master of Watsonville Grange, accompanied by the writer, visited San Lucas on the 31st ultimo and there instituted a Grange of Patrons of Husbandry consisting of 22 members, 11 women and 11 men. The following were elected and installed as officers for the current term: Wm. Griswold, M.; Thos. Ross, O.; J. A. Trescony, L.; Benj. Wood, S.; O. H. Perry, A. S.; Mrs. V. V. Winchell, C.; J. N. Beach, T.; S. Sherwood, Sec.; S. A. Bryan, G. K.; Laura Wood, P.; Nita Bellah, F.; Mrs. J. H. Newlove, Ceres; Mrs. M. E. Beach, L. A. S.; Angie Wood, Organizer.

The new organization decided to have its next meeting on the afternoon of Saturday, Feb. 16th. It is believed that the outgrowth of this step will be a strong and prosperous Grange before the lapse of the year. The zeal of the members may be estimated from the fact that, notwithstanding some resided from five to ten miles away, they were on hand at the nine-o'clock (P. M.) meeting to complete the organization.

It is believed that the Grange was peculiarly fortunate in the selection of its officers. Wm. Griswold, who was chosen Master, is an old resident of Long Valley, where he still owns a farm. He is said to be a good presiding officer and a deservedly popular citizen.

San Lucas, though only about two years old, is the most important center between Salinas City and San Miguel, a distance of nearly 100 miles. There is more fine agricultural land tributary to it than any other point, and, in the nature of things, it must, ere long, become a large town.

The principal settlements in the vicinity are Long Valley and Pine Valley to the east and Paris Valley, Jolon and Hardscrabble on the coast side of Salinas river. The Trescony farm, consisting of many thousands of acres, lies mostly on the opposite side from town. It is a magnificent tract, upon which there are sown this year over 16,000 acres with grain, and the prospect is good for a large yield.

Taken all in all, it is difficult to conceive of a neighborhood that stood in greater need of the advantages which the Grange is capable of furnishing than San Lucas.

Brothers and sisters of our noble Order, be of good cheer. Another link has been added to the golden chain that shall bind together in common interest the tillers of the soil. San Lucas Grange is planted in good soil. F. B. L.

[We hope Bro. Past Master J. V. Webster of Creston, San Luis Obispo county, will take a neighborly interest in this Grange. Would advise Bro. Griswold to correspond and invite Bro. Webster to come and instruct a class say of a dozen or so, or as many good applicants as can soon be secured for the degrees.—EDS.]

Death of Mrs. S. E. Walton.

Sister Sarah E. Walton, wife of Bro. B. F. Walton of Yuba City, died at her home on Tuesday, January 29th. Sister Walton had been in feeble health nearly a year, during which time the best medical skill obtainable was employed, and together with her husband and family the summer months were spent in the Eastern States, with a hope that a change of climate and scenery would restore her to her usual health; and no doubt to this and the most tender, indulgent and careful nursing is due her prolonged existence.

Mrs. Walton was a member of the California State Grange and a charter member of Yuba City Grange, where she held many positions of honor and usefulness. Members of the Grange throughout the State will sympathize with Bro. Walton and his children in their affliction.

The funeral took place Thursday, January 31, and was attended by a large concourse of sympathizing friends.

Roseville Grange.

MESSRS. EDITORS:—Our Grange had a splendid meeting on the 2d inst., about 40 members being present. We had an interesting time from 2 to 5 P. M., and many things of interest to the Grange are announced for future meetings. We are going to have a library. A good program is prepared for our next meeting for the Good of the Order, and we have many more things in contemplation to keep up the interest.

We will have a good program laid out each meeting for the next session. We propose to be up with the times and keep the interest up if possible, so that we will always have a full attendance.

We hope and believe that Roseville

Grange has started out to do good for each member, and that its membership will soon be much larger than now. We will let you hear from us from time to time, and assure you that we are no "dormant Grange." Roseville, Feb. 4. E. L. H.

From the Worthy Overseer.

MESSRS. EDITORS:—For several months it has not been my privilege to do any active work for the Grange, the reason for which is well known to many members of the Order. Although unable to work, I have not been unable to read the Patron and the PRESS every week, nor have my love for and interest in the principles of the Grange been at all depressed. It matters not much where a true Patron is, the teachings of the ritual stay by him. Though the sign of recognition be not answered and the sign of distress goes unheeded, because no Patrons are to be found, there yet remains the thought that faith in God, hope of immortality, charity to all that live, and fidelity to self and humanity, do not go unrewarded. Those of us who believe, and practice, that "to be honest, to be just and fear not" are valuable hints to a successful and happy life may find many, though not so many, opportunities to be good Patrons in Arizona as in California.

I read with unabated interest the reports of Grange meetings in the Patron and in the PRESS. If the officers, especially Secretaries, of subordinate Granges, knew how much interest there is taken in their Granges by those members of the Order who have no other means of getting Grange news than through the newspapers—and there is no better means—I am sure we should know more about the subordinate Granges of California. Now that a new year has just fairly begun and most of the new officers are duly installed, it seems to me proper that each subordinate Grange should report at least once a month through the Grange press. To that end this suggestion is made: Let the following resolution be passed by every subordinate Grange under the jurisdiction of the California State Grange:

Resolved, That the Secretary of this Grange is hereby instructed to report in writing, as often as once each month, to the Secretary of the State Grange, all local Grange and agricultural news to which the reading public is entitled.

No member of the Grange should be unwilling to do that much work for the good of the Order. And it will do the Order great good if such work is done.

While on this subject another thought suggests itself, viz.: Why don't the great dailies of San Francisco, in their weekly reviews of fraternal societies, give some attention to the Order of Patrons of Husbandry? Don't their editors know anything about the Grange, or don't they care? It is for me to tell them that the farmers of California are readers; and among the most careful and scrutinizing farmer-readers are Patrons of Husbandry, or, as they are generally called, "Grangers." Let the editor of the "Fraternal World" in the San Francisco dailies bestir himself in behalf of the Grange; if not, he will be left, for somebody else will. The Grange is coming to the front again sure, and this time to stay more permanently than ever before. The principles of the Order, like the famous ghost, "will not down." As long as honest men and pure women till the soil; as long as education elevates; as long as labor is rewarded; as long as freedom is enjoyed on earth, so long will the Grange live, and, we pray, flourish as the green bay tree.

One word more and I have done: The spring is almost upon us. This is the season when all nature rebuilds with new material. The animal world vies with the vegetable in donning a new suit. This then is the time for the Grange to rebuild. Let the young and the old join in this pleasant task of rebuilding the "House of the Grange." Picnics, reunions, celebrations, dedications, concerts, festivals and open meetings ought to be held. Don't weary with long speeches; short ones are better. Variety is the spice of life; therefore have a number of limited-as-to-time speakers. Have song, recitation, etc., and by all means have something to eat. The Grange is, geographically, pretty well represented by its State officers. Let them organize the work in their respective sections, and then call for assistance if any is needed. Plenty of good work and some success can thus be obtained without much expense. I hope to be able to join in the charge on the enemy before many months. That the roll-call at Sacramento next October will show a hundred or more subordinate Granges, is the sincere wish of an earnest, humble Patron. E. W. DAVIS.

Yuma, Arizona, Feb. 1, 1889.

OREGON has a new Grange, No. 222, in Wasco county.

Discouraging to Gamblers.

Assembly bill No. 313, introduced by Mr. Ostrom, Jan. 23d, and referred to the Committee on Agriculture, proposes to amend "an Act to form agricultural districts, to provide for the organization of agricultural associations therein, and for the management and control of the same by the State," passed April 15, 1880, by adding to said Act two new sections, to be numbered respectively 17a and 17b, as follows:

SEC. 17a. The moneys which shall be annually appropriated by the Legislature of this State, for the use of the several societies organized under this Act, shall not be drawn from the Treasury of the State until the close of the annual fair of the district making application for the money, and then only on filing with the Controller of State an affidavit of all the Directors of the associations so applying, substantially in the following form:

STATE OF CALIFORNIA,)
COUNTY OF _____)

(Here insert the names of the directors), being duly sworn, each for himself says: That he is, and during the annual fair of the Agricultural Association organized for district number _____, was a director of said organization. That no gambling was allowed on any of the grounds or in any of the buildings under the management or control of the Board of Directors of said association (other than pool-selling) during said fair, with the knowledge of affiant, and that special pains were taken by the Board of Directors to prevent such gambling.

SEC. 17b. The Board of Directors of each society organized under this Act shall divide the business of their associations respectively into two departments—one to be known as the Stock Department, and the other to be known as the Agricultural and Horticultural Department. And all moneys which shall come into the hands of the Board of Directors for disposition, over and above the salaries of employees and expenses necessarily attending the management of the business of said society, shall be equally divided; one-half to be by the Board of Directors respectively disbursed to the exhibitors in the Stock Department, and the other half to the exhibitors of the Agricultural and Horticultural Department.

Bill No. 314, introduced at same time, would make similar additions to the Act to provide for the management and control of the State Agricultural Society, passed April 15, 1880.

A bill is also before the Legislature to restrict book-making or pool-selling "upon the result of any trial or contest of skill, speed or power of endurance between horses, or between men, or upon the result of any pastime, lot, or hazard," to the race-track, building or other place within whose limits such trial, contest, lot or pastime is to take place or be had, and making violation of its provisions punishable by imprisonment in the county jail for six months and a fine of \$500.

Grange Officers Installed.

ELK GROVE.—E. W. Stickney, M.; D. Gage, O.; Dr. I. Caples, L.; J. D. Hill, S.; Wm. Bader, A. S.; Mrs. M. Caples, C.; F. Stelter, T.; Geo. S. Williamson, Sec.; L. Behlmeier, G. K.; Mrs. Katie Lewis, Ceres; Mrs. Williams, P.; Miss Carrie Carr, F.; Mrs. J. D. Hill, L. A. S.; Miss Happy Foster, Org't.

VALLEY GRANGE.—G. T. Loucks, M.; C. T. McClellan, O.; W. H. Billings, L.; J. Lieber, S.; J. R. Minaker, A. S.; Sister Minaker, C.; E. A. Majors, Sec.; E. W. Williams, T.; B. F. Bebee, G. K.; Sister Williams, F.; Sister Bebee, P.; Sister Billings, Ceres; Jennie B. Loucks, L. A. S.

SALINAS GRANGE.—W. J. Hill, M.; Wm. Robson, O.; Geo. Abbott, L.; Wm. King, S.; W. F. Treat, A. S.; U. Hartnell, C.; Ira Tucker, Treas.; O. A. W. Schuchard, Sec.; Geo. Hunter, G. K.; Mrs. M. Williams, Pomona; Miss V. Archer, Flora; Mrs. S. B. Treat, Ceres; Miss A. E. Williams, L. A. S.

Temperance Colony Notes.

EDITORS PRESS:—The weather is delightful, crop prospects hopeful, and in the union of the Patron and RURAL we are favored as well as thankful, for by referring to these periodicals, we gain the knowledge requisite to our worldly advancement. Looking upon the paper as a special exponent of our fruit interests, we turn to its pages for correct reports, good advice and expressed sentiments of the experienced upon various subjects. A neighbor states they would have lost a valuable cow had it not been for reference to the RURAL PRESS.

Canvassing the question of the fruit-pest law, I find it meets the approval of those interested in fruit-raising in this community, who deem it a wise provision that the powers are vested in the Board of Supervisors, and think that an ordinance against bugs similar to the one passed by the Pomona City Council, will be welcomed.

Nurserymen report their stock of fruit trees well-nigh exhausted, and it seems that rigid sanitary measures must be enforced to protect the coming fruit interests. Our vineyards are as yet healthy and not in any apparent danger of the "mysterious vine disease." A. L. A. Fresno, Jan. 30, 1889.

Worthy Master Carr at Tulare.

Good Plain Grange Talk.

DEAR BROTHER DEWEY:—The Grange met on Saturday and indorsed the steps taken to receive Bro. Carr. A report was read by Sister Nettie Merritt on the steps necessary to establish a co-operative creamery. The report is not sufficiently complete for presentation to the readers of the RURAL PRESS, and in the meantime I know suggestions on the matter by any of your contributors will be gratefully received. It is a subject deserving serious attention, as it is in the direction of labor-saving to overworked farmers' wives. Would not a co-operative laundry be also a good thing to agitate, now that the "heathen Chinese" are going? Washing and ironing are quite an item in household duties.

A petition ordered by the Grange is now receiving signatures asking the aid and assistance of the State in establishing a thorough system of irrigation by water-storage, etc. It is in reality an indorsement of Gov. Waterman's letter published in last week's RURAL PRESS.

Each Grange should prepare a similar petition and press the matter on the attention of the Legislature assembled. A special session for the due and sole consideration of the irrigation question would, I think, be an act of wisdom. It is the most important question in the interest of the State.

Reception of Wisconsin's Master.

On Monday the Grange Committee met Bro. S. C. Carr, Master of Wisconsin State Grange, with Bro. and Sister Nelson Carr at the Cosmopolitan hotel, all looking hearty and in good condition for interesting Patrons of Husbandry.

After a pleasant chat we again met at Library hall. We had a fair audience, but not as large as might have been, owing probably to the busy season of the year, which we very much regret.

An Eloquent and Eminent Address.

After music by the choir Bro. Carr was introduced by W. M. Bro. Moore, our honored guest of California, who then gave briefly a sketch of the origin of the Grange, showing that its success has been largely owing to obtaining the assistance and the co-operation of the sisters. He eloquently described the rise and progress of the Grange in New England, the education of its members and the advancement of their general intelligence. The Interstate Commerce law owes its origin and existence to a Granger—W. W. Adams. Such actions have made the name of a Granger respectable, commanding the respect of even newspaper reporters. Many of the grand things for the benefit of the entire country which can be traced to Grange action was told, and a general invitation was given to all to join that army of workers. He spoke of the ineffectual union of universities and agricultural colleges, that they could no more work together than oil can mix with water. Agricultural schools must be independent and purely agricultural, and he gave various schools and institutions as object-lessons of proof; and the Grangers ask that their sons and daughters can have colleges where they can be taught and educated in horticultural and agricultural pursuits, and come out finished and ready to engage in farming intelligently. He then showed by statistics that the genius of business and those who control the action of the whole country were born and raised on a farm. Still, farmers are not represented in Congress, nor in the Senate, there not being one farmer in the Senate.

On an agricultural committee there were appointed five lawyers, four merchants, two bankers, three farmers, one planter and one of no occupation—men who mostly could not tell a beet from a head of cabbage. So we must send millionaires to make laws for us—men who care no more for farmers than to raise wheat to send over their railroad lines. In our criminal institutions only a very small per cent comes from the farm. The Grange then is an excellent place for the young as well as the old, being an excellent school for morals and general education.

It would be impossible to give all the brilliant points made by Bro. Carr, and all who are going to hear him will have a rare treat, and hope that larger audiences await him than he addressed here, and we feel thankful to Bro. Dewey for the treat.

Rev. Mr. Williams followed in a few pleasant remarks confirmatory of what had been said, and a few very cutting and timely sentences on the cold rule of supply and demand. Then the choir discoursed excellent music.

Bro. Nelson Carr had never regretted being a Granger ever since a Grange was instituted in his county, and through its instrumentality has made his most pleasant acquaintances. Sister Carr regretted not being able to have attended the State Grange at Tulare, on account of sickness; that she never permitted anything or anybody to prevent her attendance on Grange meetings.

Bro. I. N. Wright followed, and among other instructive ideas quoted from the Lecturer of National Grange, that \$100,000 was lost by farmers every year by producing a surplus of wheat, and the nation paid to foreign countries, for sugar, \$100,000—showing that we ought to produce more sugar and raise less wheat.

The writer said a few words, followed by Bro. Toohy, Sister Maples, Sister Stella A. Merritt, Sister Hawkins, Mr. E. M. Dewey, Bro. S. Fowler, who spoke in his usual energetic,

characteristic style, delivering home truths with home thrusts. He called attention to the petition already mentioned and obtained many signatures. J. W. MACKIE.

The Insurance "Trust" Worried.

The Sacramento correspondent of the *Chronicle* says that the Mutual Insurance bills are giving the "trust" lobbyists much concern. On the 1st inst. an attempt was made to set back Senator McGowan's Township Insurance bill which has got through the Senate Committee on Corporations and reached the second-reading file. Wilson of San Francisco moved that the bill be recommitted to the Judiciary Committee, which is accredited with much ability to hold a tenacious grip on bills aimed at the privileges of rich and grasping monopolies. Senator McGowan made a most vigorous fight for his bill, and berated the insurance lobbyists in a manner which must have been highly interesting to these fat and prosperous-looking persons as they glared over the Senate railing at him. The Committee on Corporations, McGowan said, had given the subject of mutual insurance long and serious consideration, and reported his bill back favorably. It had been shown that the best elements of the business and agricultural communities demanded the right to form mutual insurance companies and thus escape the impositions of the insurance trust. "To now wrest it from the control of the committee," he said, "would be nothing less than an insult to the members of the committee. We are told that the insurance gentlemen from San Francisco desire a hearing. The bill has been frequently commented upon, its features explained, and are there not members on this floor who will care for the insurance gentlemen from San Francisco, called by those who know them best insurance thugs? The reason of this opposition is that the bill referred to is a plan for cheap and safe insurance, and will be a formidable obstacle in the way of the stock companies that are now managed by the 'insurance gentlemen from San Francisco,' systematically robbing the people. The insurance-men had better withdraw their opposition to this bill, if not they will find a very stubborn and disagreeable opposition to the nefarious schemes by which they are now conducting insurance business. This opposition will come in all events, but their opposition to this bill is only adding an intensified opposition to the plans of the 'insurance gentlemen from San Francisco.'"

The result of McGowan's vigorous opposition was that the Senate by a vote of 14 yeas to 24 nays refused to recommend the Township Mutual Insurance bill to the Judiciary Committee, so that it still stands on the second-reading file of the Senate.

A Useless Debris Dam.

Engineers C. E. Grunsky and L. F. Bassett have presented reports to the Sacramento supervisors concerning visits of inspection they made, by order of the board, to a restraining dam on Bear river, constructed by the Liberty Hill Mining Co., at a point near Dutch Flat, about 1000 feet below the mouth of Little Bear river.

Engineer Bassett, in his report, says: "The utility of the dam as a work for restraining the flow of mining debris, I found to be practically at an end, as the reservoir, caused by the construction of the dam, is filled with mining debris to a level with the outlet or bottom of the waste way. In fact, very coarse sand could be seen rolling along in the bottom of the water flowing through the waste way and being discharged into the river below the dam; and this, notwithstanding the volume of water flowing at the time was small, in fact, a minimum winter discharge. During time of storms, with a large volume of water flowing through the waste way, there must, necessarily, be a large discharge of the old mining tailings lodged in the canyon above the dam through the waste way."

"At the time the dam was constructed it was represented that the reservoir capacity created thereby would be sufficient to hold the tailings from the Liberty Hill mine for a long period—one engineer estimating the time at eight years' continuous running of the mine and another at 20 years. The mine was operated only a few weeks after this dam was constructed; but three years have elapsed since that time, and yet the dam is already filled to overflowing—the washing down of the old tailings lodged in the canyons during the operations of the mine in the years preceding the construction of the dam having alone been sufficient to effect the result. Had the mine continued in operation, the complete filling of the reservoir would undoubtedly have resulted in a few months, as the tendency is for the filling to take place back from the dam nearly on a level, after which only the coarser portion of the mining debris is restrained."

Bassett further states that he has twice visited the Liberty Hill mine, and seen it in operation, examined the banks, and is of the opinion that fully 80 per cent of the material handled in working the mine reaches the river.

Engineer Grunsky gives an exhaustive description of the dam and of the material of which it is formed. He agrees that the storage capacity of the reservoir is already exhausted. The reports are sworn to, and will be sent to the U. S. Debris Commissioners, now sitting in San Francisco. —*Marystown Appeal*.

Practical Education and Temescal Grange.

Bro. C. J. Cressey was present from San Jose Grange last Saturday evening, and of course Temescal Grange had an unusually lively session.

Bro. Dewey stated that he thought Bro. Carr, Master of Wisconsin State Grange, together with his brother, Nelson Carr, and wife, would be able to reach Oakland after the Worthy Master's reception at San Jose on Saturday evening, Feb. 9th. In anticipation of such an event, Temescal Grange voted to hold a special meeting at the residence of Sister Mary S. Smith, 1325 Chestnut street, near Adeline station, on the broad-gauge railway, Oakland, at 7:30 o'clock, to which the members of Eden Grange, the Contra Costa county Grangers and all adjoining Patrons are invited.

[Since the meeting was held, word has been received from Master Carr stating that on account of Dr. E. S. Carr's condition, he must leave on the 9:30 train for Pasadena. We trust his reception, however, will be as pleasant as it must be brief.]

The report of Sister Dewey, Lecturer, on the annual program, was discussed and adopted the same as published in our columns last week.

Two applicants were elected to receive degrees at the next regular meeting.

Practical Education, Cooking, Etc.

This being the subject named for discussion, Sister Smith being called upon to favor the Grange, induced Bro. C. J. Cressey, from San Jose Grange, to take the floor. He was always glad to meet with the old laborers in Temescal Grange. It was his early Grange home. His children grew up in Oakland, and now the meeting of those who were mere children with his children, grown up in the Grange, admonished him of the flight of time, and how we are all "older grown" together. He was glad to meet and greet them and encourage them in their work with the older heads present.

It was during his residence in Oakland that he did the hardest and best work of his life, fighting, with others, for the farmers' rights against the grain and freight rings and big combinations which had always successfully fleeced the farmers until, by the combined action and capital of farmers in the establishment of the Grangers' bank, they were able to demand a fair deal and enforce it. Up to that time, grain-producers had been taken one by one and submitted to the squeezing process by Friedlander and his associates, year after year. Now, by the aid of combined capital in the Grangers' bank, farmers were enabled to withhold their grain from sacrifice by rates of interest that would justify such action. Such work was practical education to the farmers of California.

As to cooking, between ranching and camping he had learned the rapid process. By long experience he could make flapjacks to a turn, and had used flapjacks until they had become anything but a healthy diet. Too many of our children are brought up without learning even to cook flapjacks. We are bound to give our children a scientific education. This they ought to have. But it proves of little use unless they have a practical education also. The Grange is a practical educator. His money and time had been well spent in the Grange. For a lack of better education in youth, he was obliged to be a post-hole digger still. He loved the Grange and was glad to see evidences of its renewed prosperity, and desired, during the present year especially, to help move the Order along that we may have a good report to render from all quarters at the next annual meeting at Sacramento.

He would like to hear the sisters' opinion on practical cooking. He had become tired in batching and camping with the flapjacks and other hastily prepared and ordinarily indigestible food. He, however, just thought of one dish, new to him, a preparation which he could recommend the sisters to try for a hasty meal, made as follows: Sliced-up potatoes, sliced onions, with sliced bacon and water, all duly seasoned with pepper and salt. Place in a frying-pan over a hot fire with a cover, and you will have a splendid dish at short meter, and one that will stand by a workingman or loafing camper.

Bro. Cressey was glad in anticipation of meeting Bro. Carr, Worthy Master of Wisconsin Grange, at San Jose, and extended a hearty invitation for all Patrons to come and attend the Harvest Feast, as well as literary and social exercises. He was happy to say that San Jose Grange was waking up, the rusty ballot-box was getting brightened up some in San Jose as well as in Temescal Grange.

The Order affords the only true protection that the farmer has. Let each one help to cultivate it for our own and our children's sakes. Demand our rights with zeal and in true spirit and we will get them. We need to go to the market begging buyers to give us decent prices in single file, and were always slaughtered, one by one. We must, in a body, demand our rights to secure a hand in establishing prices.

If the facts were all known, the Grange has done a great deal to help its members and to elevate their condition, young and old. It ought to have done more; it must do more in the future. Thankful for what we have accomplished, let us keep on and do better for our own and our children's sakes.

Bro. Dewey gave a reminiscence of the State

Farmers' Union which met in San Francisco in 1873, when an Executive Committee was appointed for the purpose of considering the project of organizing a co-operative business association. A great deal of talking had been done by different individuals, all seeming earnest in the cause of the farmers. There was no lack of good talk, but after the business was all through, and the Executive Committee appointed, a tall man, commanding in figure, who had been silent during the session, rose, and by his earnest, telling words, showed that he had been a good listener and thinker, and there and then made the most impressive speech of the entire meeting. Impressed with the sincerity and practical views of the plain talker, the acquaintance of Bro. Cressey was sought and made with pleasure by the speaker, who was gratified to say that the opinion then formed of the father of the Grangers' bank was an unmitigated one, for the history of the Grange movement will have to accord to Bro. Cressey a hard-earned and well-earned reputation.

Sister Mary Smith of Yuba City Grange followed with some excellent remarks, proving the practicability of Grange education through personal experience. Having 30 acres of land plowed in Sutter county for planting trees, she made inquiry at the Grange meeting in regard to the culture of almonds and other fruits. From information thereby secured she had, with much satisfaction, planted both almonds and Adriatic figs, and did not fear any world's overproduction in either crop. She proposed to write domestic receipts for the RURAL PRESS and other journals, recommending plenty of almonds and dried figs for cakes, puddings, etc.

Bro. Cressey responded that he did not take any stock in the cry of over-production in good fruits in California. He remembered the time when grain was first raised in California and that when there was more wheat produced than Sperry's mill at Stockton could grind, croakers began to whine and fear over-production. But wheat, like gold, is of standard value. The world wanted it and would have it, and it would always draw the gold coin from the vaults of London banks at any time.

Worthy Master Goodenough thought perhaps he should have asked the Worthy Lecturer to define more fully what she meant by practical education. Practical education did not apply to hand work alone. In the late war some generals in command of 50,000 men were unable to place more than one-half that number to advantage on the battle-field. They lacked the practical education to utilize the whole 50,000 by proper placement in the lines. The education that makes men and women really successful must be practical. A sharp lawyer may not be a successful man. Practical education is that which makes well-rounded-up men and well-finished lives.

Bro. Cressey claimed that the Grange was the best of all institutions to make practical men and well-rounded-up lives of men and women. Sister Frink and Sister Dewey spoke briefly. Sister Dewey thought that children should have more time in which to receive their education, and more safeguards should be thrown around their school days to prevent injury to their health.

Bro. Goodenough thought that Senator Stanford was making a practical and noble effort to advance practical education in our State. Bro. Cressey indorsed this sentiment heartily, having recently visited the Leland Stanford, Jr., University grounds, where the solid buildings were being erected. He believed that the dealings of Senator Stanford with workingmen in his railroad and building enterprises had thoroughly impressed him with the necessity of a practical education, and had caused him to study well plans for bringing about a more practical system for obtaining practical education.

Sister Smith, in inviting the Grange to meet at her home, expressed herself very strongly in favor of extending the Grange influence and Grange meetings socially, both by Granges singly and co-operatively, saying that she had never regretted her attendance at her own Grange or at any Granges she had had the privilege of visiting in her many years of Grange membership.

Bro. Cressey, remembering the scenes of his early Grange trials and social Grange pleasures while in Oakland, desiring to keep up a warm friendship and acquaintanceship with all its members and to the gratification of the Grange expressed his determination to visit Temescal Grange frequently.

Who Calls First?

The Worthy Master of the State Grange offers as a premium a set of the combined ritual to the first Grange in this State which gets up a class of ten, consisting of men and women, and will also see that some officer of the State Grange is in attendance at the meeting to confer the Third and Fourth Degrees.

MORE GOOD NEWS.—Bro. F. B. Logan writes that Gilroy Grange will be reorganized on Thursday, Feb. 7th, meeting at 2 o'clock P. M.

WORTHY MASTER J. H. BRIGHAM has appointed Bro. John Trimble, Secretary of the National Grange, to represent the legislative interests of the Order before Congress.

Eschscholtzia.

[Written for the Rural Press by M. B. CULVER.]

Unfold your gold, unfold, unfold,
O poppy buds, so tightly rolled.
Doff your green cap, your dancing-cap,
And toss it on the Earth's green lap.
Shake all your silken tresses free
And call the butterfly and bee.
On green hillside your gold display,
Fresh-coined from Nature's mint each day.
Hebe ne'er bore a lovelier cup
Than you on slender stem hold up.
Graven and chased by Hand Divine,
All shimmering amber—satin-fine.
A drink from you shall never cloy,
Sardonyx chalices filled with joy.
From filtered sunshine and from dew,
And the bright air that birds flit through,
All redolent with flower-scents fine,
Nature's elixir—Summer's shine.
Come then, bright visions, come and stay,
We love you so—Eschscholtziae.

Calistoga, Jan., 1889.

Beautiful Hands

Such beautiful, beautiful hands!
They're neither white nor small;
And you, I know, would scarcely think
That they were fair at all.
I've looked on hands whose form and hue
A sculptor's dream might be;
Yet are these aged wrinkled hands
Most beautiful to me.
Such beautiful, beautiful hands!
Though heart was weary and sad,
These patient hands kept toiling on,
That the children might be glad.
I almost weep, as looking back
To childhood's distant day,
I think how these hands rested not
When mine were at their play.
Such beautiful, beautiful hands!
They're growing feeble now,
For time and pain have left their mark
On hand and heart and brow.
Alas, alas! the nearing time,
And the sad, sad day to me,
When 'neath the daisies out of sight
These hands will folded be.
But oh! beyond this shadow-land,
Where all is bright and fair,
I know full well these dear old hands
Will palms of victory bear.
Where crystal streams through endless years
Flow over golden sands,
And where the old grow young again,
I'll clasp my mother's hands.

—Selected.

The Reedstown Postmistress.

[Written for the Rural Press by I. H.]

It was a decided innovation, a woman in charge of the postoffice at Reedstown; and sundry wise people in the little country village gravely shook their heads and prophesied all manner of irregularities. But to Margaret Anderson it seemed that the dispatching of a single mail-bag in the morning, the distributing of the letters and papers of the small community in the afternoon, scarcely required the strength of an able-bodied man or the wisdom of a Solomon.

So when a new administration came in, and it was beyond a doubt that the old postmaster would receive no reappointment (he being, as was well known, a partisan politician on the other side), she took counsel of no one, but quietly wrote a letter to an old friend of her father's who stood high in the confidence of the new regime and asked for the place. Then she told her mother: "It is not for the honor and glory, but I want the salary. It would be a wonderful help in these hard times," she said; "perhaps we might save enough to send Kitty to the Normal School."

Mrs. Anderson was a widow with two daughters—Margaret, aged twenty-three, and Kitty, six years younger. Their father had died when the two girls were mere children, leaving to his family a moderate competence. In an evil hour the widow had listened to the counsels of an ill-advised friend and had invested part of her capital in certain mining stocks which were said to promise well. The promise was never fulfilled, the friend came to utter ruin, and Mrs. Anderson found to her grief that instead of doubling her income she had diminished it by one-half. Life was a struggle after that, and the wear and tear of the constant efforts to make two ends meet told upon her health and spirits as the years rolled on.

Of late, Margaret had added a little to the family treasury by teaching music, but she had found that a very uncertain dependence. If

she could get the postoffice, there would be a fixed sum to count upon for four years to come. After that—but of her own private hopes and dreams this is not the time to speak.

There followed the usual delay, days and weeks of eager expectation, then of doubt and dependency; and at last, when the matter had ceased to be uppermost in her thoughts, the appointment came and Margaret Anderson was postmistress at Reedstown, California.

Like her mother, she had a certain self-restraint and equipoise which were seldom shaken, but Kitty was her very opposite in character and disposition, and when the news was received she was wild with excitement.

"Oh, what fun! To get the letters first and know who they are all for and where they come from! I'll help you with them; two pairs of hands will make quicker work."

"The postmistress is a mere machine," said her sister. "She is to see and know nothing beyond the simple address."

"Very fine in theory, but impossible in practice," retorted Kitty the irrepressible. "You'll see what romances I will weave out of those same addresses."

But after all, she was very good. Now and then she would take her sister's place for an hour; when the mail was unusually heavy she would assist in its distribution, and no one could find fault with her behavior. Even the young men of the village, to whom pretty, mirth-loving Kitty was very attractive, found that she was a different person behind the letter-boxes and ceased to offer her any attention there.

To Margaret in her official capacity there came of course a large amount of mail-matter, the greater part rubbish—advertisements of trashy goods which any one could realize a fortune by selling, offers of agencies for everything from a thrashing machine to a paper of needles. These were glanced at and consigned to the waste-basket. But one day a letter addressed to the postmaster at Reedstown caused her first to frown and then to laugh as she read it at home in the parlor after tea.

"Just listen to this," she said. "The postmaster at Reedstown will confer a great favor upon the writer if he will inform him whether letters in the handwriting inclosed are regularly mailed at his postoffice." What do you suppose is the meaning of that?"

"Some one in search of a missing friend has an idea that he or she is in this neighborhood," Mrs. Anderson suggested.

"A detective, perhaps!" exclaimed Kitty. "The postoffice begins to be interesting. Let's see the specimen of handwriting."

But Margaret replaced it in the envelope.

"If I do, you will be playing the spy," she said, half in fun, half in earnest.

"O Margaret!" remonstrated Kitty, "I think you are too bad."

"Margaret is right," said her mother; "it is no part of her duty to furnish such information."

"Won't you answer it, then?" asked Kitty.

"No; I think not."

"I would. I'd tell him just what I thought of his impertinence." For Kitty had the easiest way at times of adopting any opinion expressed by her mother or sister.

Margaret said nothing more; she dropped the bit of paper into the fire, the letter into the basket beside her, and dismissed the matter from her mind.

Not so did Kitty. Her curiosity was excited, and the next day, when she was alone in the sitting-room, she took the letter out of the basket, opened and read it.

"I have a great mind to answer it myself."

There was a spice of mischief in the thought she could not resist. She took a sheet of paper and wrote: "The postmistress at Reedstown is neither a spy nor a detective." Then she inclosed it in an envelope and addressed it as directed in the mysterious letter.

How to mail it was the next question. She carried it in her pocket for three days before the opportunity came. On the fourth morning, as Margaret was making up the mail, she was called away to weigh a parcel.

"Stamp those letters for me, Kitty," she said, and with them Kitty slipped her own letter into the bag, feeling a little nervous and guilty as she did so.

She thought the matter ended there; but she was mistaken. Ten days passed, and then came another letter to the postmistress at Reedstown. The handwriting outside was of that of the former letter, but inside it was; and these were the words that Margaret read with strong surprise: "The postmistress at Reedstown little knows the cruel pain she has inflicted on a distressed brother by her reply to his anxious inquiry."

What could he mean? Light suddenly flashed upon her; this was Kitty's doing!

Of course that erratic damsel made full confession when questioned, but could not be made to see the enormity of her conduct, though her mother and Margaret expressed themselves in stronger terms of reprobation than she had heard for many a day.

The worst feature of the affair was that there was nothing to be done but to try to forget it, and to hope that no evil consequences might follow. And, indeed, both Mrs. Anderson and her elder daughter were a little inclined to share Kitty's emphatically expressed opinion that the "cruel pain" was probably put in for effect.

A whole month had slipped away, and the annoying incident had been almost forgotten, when it was recalled to Margaret's mind in this

manner: She was alone in the postoffice in the afternoon; the rush of applicants for the mail had come and gone, and she was waiting for six o'clock to set her free, when a gentleman entered, evidently a stranger.

"Are you the postmistress?" he asked.

"I am," said Margaret.

"Then—" (and there was a smile of amusement lurking about the corners of his mouth as he said it) "I have been commissioned to deliver a message of apology. I presume this is your handwriting?"

He held out Kitty's unlucky letter.

"No," said Margaret, "it is not," and her face was covered with blushes. "That letter was written without my knowledge and very much to my regret."

Her confusion and annoyance were so evident that the stranger altered his tone immediately.

"I am very sorry if I have given you pain," he said. "I thought it probable that you would see the ridiculous side of the matter and feel interested in the denouement, or I should not have accepted the office of apologist. Perhaps you will not think it such a serious business if you will allow me to explain."

"Oh, thank you," said Margaret; "you are very kind. I shall be glad to hear the explanation." She felt a little ashamed of having shown so much feeling to an entire stranger.

"It is not a very long story. The letter to which this was the reply was written by a young fellow whom I chanced to meet under rather trying circumstances—a railroad accident, where he was seriously injured, and I, sitting beside him, escaped unhurt. He was laid up for some time, and it soon became evident that his state of mental anxiety retarded his recovery. For want of a better confidant he unbosomed himself to me. I will shorten the details as much as possible. A brutal and despotic father had made his home so hateful to him that he ran away years ago, leaving his only sister to the tender mercies of the old man. She, too, found her position unbearable and left him, but not until he had almost broken her heart, as he had tried to break her spirit, by a false report of her brother's death. Lately the father died, having made no will, and leaving considerable property. By accident the son saw an advertisement for the heirs and returned, but to his great grief could learn nothing of his sister, so effectually had she concealed her movements. He had no hope of finding her under her own name, and all his advertisements failed to bring an answer. At last he found a clue by the merest accident; he picked up in the street a newspaper envelope addressed in a hand which was unmistakably hers, and the postmark was 'Reedstown, Cal.'"

The next day he was on his way to find her; but unhappily he met with the accident and detention I have spoken of. He had sent his letter to you before he told me his story, and was waiting for the answer in a fever of impatience. When it arrived I would have told him he was rightly served but for his evident distress. He told me afterward of his second letter, which of course was of a piece with the whole affair. He was really so ill that he was obliged to coax the doctor to address it; he was afraid to ask me. However, it all ended happily. He recovered, persuaded me to come with him to conduct the search, which I did, as I liked the boy and saw he needed some one to save him from acts of absurdity. He found his sister after a few quiet inquiries. She was acting as governess in the family of a Mr. Coates, some fifteen miles from here, I believe, and this morning he took her with him on their way back to the East. That is the whole of it; but he felt that you—or rather that the writer of the letter—deserved an explanation and apology at his hands and begged me to come and see you."

"Oh!" exclaimed Margaret, "I am so glad. I have been so vexed about it. It is quite a relief to know that no harm was done. Thank you very much indeed," and she smiled brightly, with an odd little trick she had of elevating her eyebrows at the same time. It was an inherited peculiarity. Her father had had the same habit; perhaps for that reason Mrs. Anderson had never attempted to check it when she was a child. Now it was as much a part of Margaret as were her dark-gray eyes, also like her father's, and both were dear to her mother's heart.

The stranger looked at her for a moment intently. Just then a young girl rode up to the postoffice door.

"O Miss Anderson!" she called, "won't you please give me my mail? My pony's so fractious to-day I can't leave her a moment."

"I'll bring it," said Margaret, and she went out with a handful of letters. Her new acquaintance waited for her return.

"Excuse me," he said, "if I am taking a liberty, but just now your face seemed to me strangely familiar and your name makes me venture to ask the question, can it be that you are the daughter of my old friend, Charles Anderson?"

"That was my father's name," Margaret answered, "and I am said to be very like him."

"And your mother was Margaret Lewis of Eastville, Vermont?"

"Yes," said Margaret in surprise.

"You may have heard her speak of Tom Archer—"

"Indeed I have," and the girl held out her hand. "I am very glad to meet you, and my mother will be, too. We live just across the street in that small cottage at the corner."

"I will have the honor of calling upon her

this evening," said Mr. Archer, and he took leave.

There was quite a flutter of excitement when Margaret went home and told her story. Kitty clapped her hands with delight that her escapade should have so pleasant an ending.

Often and often had Mrs. Anderson spoken to her daughters of Tom Archer, their father's early friend and favorite companion—of his merry pranks and joyous disposition, of the fair young girl he had won for his bride, Kitty Carter, the belle of the village, whose beauty was equaled by her loveliness of character. The sad sequel had been also told—how she had died in England within a year of their marriage, leaving her husband heart-broken for her loss. He had not returned to his early home, but had been a wanderer in foreign lands ever after. To Kitty, who had been named in memory of the young wife, it was all like a romance. Now she was to see the hero.

(To be Concluded.)

Working Women in San Francisco.

A dispatch from Washington states that Carroll D. Wright, Commissioner of Labor, has submitted his Fourth Annual Report to the Secretary of the Interior. Its subject is the "Working Women in the Great Cities." The report comprehends 342 distinct industries in 22 different cities. It does not embrace facts in relation to the employment of women engaged in the higher pursuits, such as teaching, typewriting, etc., nor those who are engaged in the lowest forms of labor and live in the slums of the great cities. Most of the facts in the report have been collected by women, excepting the investigation in California and the collecting of statistics relating to feminine depravity. The average weekly earnings of working women range from \$4.05 in Atlanta, Ga., to \$6.91 in San Francisco. The average of all the cities is \$5.24. In San Jose the average is \$6.11.

In speaking of the industrial conditions in San Francisco, the Commissioner says: "The presence of the Chinese has had a considerable effect upon the industrial condition of the San Francisco working women. For a number of years it has been the custom to employ Chinese as house servants almost exclusively. Since the Restriction Act has lessened the supply of Chinese, the San Francisco housewives have attempted to get white girls to do their housework. To get them is very difficult. House service has so long been the special field of the Chinese that the white girls think there is something degrading in the work. Some girls who refuse house service will perhaps accept work in a cigar factory, which, although employing Chinese, is not pre-eminently a Chinese field of labor."

"The fruit canneries of San Francisco afford temporary employment to a large number of women and girls. During the season, which lasts from June 1st to the latter part of August, these canneries employ hundreds of girls. The rest of the year the cannery girls go to school, engage in domestic service or stay at home. In the canneries of San Jose, Oakland and other neighboring towns the girls employed are often of good family and education, some being school-teachers, who thus spend a portion of their vacation in a not unpleasant occupation which brings them 'pin-money.'"

"The poorest classes of women in San Francisco are seamstresses. A number of institutions were discovered by the agent of the department where a regular system of fraud was being practiced upon defenseless sewing women. The general plan of such frauds is in brief as follows: A standing advertisement is kept in the papers asking for girls to do tailor sewing. When a girl applies she is told it will take her several weeks to learn the work, but after she had learned good wages would be paid. The girl accepts and goes to work. She demands pay for her work, and she is told that she is not satisfactory and that she cannot be employed. The agent found cases of this kind where the women had not only given their labor, but had also brought their sewing machines to the fraudulent factory and given the use of them, and at the end of a month or more had been sent away without pay. The exposure of this system, which was practiced by a number of disreputable firms in San Francisco, led to a mass meeting at which the Sewing Girls' Union was formed, one of the objects of which is to prevent such frauds and to prosecute their perpetrators."

"Almost all the necessities of life are dearer in San Francisco than in the Eastern cities, but to counteract this, wages are slightly higher. The mildness of the climate enables the working women to do with less fuel, less clothing, and even less food. It seldom happens that a San Francisco working woman spends anything for fuel except for cooking purposes."

Didn't Know She Was Loaded.

"Hold on! What's that you have there?" an Orland, Me., lady exclaimed to her domestic, who was on the point of throwing something in the stove the other day.

"Only some onion seed."

"Let's see."

On investigating, the lady found that the "onion seed" was a quarter of a pound of giant powder.—*Lewiston Journal.*

Luring Boys to Smoke.

Many cigarette manufacturers send out advertisements like the following:

"This is the most complete and correct collection of military and naval uniforms in the world. We will pack in the celebrated Gold Coin chewing tobacco, the portraits of all leading baseball players, police inspectors, jockeys, and actors in the country, in full costume. Continue to save the wrappers; they are valuable. Figures never lie. The following statistics of our sales since 1882, showing the enormous increase from year to year, will convince you of the general appreciation of our cigarettes." The statistics are then given, after which comes this boastful statement:

"Think of it! Four hundred and sixty-six millions of cigarettes sold in one year, over three hundred millions of them sold within the last six months, or an average of two millions for each working day, three hundred and twenty-two per minute, allowing ten hours per day." With every package comes a little slip, and the boy who smokes 75 packages or obtains 70 slips sends them to the manufacturer, who sends him an album containing all the cigarette pictures the firm has ever published; and for this many boys are trying, either by smoking the poisonous things or by collecting them of those who do, and while some pictures are decent and attractive, others are indecent. It might seem the most harmless thing in the world for a boy to make a collection of pictures, but when you turn them over, discover the snare and know that in this way there may come into his hands base representations, and that through them his mind may become familiar with low things, you can but see that it is harmful.

Fathers and mothers, be on your guard! The foe lies in ambush, though you may not know where, and very insidious are his approaches. Let us strive to fortify with principle and instill into the minds of our boys such a loathing for all that is low and vile that they will instinctively turn away from whatsoever is associated with evil.

E. J. B.

A Young Amazon.

The Chico Enterprise says that Miss Kate Lucas, who lives with her mother and brothers in the mountains above Chico, is an intrepid horsewoman, scorns a saddle, and at times rides a fiery mustang, without either bridle or blanket, simply using a lariat, the end tied around her horse's head and neck. She is a capital shot with the rifle, and when out with her brothers hunting rarely fails to bag a deer, or some of the other wild animals, which abound in that section. Sometimes the young miss assists in capturing the wild cattle, when they are required for the market, and then the lariat is twirled with a precision that often puts the vaqueros to shame.

A few weeks ago, having ridden after a particularly wild and fleet-footed steer, which showed fight from the start, the young lady laughed at a vaquero, who seemed afraid of the animal, and smilingly challenged him to throw a rope over the animal's head and ride him. The vaquero declined with thanks. Miss Lucas, springing from her horse, went up to the bound and bellowing beast, quickly tied a rope around his head and neck and then told the vaquero to let him loose. This he did reluctantly, and the enraged steer was quickly on its feet, but equally as quick the fearless lass was on its back. Then commenced a ride the like of which is rarely witnessed. For half an hour the wild chase continued over hill and dale, through brush and canyon, when the steer gave completely out, and the triumphant girl led her captive to the house. It was a bold feat, and the daring rider has made herself famous in that section of the county.

VOLAPUK.—A correspondent of the Record-Union says that "Volapuk" (world's speech) continues to make steady progress, especially in Europe, where they have had the advantage of good dictionaries for several years. Its progress has been comparatively slow in English-speaking countries, for want of a good dictionary; but such a dictionary will be published within a few weeks. It is estimated that about 1,500,000 people have learned Volapuk. It has been translated into 35 languages, and 25 periodicals, in 20 different countries, are entirely devoted to it, while many others have "departments" devoted to the cause. In most of the cities of Europe Volapuk bureaus have been organized for the purpose of giving miscellaneous information free to traveling Volapukists, and clubs have been formed in most of the larger cities of the world for the purpose of learning and propagating this international mode of speech.

A SURPRISE PARTY of almost any sort—pillow-case, donation, or whatever it be, and with whatever good feeling it may be sprung upon the unsuspecting recipients—has in it a taint of intrusiveness, a lack of due regard for the rights of home privacy, which makes it somewhat vulgar, and it may cause great inconvenience. It pushes in and takes liberties after a fashion that offends sensitive people, who may still be too considerate and courteous themselves to show that they are put to trouble or inwardly annoyed by the kindly but unwarrantable invasion.

YOUNG FOLKS' COLUMN.

The King's Daughters.

[Written for RURAL PRESS by FANNIE ISABEL SHERRICK.]

She was one of the King's daughters. But you would never have taken her for a princess, for she did not wear the royal purple, and she was not beautiful, with golden hair and violet eyes, as the poets tell us most princesses are; and she did not live in a palace with myriads of servants to do her bidding and magnificent equipages in which to ride.

No, she was only a commonplace girl, and she lived in a commonplace house in the midst of the great city of San Francisco. You could see a dozen girls like her any day on the street. She was clad in plain woolen dresses and wore gingham aprons, and instead of having servants to wait upon her, she helped her mother do their housework and washed dishes every day of her life; and the only carriage she ever rode in was the cable car which ran past her door and which was often filled with more shabbily dressed people than herself.

And yet she was the daughter of a King, for she was the child of God, and is He not ruler over the whole universe? and are we not all of more royal birth than the mightiest kings who have reigned upon the earth?

She belonged to the "Flower Mission," which has brought good cheer to so many hospitals and sick-rooms and also to the "King's Daughters," the members of which are pledged to do good whenever and wherever they can.

Such bright girls owed allegiance to this King, and such happy and busy girls! Every day brought them some work to do, and each night they were happier, I think, because they had done something that was noble and good.

It is the best recipe in the world for happiness and health, this doing good unto others. It makes the heart cheerful and sends the red blood coursing joyously through the whole body. Just think how crammed full of happiness this world would be if only we could remember always "to do unto others as we would that they should do unto us!"

And what a miserable old world we do make of it sometimes just because we will persist in doing unto others as they do unto us, not remembering that in returning good for evil we gain our own greatest measure of happiness.

Well, all this striving after the good did not make our little friend Alma an angel. Not by any means. She had her faults and I dare say was cross some days and didn't have her lessons at school the same as other girls; but it helped her wonderfully to be good. It was such a grand thing to know that she was the daughter of a King and that she could serve Him in so many beautiful ways.

Alma lived in this lovely city where the flowers bloom all the year around and the snow never comes, for California is the land of summer, so she had never seen, as some of us have seen in the Eastern cities, the poor people actually freezing to death in garrets and cellars, but she had seen much poverty and misery, and she loved to give her little mite and her kind word to the sick and miserable.

One day she was returning from school when Jessie Moulton stepped up behind her. Now Jessie, though she lived in a fine house and wore fine dresses, was not one of the King's daughters, and she knew very little about the golden rule which Alma practiced. She did not know that any girl could be a real princess and yet live in a plain old house and wear plain dresses. Like her fashionable mamma, she thought a good deal of fashion, and probably thought that only "stylish" people ever went to heaven.

Her face was all ablaze with anger as she came up to Alma, and she jerked her words out with angry force.

"Alma Treadway!" she cried, "you are the meanest girl in school, and I'll get even with you if it is the longest day I live!"

Alma turned around and looked at her quietly. A slight flash rose to her face, but she said calmly:

"Tell me why you say this, Jessie!"

"You know why I say it!"—Jessie could hardly speak for her anger—"because you did not reply to my note this morning in the examination. I only asked you the meaning of one word and you refused to give it to me. There isn't a girl in the whole school would be as mean as that!"

Alma's eyes were slowly filling with tears at the cruel injustice, but there was no anger in her heart.

"Dear Jessie," she said softly, "I am sorry you are angry, but it is a point of right and honor with me. Even to have told you one word would have been cheating and dishonorable, and it would have been lying to our dear teacher who trusted us. Even had she never known it, there is One who knows and sees, and my own conscience would have reproved me. We would both have sold our honor for a mere word. Dear Jessie, don't you see this?"

But Jessie was too angry and too disappointed at the result of her examination to see anything in its true light. Besides, her conscience had not been trusted as Alma's had always been, consequently its voice was seldom heard and she could not see how it could be so very dishonorable to tell just one little word, not knowing the principle that makes it just as much of a sin to steal one dollar as a thousand.

"It's foolish nonsense," she cried hotly; "it

DOMESTIC ECONOMY.

Tested Recipes.

[Written for the RURAL PRESS by ADA E. TAYLOR.]

Barbecued Ham.—Cut raw ham in thin slices, soak in scalding water for half an hour, then lay the slices flat in a frying-pan; on each piece put pepper, nutmeg and some made mustard. Pour in vinegar in proportion of half a teaspoonful to a slice; fry quickly, turning over. When done, take out and serve on a dish; add to the gravy half a glass of wine and a teaspoonful of sugar; boil up once and pour over the meat.

Ham Toast.—Toast some bread to a crisp delicate brown, dip quickly in hot water, and lay separately on a warm platter, butter each piece, and lay on top a piece of nicely fried ham; on the ham place fried or poached eggs, as one may prefer. This makes a very nice breakfast dish.

Strawberry Sauce.—Beat one cup of sugar and one cup of cream until stiff, then add the beaten whites of three eggs; stir in this mixture a bowlful of thoroughly mashed strawberries. This is nice set on ice for a few hours before eating.

Lemon Pudding.—Take a pint of bread-crumbs, a quart of milk, the juice and grated rind of two lemons, the yolks of three eggs; sweeten to taste. When baked, cover over with a frosting made of the whites of three eggs, beaten light, one-half cup of sugar and the juice of one lemon. To be eaten with cream and sugar.

Apple Tapioca Pudding.—One cup of tapioca soaked over night in six cups of water; next morning add about six large tart apples chopped very fine and one cup of white sugar; bake slowly about four hours; to be eaten either warm or cold with cream.

Puff Pudding.—One cup of sour cream, one-half teaspoonful of soda, a pinch of salt; stir in flour till stiff; spread in a pudding-dish; set in the oven and let it brown; take four or five nice tart apples stewed smooth; add one tablespoonful of butter, one cup of white sugar, the yolks of three eggs and half a teaspoonful of the extract of cinnamon; put this mixture on the crust when done and return to the oven. Beat the whites of three eggs to a stiff froth, add one-half cup sugar and a little cinnamon; drop in spoonfuls on top of the pudding when baked.

Pudding sauce.—Beat one small cup of sugar and one tablespoonful of butter to a cream; stir in a large spoonful of flour and pour over the whole two pints of boiling water; set on the stove and let boil; flavor to taste.

Vallejo.

KEECH CAKES.—For a family of four take two cups of cornmeal and one-half cup of flour, a good pinch of salt and one fourth teaspoonful of dry saleratus, stir all together while two or three tablespoonfuls of fat are melting and heating; after sifting these ingredients, mix with scalding water, dip the spoon in the hot grease, and make with the spoon the dough into small spider cakes. Cook steadily, but not too fast. When the grease is taken up, the cakes are ready to turn and finish on the other side. Nice, clarified beef suet gives a sweet, crisp crust. Serve these cakes hot.

SPANISH CREAM.—One and one-half pints of sweet milk, one-half box of gelatine, three eggs, four tablespoons of sugar, one teaspoonful of lemon flavoring. Mix the milk, gelatine (which has been dissolved in a cup of hot water) and yolks of eggs together, stirring constantly until they come to a boil; then add the remainder of the ingredients and stir briskly for a few moments; pour into molds, which have previously been wet with cold water, and set away to cool.

COTTAGE PUDDING.—One cup of sugar, one tablespoon of butter, two eggs, one cup of sweet milk, three cups of flour, or enough to make a tolerably stiff batter, one-half teaspoon of soda, one teaspoon of cream of tartar sifted with the flour, one teaspoon of salt. Rub the butter and sugar together, beat in the yolks, then the milk and soda, the salt and the beaten whites, alternately with the flour. Bake in a buttered mold, turn out upon a dish; cut in slices and eat with a liquid sauce.

VEAL OMELET.—Veal omelet is made with an omelet mixture of four eggs, half a cup of milk and a pinch of salt. When half done, stir in carefully one cupful of finely minced veal and a handful of breadcrumbs which have been soaked in milk. Also moisten the meat by stirring it in a stewpan with a little melted butter. Fold the omelet and serve hot. If there is cold ham in the larder, a few shavings minced with the veal give the dish an added flavor.

ORANGE CAKE.—One cup of butter, three cups of sugar, one cup of sweet milk, 4½ cups of flour, two teaspoonfuls of baking powder and six eggs, saving out the whites of four. Bake in layers. Beat the four whites to a stiff froth and add one pound of powdered sugar. Froth three oranges, and after the frosting is spread over the cakes, slice the oranges very thin and lay them on the frosting of all the layers except the top.

RICE PUDDING.—Two quarts of milk, two-thirds of a cup of rice, the same of sugar, small piece of butter, and a little salt; stir it occasionally until boiling hot, and cook in a small oven until of the consistency of cream.

The Week.

The weather again demands attention, for unless something generous is done soon by the clouds there will be much apprehension and foreboding. In some parts of the State the natural feed and the young grain are showing the yellow leaf in absence of rain and under the influence of drying winds. The southern beekeepers complain of blight in the blossoms and the miners of the mountains bewail the lack of snow and the low reservoirs. Of course there is plenty of time for most of the State, and if February is as wet as it sometimes is, all will be well.

The Legislature has been largely occupied with questions of local concern, such as county divisions and city charters. The vast appropriation measures do not seem to be making much progress and the time is getting so short that many of them will never emerge from the committee-room. Not many will mourn their failure.

Latest information from the south is favor-

able to a fine orange crop, as large as has ever been gathered, in spite of subdividers and town-lot fiends. A grand crop will do the south far more good than a boom.

The Government Irrigation Work.

Senator Stewart of Nevada seems to be the leader in irrigation matters at Washington. In another paragraph in this issue mention is made of his measure concerning streams which flow from one State into another. The telegraph also brings an outline of new propositions relative to the Government surveys looking to irrigation of arid lands. It seems Senator Stewart has offered an amendment to be inserted in the Sundry Civil bill, increasing the appropriation for surveys of sites for irrigating reservoirs in arid regions, and estimating the cost of construction thereof from \$250,000 to \$350,000. The amendment provides that when surveys and estimates for necessary hydraulic works have been completed for any section of land by said system of hydraulic works, the lands to be irrigated under such system shall be subject to entry under the Homestead law, provided no patent shall issue for any such entry until the construction of hydraulic works shall progress sufficiently to furnish water for the reclamation of the lands to be patented, or so much thereof as may be susceptible of irrigation. Any assignment, transfer or alienation of lands so entered prior to the issuance of patent shall be absolutely void and the lands shall revert to the United States. It is provided further that the Secretary of the Interior shall have power to make regulations whereby persons entering such lands may form co-operative associations for the purpose of constructing the necessary hydraulic works in any irrigation district in which lands are to be irrigated by said system, and the associations formed for such purposes may mortgage their right to lands entered by them for the purposes of obtaining funds for the construction of the necessary hydraulic works. Any mortgage or incumbrance made upon such lands without approval of the Secretary of the Interior is made void, the land to revert to the United States.

These propositions are interesting and important and should be thoroughly discussed by all those contemplating investment and enterprise in lands likely to be rendered available by the new Government work for irrigation.

Lands in Lassen and Modoc.

In an article on "Desert Lands in Lassen," in the RURAL PRESS of Jan. 19th, it was remarked that too many "innocent victims" have been led by real-estate schemers to sink their money in land which they have no means of reclaiming. The *Alturas New Era* thinking this rather severe and liable to mislead, explains as follows:

Two years ago there was a rush to obtain land upon the Madeline plains. Schemers from Chico and other places rushed up to Susanville, obtained plats of unclaimed land from the Land Office, returned to Chico and disposed of the lands on the plats to their friends and neighbors. When the purchasers went to Madeline to view their purchases, a few of them found their lands upon the tops of hills and in rocky canyons. They were deceived by their friends, and not by real-estate agents. This is the only case, so far as we have ever heard, where "innocent victims" were taken in and induced to buy land that could not be irrigated in either Lassen or Modoc counties. There is very little desert land in either county that is not easily irrigated, and there is, in Modoc at least, plenty of water to irrigate it with.

Real-estate dealers, to our certain knowledge, have had very little to do with lands in either county. Lands have, as a rule, been "taken up" by settlers, and what little was sold by settlers to new-comers, in nearly every case the sales were made by the owners on the spot, and the buyers purchased with their eyes open. If they were swindled, they have only themselves to blame.

It is true, there are thousands of acres of good land yet open to settlement in both counties, and it is equally true that there is ample room for private enterprise in the developing of water and constructing storage reservoirs at the base of the mountains in these counties.

THE LOS GATOS PACKING CO. has filed articles of incorporation. Its objects are to buy, sell, dry, pack, can and preserve fruits and vegetables and to acquire and hold real or personal property. The capital stock is \$100,000, divided into 2000 shares at \$50 each. The principal place of business is here, which is the residence of all the directors.

Is Rattleweed Poisonous?

It seems rather late in the day, in view of the popular belief that animals are crazed by eating rattleweed, to start a discussion as to whether it is really the plant that occasions the peculiar behavior which leads stock-growers to say an animal is "loco'ed." We supposed that there was no question whatever about it. It is true, we believe, that analysis has never separated a substance which could be specifically charged with the evil, but vegetable poisons are sometimes very obscure in their chemical condition. It seems, however, that there is now coming out some testimony tending to overthrow the common belief in loco poisoning, and we publish the following, which we find in the *Fresno Republican* of January 25th, to draw attention to the matter:

The discussion as to whether the "yerba loca" will, if eaten by stock, produce insanity, is becoming quite general. Mr. James Kennedy, Ph. G., of the Texas Pharmaceutical Society, has made analyses and experiments, and he declares that the only ill effect that could follow its consumption would be the usual effect of over-eating. Dr. L. M. Booth of Stanislaus county, a physician with 30 years' practice, and who is a pioneer stockman, says rattleweed is not poisonous. He thinks that insanity in horses is caused by the swallowing of sand and dirt, which clings to the roots of grasses and herbs that the animals feed upon. His testimony is corroborated by that of Mr. S. Gates, a stockman of San Luis Obispo county, whose letter we print below:

I have noticed in a number of papers lately, remarks and opinions about the plant "yerba loca," or rattleweed, and in your valuable paper of the 4th inst. the statement is made that stockmen are unanimous in their belief in its injurious quality. I wish to be put down as one who does not believe in the loca-weed theory. I am in the stock business, and live between the Cox and Clark ranch, on the west, and the Cholame ranch of 40,000 acres on the east, all run to stock. There are fully 50,000 head of cattle, horses and sheep kept in this immediate neighborhood, and I have no knowledge of one loca animal, so called, and there is an abundance of rattleweed all over this country. Last year was a very poor grass year, and everything in the way of vegetation was eaten, rattleweed and all, without any bad effects. It is my opinion that the using of poor, muddy water by stock has more to do with their going crazy than anything they eat. Respectfully yours,

S. GATES.

Such is the case in favor of the innocence of the weed. What have our readers to say about it? Have they positive evidence that eating the weed has caused the trouble or knowledge that eating it is not followed by such effects? It will be valuable to know whether the popular belief is a delusion or well founded on fact.

The Samoan Row.

The present war flurry with Germany over the Samoan islands will no doubt evaporate in words; but it will do good—it will give us a realizing sense of the feeble condition of our navy. While the naval power of the country may impose upon the negro republic of Hayti, it is calculated to make anything but a serious impression upon the great military powers of Europe. It looks all right enough on paper to send a fleet to Samoa, or wherever trouble with foreign powers may be anticipated, but the admission may as well be frankly made that in an actual emergency of war our navy could not cope with the tremendous ironclads and fast-going cruisers of Italy, Spain, France or Great Britain. Even for the purpose of making a moral impression upon the weakest of the nations of Europe it would be necessary to depend upon some other force than that of the navy.

The people of this country feel justly proud of the recent vigorous efforts to rehabilitate our navy. A great commercial nation, and especially one that threatens to enforce the Monroe doctrine, cannot afford to be without such an armament. We are making some progress. Some of the new cruisers that have been lately launched are regarded by the best authorities as models of naval construction. In celerity, strength, seaworthiness, and the ease with which they may be maneuvered in action, they show they are a match for the best that can be brought to bear against them. And then for skill and bravery there are no better seamen in the world than the Americans.

But while we have fine sailors and swift cruisers, our navy is very little better off than it was before. The great guns necessary to impress an insolent and powerful nation with the greatness of the United States are sadly lacking. We have not a ship in our navy that could withstand the great guns of the British "Blake" or "Blenheim," the German "Kaiser," or the "Devastation" of France. So if our pres-

ent relations with Germany should call attention to the weak points of our navy and show how inadequate it is to grapple with a mighty people, it will do good, for all classes of people must be interested in seeing this arm of the service placed upon a respectable war footing.

Interstate Water Rights.

It is telegraphed from Washington that Senator Stewart has introduced a bill, the object of which is to allow suit to be brought in the Circuit Court in either California or Nevada to determine water rights to streams rising in California and flowing into Nevada, and to enable parties to obtain service of defendants whenever they may be found.

Senator Stewart's bill is to amend Section 1 of the Judiciary Act as follows:

"That where the sole ground on jurisdiction is founded on the fact that the action is between citizens of different States, suit may be brought in the district of the residence of either plaintiff or defendant; and provided further, that when there is a controversy between citizens of different States involving the right to use water which flows from one State into another, and the plaintiff claims the right to use it in another State, suit may be brought up in the district where the plaintiff or defendant resides, and process may be used in any district where the defendant may be found."

There are in the irrigating regions many other localities to which this law will apply. Without such a law there is no practicable way of determining disputes.

Reforming the Ballot.

A bill is now before the Legislatures of California and Missouri embodying the salient features of the Saxton electoral-reform measure which recently engaged the attention of the law-makers of New York. Nine bills have been introduced in the Indiana Legislature looking toward reform in election laws and methods of voting. Indeed, nearly all the Legislatures of the Northern States which are now in session are considering measures of this class. Never before has the movement in favor of reform in the ballot been so extensive or so powerful in this country.

In nearly every instance the electoral method that is sought to be adopted is a modification of what is known as the Australian method. The principal features of this method we have already given our readers. So far as present legislation is concerned, this scheme is no longer an experiment. As we have pointed out, it has been tried in England and Canada, as well as Australia, and has worked well. Nor is it wholly unknown to the United States. Massachusetts enacted a law of this sort about a year ago, which goes into effect at the next State election. Two cities of this country—Milwaukee and Louisville—have already held elections under an Act of this kind.

As we have just said, this scheme is no longer tentative. Wherever it has been tried it has given satisfaction. Wherever it has been in operation it has removed the most serious frauds and abuses that have clung to the system it superseded.

The measure now before the Legislature at Sacramento meets with much opposition from the politicians. They say it is not adapted to the institutions of our country. The test to which it has been submitted in the two American cities silences that objection. That test proves that this method of voting can be made serviceable in this country.

But we are told that our present law is good enough if its provisions were enforced. The fearful depravity and corruption at the last election in the city of San Francisco alone is a sufficient reply to this objection. Under the new scheme things cannot be worse, and may be better; let us therefore give it a fair trial.

STATE BOARD OF TRADE.—At the Executive Committee's meeting Tuesday afternoon "California on Wheels" was reported as moving successfully along in Indiana and Michigan, and the manager of the board was authorized to purchase displays of vegetables of various kinds and forward them at once to the traveling exhibit. Letters were read from the managers of the Buffalo and the Minneapolis expositions urging that California be represented at both. A special meeting of the committee was called for next week, when these matters and the question of a traveling exhibit in Europe will be considered.

A Rabbit-Proof Fence.

[Written for the RURAL PRESS by MIRAMONTE.]

In view of the ravages committed by the jackrabbits in unprotected fields and orchards, it may be of interest to your readers to know of a rabbit-proof fence that is not only comparatively cheap, but also possesses the merit of having been thoroughly and successfully tested. From the accompanying sketch and description it would seem that any one can get a clear idea of it.

The tall posts are regular split redwood posts. The intermediate small ones are made by sawing in two the regular posts and splitting them into eight small posts, or rather large stakes. These posts and stakes can be set in the ground any depth to suit the ideas of the fencer.

The netting, which is of galvanized wire, No. 19 gauge, is of $1\frac{1}{2}$ -inch mesh. This is better than two-inch mesh of No. 18 wire, as the smallest rabbits cannot squeeze through it, while they can through a two-inch mesh, and, while it costs a little more, it is stronger.

This netting is stapled to the posts and stakes on the inside, or toward the field. This is of prime importance, as it will not serve the purpose if it is placed on the outside. The bottom of the netting is to come down to the ground, and the ground must be left hard, and not plowed, to prevent burrowing or scratching the dirt from underneath, which can be easily done if the dirt is softened up. It is not at all necessary to set the netting below the ground.

In the sketch are shown three barbed wires, with barbs $2\frac{1}{2}$ inches apart. These wires must be placed on the outside of the posts. This position is also a prime necessity. The lower wire is stretched just clear of the surface of the ground. The middle wire is one inch higher than the top of the netting, and the top wire, which is intended only as against cattle, is at a height suitable for the purpose. The rabbit-proof portion is comprised in the netting and the two lower wires. Hence if cattle are not feared, and rabbits are the only foe, the top wire can be dispensed with, and the posts can be all short with a greater proportion of stakes, having only enough stout posts to stand the strain of the wires.

The theory of this construction is that a rabbit can only pass the fence over the top or under the bottom. Any one acquainted with the habits of the jack will perceive that the first is practically impossible. It is very rare that a rabbit will take a standing jump of more than a few inches, and still more rare that he will take a running leap unless under excitement, as when being chased by dogs or coyotes. In such cases, however, he will never notice the netting until he is so close that he cannot recover himself, but invariably strikes against the netting while at full speed, and either breaks his neck or is caught by his pursuer. It is manifestly impossible for him to climb over the fence, as the distance between the top of the netting and the barbed wire, less than four inches, will not permit him to pass without getting torn to pieces by the barbs.

He has left but the possibility of burrowing under the fence. Now, the jack is not a burrowing animal; that is, he never makes a complete underground burrow. His *modus operandi* is to look along a fence till he finds a place where the bottom of the fence does not quite touch the ground, and at that point he begins to scratch the dirt out, as would a dog. This he continues until he has succeeded in working a space large enough to force himself through. This is what they constantly do in the case of the slat or lath-woven fences, and they generally assist themselves by gnawing away the inside bottom corners of the two laths between and under which they aim to pass. This I have seen done hundreds of times, and for that reason do not consider that style of fence at all effective.

By a glance at the side or end view on the sketch it will be seen that for a rabbit to burrow under the netting, he must either pass under the netting by burrowing under it while the barbed wire is under his abdomen, or he must burrow under both wire and netting. It is patent that he will not make more than one short attempt at the former method. If he tries the latter he must begin well back from the wire to clear it, and dig both deep and for

a long distance. He will invariably soon get discouraged in this effort, and will stop at that point and begin again elsewhere, with the same result. If he makes his burrow shallow, or begins it too close to the barbed wire, he will shortly get to a point where the barbs will catch him in the back. The first prick will put a sudden stop to that attempt. I could enumerate many other advantages of this style of fence as an almost certain defense against the rabbit, but from what I have already stated, your readers can study them out for themselves.

Now for a working illustration of this fence I will refer to the one put up on the Miramonte Colony, in the artesian belt of Kern county, by a few of us last spring, and which has consequently had a thorough test of nearly a year. We have 240 acres inclosed by $2\frac{1}{2}$ miles of fence—a sufficient length to demonstrate its weak points if any exist. After putting the fence up we left a small gap in one corner and

THE YUM YUM—A FAMOUS EARLY PEACH IN GEORGIA.

gradually drove out most of the rabbits that were inside. We then cleared off the brush from the inclosure, and it was not long before the two or three dogs had disposed of the rest till not a solitary jack was left, not one. And since then I think I can conscientiously say that not a dozen have got inside, and these few either through a partly open gate or else by following a badger burrow. Probably not one of these lived inside a half hour, as the land being clear of brush and open, the dogs quickly spied him and he was soon disposed of. A very slow dog can catch a jack inside of the fence in a few minutes, for as soon as he chases it, it becomes excited and demoralized and flies at full speed against the netting, which he fails to see until

In a future communication I will, if desired to do so, describe an automatic rabbit corral, as an attachment to this fence, in which the rabbits will, I trust, kindly place themselves and remain, so that once a week or so we can go to it and dispose of them without trouble. It can be put up at a cost of about \$6 or \$7.

Let no one imagine that the fence once up, his labors in that direction cease for all time. Like anything else, it will need more or less examination and repairing from time to time, but will probably need as little of it as almost any kind.

Mohair.

We are glad to have anything that looks like a glimmer of light on the mohair situation. It has been a long, dark period, and some California goat-growers have grown weary and sent their animals to the butcher. It is, however, a long lane that knows no turning, and we hope

the following note which we have just received from Wm. Macnaughton's Sons, the well-known dealers in wool and mohair of New York, may indeed be the announcement of a new and better era for the Angora:

As we know that your paper reaches a very large number of those who are actively engaged in the mohair industry, we take great pleasure in writing to you regarding the somewhat better feeling which prevails in the market for this stock. During the past four months there have been fluctuations in the foreign markets, which have resulted in somewhat advanced prices. The demand there increased sufficiently to cause an advance, and then fell off enough to cause a decline, but not equal to the previous rise, so that the markets abroad are now on a higher level than they were some time ago.

A RABBIT-PROOF FENCE IN SUCCESSFUL USE IN KERN COUNTY.

too late, and either breaks his neck or is thrown back by the spring of the netting, generally right into the mouth of the dog who has arrived and is ready for that occurrence.

An intelligent farmer in the same district following our example, fenced in some 80 acres; about half of it in alfalfa and half covered with large sagebrush.

It was of course impossible to get all the rabbits out with such numerous hiding-places as the brush afforded, and there must have been hundreds, if not thousands, left in. Nevertheless it is generally understood that within three months from the time he got his fence up he saved enough hay from his 40 acres, or less, of alfalfa to more than pay the cost of the fence. What the returns from his investment will be in the course of the next few years would be difficult to figure, but it will probably turn out to be the most profitable expenditure he has ever made.

That it may not be imagined that rabbits are few in number in that section, it is only necessary to say that in one rabbit-drive there last autumn 13,000 were killed. There are many miles of such fence being put up there now by people who have evidence of its effectiveness directly under their eyes.

The greatest demand at all times was noticeably for the finer qualities, and this is also true of our own market. As usual, in sympathy with the foreign demand, our consumers have taken hold of domestic mohair, and in sufficient force to clear up all the stock we had on hand. This stock was entirely of fall mohair, and though its staple was rather short, the prices realized were most satisfactory. The cause of the demand for this stock, which has recently been so sadly neglected, is the revival of the fashion for luster goods. This fashion has not yet become general, but we have reason to believe it will. It was this very fashion which caused a demand for mohair and luster wools in years past.

We have recently received letters from growers all over the country who are intending to engage in raising mohair. To encourage such, and still further to establish the industry, we are now beginning again to make advances after consignments have been received.

THERE are over 200,000 sheep in the vicinity of Kelton, at the north end of Great Salt Lake. These animals are reported to be in better condition than ever the flocks were known to be at this time of the year.

SOME of the large land-holders of Southern Humboldt county, Cal., are considering the advisability of dividing their holdings into larger tracts, to be leased for dairy purposes.

The Yum-Yum Peach.

We give on this page a picture of a peach which is attracting much attention in the early fruit regions of Florida and Georgia, as an extra early peach. H. W. Reed & Co. of Waycross, Georgia, who are propagating the variety, assure us that they regard the Yum Yum the finest well-shaped early peach yet introduced in the South. They report that in 1888 two trays of the Yum Yum, holding 50 peaches each, sold for \$5 per tray in the Boston market, while 13 crates of the Peen-to sold at the same time for \$2.50 per tray. Messrs. Reed & Co. in their "Cherokee Annual" for 1889, gave the following account of the peach:

The Yum Yum is a seedling of the Peen-to, and originated with Dr. Cushing of Waldo, Fla., where the tree has borne several crops of fine early peaches. It ripens about the time of, or a little before the Peen-to, is medium size, slightly long to round in shape, having a small suture on one side, and a short recurved point. In color, it is a rich waxy, or cream, slightly tinged with red on one side. Juicy, a most delicious flavor, being free from the nayan or bitter taste found in the Peen-to, and parts fairly well from the seed. The tree is a vigorous grower, a sure and prolific bearer. This year a late frost caught the tree full of small fruit that, undisturbed, would have ripened in the early part of April. The tree immediately put on another full bloom and yet made a fine crop of peaches that ripened as early as the Peen-to, some of which measured eight inches in circumference. Our attention was called to this tree by Col. Livingston of Waldo, who regards it as the finest early peach in the South.

After investigating its merits to their satisfaction, Messrs. Reed & Co. purchased the original tree, and have been propagating the variety for sale. Its season is put down for Georgia as April and May. We hope it may be tried in California.

QUERIES AND REPLIES.

The Snow Plant.

EDITORS PRESS:—Your note of recent date inclosing a letter of inquiry from Seward Cole of Los Angeles county is at hand.

He asks for information concerning our famed "Snow plant" (*Sarcodes sanguinea*) and first, if there is such a plant. Yes. It is well known to most Californians that there is a most striking and wonderful plant growing in the high Sierras, which has been very inappropriately named "Snow plant," for no reason that I can think of but that it is found usually well up in the dense forest where snow lies deeply in winter. The plant is, in appearance, very unlike snow, being bright-red in all its parts; and also, not at all fleshy in form, but compact, and rising out of the black mold like an elongated pine-cone.

The Snow plant—so called, belongs to a class of vegetables that are mostly parasitic upon the roots of other plants, though whether or not this plant is such has never been satisfactorily determined. I have excavated many a deep cavity or trench with spade and pick without detecting parasitism to entire satisfaction. I believe parties connected with the California Academy of Sciences have given especial attention to determining this question by careful and labored investigations the past season, and for one, I watch for interesting results when published.

My correspondent asks "to know a little about the habitat, genera, season, nourishment, etc." of this strange plant.

Briefly:—Our species stands alone as the type of a distinct monotypic genus—*Sarcodes*, aptly so named by Dr. Torrey on account of the exceeding fleshiness of the plant, *sarkos* meaning flesh in Greek.

The thick stems rising, as I have said, like elongated pine cones from the earth, are often several in number from near the same source. Usually but a few inches high, they often become a foot or more in height, the spike of flame-colored flowers arranged in spirals, each flower a thick cup or jug of pink porcelain, bordered by fine lobes in the most approved style of fantastic Majolica ware, and each with a long, pearl-bordered, beautiful strap of crimson passing up one side and turning over the top of the vessel as if to shield it from receiving its predestined occupants—until the proper time, at least.

As the flowers mature, they turn outward from this protection and eventually downward. All this is connected with fertilization—too abstruse a subject to be entered upon here. The plant remains in bright color for a long time—a month or so—then shrivels and turns to a jet black, usually maturing a large quantity of seeds, which, strange to relate, have never been grown successfully by florists, though many have attempted the much-desired object.

The Snow plant is native to the high mountains of California and Oregon alone, usually in heavy fir forests at middle elevations of 4000 to 7000 feet, where, when first seen by the ap-

precipitate stranger, it creates the most profound emotion.

It is said that when first seen by Dr. Torrey, it was when he was approaching the Sierra in the famous overland stage of the early period. A single plant stuck in a bottle to ornament the window of a saloon in Carson caught his eye. The great botanist jumped out of the stage, seized the plant and became so engrossed in trying to obtain its history and place of growth that he chose rather to pursue the meager clues given him than to keep his place in the stage, and so forfeited his right to ride to Sacramento.

My correspondent writing from Los Angeles county may not be far from the San Bernardino mountains. If so, he may in June or July take an excursion into the forests of that range—notably near old Greyback—and see for himself this most beautiful and strange plant, and then I know he will exclaim with the Queen of Sheba, "The half was not told me."

I will soon forward to Mr. Cole a copy of our "Forestry Report," and in it I will place a specimen of the Snow plant; but this poor wrinkled black thing will not give any idea of its beauty in life.—J. G. LEMMON, Botanist for State Board of Forestry, Lemmon Herbarium, 1015 Clay St., Oakland.

Raising Peanuts.

We have had several inquiries lately about the culture of peanuts—how to prepare the ground; when and how to plant; what care and cultivation the vines require, and the time and manner of harvesting.

We hope that some of our readers who have had success in peanut-growing will tell their experience, through the RURAL, for the benefit of those who are new to the business. Meanwhile we reprint portions of an article which appeared not very long ago in the S. F. Chronicle.

The peanut is generally believed to be indigenous to Africa, but several varieties have been found wild in Brazil. It is a dwarfish plant, with innumerable low-trailing branches; the flower is small and yellow, and after it falls away the forming-pod is forced into the soil by the elongation of the rigid deflexed stalk to which it is attached. It then rapidly enlarges and forms a thick-shelled, indehiscent pod, with a strongly netted surface, often contracted between the seeds, of which it contains two or three. The flower stalk is a trailing vine, like that of the melon and cucumber, the blossoms appearing at short intervals along its length. The flower opens and blossoms close down to the stalk in the notch formed by the leaves, and it is not until the petals have fallen and the seed-pod is formed that the pushing-power is made manifest. Gradually the nut is pushed down to the ground and then into it. If by any accident this is prevented the fruit ceases to grow.

The culture of peanuts is not difficult. Good corn land is generally selected, care being taken that there is nothing in the soil that would stain the shells. In this State a sandy loam that never suffers from drought should be chosen. In fact, good melon land is good peanut land. The bottom lands on the borders of rivers that receive a winter or spring overflow are admirably adapted for the growth of this nut.

Planting-time may be had in March if there is no frost, or from the 1st to the 15th of April. The ground should be plowed five or six inches and then harrowed. The nuts (which must, of course, be planted raw) should be taken out of the pod without breaking the skin, the best plan being to crush the shells with a light wooden hammer. The kernels are then planted in rows four feet apart and 20 inches from hill to hill, with three or four kernels in each hill, covering them about two inches deep. The plan adopted by a successful Chinese grower is given as follows: "Plant to feet this way, two feet that way, you want 90 pound one acre; plant to feet this way, 20 inches that way, you want 140 pound one acre."

When the vines begin to blossom—which will be when they are about six or eight inches long, the plant should be covered with an inch of soil for four or five inches around the center, taking care, however, to leave the ends of the vines uncovered. All that is necessary after this is to keep the land free of weeds.

The plan adopted in the South is to mark off the land in furrows three feet apart, and in these two peas are dropped at intervals of 18 inches and covered in an inch and a half deep.

When the nuts are ripe, which will be in October, the California peanut farmer runs a furrow on each side of the row of the vines with a bull-tongue plow, close enough to loosen the soil and plants; then he takes a light, narrow grubbing hoe, digs up the vines and turns them over to dry, taking care never to gather in rainy weather nor when the ground is very wet. After allowing the vines to lie in the sun for a day, the best plan is to stack them, after the dew has dried, in the following fashion: Drive a stake of four or five feet long firmly into the ground, spreading dry grass or hay around it, so as to keep the vines from the damp ground. Then lay the vines around the post with the roots upward, taking care, to leave space around the stake for the purpose of ventilation, and when the stake is of a proper height thatch it with a straw cap tied to the stake. Let the vines remain in stack from three to five weeks, and then pick the nuts and send to market.

A clean, bright appearance of the pods is

largely to be desired, and to get this the nuts are sometimes put into a sort of winnowing cage, which is turned by either hand or power. There are two sorts of peanuts grown in California—the white and the red—and to make the white variety still whiter the nuts are sometimes treated to sulphur fumes. The red variety, by the by, is more easily cultivated and sells for about the same price. The white variety runs along the ground, while the red grows upright in a bunch. The picking is rather arduous, but the labor will in all probability be modified by the use of machinery.

In 1872, as for several years previous, there were imported into New York a half-million bushels of peanuts, the bulk of them coming from Africa and the rest from Spain. The Spanish peanut was of the variety known as the Amande de Terre (earth almond). It was brought in shelled, and sold from 7½ cents to 10 cents a pound. The flavor of the Spanish nut was mild and sweet, and its purchasers were the confectionery men who used, and still use, it instead of the true almond, especially in that confection known as nougat. The seed of this nut was sown in Virginia in 1878, the product was found fully equal to the foreign nut, and as it could be shipped 2 or 3 cents a pound cheaper, it was not long before the Spanish Amande de Terre was driven from the market. In 1882 Virginia raised 10,000 bushels of the Spanish peanut, the amount being a yearly increasing one.

The peanut industry in California is as yet almost entirely in the hands of the Chinese. Our own farmers, however, are gradually awakening to its importance, and already have marked success and encouragement. In 1884 we raised 34,000 bushels of the nut, some of which were sent to New York as an experiment. The sample was so well received that an additional lot was asked for. The nuts were declared equal to the best Virginia.

California abounds in localities admirably adapted both in soil and climate for successful peanut-raising. At Haywards there are places where seed has been planted in June and vines pulled in November with from 80 to 100 nuts thereon. At Vina there are many large peanut-fields cultivated by Chinese, the nuts being large, white and sound, and the yield being as high as 70 bushels to the acre. At San Jacinto there is some excellent peanut soil—alluvial mold, with just the right proportion of sand, with a hot summer and dry atmosphere the year round. One patch of 12 yards square has yielded three sacks of peanuts at this place. There are plenty of good peanut farms about Clear lake, while the bottom-lands in Sacramento county have been found admirably adapted by the shrewd Chinese for raising the useful nut.

The peanut is a much more useful product than most people imagine. We all know how extensively it is eaten roasted, but therein by no means lies the extent of its value. The nuts contain from 42 to 50 per cent of a nearly colorless, bland, fixed oil, resembling olive oil, and used for similar purposes. The best is obtained by cold expression, but a large quantity of inferior oil is procured by heating the seeds before pressing. It is a non drying oil, changing but slowly by exposure to the atmosphere, and remaining fluid in a cold several degrees below 32° F. The principal consumption of the oil is in soap-making. In 1883 Virginia began the manufacture of peanut flour, the result being a peculiarly palatable biscuit, while Georgia has long made pastry of pounded peanuts. The kernels roasted are largely used for coffee. "The poor man's fruit" is capable of sustaining life for a long time, owing to its peculiarly nutritive qualities; the vines afford an excellent fodder, and hogs will fatten on what they find in the fields after the crop has been gathered.

Drying and Packing Peaches, Etc.

EDITORS PRESS:—Can any of your readers enlighten me on the method of drying peaches? I am a "tenderfoot," and will have my first crop of peaches this season (20 acres). In sundrying, how long does it take? Should the fruit be turned over? Is it better to dry on boards or on stretched canvas or linen? How high should it be from the ground? Should the fruit be shaded in any manner during the process of drying? How is sulphuring managed, and what appliances are used in the operation? What quantity of sulphur is used? What is the best machine in use for peeling peaches, and about what quantity can one person peel during a day of ten hours? Is hand machinery or foot-power used, and where can the machines be purchased? When packed dry, what is the most marketable weight of dried fruit to put in a box? And what is the most marketable weight for green fruit in box? What are the dimensions of said boxes in inches? Should the fruit be picked when very ripe or tolerably green?

THE RURAL PRESS has given many very useful and scientific principles for pruning and cultivation of the peach, but I have seen nothing yet regarding the system of drying this fruit. Any information on this subject will be considered a great favor, as I have no close neighbors who are thoroughly conversant with this industry.

San Jacinto, Cal.

[All of these topics are worth writing on, and we hope our kind contributors will take them up.—Eds. PRESS.]

The New Horticultural Bill.

The following is the full text of the new bill relating to the State Board of Horticulture which has passed both Houses and is now in the hands of the Governor:

An Act

To amend Sections 3, 6 [7], 8 and 12 of an Act entitled "An Act to Create and Establish a State Board of Horticulture, and Appropriate Money for the Expenses Thereof," approved March 13, 1883, and an Act amendatory thereof, approved February 18, 1885, and to add five new sections to said Act, to be known as Sections 14, 15, 16, 17 and 18, and to repeal Section 9 of said Act, and to appropriate money for the uses of the State Board of Horticulture.

The people of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. Section three of said Act is hereby amended to read as follows:

Section 3. The board shall biennially elect a president, a vice-president, a chairman of the Finance Committee, and appoint from without their own number a secretary, who shall be ex-officio Horticultural Officer, and elect of their own number a treasurer, who shall give a bond to the State, with sureties approved by the board, in the sum of ten thousand dollars, for the faithful discharge of his duties.

SEC. 2. Section six of said Act is hereby amended to read as follows:

Section 6. Said board shall appoint from without their number a competent person, especially qualified for the duties of his office, who shall be known as [clerk] of the Publishing and Quarantine Bureau of the State Board of Horticulture (to hold office at the pleasure of the board), who shall be qualified, by experience and education as a compiler, to correct reports and essays; to present in a logical order all the information to be published, and shall give his whole time in such work, and such other duties as may be required of him by the board and by reason of his official position, and shall have power to enforce all rules and regulations regarding the spread of insect pests, quarantining districts or nurseries [found to be infected]. He shall be paid for his services as [clerk] of the Publishing and Quarantine Bureau of the State Board of Horticulture, one hundred and [seventy-five] dollars per month, to be paid as other State officers.

SEC. 3. Section nine of said Act [is] hereby repealed.

SEC. 4. [Section seven of said Act is hereby amended to read as follows:

Section 7. The said board, and in case of necessity during the recess of the board, the said clerk of the Publishing and Quarantine Bureau, may appoint such quarantine guardians as may be needed to carry out the provisions of this Act, whose duties it shall be to see that the regulations of the board and the instructions of the clerk of the Publishing and Quarantine Bureau are enforced and carried out; said clerk may appoint, in case of emergency, a deputy, who shall have the same power as his own, whose salary shall not exceed three dollars per day for each day's services performed, said services to be paid for by the State Board of Horticulture. The said Quarantine Guardians shall report to said clerk, or to the State Board, all infractions or violations of said directions, regulations, and of the law in regard to quarantine, disinfection and destruction of insect and other pests injurious to fruit, fruit trees or vines, and precautions against the spreading of all the aforesaid named pests and diseases. The salary of Quarantine Guardian shall not exceed \$3 per day, and shall be paid by the owners of orchards and other places and localities under quarantine regulations, and they may maintain an action therefor before any justice of the peace in any township in which any quarantined locality is wholly or in part situated, but in no case shall they have any claim upon the State for such services.]

SEC. [5] Section eight of said Act is hereby amended to read as follows:

Section 8. It shall be the duty of the secretary to attend all meetings of the board [and of the Executive Committee], and to preserve records of its proceedings and correspondence; to collect books, pamphlets and periodicals, and other documents containing information relating to horticulture, and to preserve the same; to collect statistics and other information showing the actual condition and progress of horticulture in this State and elsewhere; to correspond with agricultural and horticultural societies, colleges, and schools of agriculture and horticulture, and other persons and bodies, as he may be directed by the board; and prepare, as required by the board, reports for publication. He shall appoint, subject to the approval of the board, a competent person as clerk, and he shall be held responsible for the acts of said clerk. He shall be paid for his services as such secretary and ex-officio Horticultural Officer a salary of [one] hundred [and seventy-five] dollars per month. [His] clerk shall be paid a salary (as such clerk) of fifty dollars per month, each to be paid as other State officers.

SEC. [6] Section twelve of said Act is hereby amended to read as follows:

Section 12. There is hereby appropriated for the uses of the State Board of Horticulture, as set forth in this Act, out of any moneys in the State Treasury not otherwise appropriated, for the fiscal year ending June thirtieth, eighteen hundred and eighty-nine, the sum of [one] thousand dollars, and the State Controller shall

draw his warrants upon the State Treasurer in favor of the treasurer of said board for the same upon proper demand.

SEC. [7.] A new section is hereby added to said Act, to be known as section fourteen, to read as follows:

Section 14. The president (and in his absence the vice-president) and the two commissioners for the State at large shall constitute the Executive Committee; said committee shall have [charge of] the management of the affairs of the board while the board is not in session. The members of said committee shall receive their actual traveling expenses in attending quarterly meetings of the Executive Committee. The other members of the board shall receive their actual traveling expenses (only) in attending semi-annual meetings of the board.

SEC. [8.] A new section is hereby added to said Act, to be known as section fifteen, to read as follows:

Section 15. Vacancies occurring in any office shall be filled by appointment made by the president of the board [with the consent of the Executive Committee] until the next meeting of the board.

SEC. [9.] A new section is hereby added to said Act, to be known as section sixteen, to read as follows:

Section 16. Said board shall make and publish their reports annually.

SEC. [10.] A new section is hereby added to said Act, to be known as section seventeen, to read as follows:

Section 17. It shall be the duty of the county boards of horticulture to make quarterly reports in writing to the State Board of the condition of fruit interests in their several districts, what is being done to eradicate insect pests, also as to disinfecting, and as to quarantine against new insects, and as to carrying out of all laws relative to the greatest good of the fruit interest. Said board shall publish said reports in bulletin form, or may incorporate [as much of] the same in their annual reports [as may be of general interest.]

SEC. [11.] A new section is hereby added to said Act, to be known as section eighteen, to read as follows:

Section 18. The expenditures necessary to be made in experiments in the different districts shall be determined by the board. On application of one or more of the fruit-growers in such districts, the said board shall select such person or persons to make such experiments, and pay the expenses thereof. The sum of not exceeding one thousand dollars for traveling expenses shall be allowed when the board or the Executive Committee shall deem it necessary to send either the [clerk] of bureau or secretary to direct and supervise such experiments; [provided, that not more than one thousand dollars shall be expended in any one year for such traveling expenses.]

SEC. 12. This Act shall take effect immediately.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 220 Market St., S. F.

FOR WEEK ENDING JAN. 22, 1889.

- 396,547.—OIL-BURNING LIMEKILN—Clark & Mapel, S. F.
- 396,649.—CABLE RAILROAD TURNABLE—W. Davidson, Oakland, Cal.
- 396,651.—BALE TIE TWISTER—Chris. Franco, Livermore, Cal.
- 396,555.—CAN OPENER—T. H. Gilham, Cortez, Nev.
- 396,480.—SULKY PLOW—G. W. Haines, Stockton, Cal.
- 396,562.—DRIER—A. J. Hatch, S. F.
- 396,564.—EXTENSION LADDER—H. T. Hayes, Oakland, Cal.
- 396,565.—EXTENSION LADDER—H. T. Hayes, Oakland, Cal.
- 396,573.—CAMERA-CARRYING CASE, ETC.—Jas. H. Johnson, S. F.
- 396,440.—BEVERAGE—W. B. Starbird, Stockton, Cal.
- 396,447.—CULTIVATOR—H. H. Taylor, Santa Rosa, Cal.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

THE SOUTHERN NEGRO AND COTTON.—Cotton has long since ceased to be the product of the negro, as remarked by the New Orleans Times-Democrat. When the war ceased, nine-tenths of it was raised by the colored race; to-day, three-fifths come from white farms. The white States and white districts have become the cotton centers of the South. The negro parishes of Carroll, Tensas and Madison, the finest country in the world, where the yield is greatest and the staple the finest, produce far smaller crops than they bore 30 years ago, while the white counties of Texas have increased their production four and five fold. This fact attracted the particular attention of Prof. Hilgard, who prepared the census report on cotton, and he notes the singular coincidence that the bulk of the crop of Mississippi is raised in the hills, where the yield per acre is small, instead of in the bottoms, where every condition is favorable. The fact did not seem to strike him that the true reason lay in the fact that in the hills the cotton was raised by the whites; in the bottoms by the negroes.

FORESTRY.

The Nation's Forests.

The first step in the effort to provide for the conservation of the forests on the national domain should be the withdrawal from sale of all forest-lands belonging to the nation. It will not be necessary to preserve and maintain all these forests permanently, but the extent of forest-territory which will be required by a practical plan of forest-preservation and management for our Western mountain regions cannot be at once precisely determined. A thorough examination of these regions, and of the agricultural country depending upon them for its water supply, will be necessary, in order to show what forests must be retained, and what tracts of timber can be put upon the market without injury to the important interests involved. Until such an examination has been made, none of the forest-lands now belonging to the United States should be sold.

The second step should be to commit to the United States army the care and guardianship of the forests belonging to the nation. There is in time of peace no other work of national defense or protection so important as this which the army can perform, and it is plain that under existing conditions the forests on the national domain will not be—indeed cannot be—adequately guarded and protected by any other means. The measures which have been tried, including those now in operation, or nominally in operation, have proved almost ineffective. The forests on the public lands are pillaged by settlers, and by the employees of railroad and mining companies, without scruple or limit. Other instruments will have to be employed if the forests are to be preserved. Their complete and final destruction, with that of the soil which sustains them, is, under the present system, or want of system, only a question of time, and of a very short time.

The officers of the United States army are educated by the nation for its service, and they constitute a body of men not equaled by any other in our country in their equipment for guarding and protecting the great forest-regions belonging to the nation. They possess every kind of fitness for this work in greater degree than any other class of men, and if authorized by law to undertake this service they would have the power and the means necessary for its performance, while everybody else is at present inevitably powerless and incapable. As there is likely to be very little work for the army hereafter in the care of the Indians, it will be available for this service of guarding the national forests. The work can be done well by the army, and it would cost nothing, or very little, while any other plan would necessarily be both ineffective and costly. This guardianship and defense of the nation's forests by the army of the nation should be continued and maintained until a sufficient number of adequately trained and equipped foresters has been provided by the National Government for the administration of a complete and permanent system and policy for the management of the forests on the public domain.

This brings us to consider the third step. This should be the appointment, by the President, of a Commission to make a thorough examination of the condition of the forests belonging to the nation, and of their relation to the agricultural interests of the regions through which the streams flow which have their sources in these forests, and to report, with the facts observed, a comprehensive plan for the preservation and management of the public forests, including a system for the training, by the Government, of a sufficient number of foresters for the national forest service.

The Commission should determine what portions of the existing forests on the public domain should be permanently preserved, and in what manner the remainder should be disposed of. The national forests can be so managed that they will be perpetually reproduced, and will yield forever an abundant supply of timber for the inhabitants of the adjacent country, and a revenue which will more than sustain the cost of the forest service. A National School of Forestry should be established at a suitable place in one of the great mountain forests on the public lands, and its equipment should be as thorough and adequate for its purpose as is that of the National Military Academy at West Point.—*Garden and Forest*, Jan. 30th, 1889.

OUR WOOL IMPORTS.—For the ten months ending October 31, 1888, the value of the imports of manufactures of wool was 11 per cent more than for the same time last year. The increase was chiefly in women's and children's dress goods and miscellaneous merchandise. Though there was a slight falling off in the value of cloths, there was an increase in the quantity. There was an increase in the quantity of yarn of nearly 29 per cent. Clothing wools have been freely imported, and more of them have been retained for home consumption instead of being exported to Canada, etc. The export of wool is in some years a matter of considerable moment. In 1887 it amounted to 6,214,410 pounds clothing wool alone, over 3000 pounds of which were sent to Nova Scotia and neighboring provinces, 933,000 pounds to England, and 1,773,000 pounds to Belgium.

Dewey & Co.'s Scientific Press
Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

A Treatise on the Horse and his Diseases

By B. J. KENDALL, M. D.

35 Fine Engravings showing the positions and actions of sick horses. Gives the cause, symptoms and best treatment of diseases. Has a table giving the doses, effects and antidotes of all the principal medicines used for the horse, and a few pages on the action and uses of medicines. Rules for telling the age of a horse, with a fine engraving showing the appearance of the teeth at each year. It is printed on fine paper and has nearly 100 pages, 7x5 inches. Price, only 25 cents, or five for \$1, on receipt of which we will send by mail to any address. DEWEY & CO.,
220 Market St., S. F.

AGRICULTURAL NOTES.

CALIFORNIA.

Butte.

A LEASE OF COUGARS.—Chico *Enterprise*, Jan. 30: D. A. Hannah was lucky enough to bag three California lions last Friday, and brought their pelts last to Chico this morning, where they were gazed upon by a large crowd. Mr. Hannah has a small mountain ranch on Mud creek, about ten miles from town, and has suffered considerable loss of stock from the depredating California lions, but was unsuccessful in capturing any of them until last week. He had corraled his hogs, for the lions preferred bacon to any other kind of meat, and were rapidly demolishing his herd. On the day above mentioned he heard a terrible squealing at the corral, and got there in time to see a full-grown lion leaping over the inclosure with a dead hog in his mouth, the body thrown across his back. Close beside him ran a lioness and a full-grown cub. Mr. Hannah ran to the house, got his rifle, and taking three or four dogs, started in pursuit. They soon came upon the animals feeding upon the carcass of the hog. One shot killed the lion, while the lioness and cub took to a tree. Mr. Hannah then fired at the female, but only wounded her. She sprang for him, but the dogs seized her, and another shot finished her. The cub was then dispatched. Mr. Hannah will receive \$10 each for the scalps, which is not a bad sum for one day's hunt.

Kern.

JAPANESE BUCKWHEAT.—San Diego *Sun*: A Kern county farmer, who has experimented successfully with Japan buckwheat, says that the berry is much larger than the American buckwheat, and that twice the number of pounds can be produced to the acre, while it makes cakes superior to any other. He finds that it can be sown at any time, and is satisfied that this Japan product will prove far more profitable than wheat, when the farmers of other counties can be induced to make the trial.

Lake.

TEA AND FLOWERS.—Lakeport *Avalanche*, Jan. 24: A. H. Poe brought us a bouquet of roses and choice cut-flowers, which indicate very warm weather in his neighborhood. He also brought some genuine Japan tea, which he has grown with considerable success. He informs us that our climate is well adapted to the growth of tea, and next season he will go into its culture more extensively.

Los Angeles.

WORKING UP THE OLIVES.—Pomona *Progress*, Jan. 24: G. C. Muir has been engaged for over ten days in picking the 3000 gallons of olives he has gathered from his seven acres of trees this season. He has given much study to the work, and visited the largest olive-packing houses in Southern California to learn the business. He has picked 1500 gallons of olives in kegs ready for shipment, and 1000 more gallons are now in lye vats. Mr. Muir has also been making olive oil and has had unusual success.

CUCUMBERS.—Cor. *Riverside Press*: Mrs. Rogers of Azusa has a trellis at the kitchen door on which morning-glories climb and bloom. About the first of July last a stray cucumber plant made its appearance through the ground at the foot of this trellis, and Mrs. R. would not allow the little volunteer destroyed, but gave it a place on the trellis along with the morning-glories, and soon the two became so intertwined that the morning-glories appeared to bear cucumbers and the cucumbers to bloom as the morning-glories. It was soon evident that the small family could not use the products of the vine without resorting to some system of storage; and Mrs. R. began gathering them for pickles. The first were picked September 1st and the last on December 12th. The total product of the vine was 502. Those for pickling were gathered at a size averaging 25 to the quart, and those for table use were allowed to grow larger. This volunteer vine furnished all that was wanted for table use and a surplus of 4½ gallons of pickles. The vine grew on one of the rocky lots for which Azusa is noted.

Nevada.

MAPLE SUGAR.—Grass Valley *Union*, Feb. 3: Mr. Moulton, proprietor of the Brier ranch, near the Upper Colfax road, has been making sugar of an excellent quality from the native California maple trees of his own planting of a few years' growth. Very few persons are aware that the native maple is rich enough in saccharine juice to make sugar, but Mr. Moulton has demonstrated the fact successfully.

Modoc.

CATTLE DROWNED.—New Era, Jan. 26: W. H. Bowman, foreman of the X. L. ranch, informs us that recently, while driving a band of cattle on the west side of Goose Lake, they stampeded and ran out on the ice and about 50 of them broke through. The cowboys had great difficulty in getting them out. As it was, eight head succumbed to the intense cold of the icy waters.

Placer.

FRUIT SHIPMENTS.—Auburn *Republican*: The fruit shipped from the single town of Newcastle in 1888 footed up to 9,922,633 pounds. A. Moger, manager of the Newcastle Shipping Co., tells the *Republican* reporter that this fruit, taking it all on an average, was sold for at least 2½ cents a pound by the producer. At that price the returns would be \$248,065.82; but it

is a low estimate and the actual receipts were undoubtedly much larger.

San Benito.

HORSE MARKET.—Free Lance: The next monthly Horse Market will be held at Hollister, Sat., March 2d. One person has already stated that he will enter 18 horses, another eight, another ten. The market will be extensively advertised among horsemen all over the State, and it is probable that a large number will attend.

San Bernardino.

FROM CLOVERDALE PRECINCT.—Editors *Press*:—There is a large amount of new land being broken up in this neighborhood in anticipation of the good season that everybody is expecting. One of the results of so much clearing is a noticeable diminution in the number of jackrabbits, as they seem to be shy of the clear land. There is no grubbing necessary here. If the brush is too large to plow down, an iron rail about 14 feet long is attached to the tail of a wagon and four horses drag it over the brush, breaking it down, after which it can easily be burned. Where the brush is small it is plowed under as much as possible, and, after harrowing, a horse-rake is run over the ground, piling the brush up ready to burn. Where else in the world can a man clear his land so easily and plant a crop at the same time? ... My peas, radishes and lettuce, planted about the middle of December, are up and doing well. Onions, carrots, turnips and beets, planted at the same time, did not do so well. I think the heavy rains packed the soil too hard on the seed. We need more rain to put new land in good condition for plowing. ... The *Rural* comes regularly like a ray of sunshine, and is met by the answering smiles of the whole family, each of whom takes a turn at it. Those too young to read admire the pictures. —L. S. LYMAN, Alessandro, Jan. 30th.

RIVERSIDE ORANGES.—Cor. *Bulletin*, Feb. 1: Our orange crop is good and prices are good. Owing to the total absence of scale pests in San Bernardino county, orange-growing is in great favor, and planting is again as active as usual, most of the purchases of land being for improvement. Riverside being the principal orange-growing center, our crop being expected to aggregate 800 to 1000 cars, naturally furnishes a great deal of labor, and at present the supply is greater than the demand. There will probably be enough employment for all when the orange-picking season opens, which will not be before the middle or end of February. Our oranges are hanging yellow on the trees and have been for two months, but are not by any means as ripe as they look, and are not, consequently, in as good demand as they will be further on. Shipments East have not commenced in earnest for various reasons, among which are the unripeness, the risk of shipping in freezing weather, and the presence of the Florida crop on the market. Packers, however, are getting ready and doing a little. Some of them are employing Chinese to the exclusion of white labor, which is causing dissatisfaction among unemployed white laborers, many of whom have bought homes and expected to pay for them by working in our orchards and vineyards. A large meeting was held here a few days ago to devise steps to furnish employment to deserving white people and discourage the employment of Chinese. At the meeting a committee of five was appointed to see the fruit-growers, packers, and employers of labor generally, urging them, as far as possible, to give their labor to white people.

Shasta.

FAIR ASSOCIATION.—Redding *Free Press*, Feb. 2: The Shasta County Agricultural and Mineral Association has been reconstructed; many of those who possessed shares have sold out, and the number of directors has been reduced to five, as follows: Pres., A. C. Brigham; Vice-Pres., F. M. Swasey; Sec'y, H. E. Hodson; Treas'r, Fred Grotschend, Dr. Miller and R. Bostrick. The association intends to give a fair in August or September.

Santa Barbara.

SUGAR BEETS.—The Santa Maria *Times* publishes a letter from W. Mays Newhall to W. C. Adam, respecting seven different samples of sugar beets grown in Santa Maria valley, in different localities, last summer. Mr. N. says: I have obtained from Mr. Spreckels the analysis of the sugar beets sent to that office by you, and herewith send you a copy of the results. As I understand the matter, the principal test of quality is in the degree of polarization. At Watsonville all beets are accepted at the factory which polarize 12 degrees and over, and the price paid for beets there is \$4 per ton for those showing a polarization of 12 degrees, and 50 cents per ton for each degree of polarization above that. It would seem, therefore, from the analysis that the samples sent are unusually good, as five of the seven showed a polarization of 12 degrees, and the highest, the sample of J. C. Martin, showed a polarization of 16.97 degrees. At the office of Mr. Spreckels the opinion was expressed that the results of the analysis showed a very flattering prospect for your valley in the raising of sugar beets.

Santa Cruz.

PAJARO VALLEY APPLES.—Watsonville *Pajaronian*, Jan. 31: Apple-orchards are being eagerly contracted for by packers. The Pajaro valley is now the leading apple district of the State, and its apples are unexcelled for shipping purposes—in that particular being vastly preferred to Oregon apples. (The latter will not

stand shipment to the South Pacific islands.) At the present time five firms are engaged in packing and shipping apples, exclusive of farmers who handle their own orchards. These packers maintain extensive establishments and keep a number of men constantly employed in sorting apples from the time the picking season closes until the supply is exhausted. At present they have a small portion of last year's crop on hand—mainly Newtown Pippins—but as prices are good they expect to have all sold during the coming month. The apple business of this valley is annually increasing in importance.

Stanislaus.

THE CHAMPION GUM-TREE.—Modesto *News*, Feb. 1: A. Shearer, who lives nine miles northwest of Modesto, has a gum tree on his property that measures eight feet in diameter! Mr. Shearer believes the tree is the largest one of its species in Stanislaus county.

A HORSE-FARM.—Last Saturday we paid a visit to the breeding-farm of L. A. Richards, 2½ miles south of Grayson. Our stay was limited, but Mr. Richards obligingly took us to view the fine stallion "Richards' Elector," by "Electioneer," and his numerous progeny (35 Elector's colts at the place). Elector is a dark bay, about 15 hands high, 9 years old, a finely-bred stallion. Of his progeny, "Electric," coming five, has a record as a three-year-old of 35. But the dandy is "J. R.," two years old, with a record of 33½. Out of five three-year-olds of Elector's first lot of colts, four of them will trot in 2:35 or better. It is worth going miles to see the fine intelligence of Elector's colts, and their extreme gentleness is remarkable. We were also shown the beautiful Percheron-Clyde stallion "Jim Blaine," 18 hands high, weighing 2100 pounds. For so large an animal he has a fine movement.

RESULTS OF IRRIGATION.—As a proof of the beneficial effects of irrigation, we were shown by J. H. Prouse, of Knight's Ferry, a tract of land which yielded him last year an immense amount of corn, planted after the harvesting of an equally heavy crop of hay on the same land. Mr. Prouse's advice to the farmers in the valley is to "go and do likewise."

Sutter.

WATERMELONS IN FEBRUARY.—Sutter *Farmer*: B. G. Stabler, near Yuba City, raised some fine watermelons last summer, and during the fall put several away in the cellar to keep them as long as possible. He has several now in good preservation. Cutting one for the seed a few days ago, he secured 735 seeds, the melon being 28 inches long, 10 inches wide and weighing 64 pounds.

Tulare.

GRAIN PROMISING.—Visalia *Times*, Jan. 31: J. J. Cairns of Woodville, who is farming 12,000 acres of land, says that the present outlook for an abundant harvest in Tulare county is better than he ever saw it before at this time of year. He sowed 8000 acres before the first of January, and the grain is up and growing as rapidly as one could wish. The frosty weather is proving a benefit to the growing crops, preventing their too rapid growth. In regard to rain, Mr. Cairns said that none would be needed for two weeks, as the ground is full of moisture.

SAINFOIN.—A sample of esparcet grass, having a tap root 28 inches in length, was brought to the *Times* office yesterday by J. A. Dahlem, who resides 4 miles southeast of Hanford. The seed was planted on the 17th of March last, and was irrigated but once. Mr. Dahlem sowed two pounds of the seed as an experiment, and is so well pleased with the result that he will sow ten acres this season, beginning about the middle of next month. He will raise it for the seed, and will sow 15 or 20 pounds to the acre, according to the productive quality of the land. For pasturage purposes he says that it should be sown thicker. This forage plant is attracting much attention all over the Pacific Coast at present, and Mr. Dahlem, who was familiar with its culture in Germany, is quite positive that it will be successfully grown in this valley. It has some advantages over alfalfa, among which may be mentioned its non-bloating qualities, and it will thrive with less irrigation than alfalfa does. In the "old country," fields of it have been kept productive for 20 years, without re-sowing.

Ventura.

EDITORS PRESS:—We have had no rain for 39 days, and the east wind, from the desert, has been blowing almost constantly for the past two weeks. Some patches of barley are yellow and almost dead; others will stand it a little longer. Grass is drying up on the foothill ranges. Alfalfa is making an attempt to bloom before dying, but the bloom has no honey. Bee-keepers say if the first flowers do not yield honey, the rest will not throughout the season. —J. F. MCINTYRE, Fillmore, Feb. 4, 1889.

Yolo.

AN OVAL ODDITY.—Winters *Express*: G. M. Gray brought to this office on Thursday what, at first glance, appeared to be a soft-shelled egg. Upon investigation, however, an egg with a hard shell was found to be encased within the outer shell or skin. The intervening space between the two shells was filled with a liquid substance which made the whole appear as large as a goose egg.

PLOWING BY STEAM.—Woodland *Democrat*, Jan. 31: The steam plows have been received by Webb Curtis, and yesterday were put to work in Reclamation District No. 108. A spectator says that the work was done in fine

style. The traction engine walked off with eight 12-inch plows at the rate of 2½ miles per hour through the virgin soil of the tules—wire grass and tule roots, and threw the sod splendidly. Mr. Curtis has about 15,000 acres of this land to seed this year and will have another and larger engine at work soon. Both engines will be run night and day.

Yuba.

MIDWINTER FLOWERS.—Marysville, Jan. 24: A novel exhibition of a floral character goes down by the Oregon express from this city tonight for display at the rooms of the State Board of Trade in San Francisco. It has been gathered by the *Appeal* from the gardens of Marysville and Yuba City to day, and all specimens sent are exclusively of open-air production. The object is to afford ocular demonstration to Eastern visitors now in San Francisco that this part of the State possesses a climate as mild as that of Southern California. Included in the flowers sent are camellias, chrysanthemums, Japanese loquat blossoms, heliotropes, carnations, violets, marigolds, marguerites, crocuses, fuchsias, magnolias, and eight different varieties of trees. Among the plants represented by fresh foliage are banana, hydrangea, Johnsonia lily, passion vine, castor bean, camphor, oleander, orange, lemon and olive. The display, while not large, is creditable and representative. [The exhibit reached this city duly and was set up at the Board of Trade rooms, where it proved an object of interest and admiration to beholders.—EDS. *Press*.]

ITEMS.—*Appeal*, Feb. 1: The work of preparing ground on the south bank of the Yuba river, west of D-street bridge, for planting Bartlett pear trees, has commenced. A few acres will be put in as an experiment, and if the trees thrive, P. George will plant the whole acreage in Bartlett pears. ... Can-making is in progress at both the Sutter and Marysville canneries. Each one is turning out about 3000 cans per day. ... Sheriff Inlow is planting a large orchard upon his ranch in this county. It consists of peach, apricot, plum, pear, etc., and will cover 85 acres. ... Most of the orchards in and around Yuba City are now being sprayed with a mixture that gives them a white-washed appearance. ... The entire area to be planted in Yuba and Sutter counties this year, in trees and vines, will not fall much short of 5000 acres.

NEVADA.

A SUBTERRANEAN SPUD-FIELD.—Virginia *Enterprise*, Feb. 2: A year or two ago some miners sunk a shaft at the mouth of Six-Mile canyon, in search of placer gold. After attaining a depth of about 90 feet, work was discontinued. Two or three days ago they concluded to sink the shaft to a greater depth. When one of the number descended to the bottom, the first discovery he made was that a little potato ranch was flourishing down there. The vines were of rather a sickly hue, but a little prospecting developed quite a nest of new potatoes about the size of hens' eggs. Samples of these potatoes, grown nearly 100 feet beneath the surface of the earth, are to be seen at Bierke's saloon. The seed potatoes were probably thrown into the shaft by children playing in the neighborhood.

WASHINGTON TERRITORY.

HOP SALES.—Orting *Oracle*, Jan. 25: E. A. Lorenz of Orting sold this week to J. Kincaid 231 bales or 21 tons of hops for 17½ cents a pound—a good sale at this season of the year. The entire quantity will be shipped immediately to Glasgow, Scotland. Mr. Kincaid averred that this lot of hops was as fine in quality and condition as he had ever seen in Payallop valley. Henry Beckett also sold 66 bales last week to Isaac Pincus of Tacoma for 12½ cents, but this lot was slightly damaged from having remained too long in the field on account of the scarcity of hop-pickers.

THE GRAIN-FIELDS.—Walla Walla *Cor. Oregonian*, Jan. 16: A fine snow has fallen, and provided an invigorating covering to the immense wheat-fields on every hand. This snow is taken by our farmers and those interested as a good token, a harbinger of a fruitful year, and, of course, proportionate prosperity and all that follows in its train. The grain acreage, by reason of an open fall, and the stimulation afforded by the handsome price of wheat for several months past, will be increased fully one-fourth, so that the coming harvest will cover not far from 100,000 acres immediately adjacent to this city. With the usual increase on Eureka Flat and other sections of our county, put down at about 25,000 acres more, and the crops averaging as usual, the output of Walla Walla county will assume enormous proportions.

BEEF PACKING.—Washington *Farmer*: There is now being organized at North Yakima a beef-packing association, with a capital of \$100,000. A tract of 250 acres of ground north of the city goes into the pool. Joseph Baxter, a large stock-grower at the mouth of the Yakima river, takes \$25,000 of the stock. Other parties put in \$25,000 worth of cattle, and the company will build and own its refrigerator cars. Puget Sound is now butchering over 100 head of beeves, besides mutton and pork, every day from the Yakima range. Alaska and British Columbia are also largely supplied with fresh meats from here, and the business is increasing steadily and rapidly.

Books and Authors.

By C. L. B.

The greatest of American story papers, the *New York Ledger*, published by Robt. Bonner's Sons, is deserving of the reputation it has attained, the publishers looking well to the interests of both readers and contributors while furnishing a family weekly that is clean, bright, entertaining and instructive.

"THE IMMORTAL." By Alphonse Daudet. New York: John B. Alden, publisher.

This novel, which is a scathing satire on the famous company of the "Immortals," the French Academy, has, it is said, reached in France alone the enormous circulation of 350,000 copies. Be that as it may, the book is indisputably a masterpiece in its strong though merciless portrayal of the follies and vanities of mankind designated "L'Immortal;" and the author's satire will doubtless prove a most effective weapon in the battle waged against slavish Academic trammels.

A LITTLE book entitled "A Christian Science Exposition of the Lord's Prayer," by Joseph Adams of Chicago, has recently been laid upon our table. While some of the views will hardly harmonize with strict orthodoxy, still the reader will find it in the main a sweet benediction. We are charmed with its broad charity and devotional sentiments. Mr. Adams is well known and highly respected by the people of this coast, and we are glad to learn is quite popular in Chicago and is doing a noble work by his public ministrations at McVicker's theater.

From the *Youths' Companion* office, Boston, comes an unusually attractive prospectus for 1889, with promise of six serials, 150 short stories, poems, and illustrated sketches upon a variety of subjects by many noted contributors, among whom may be mentioned the Right Hon. W. E. Gladstone; Lord Wolseley; Profs. Tyndall and Huxley; Justin McCarthy, and Archdeacon Farrar; and among American authors, O. W. Holmes, Jr.; Lieutenant Schwatka; Admiral Luce; Col. Knox; Earl Marble; Andrew Carnegie; James Parton; and about one hundred others. The *Companion* enters more than 400,000 families weekly, and is undoubtedly read by two million readers, which fact speaks more for its high excellence than would any mere use of adjectives, although it might justly claim many of the most complimentary. The publishers announce that any one subscribing now can have the *Companion* free, to Jan. 1st, and for a full year from that date for the subscription price of \$1.75, which offer will doubtless be as eagerly accepted by the young people of the Pacific Coast as by those of the Atlantic.

Volumes 8, 9 and 10 of Alden's *Manifold Cyclopedia* are marked by the same excellence which has distinguished the preceding numbers of this marvelous work; marvelous in that it surpasses all other Cyclopedias in the amount and quality of matter offered for the price. Volume 10, for instance, containing 630 pages, about 100 illustrations, and treating over 1600 subjects, being neatly bound in cloth for 50 cents. A specimen volume may be ordered, and returned if not satisfactory. Address John B. Alden, publisher, New York City.

The Aspinwall Potato-Planter.

The excellent picture on this page represents quite a new claimant for public favor, and one which seems to win its way very thoroughly wherever it is tried. The machine will plant from five to eight acres per day, and all the work of marking, furrowing, dropping and covering is done in a single operation. The planting can be varied in depth from three to nine inches and the covering is uniform. Instead of dry earth on top, the coverers of the planter draw upon the seed the moist or under soil, and the value of this is well known to all potato-raisers, for few things are more fatal to the starting of seed than to cover it with dry earth. The work is claimed to be superior to hand planting. The furrows being V-shaped, the seed must necessarily be dropped in the bottom in perfect line and cultivation can be made early and close.

The planter is adjustable for planting either whole or cut seed, and will plant from 10 to 26 inches apart, and at all these variable distances it drops the potatoes with absolute regularity. The distance of planting is exactly the same in each row.

The mechanical construction of the planter is good. The materials are of the best and will last many years. There is no cog-gear and no fast motion. Excepting the pole and hopper, the whole machine is made of steel and iron.

A corn-planter attachment is now made which will be wanted by many who purchase the potato planter. Altogether in its present high perfection the Aspinwall Potato-Planter is held to be an implement few potato-growers will care to do without. For illustrated circular and full information, address Hawley Bros. Hardware Co., S. F., Cal.

Fashion Notes.

Ladies' Felt Hat and Empire Veil.

FIG. 1.—This hat suggests a Nanon bonnet in its picturesque outline. It is of gray felt and has ribbon bows placed on top and coming toward the front, the ribbon showing a stripe of deep-pink satin and gray

FIG. 1—LADIES' FELT HAT AND EMPIRE VEIL.

grograin. About the crown and reaching under the loops is a monture of pale-pink blossoms that almost wreathes the hat. The felt is sufficiently fine to do away with the necessity of a binding. The Empire veil is of dotted net, the upper frill being of two rows of French lace and the lower frill of one row. It is fastened in the back, and then the narrow ribbons are drawn to make it fit under the chin. The net hangs in bag-fashion and the lace frill frames the face very prettily. Large dotted net is liked for these veils, though a few are seen of plain Brussels net.

Little Girls' Costume.

FIG. 2.—The costume is in the Directoire style, and it is here pictured developed in vieux-rose watered silk and cashmere and green velvet. The fronts hang open in jacket-fashion, and are each folded back in a Directoire revers above a row of three large oxidized buttons, the revers being faced with watered silk. Between the fronts

FIG. 2—LITTLE GIRL'S COSTUME.

is seen a full vest that is shirred across several times at the neck and passed under a broad Directoire girde of folded watered silk. The back, which lies in two pretty tabs upon a full sash-bow of watered silk, is gracefully fitted to the form by side-back gores and a center seam. The skirt encircles the figure in natural folds, and except where it joins the edge of the vest, it is sewed to a belt that is tacked underneath to the body seams. The standing collar is covered above the vest with a puff of cashmere and is of velvet the rest of the way. The full sleeves, which add much to the

picturesque effect, are gathered across the top and bottom and shirred around several times above the elbow; they are arranged on coat-shaped foundations and are finished with cuff facings of velvet.

Very quaint effects may be realized in a costume of this kind, as it develops well in all seasonable dress goods, and may either be of one color or of several, as preferred. In its making, small pieces of dainty material that are left from the fancy gowns of older people may be utilized to advantage. Flowered and figured goods are particularly appropriate for these little gowns, with a plain combining material of the same or a different texture.

The large flare hat is trimmed with ostrich plumage.

California Sunshine.

This is the fitting title of a very delightful little book by Mrs. L. H. Shuey, so well known to readers of our journal as the *Maid-of-all-Work*, the pseudonym which she assumes in her contributions.

The collection includes "The Golden Spike," "Dare," a Napa college alumni poem, "In Memoriam" poems, a C. L. S. C. poem, and the "Home and Field Verses of California Farm Life on the Plains."

We can earnestly commend this work of one who writes so acceptably for our columns to all our readers who love pure sentiment, truth to life and loyalty to California in musical verse.

This book is for sale at book stores and by the author, Mrs. L. H. Shuey, 2509 P street, Sacramento, Cal.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, term of subscription, and give it their own patronage, and as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

CONSUMPTION CURED.

An old physician retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper, W. A. NOYES, 149 Powers Block, Rochester, N. Y.

Injurious Insects of the Orchard, Vineyard, Field, Garden, Conservatory, etc.,

Remedies for their Extermination.

By MATTHEW COOKE.

Late Chief Executive Horticultural Officer of California. Illustrated with over 750 wood-cuts and 25 pages of classified illustrations. This book is designed for the use of orchardists, vineyardists, farmers and others interested in the subjects treated. It is designed to convey practical information concerning some of the species of insects injurious to the industries of cultivators of the soil, and those interested in earth produce generally. Price \$4, postpaid. For sale by DEWEY & CO., publishers, 220 Market St., San Francisco.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or of some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

FIGS AND RAISINS.—We are pleased to learn that Dr. Gustav Eisen of Delano, Kern county, intends to collect, revise and extend his published writings on the fig and the raisin and issue them in a special book on these two important topics. Such a work will be valuable.

FOR INFORMATION, our readers are referred to H. A. Deming, No. 124 Post street, S. F., a leading and well-established house, for paper patterns of plates illustrated in our present issue.

PERFECT MUSIC BOOKS

For CHOIRS, for CLASSES, for CONVENTIONS, are perhaps impossible—but DITSON & CO.'S matchless books are just on the line.

Emerson's Easy Anthems, 80 cts., \$7.20 per dozen, are 49 in number—quite new—give about one for each Sunday in the year, and are full of grace and beauty.

Song Harmony, 60 cts., \$6 per dozen, by L. O. Emerson, is a new and very "perfect" book for Singing Classes, perhaps the best of a long series of books by the same author.

The Graded Singing School, 50 cents, \$4.50 per dozen, by D. F. Hodges, is a sensible, practical method, by a very sensible, practical teacher, and is fully furnished with good material for successful work.

Jehovah's Praise, \$1, or \$9 per dozen, by L. O. Emerson, is a full size Church Music Book, with a large number of Anthems and Tunes for Choirs, also Glee, Part Songs, and a multitude of melodious exercises for classes.

Temple Chimes, 35 cents, or \$3.60 dozen, by published, is a very superior collection of new Gospel Songs, of Hymns and Tunes.

Praise in Song, 40 cents, \$4.20 dozen, by L. O. Emerson, and E. U. Emerson, is a new Sunday School and Praise Book, full of uncommonly good music and hymns. A very "perfect" book for vestry singing.

Any book mailed for retail price.

SEEDS

Come, Fellow Farmers!

It is the good things and the new things you want.
Here is a Catalogue full of them! Do you want tested
seed, raised from stock selected with extra care,
grown from the best strains, got from the originators?
I am to have mine just such. Do you
want new varieties that are really good, and not
merely novelties? I am to have mine such. Do
you want seed that the dealer himself has faith enough
in to warrant? I warrant mine, as see Catalogue. Do
you want an exceptionally large collection to select from?
Mine is such. Do you want them directly from the grower?
I grow a large portion of mine—few seedsmen grow any! My
Vegetable and Flower Seed Catalogue for 1889 FREE to every-
body. **JAMES J. H. GREGORY, Marblehead, Mass.**

Irrigation Districts.

Proposed Amendment to the Wright Law.

Two bills amendatory of and supplemental to the Act to provide for the organization and government of irrigation districts, and to provide for the acquisition of water and other property, and for the distribution of water thereby for irrigation purposes, commonly known as the Wright law, approved March 7, 1887, have been introduced in the Assembly by Hon. Vital E. Bangs of Modesto, passed by that house and reported to the Senate.

The first, introduced Jan. 24th, and designated as Assembly Bill No. 335, provides for changing the boundaries of any irrigation district, by excluding therefrom tracts of land which were included therein at or after its organization; "but neither such change of the boundaries of the district, nor such exclusion of land from the district, shall impair or affect its organization, or its rights in or to property, or any of its rights or privileges of whatsoever kind or nature; nor shall it affect, impair, or discharge any contract, obligation, lien, or charge for or upon which it was or might become liable or chargeable, had such change of its boundaries not been made, or had not any land been excluded from the district."

The owner or owners in fee of one or more tracts of land which constitute a portion of an irrigation district, may file with the board of directors of the district a petition praying that such tracts, and any other tracts contiguous thereto, may be excluded and taken from said district. The petition must describe the boundaries of the tracts to which it has reference, and it must be acknowledged in the same manner and form as is required in case of a conveyance of land.

The directors are required to publish notices of the filing of such petition for at least two weeks in the county where their office is situated and in every county within which lies any portion of the territory to be excluded, describing the lands, etc., mentioned in the petition and notifying all persons interested in or opposed to the change sought to present their objections in writing at the office of the board at a specified time—which shall be the regular meeting of the board next after the expiration of the time for the publication of the notice.

After hearing the petition and all objections thereto presented in writing by any person showing cause why the prayer should not be granted, the directors are to proceed in the manner provided for by the following sections:

SEC. 5. The board of directors, if they deem it not for the best interests of the district that the lands mentioned in the petition, or some portion thereof, should be excluded from said district, shall order that said petition be denied. But if they deem it for the best interests of the district that the lands mentioned in the petition, or some portion thereof, be excluded from the district, and if no person interested in the district shows cause in writing why the said lands, or some portion thereof, should not be excluded from the district, or if having shown cause, withdraws the same, and also if there be no outstanding bonds of the district, then the board may order that the lands mentioned in the petition, or some defined portion thereof, be excluded from the district.

SEC. 6. If there be outstanding bonds of the district, then the board may adopt a resolution to the effect that the board deems it to the best interests of the district that the lands mentioned in the petition, or some portion thereof, should be excluded from the district. The resolution shall describe such lands, so that the boundaries thereof can readily be traced. The holders of such outstanding bonds may give their assent in writing to the effect that they severally consent that the board may make an order by which the lands mentioned in the resolution may be excluded from the district. The assent must be acknowledged by the several holders of such bonds in the same manner and form as is required in case of a conveyance of land, and the acknowledgment shall have the same force and effect as evidence as the acknowledgment of such conveyance. The assent shall be filed with the board, and must be recorded in the minutes of the board; and said minutes, or a certified copy thereof, shall be admissible in evidence with the same effect as the said assent; but if such assent be not filed the board shall deny and dismiss said petition.

SEC. 7. If the assent aforesaid of the holders of said bonds be filed and entered of record as aforesaid, and if there be objections presented by any person showing cause as aforesaid, which have not been withdrawn, then the board may order an election to be held in said district to determine whether an order shall be made excluding said land from the district as mentioned in said resolution.

If at such election a majority of all the votes cast shall be against the exclusion from the district of the lands in question, the board shall deny and dismiss the petition, and proceed no further in the matter. But if a majority of such votes be in favor of the exclusion of said lands, the board shall thereupon order that the said lands be excluded from the district.

The remaining sections of the bill prescribe the manner in which details of business, consequent upon the order of exclusion, shall be carried out.

The second measure, introduced Jan. 25th and known as Assembly Bill No. 340, is the counterpart of the former, as it provides for enlarging the boundaries of an irrigation district, so as to include a tract adjacent. Its provisions as to petitions, publication of notices, hearings, denials, resolutions, elections, orders, etc., are similar to those of A. B. No. 335.

Under either of the above bills, an election is to be called only when objections are filed with the board, otherwise the board acts of itself. If it should agree with the objectors, then the petition for inclusion or exclusion of lands will be rejected without submitting the matter to a

vote of the electors of the district. The election is called only when the board of directors are in favor of the petition and objections thereto are filed.

After either of the orders above referred to has been entered in the minutes of the board, and a certified copy has been filed in the County Recorder's office, the district affected shall be and remain an irrigation district as fully to every intent and purpose as it would be had no change been made in its boundaries.

In case of the inclusion or exclusion of any lands within any district by proceedings under the above Acts, the board of directors, at least 30 days prior to the next succeeding general election, shall redivide such district into five divisions, and one director shall thereafter be elected by each division.

Both these bills having passed the Assembly on Monday last, were reported in the Senate Tuesday and substituted for identical measures on the Senate file.

State Horticultural Society.

The monthly meeting of the State Horticultural Society was held at 220 Sutter street Jan. 25th, President W. C. Blackwood of Haywards in the chair.

David Bush and F. J. Fletler of San Francisco, C. W. Reed, Jr., of Sacramento and J. R. McKee of Napa were elected members.

A communication was received from A. Crozier, secretary of the American Pomological Society, inviting the horticultural society to attend the annual meeting, which will be held at Ocala, Fla., Feb. 22 to 25th.

Dr. Gibbons of Alameda spoke about forage plants. He said that he had made several experiments with alfalfa, a Spanish forage plant which is found in all parts of the State. Judging from a crop which he had grown on a small plot, he believed that it would yield fully 25 tons of green weight to the acre.

E. J. Wickson, instructor in agriculture at the State University, read a paper on the "Wild Fruits of California." The paper is an advance copy of a chapter of a book which Mr. Wickson is writing on the fruits of California.

D. B. Wier read a paper, "Native Fruits Are the Best."

At the next meeting the subject for discussion will be "The Marketing of Green and Dried Fruits," and the secretary was instructed to issue an invitation to all interested in the subject, both as producers and dealers, to attend and take part in the discussion.

Distributing the Waters.

We trust that the farmers of this State are becoming more and more awake to the vast importance of settling the water problem on a firm legal basis.

A correspondent at Sacramento wrote last week that no hostility to irrigation measures had, so far, been developed; indeed it seems to be generally recognized by members of the Legislature that the question is of vital moment to the people, and the prevailing sentiment appears to favor any laws that will give the people that of which they are so urgently in need.

The prompt passage by the Assembly of the two bills introduced by Mr. Bangs, an abstract of which we give in this issue, is encouraging, but our Grangers and farmers generally should be calling meetings in all quarters, discussing the measures and stirring up our legislators to still further action.

Fair at San Jose.

We are pleasantly reminded, by the coming of a complimentary ticket, that the Citrus or Winter Fair, of which notice was given some weeks ago, is to open in Horticultural hall, San Jose, next Monday, Feb. 11th, and continue throughout the week. Members of the Committee on Fruits, who have canvassed the various districts of the county, feel assured of a magnificent display. Special exhibits are promised from Mountain View, Los Gatos, Saratoga, Gilroy and Alina; while the fruits from Berryessa, Evergreen, The Willows and other districts adjacent to San Jose will be of unusual merit.

THE AGRICULTURAL APPROPRIATION BILL, as completed Jan. 31st, would make an appropriation of \$1,636,010, as compared with the estimates of \$1,686,160, and the appropriation for the present year of \$1,715,826. The appropriation of \$100,000 made in last year's bill to enable the Commissioner of Agriculture to continue experiments in developing sorghum cane is omitted in the present bill. The regular appropriation of \$100,000 for the purchase and distribution of seeds is made. A provision is inserted requiring the Commissioner of Agriculture to supply these seeds directly to the several State agricultural experimental stations instead of distributing them through Senators and Representatives.

THE STATE BOARD OF SILK CULTURE held a meeting last Saturday, at which Pres. G. W. T. Carter, Mrs. L. Rienzi, R. H. McDonald, Jr., S. A. Sellers and J. J. Rivers were present. The secretary was instructed to give visitors samples of silk and cocoons. The project of issuing a quarterly publication to show the progress made in the silk industry in this State, was talked over. Scholars from the Clement grammar school visited the flature and witnessed the process of making silk, preparatory to writing essays on the subject.

California Products at Chicago.

CHICAGO, Feb. 5.—The first oranges of the season from California were on sale yesterday. Arrivals from Florida are very moderate, but some Messina oranges are coming in, and with those from California, the supply is fair. Floridians still lead and choice fruit rules steady, but common grades of fruit of all kinds rule easy, which is always the case. Quotations are: California, $\frac{1}{2}$ box, \$3@3.50; California Navels, $\frac{1}{2}$ box, \$5@6. Dried fruits—Up to within a few days there has been very fair trade in this line of goods, but buyers seem to have secured fair stocks, and at present quietness again reigns. Some quite large dealers report stocks considerably reduced, and there is no pressure to sell; but at low prices which now prevail the feeling is rather steady. Prices are quotable as follows:

Apricots—Evaporated, bleached, bxs, 13@14c; do, sun-dried, bleached, bxs, 9@12c. Apricots, sun-dried, unbleached, bxs, 7@9c. Peaches—Evaporated, bleached, unpeeled, bxs, 7@8 $\frac{1}{2}$ c; do, sun-dried, bleached, unpeeled, bxs, 6 $\frac{1}{2}$ @8c; do, unbleached, unpeeled, bxs, 4 $\frac{1}{2}$ @6c; do, sun-dried, peeled, bxs, 10@12 $\frac{1}{2}$ c; do, peeled, bxs, 10@10 $\frac{1}{2}$ c; do, evaporated, peeled, bxs, 12@13c. Nectarines—White, evaporated, bleached, bxs, 9@10c; do, sun-dried, bxs, 8@9c; do, red, evaporated, bleached, bxs, 7@8c; do, sun-dried, bleached, bxs, 6 $\frac{1}{2}$ @7 $\frac{1}{2}$ c. Plums—New, pitted, 7 $\frac{1}{2}$ @8c; new, unpitted, 4@7c. Prunes, according to size, in bxs, 5@9c; do, Silver, 10@12c; do, Hungarian, bxs, 3@3 $\frac{1}{2}$ c.

Raisins—Loose Muscatels, new, $\frac{1}{2}$ box, \$1.10@1.50; do, London layers, new, \$1.75@2.25.

Hops—Considerable strength exists in the market for hops. The demand is very fair, especially for choice grades, and the supply, generally speaking, is moderate to rather light. Washington Territory, good to choice, 18@22c; do, red tinted, 15@17c; do, common red, 12@14c; Pacific Coast, fair to prime, 18@20c; do, choice, 20@22c.

Beans—Met with fair sale. They rule steady and the supply on hand is fair. The demand, as a rule, is fair. Choice stock and common lots are slow. California pea beans, \$1.90; do, Lima, 4 $\frac{1}{2}$ c $\frac{1}{2}$ lb.

In advocating the passage of Assemblyman Hall's bill for the formation of a new agricultural district out of those portions of the counties of Santa Cruz and Monterey comprising the Pajaro valley, the *Pajaronian* declares: "Pajaro valley has a genuine fair association, one that gives an annual exhibit of our farm products. It has been run without State aid. It now proposes to fight for a portion of the appropriations given neighboring associations, and which are usually expended for the encouragement of horse-jockeying and the fostering of pool-selling and other forms of gambling."

A LEADING REAL-ESTATE FIRM.—During the last 90 days a lively interest has been taken in real estate in Monterey county. The firm of Lang, Merritt & Dexter at Salinas City occupy a leading position as real-estate brokers, and their list contains fruit, farming, and grazing land. Parties wishing information or an investment in Monterey county will be materially assisted by consulting this enterprising and well-reputed firm.

TO SUBSCRIBERS.—Members of the P. of H. now receiving the regular editions of the *RURAL PRESS* are advised to try our Grange editions instead for awhile. The cost is the same for each edition. We will transfer names from either to the other on receiving a written request therefor.

PARTIES desiring to obtain seed potatoes will do well to read the advertisement of D. B. & M. S. Harrington in another column.

DURING 1888 the steamers on Puget sound carried 355,000 passengers. In 1886 the number was only 73,000.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, if requested the following articles (while this notice continues), at the very greatly reduced figures named at the right:

- 1.—The Agricultural Features of California, by Prof. Hilgard, 138 large pages, illustrated, cloth, with colored maps (full price \$1). \$0.25
- 2.—World's Cyclopedia, 794 pages, 1250 illustrations; (exceedingly valuable). \$0.50
- 3.—Dewey's Patent Elastic Binder (cloth cover), name of this paper stamped in gilt. \$0.50
- 4.—Niles' Stock and Poultry Book for Pacific Coast, pamphlet, 120 pages, illustrated. \$0.25
- 5.—Kendall's Treatise on the Horse and Diseases, 89 pages, instructive illustrations. \$0.05
- 6.—To New Subscribers, 12 select back Nos. of the *RURAL PRESS*, "good as new." Free
- 7.—Any of Harper's, Frank Leslie's and most other first-class U. S. periodicals, 15 per ct. off regular rates.
- 8.—Pacific Coast and Eastern Dailies and Periodicals, except special publications, we can usually give 10 to 15 per cent off advertised retail rates.
- 9.—March of Empire, by Mallie Stafford. \$0.25
- 10.—Life Among the Apaches, 322 pages, stiff cloth. \$0.25
- 11.—\$1 worth of choice seeds, to be selected from a list of 107 flower and 82 garden seeds, as previously published, or which list we will send on application. \$0.25
- 12.—Dewey's Pat. Newspaper Fileholder (18 to 36 in.). \$0.50
- 13.—European Vines Described, 63 pages. \$0.05
- 14.—Webster's Dictionary, 654 pages, with 1500 illustrations; very handy and reliable. \$0.50
- 15.—Architecture Simplified, 60 pages. \$0.25
- 16.—Mother Bickerdyke's Life with the Army; patriotic and ably written; 168 pp., cloth, \$1.00. \$0.50
- 17.—Ropp's Easy Calculator, cloth, 80 pp. \$0.25
- 18.—How to Tell the Age of a Horse. \$0.05
- 19.—Percheron Stud Book—French—bound in leather, 192 pages (full price, \$3). \$1.00
- 20.—What Every One Should Know; a cyclopedia of valuable information; 610 pp.; cloth; (full price \$1). \$0.50
- 21.—Knitting and Crochet, by Jennie June; 144 pp., 200 illustrations. \$0.25
- 22.—Needle Work, by Jennie June; 12 pp., 2 illustrations. \$0.25
- 23.—Ladies' Fancy Work, by Jennie June; 162 pp., 700 illustrations. \$0.25
- 24.—The Way to do Magic; illustrated, 60 pp. \$0.10
- 25.—The Taxidermist's Manual; illustrated, 64 pp. \$0.10
- 26.—A Dictionary of American Politics; comprising accounts of political parties, measures and men, and explanations of the Constitution, divisions and practical workings of the Government, together with political phrases, familiar names of persons and places, noteworthy sayings, etc., by Everett Brown and Albert Strauss (Full price \$1). \$0.50
- 27.—Beautiful Poetic Review, entertaining and instructive; 35 pages (a handsome and pleasing present). \$0.25

NOTE.—The cash must accompany all orders. Address this office, No. 220 Market St., S. F.

In writing correspondence, items of information, or on other business, please use a separate sheet. Sample copies of this paper mailed free to persons thought likely to subscribe.

Send for free circular describing most of these premiums, and any further information desired. Inform your neighbors about our offers and paper.

A Valuable Compliment.

Every package of butter in competition at the recent Dairymen's Association meeting which took a first prize or a sweepstakes prize was colored by Wells & Richardson Company's butter color. This would seem to be the nature of a very large compliment to a well-known article of local manufacture, which, by the way, has been very much improved lately. We congratulate the manufacturers upon this splendid tribute to the value of the improved butter color.—*Burlington, Vt., Free Press, Jan. 19, 1889.*

SEEDS AND PLANTS.—Frank Ford & Sons of Ravenna, Ohio, have embellished their catalogue of "sound seeds and live plants" for the spring of 1889 with a handsome colored plate of the Eaton grape, which has round black berries, full an inch in diameter, and is said to be very juicy and the Concord's peer in quality.

MAMMOTH SEED-POTATO CELLARS.

The accompanying illustration shows a sectional view of John A. Salzer's mammoth seed-potato cellars at La Crosse, Wis., by far the largest seed-potato cellars in America. They are built of massive rock, with a four-inch air space and veneered with brick. This insures warmth and proper dryness. When we remember that the mercury at times falls below 40° at La Crosse, this extra precaution is necessary. The cellar has a capacity of over 60,000 bushels in bins, and a storage-room of upward of 10,000 barrels. All orders from the South

during the cold months are shipped in special refrigerator cars to St. Louis, then transferred to the different railroads upon which his patrons reside. This gives the South quick shipment, and brings the potatoes frost free and in early season to the planter's door. Orders from the North are packed when received, addressed, and stored until warm enough to transport. Mr. Salzer's potatoes are grown in Dakota, and are known the United States over as finely flavored, mealy, heavy cropping varieties. Mr. Salzer makes a specialty of early potatoes, having some sorts ripening fully in only 50 days. His elegant catalogue for 1889 is sent free to all applicants.

Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

HORSES AND CATTLE.

J. R. ROSE, Lakeville, Sonoma Co., Cal., breeder of Thoroughbred Devons, Roadsters and Draft Horses.

P. H. MURPHY, (Brighton) Perkins P. O., breeder of Recorded Short Horns and Poland China Hogs.

HEILBRON BROS., Cruickshank strain of Short-horns & Herefords, Wildflower Farm, Fresno or Sac'to.

OOTATE RANCH BREEDING FARM, Page's Station, S. F. & N. P. R. R. P. O., Penn's Grove, Sonoma Co., Cal. Wilfred Page, Manager. Breeders of Short Horn Cattle, English Draft Horses, Spanish Merino Sheep and Berkshire Swine.

JERSEYS—The Best Herd, all A. J. C. Registered, is owned by Henry Pierce, San Francisco.

SETH COOK, breeder of Cleveland Bay Horses, Devon, Durham, Polled Aberdeen-Angus and Galloway Cattle. Young stock of above breeds on hand for sale. Warranted to be pure bred, recorded and average breeders. Address, Geo. A. Wiley, Cook Farm, Danville, Contra Costa Co., Cal.

J. H. WHITE, Lakeville, Sonoma Co., Cal., breeder of Registered Holstein Cattle.

R. J. MERKELEY, Sacramento, breeder of Norman, Percheron Horses and thoroughbred Shorthorn Cattle.

T. SKILLMAN, Petaluma, importer and breeder of Suffolk, Percheron-Norman and French Coach Horses.

M. D. HOPKINS, Petaluma, importer and dealer in Eastern registered Shorthorns, Red Polled Cattle, Holsteins, Devons and Shropshire Sheep.

PETER SAKS & SON, Lick House, San Francisco, Cal. Importers and Breeders, for past 18 years, of every variety of Cattle, Horses, Sheep and Hogs.

GEO. BEMENT & SON, Maple Grove Farm, Oakland P. O., breeders of Ayrshire Cattle & Essex Swine.

F. H. BURKE, 401 Montgomery St., S. F. Registered Holsteins; winners of more first prizes, sweepstakes and special premiums this year than any herd on the Coast. Pure Berkshire Pigs. Catalogues.

H. P. MOHR, Mt. Eden, Alameda Co., Cal., breeder of Clydesdale Horses and Holstein-Friesian Cattle.

WILLIAM NILES, Los Angeles, Cal. Thoroughbred Registered Holstein and Jersey Cattle. Write me.

H. S. SARGENT, Stockton, importer and breeder of registered Jersey Cattle. Correspondence solicited.

P. PETERSEN, Sites, Colusa Co., importer & breeder of registered Shorthorn Cattle. Young bulls for sale.

W. S. JACOBS, Sacramento, Cal., breeder of Thoroughbred Shorthorns and Berkshire Hogs.

BRADLEY RANCH, San Jose, Cal., breeder of recorded thoroughbred Shorthorn Cattle. A choice lot of young stock for sale.

HENRY HAMILTON, Grayson, Cal., breeder of Kentucky Jacks and Jennies, Draft Horses and Holstein Cattle. Jacks, Horses and Mules for sale.

DENMAN & McNEAR, Petaluma, importers and breeders of thoroughbred and graded Clydesdale horses.

EL ROBLAR RANCHO, Los Alamos, Santa Barbara Co., Cal. Francis T. Underhill, proprietor, importer and breeder of thoroughbred Hereford Cattle. Information by mail. C. F. Swan, manager.

POULTRY.

CALIFORNIA POULTRY FARM, Stockton, Cal.; send for illustrated and descriptive catalogue, free.

R. G. HEAD, Napa, Cal., breeder of the choicest varieties of Poultry. Each variety a specialty. Send for new Catalogue.

T. D. MORRIS, Agua Caliente, Cal.; pure-bred fowls.

GALT POULTRY YARDS, S. W. Palin, prop'r, Galt, Sac'to Co., Cal., importer and breeder of thoroughbred Ply. Rocks, Lt. Brahmas, Langshans, Wyandottes & P. Cochins; eggs, single sitting \$3, 3 sit'gs \$7.

W. G. ELLIS, 954 Broadway, Oakland, Cal., importer and breeder of thoroughbred Black Leghorns.

A. C. RUSCHHAUPT (successor to Jas. T. Brown), P. O. Box 43, Station B, Los Angeles, Cal., yard on State St., Brooklyn Heights, importer and breeder of all leading thoroughbred Fowls, and Eggs, at reasonable prices. Circular free.

W. O. DAMON, Napa, \$2 each for choice Lt. Brahmas, Wyandottes, P. Rocks, White and Brown Leghorns Best Seed for sale.

D. H. EVERETT, 1616 Larkin St., S. F., importer and breeder of Thoroughbred Langshans and Wyandottes.

O. J. ALBEE, Lawrence, Cal., breeder and importer.

SHEEP AND GOATS.
